Twenty wagons, several tents and a number of horses constituted the movable property of the gypsy camp when I made the acquaintance of the aged chief, who called himself Carpenter. My idea, that the average gypsy is devoid of what we call education,—received a rude shock, for here was a man well versed in the literature of the day and current events.

I asked him why the gypsies were such wanderers throughout the earth, and instantly he replied, "Because they are God's chosen people."

I am quite sure the old rascal did not believe what he said, because there was a merry, half-wicked twinkle in his eyes. Then, also, he was just at that moment occupied in dressing some plump chickens, over whose manner of getting into camp I thought best to throw the mantle of silent charity. But he gravely proceeded to draw a host of similitudes between modes of gypsy life and those of the ancient patriarchs, laying great emphasis upon the statement that gypsies were the true descendants of the house of Rechabites, so loved of the Lord for the faithful observance of divine commands. Then he glibly quoted from Jeremiah: "Neither shall ye build houses, nor sow seed, nor plant vineyards, nor have any; but all your days ye shall dwell in tents; that ye may live many days in the land where ye be strangers."

During my further conversation I learned that in reality the gypsy's mind is an utter blank on all matters which the Christian world regards as sacred. True, he will quote you yards of Bible passages to prove that his pilgrimage life is the only correct one, but he does this merely to confuse you, not because he himself respects the anthority he quotes in his behalf. Unquestionably he considers his as the only right way of living.

It is a noteworthy fact that the Romany (gypsy) language contains no exact equivalent for "God." Indeed it is, we are told, almost barren of words designating the Creator. "Baurie Rom," or "Great Head" is probably the expression nearest the Bible idea, and even that really means "a powerful man," and is not employed in designating spiritual leadership.

It is not fair to say that the gypsy is blasphemous in his stern and unrelenting refusal to accept what you and I know no other possibility but to embrace. Contrary to the commonly-expressed idea that "no people exist who do not have some form of worship for a supreme being," here is a people who seem to be utterly incapable of even the most trifling submission to Deity. They seem to be unable to think of God as a Father and Christ as a Savior.

As to the future state the gypsy has no hope. With him "death ends all." In this he is a veritable agnostic. We are told that in a collection of over three hundred gypsy songs, there is not the slightest reference to a future reunion with the sainted dead. Even the wildest ravings of the gypsy lover for the lost treasure of his heart do not pierce the veil which to him is impenetrable darkness.

There are few who can believe any good possible among so faithless and hopeless a people, but there is good among them, and that of a kind that the Christian world might imitate with great consisten-

cy and profit. While gypsies are without faith and without law as we know it, no people live purer lives, physically and morally.

They universally revere the marriage relation as a sacred state. Perhaps their utter lack of worship, as known to the Christian world, has brought about among them what might be termed "virtue-worship." This is not merely the result of proper training in youth,—it is inherent in the race,—an influence before birth. The tent-home government and surveillance are such that gypsy children grow unconsciously and without question into virtuous lives and loyal lovers. You may not believe it, but the gypsy man,—yes, even the boy,—regards virtue of as much importance in man as in sweetheart or wife.

Some idea of the awful sacredness of that primal requirement in woman may be had, when the fact is stated that any gypsy maiden convicted of having been unchaste previous to marriage, is at once cast out from the tribe. It is also maintained that more than once the lives of such have been sacrificed with the calm and stern approval of parents and friends. Such a thing as disloyalty of husband to wife or wife to husband, after marriage, has yet to be recorded of the gypsies on the European or American continent.

Elgin, Ill.

THE SHIRT WAIST FASHION.

This latest fad will probably be new to most Inglenookers, and in accordance with the policy of the paper in getting before the reader the latest and the most interesting things we will have our word over it. What is it all about, some rural reader will say? It is that there is a fashion, just starting in the cities, of men wearing shirt waists, just like women. It is exciting no end of comment, and the people are divided as to its usefulness and desirability. What complicates matters is that not only the fashionable youth are taking it up, but the older and more staid part of the population. It is not by any means common as yet, but we may not have seen the last of it.

The newspapers are divided in sentiment about it, and in some places much bitterness is the outcome of the fashion. The *Chicago American*, a new daily in the Windy City, has these thoughts on the subject:

"As a rule the question is treated humorously, but it is not at all humorous.

"It involves an important, and, in our opinion, a beneficial, change in a man's costume and appearance.

"Every distinct change in dress marks a change in our habits of thought; every step towards simplicity does away with a certain amount of vanity, with a certain amount of brain work wasted on trifling detail.

"The tendency toward shirt-waist wearing by men is a sensible step. Of course the so-called shirt waist will be modified. It will become a sort of a sensible workingman's blouse. The dandified working clerk will wear his shirt waist of silk or other light and easily soiled material. The real workingman, rich or poor, will have a loose shirt or blouse of solid dark colored stuff.

"Like all great movements, this shirt-waist movement will do some harm while it does good. If it develops as it promises to do, it will largely ruin the business of many manufacturers of summer clothing. It will deprive thousands of work. It will revolutionize the styles of making trousers, at least so far as the tops of the trousers are concerned. For those tops hitherto invisible have been made carelessly, with no eye to beauty. Now that they are to be seen, much American ingenuity will be spent upon them, and we have no doubt that they will be made to look hideously "artistic" with silk bands and other ornamentations.

"A man thinks as he dresses. If he dresses simply he thinks simply. If he dresses comfortably he thinks comfortably."

It will be seen that *The American* sides with the innovation. It is not likely to become at all general this season, but the way may be paved for next year, when it may be a question in every remote hamlet in the land whether or not the fashion is to be followed. The INGLENOOK advises its readers not to be too fast in following these latest things. It may be better not to follow them at all. It would be funny, but not at all impossible, five years

from now, or in even a less time, for the Annual Meeting to discuss it. Personally the INGLENOOL does not think it would look well in a shirt wast. The belt part of it would lack artistic proportion.

CRADLES THAT ARE EXPENSIVE.

The woman that rules the world to-day through the medium of the cradle has a pretty expensive undertaking on her hands, for cradles do cost so much money—that is, some cradles do. This year's baby is a financial monarch, indeed. He can cuddle down in a beautiful downy nest built on a foundation of rare woods, carved in exquisite design and inlaid with precious stones. He can dight pink toes into rich silks that cost any number of dollars a yard, and wipe his pudgy nose on linens that are equally expensive. And by the time he has done all this, and wriggled his fingers through any quantity of soft laces, he will have instituted himself sole owner of a cradle that cost his indulgent parents \$500 and upwards.

A cradle of this description is certainly a thing of beauty, and it ought to be a joy forever. The effect of such a creation upon the primitive man who swung his progeny in a bed of boughs or a wooden box set on rockers, is difficult to contemplate. Even kings and queens of past ages would stand in awe of it. In old illustrated manuscripts there are illustrations of cradles wherein princes of royal blood lay them down to rest, and some of these beds of aristocratic infants are still preserved for the edification of later generations. But the 1900 baby could turn with disdain from every one of these cradles, and seek his own modern couch with pride and thanksgiving.

These really expensive cradles are not kept in stock by furniture dealers. They are made to order by expert cabinet makers, and the furnishings are selected from the choicest importations.

"The excessive cost of some cradles," said a Broadway furniture dealer, "lies largely in the amount of labor expended on the carving, which is most elaborate. In no article of furniture that we turn out is more delicate workmanship required than in a cradle. Often the work alone on one of these little beds costs \$200 to \$300. Then, when you have quadrupled this one item with the value of the material and bedding, you have a cradle whose elegance ought to make any baby feel on good terms with the whole world."

"But what about the cheap cradles?" asked the visitor. "There certainly must be cheap ones. Every baby who is squirming through this end of the century cannot afford to snooze in a \$500 couch."

"O, yes," assented the dealer, "they come cheap, lots of 'em, but we don't handle them. The lowest priced cradle we carry costs \$25. But you can get one for \$1. Compared with these fancy affairs a dollar cradle looks about like thirty cents, but no doubt the poor baby rests just as comfortably as the more fortunate youngster."

EARNINGS ARE VERY LARGE.

The well-patronized sleeping car pays for itself in considerably less than a year. Take the run from New York to Chicago, 1,000 miles. Every road in the United States pays three cents a mile for the privilege of hauling a sleeper and contracts to return said car in as good shape as it is received and to pay for all damages. The journey on the limited expresses to Chicago is made in twenty four hours, therefore the car earns \$30 a day for travel.

If it is full, which is generally the case, receipts from berths, sections and staterooms amount to \$185, making a total revenue of \$215 a day. Out of this must come the wages of the porter and continuous the latter, however, usually having charge of several cars—the towels, sheets, soap, ice, etc. the whole amounting to but a small sum.

Then there are the wear and tear and general depreciation, the daily cleaning, the annual refitting and repainting. Set these charges down at ten per cent and give the car three trips a week of 1,000 miles each and we have its earnings at over \$60,000 annually. Some can earn a great deal more.

"Now, Sammy, tell me, have you read the ston of Joseph?" "Oh! yes, Uncle." "Well, their what wrong did they do when they sold their broth er?" "They sold him too cheap, I think."

ooo The o Circle ooo

OFFICERS -W. B. Stover, Bulsar, India, President; John R. Snyder, Belle-Officer Ohio, Acting Fresident; Otho Wenger, Sweetsers, Ind., Acting Fresident, Covington, Ohio, Secretary and Secretisten, Mrs. Lizzie D. Rosenberger, Covington, Ohio, Secretary and Secretisten, Address all communications to Our Missionary Reading Transfer, Original Covington, Ohio.

THE CIRCLE.

"THERE is no near and no far but just one round world of lost and perishing souls to be rescued and saved by the world's Christ."

ORGANIZATION.—Our Circle was organized nearly seven years ago. Some young people talked about nissions, and confessed their ignorance on the subject. They decided to meet regularly and read and study books on mission work. They soon became intensely interested, and it was not long until in other churches Circles were organized, and now we have Circles all over our Brotherhood, while over in India, Brother Wilbur Stover, who helped to organize the first Circle, is preaching to the heathen. He expected great things from our Circle. Let us work in the hope that much good may be accomplished and that God's promise to Abraham may be verified in us,—"Thou shalt be a blessing."

How You Become a Member.—It costs just twenty cents to become a member. Then you promise to read eight books, and also to try to persuade others to join. We have over thirteen hundred members now. That seems like a great many. All have joined with the avowed purpose of doing good, of becoming more zealous in giving the King's message to a waiting world.

lucreasing Interest in Missions.—Sometimes figures become very interesting. We have been reading the figures on the Missionary page in the Gospel Messenger; and as we note the increasing interest shown in mission work, the amounts contributed by each individual, and the sum total which is larger each year; we wonder whether by the grace of God, some of this ever-increasing interest in evangelizing the world and "doing good" may not be attributed to the earnest, consecrated work done by our Circle. At our late Annual Meeting, one of the missionaries appointed to go to India, has long been one of us, and has written to us of his desires to work for Jesus in a foreign land.

Young People.—Wherever you find a church with a number of young people in it; if there is no Circle there, we can only say there should be. It will prove a safeguard, it will give them something to think about, and it will not be long until its influence will be seen in the work they do for Jesus. It will draw the young people closer together; it forms a bond of sympathy between young and old, because our older members are very often the leaders in Circle work. Many churches testify to the good it has done for them.

Young Prople's Meetings.—They are found in most of our churches. The Circle encourages them, and in the future, each week, a programme will be given in our paper for such a meeting. We shall by to make this programme as interesting as possible, and we think it will prove helpful to our members. These meetings draw the young people closin his service.

Ucal Secretaries.—In each church, or locality, we want a local secretary. He or she is to remany new names as possible, and there are many of the work, which will be more fully explained to a thful, and as a result, we have good working Cirtallocal Secretaries.

THE CIRCLE IS STEADILY GROWING.—Within the sat few days we have written to sixty-five people have mailed certificates to sixteen members on have read eight books, and so completed a site to Our Missionary Reading Circle, Covington,

Sunday A School

THE TRUTH AND THE MAN.

THAT a man does not practice what he preaches is not against the preaching, but against the practice. And yet the inconsistent preacher is often scorned for what good he says rather than for what evil he does. It is certainly desirable that the preacher's conduct should consist with his doctrine when the doctrine is right. But it is not desirable that he should preach unrighteousness in order to make his doctrine conform to his conduct. The fact is that if it is the man that preaches, then not the man's words alone, nor his conduct alone, is sufficient to constitute him a worthy minister. Yet this fact does not warrant our scorn of the truth in his words, even when those words are not in consonance with his conduct. The truth is more important than the man who proclaims it.

TWO OF LIFE'S TEACHERS.

LIFE has two teachers,—example and experience. Experience is a most excellent instruction, but, as has been said, his school fees are very high. Example gives his lessons in less notable and perhaps less effective ways, but he is more considerate of the welfare of his scholars. Experience throws us into a deep pool of water, and says: " Now swim." Example goes along beside us, puts his hand under our shoulder, and says: "This is the way to do it." Experience may be the teacher more to be trusted, but example is often the teacher to be the more desired. The bold man goes to the school of experience, and if, in the end, he does not repent it, he at least appreciates his rashness. The wise man learns by example, and his wisdom is justified of her children.

GOD'S HELP AND HELPING GOD.

It is one thing to ask God to help us in our plans: it is quite another thing to ask God how we can be helpers in his plans. Every man is glad to have God's help; only now and then is a man found whose first thought is how he can help God. What is your chief desire in your morning prayer for the day? Your honest answer to that question may reveal to you your spirit and purpose in life.

There is good authority for believing that in some very important qualities the standard of the child is higher and better than that of the man. Jesus Christ was positive that except as the choicest man retains his childlikeness, or is able to get back to it again, there is little hope for him in this world or beyond. In view of this truth, the average man has more reason to desire to be as a child than the average child has to desire to be as a man. This every teacher of good ought to bear in mind,—as, indeed, all the best teachers do.

LIBERTY is impossible without limitations. Order cannot exist unless under regulations, although chaos and confusion can. This is a truth alike applicable in the realm of matter and of mind. It is true of all mechanical forces on the one hand, and of the most formal and conventional, or the most natural and unstudied, intellectual processes on the other hand. In no sphere is there freedom without constraint,

THERE is a Bible word which says that he who rules his own spirit is a greater hero than he who takes a city. Self-mastery is the noblest victoriousness and the highest achievement in life. The winner in a contest of any kind adds yet greater honor to his success when he bears himself worthily, with quiet modesty and humility, with sensitive regard to the feelings of those he has surpassed.

Being satisfied is taking it for granted that God has nothing better in store for one in the opening future. It is proper to be contented for the moment, but not to be satisfied for all time to come. As Robertson says, "Man's destiny is not to be dissatisfied, but forever unsatisfied." Let us therefore be ever unsatisfied while ever contented.

Shiftless people are never the ones who worry about it.

For * the * Wee * Folk

BABYLAND.

How many miles to Bahyland?
Any one can tell,
Up one flight,
To the right—
Please to ring the hell.

What can you see in Babyland?
Little folks in white—
Downy heads,
Cradle-beds,
Faces pure and bright.

What do they do in Babyland?
Dream and wake and play,
Laugh and crow,
Shout and grow—
Jolly times have they.

What do they say in Babyland?
Why, the oddest things;
Might as well
Try to tell
What a birdie sings.

Who is the queen of Babyland?
Mother, kind and sweet;
And her love,
From above,
Guides the little feet.

DUDABBEN.

BY 1DA DE BERRY WHEELER.

The little blue hen came up one morning with twenty baby chicks. Bessie and Cecil wondered how the twenty eggs had been covered by the tiny wings, and where the nest had been hidden.

After a while the family of chicks were not so pretty, for they had lost their feathers, as all chickens must do at a certain age. It was not long, however, until they were dressed in new clothes; not so soft as their baby dresses, but more suitable for their age and size. All? No, all but one; he had not a feather on him. There he was—poor unsightly thing, with such long neck and legs that grandpa said: "The little blue hen must have had one crane egg from the island across the bay."

The little fellow did not seem embarrassed by his singular appearance; on the contrary, he came often into the house stepping as grandly and holding his head as high as if he had on the richest suit of feathers.

Bess and Cecil said Dudabben was ugly, but "so cute."

As they bestowed special attention on him, soon the household was in possession of that very troublesome thing, a pet chicken.

In baby talk, the children would say to him: "Poor little sing, on hablent dot any feathers." This they shortened into "ou hablent," and finally into "Dudahben," which was afterward the chicken's name in the family.

Dudabben grew to be so gentle that he would eat from the children's hands and allow them to dress him in Bessie's doll's clothes or hitch him to a toy wagon for a pony. Cecil would often place him on the toy freight train and pull the cars across the floor. The chicken would remain quiet at his post of duty, for you must bear in mind, Dudabben was the brakeman. It was a constant wonder to the older members of the household how much this chick seemed to understand of what was said.

One morning the question was asked, "Has any one seen Dudabben?" No one had seen him. The place was searched for him in vain. As Grandpa came from his office to dinner he found the poor little chicken in the street-dead beside a stump from which a sweet bay tree had been cut. On this stump numerous leafy branches had grown. Under these Dudabben was almost hidden. A red thread like Bess had been sewing her doll's clothes with the day before, was fast around one foot. The other end of the thread had become tangled in the bay branches, and thus little Dudabben had been a helpless prisoner. His body was lying in a track made by a passing vehicle, whose driver, unable to see the helpless creature, had innocently caused its very untimely death.

Papa went out with the children and brought Dudabben's body into the yard for burial. Bess and Cecil placed dainty white and pink shells, gathered by their own hands from the beach, on the little grave, and in their grief, spoke tenderly, almost reverently, of their departed pet, Dudabben.

TATTOOING.

PROBABLY a great many Inglenook readers have had the temptation to be tattooed come to them at some time in their lives. Happy those who have escaped. Once marked it is there to stay, and though it is said that it can be taken out, the chances are decidedly against it. The man or woman who is disfigured by being tattooed will always he so, and his ghost will have the marks, such is its permanency.

Visitors at the bathing resorts of the seashore this year say that there is to be seen an unusual number of tattooed men and women. Down at Cape May a professional tattooer is making a fine living by his alleged art. Speaking of the revived craze he says:

"I have had a number of young society men and women come to me during the last year," said he of the needle and pigment. "It may surprise you, but I think I can explain it."

"Our war with Spain brought society men for the first time into contact with the fighting men of the nation-the soldiers and sailors. Now, these warriors are almost invariably tattooed. You seldom see a sailor who does not bear the marks of the needle, and the proportion is almost as large among soldiers.

" My explanation of the new fad is that some of the young swells, probably merely for the oddity of the thing, had themselves tattooed while they were in the army. Almost any soldier or sailor

could do the job in a rough way.

"When the boys came home from the camps their friends saw the marks, were pleased with the unconventionality of it and had themselves similarly decorated. After that it was only a natural step for the young ladies to imitate their brothers.

"Not very long ago I received a visit from two actresses who were playing in one of your downtown theaters. They wanted to know if I could tattoo a mole natural enough to be taken for the real thing.

"I experimented with my pigments and soon found that the Chinese brown in the proper solution of glycerin and witch-hazel would do the thing perfeetly. See, here is the result."

He pulled up his sleeve and showed a brown spot that was indistinguishable from a mole.

"When the young ladies returned I showed them my work. They were so much pleased with it that each one had two spots put on her face. The effect was far more fascinating than an artificial patch.

"The mole, I think, will be the favorite among the society women. I have had several, however, who have had small, brilliantly colored butterflies on their arms above the elbow. One of them told me that when she wore evening dress she simply tied a broad ribbon around her arm to hide the de-

"Another popular pattern is the small fly or insect. These are put on the arm as a rule, but I have put them on the shoulder. Several women have chosen the small Japanese serpent in combi-

nation with a brilliant butterfly.

" Hurt? Oh, no. Sometimes the women are a trifle nervous at first, but they soon get over that, After a little smarting for an hour or so after the job is done there is no pain of any kind.

"You see, I have the very latest instruments. This electric needle is used only for the black lines. These are always put on first.

"I dip the point into the Chinese India ink, start the turrent and the needle goes spinning around like the buzz saws you see the dentists use. I can draw with the black as easily as you would write slowly on paper. As soon as you have got over your first nervousness you have no more trouble and the rest is easy.

"After the outline is finished I bathe it in a disinfectant of olive oil and carbolic acid, and, after a few minutes' rest, begin with the Chinese vermil-

"Then follow the other colors in whatever order I choose. I use seven different colors-a greater number, I think, than any other man in this country can use. The Jap who taught me the art used to get fine effects with nine colors, but he died without telling me what the other two were.

"So far as I know I am the only man in this country making a regular living at this work, though there are any number of people who will do a bungling job for you for whatever you choose to

give them. My prices, however, are as fixed as though I were selling groceries."

He took out a photograph of a man who had his entire chest covered with a brilliantly colored picture of the hattle of Manila. Anchors, flags, clasped hands and all appropriate devices surrounded it and underneath was the inscription, " Dewey Did It."

"That piece of work cost that chap \$35," said the needle-wielder. "My finest and most brilliantly colored Japanese dragons cost from \$10 up to \$25 and a brilliant butterfly will cost from \$3 to \$6.

"The indigo and vermilion are cheapest colors. Blue, yellow, green, brown and purple are Japanese pigments and are more expensive.

"I am glad to see that society people are taking this up. I should not advise anyone to have a conspicuous design worked out, but a small, neat piece of work is very effective. I expect to have quite a rush on the mole effects."

THAT BLESSED YOUNG ONE.

With a confiding chug-chug and a spirited snort the Duluth express drew out of the Wells Street depot, taking with it Wah and me and the baby, together with innumerable valises, umbrellas, small parcels and a box of cracker-jack. Wah is baby's great aunt, her sweet given name, Mary, being thus contorted by the blessed spalpeen.

It was close to ten o'clock, two big full hours after the time that Mr. Sand-man usually knocks at the kitchen door and asks if baby is asleep. All the way to the train the soft turquoise eyes had been hiding behind their trembling, drooping, blinking little shutters, but when we climbed into the sleeper drowsiness flew like birds before an army of boys. A kiss or two for "Fodder," a promise to "mind mudder and be a good durl," and our household image of joy and sweetness began her round of investigation and inspection.

She climbed into the berth and looked about her.

"What do they put ceilings on their beds for?" she asked.

"That ceiling is another bed," I answered. "Just about the time we are going to sleep a big fat man will climb up there to roost and roast for the night."

" Oh!"

"And after we go to sleep his shoes will fall down and awaken us and scare us out of our seven senses. And in the middle of the night he will snore, and snore, and snore-

"What will he do that for?"

"I'm sure I don't know," confessed I, "except that it is the accepted manner of fat men."

"What makes him fat?"

"That's more than I know, my darling."

"Maybe the Sand-man gets after him and makes him go to sleep early. And maybe be drinks lots of milk. If I drink milk will I snore, mudder?"

" Um---

" Mudder, I want a drink."

"Yes, dear."

"What did you push that button for?"

"To tell the porter to get you a drink."

"Oh! But where will he get it?"

"Out of a tank."

"A tank on the roof like we have at home, that leaks down through the kitchen and has to be mended?"

"I guess so,"

" Mudder, what makes the cars go?"

"The engine. Don't you think you'd better go to sleep?"

" No, I'd rather stay up and look out the window. Mudder, why is it that now you see a tree and a house and then you don't see them, and see something else?"

"Oh! hush! I'm tired. Go to sleep like a good girl."

"Well, mudder, the Sand-man can't catch me here, can he? We're going too fast, aren't we?"

"I don't know."

"Mudder, can't I go and sleep with Wah?"

"No, of course not. Wah is asleep."

"Mudder, where did you put my dolly?"

" In the trunk."

"Oh! Boo-oo! Boo-ooo-ooh!"

"What's the matter now?"

"She won't have any fresh air! Where-Where's my little woody dog?

"He's with the dolly,"

"I want him, and my dolly, too! Boo-00-000!" Soft mutterings from other berths. A clean strong tenor remark about idiots who travel wife children.

"Mudder, I don't like this bed. It's a bad old bed. It hurts my feet."

Silence on my part.

" Mudder!"

"Yes-s-s," very sleepily.

"I'd like to see Thora and the little canary bird,"

"Now see here, daughter, you be mother's sweet thing and go to sleep like a little honey, and in the morning you can go with Wah and me into the dining car and eat breakfast."

"I'll be good. Mudder, can I have mush. melon?"

"Yes-

"And shredded wheat bixset?"

"Yes-s-s."

"And ice cream?"

"No. Go to sleep!"

"Oh, mudder!" (very reproachfully.)

" Mudder, one time when me and Ora was play. ing sleeping car I fell off the bed and hurt myself. Wasn't that awful?"

"Yes, dear."

" Ora's a little Germese girl, isn't she?"

"You mean German, don't you?"

"But we're Americans, ain't we?"

"Uh-huh. Go to sleep."

Long pause. " Mother. I know a lady that's got the hooking cough---'

"Go to sleep."

" Mudder, you love your little baby girl, don't

"Yes, but I wish she'd go to sleep."

Another pause. "Can I have pancakes in the breakfast car?"

"Yes." Longer pause.

And after that sweet quiet ruled. In the mouning, when a rosy dawn crept stealthily and softly about the edge of the window shade I looked upon that precious child and wondered what God gave to babies that made them so brimful of queries. The dimpled hands, the pretty mouth, the full, rose-yelvet cheeks, the fluff of golden curls. Why, she looked like a big bisque doll baby-with never suggestion of a talking machine inside.-Helen Fo lett.

ICE CREAM SANDWICHES.

THE ice cream sandwich, although it is sold for the moderate price of one cent, is not a slip-shol affair by any means. Each one is turned out po fect in form by a little mechanical device operate by the ice cream seller. The contrivance is made of tin and consists of a handle and a tiny pan frame three or four inches long by two and a h in width, in which the sandwich is made. The hat dle fits on the middle of the bottom of the p The bottom of the pan is movable and can be drag down a quarter of an inch or more by a spring tr ger in the handle.

To make a sandwich the trigger is pulled back ward and the pan is thus made about half an inchil depth. Upon the bottom is placed a thin cracke wafer which exactly fits the space. The cracker not more than an eighth of an inch in thickness all upon it is then spread a layer of ice cream, fill the pan level to the upper edge. Upon this placed another wafer. The spring is released, the machine turned upside down and the finished said wich drops out.

The combination, simple as it seems, is an execution lent one, liked by all who try it.

"Mamma," said little Ethel, "Mrs. Gayley's his

band isn't dead, is he?"

"Then what's she going to be married ago. "Never mind, dear. You can't understand so

"O, I know," exclaimed the little girl; "it's be things."

his with much satisfaction that I express ay approval of the INGLENGOK. Its appearnce and general make-up are such that it at nce commends it to the reader. It has found is way into many of our homes, and the penleare truly glad for its continued success .-Ed. John Zuck.

Mt. Morris Says:

The INGLENOUS easily takes rank among hebest young people's papers in the country. risbelter than most of them because of the bence of the silly love stories and light readog. It is a most valuable addition to the Bethren's publications. No family should be sithout il.-Eld. D. L. Miller.

Lanark, III., Has An Opinion.

We have been receiving the INGLENOOK ince it started. We like it very well. I would he to see it go to all the homes of the land. The short sermous are good for both old and ung .- Eld. I. R. Frout.

0 0

South Bend, Ind., Thinks.

The INGIENOOK IS an interesting paper. It read by old and young in our family. Try and you will be pleased with it .- Eld. S. F.

0 0

Hear Virigina Talk.

Of all the young people's papers that I have wer seen and read I think there is none that ill wield as great or as desirable influence see its readers as the INGLENOOK .- W. K.

0 0

And Hagerstown, Md., Has This:

Thave been a constant reader of the INGLEook from its beginning to the present time, solwhile it is not specially intended for the id, yet I find something that interests me in ach issue. I am interested in the 'NOOK beond my expectations. I especially recomnend it to the young readers. - Ehl. A. B.

0 0

Al Cedar Rapids, Iowa, They Say:

Myself and family greatly enjoy reading our em church paper. We trust its future may calong and useful one .- J. K. Miller.

0.0

Another From lowa,

Thave known the INGLENGOK from its birth, I can truthfully say that it is the most inseculiarly adapted to both old and young. I ve placed it in our Mission Sunday school, and the general verdict is that it can not be Land Commissioner U. P. Ry. stelled by any other Sunday-school paper. 4 W. Emmert.

Over in Indiana.

My family and 1 say that the INGLENOOK is excellent paper. There are many things in that everyone likes, and which they ought to R. People who do not take the INGLEak have occasion to regret it. The Editor dres the needs of the readers .- 1. W. Teeter.

0 0

And Down in Missouri.

for a number of years I have wondered why adid not have a paper for our young people. thing in character, with a tendency toward church. We have that in the Ingl.enook. thould be in every home in the church.— E. Ellenberger.

00

The INGLENOUS is clean, newsy, interesting matructive. The hooks and papers one stell who and what he is as well as the Pany he keeps.—Eld. Amos Wampler.

And He Says:

The Induenook supplies the "missing link" in our church publications .- John E. Mohler.

0 0

Across In Pennsylvania.

I am highly pleased with the INGLENOOK, The INGLESIAN Companion in our less pages are always well filled with fresh and interesting reading reading. interesting reading matter .- W. G. Schrock.

> 00 Ohio Has Its Say.

We are highly pleased with the INGLENOOK, and think it worthy of a place in every family of the Brethren. It interests old and young. Its literary qualities are of the first rank .- Ino. Colvin Bright.

0 0

Pennsylvania Knows a Good Thing.

An interesting paper that should be read by every member of the church. I have read it long enough to feel that I cannot be without it. It is always brimful of good, newsy and spicy reading matter, suitable for old and young. I think it a grand acquisition to our church Interature. God bless the INGLENOOK .- John C. Zug.

0 0

And Alsn Hagerstown, Ald.

The Induenous I regard as quite an acquisition to our church literature, and it supplies a long felt want. It is very instructive and newsy. While intended for the young, which place it has successfully filled, yet we find the older of the family auxiously awaiting its coming. God hless the INGLENDOK .- IV. S. Reich-

THE INGLENOOK.

"The Inglenook" will be Sent to any Address the Rest of this Year for Twenty=five Cents, or in will be Sent the Rest of this Year and all of next Year for One Dollar.

The Best Way is to send the Dollar and be Done with it. After You Have Read it for a Week or two, You'll be Some that You Didn't Save Money by Subscribing for the Whole Year at Once. It's a Paper that Grows on One. Once Read, Always Read!

We Want Agents, == Real Live Agents

In Every Part of the Country. Anybody can solicit Subscribers at the Twenty-five Cent Rate, and Whoever Sends in Club of Ten of These, Can have his Choice of ONE of the following books:

Dictionary of the Bible, Beside the Bonne Brief Bush, Natural History of Pards and Quadrupeds,

Drimmond's Addresses,

Ten Nights in a Bar-Room,

tooration of Intellectual Life,

Adventures of a Browne, Imitation of Christ, Etc.

If he gets twenty subscribers he can have two books; for thirty subscribers three books, and so on. And they com be had in an hour's work in many a place. Whoever shows himself an efficient agent will be put in line for the Fall war There is a library of Fifty bound books waiting for somebody. connected with the INGLENOOK.

The Agent who sends in the largest list of dollar subscribers between this and the first week in January, 1901, will have sent him a Library of FIFTY BOOKS. Here is the list:

Adventures of a Brownie, Asop's Fables, And Licht blylls, Autobiography of Franklin, Amorrat of the Breakfast Table, Bacon's Essays, Beside the Bonnie Brief Bush, Black Beauty, Burns' Poems, Child's History of Lingland,

Confessions of an Optum Eater, Dictionary of the Bible, Dream Life. Drummond's Addresses, Emerson's Essays, Lithies of the Dust. Emry Land of Science, Filteen Decisive Battles, House of Seven Gables, Inntation of Christ,

Intellectual Lafe, Lays of Ancient Rome. Longletlow's Poems, Lorna Doone, Mosses from an Old Manse, Nat. History Birds and Quadrupeds, Pre's Poetical Works, Price and I, Rah and the Friends, Revenes of a Bachelor,

Samantha at Saratoga, Sesame and Labes, Sketch Book, Sticket Minister, Stories from the History of Greece, Stories from the History of Rome, Story of an African Fario, Ten Nights in a Bar-Room Thirty Years' War. Twice-Fold Tales,

Window in Thomas, Education, In His Steps, Minister's Woonig, Professor at Breakfast Lable, Lamb's Tales from Shakespeare Lallah Rookh, On Liberty, Tanglewood Lales, Sign of the Lour,

The Agent sending in the next largest list will have the choice of TWENTY-FIVE books out of the above list. I third largest list will entitle the Agent to FIFTEEN of the books, his choice; and the fourth largest list will win TEN of the cloth bound books. There is also a cash commission going to the Agent. We prefer the services of the Messenger Agenti he will write at once for the place, but we will put the first live applicant into line, as the INGLENOOK is not going to be the la If agents desire to enter for the Library they should say so in order that we may keep tab on subscriptions ceived at the office. Elgin city is barred in the competition for prizes.

The announcement of the successful Agent will be made in January, 1901.

A Live Paper for Live People.

The Inglenook is no longer an experiment. It is regarded as phenomenally successful by experienced newspaper me who know what they are talking about. The reason is not hard to find. It is a FIRST-CLASS PAPER, with nothing of and commonplace about it. It is up to date, and always will be. It will have something new in each issue, it always has and it never will fall below its self-set standard, -being the best paper of its kind in the world. You can't read it within being interested and instructed. The whole wide-spread world is ransacked in the interest of its readers. isn't made with a dull pen and a pair of shears. It is a live paper for live people.

The like of it w Some of the best known men and women in the church will write for the INGLENOOK next year. Look at the names, note the subjects! Every man and woman in the list know never undertaken in the church before. what they are talking about.

RING THE BELLS IN YOUR STEEPLES.

This Beautiful Poem is Pure Gold

RING, hells, once again in your steeples! And tell the old story again; The beautiful hope for the dying, The halm to the spirit in panu; The help to the feeble that stumble, The pardon to sinners that fall; But, all for the "dumb, driven rattle" Ring clearest of all!

For man can cry out in his trouble, And tear drops may heal as they flow, But they in said silence must suffer. With never a voice for their woe; In cold of the pitiless cointer. In heats of a midsummer sun, There's never an end to their labor, Till life's work is done.

Dear bells, as you swing in your steeples, Above all the jar of the earth, Sug law of the ex by the manger, Afar in the place of his birth; And sing of the slicep on the billsides, The poor, patient ass to his stall; Of all recary brasts that must perish. Sing clearest of all,

Oh, man, looking up to the Father! With trust in his infinite grace, Look down, myour turn, on his creatures. That know but the light of your face, That know but the warmth of your loving, That wince at a word or a blow; Ahl all of the depths of their anguish No mortal may know.

Ring, bells? as the people are kneeling In beautiful temples of prayer; The cloth gleameth white on the altar, His blood and his body are there. And softly the bells are repeating The words out of far Galilee. " For een as your love for the loveest,

> Your love is for me." - Mary Kiddell Corley.

LEVI AND LEAH.

Chapter II.

THE first thing Christus did was to uncover his ad and kneel in prayer. The multitude hushed stantly. The priests and the lawyers, and the olessional scriveners or writers, leaned forward distened. They were watching a chance to conthin of treason to the Jewish belief. The only ^{ople} not disturbed were a dozen Roman soldiers, honed here and there in the crowd to keep the ate, Two, near Levi and Leah, said, one to the

*Dogs and sons of dogs! At the first stone's ow smite with the edge of your sword him who acarest to you."

Ay, said the other, "he is their king, and they nender their king attention or I will cleave the lof the nearest.

"Let us seat ourselves elsewhere," whispered

By the lives of our fathers, No," said Levi, and slipped a stone under his mantle. Here Chrisfuned his dark eyes on the youth. For a moof their eyes met, when the stone dropped from boy's hand and he sat down quietly by Leah's

Christus prayed thus, not in exact wording do we him, but after this manner:

th. We know thy greatness. We worship thee. but weaklings, and we need thy blessing. It this people. Be with thy Son in speakto this people. May they hear, and, hearing, be the glory through the glory through the glory through the glory through the green. the glory through the ages. Amen."

The a stone whizzed past Christus. Instantly

te was an uproar. The Roman soldiers struck that and left with the edge of their swords. tots flew, and men went down like logs, some and men went down like logs, and the dead and one or two cleft through the with blood, one or two cleft through ... dead on the ground. The friends of Christus

sat where they were. The boy, forgetting himself, picked up a large stone and drew back to hit the soldier nearest him, and in the very act of throwing a hand was laid lightly on his arm. He looked into the eyes of Christus. The stone dropped on the ground and he sat down by Leah. She laid her hand on his shoulder and held him with gentle pressure. "If you love me, sit," she said. In a short time the riot was quelled. Ten were dead or wounded, one a Roman, and one a follower of Christus was among the dead. The soldier who cleft the head of the follower of Christus said in the barracks that evening, " By the great god in the temple at Rome, when I took him by the throat he uttered only 'My blessing on you,' when I smote him to his death."

The sergeant in charge of the soldiers, after the tumult, strode to Christus and said in tones of authority, "Go on." And then spake Christus. Let us remember that it was in the twilight of the world, and that human life was of little consequence, and that the crowd was filled with all the vindictiveness born of religious fanaticism, and personal hatred of everything and everybody who differed from them and their narrow provincialism.

The accounts of the Sermon on the Mount as it has come down to us, are very incomplete in detail. Matthew, who was present and heard it, gives the best history. But it was about a dozen years after its utterance that he wrote, and there must have been much that he forgot. That he did not get it all is shown in the fact that others, sacred writers, introduce things omitted by Matthew. It is only by taking the sum of what is recorded that we get the fullness of the teachings of Christ. What Levi and Leah saw was a great crowd of people listening to the opening sentences of the speech of Christus. He spoke in the language of the people, understood by all present, save perhaps the Romans.

Then Christus began his discourse. It was so utterly new to the hearers that they listened intently. Not a single teaching of the Jews but that was subverted by the speaker. The very novelty of his discourse held the audience spellbound with interest. It lasted a considerable time, and at its conclusion a decided impression had been made, but some doubted, while others openly reviled. The talk began as the crowd broke up and dispersed, and it has been going on ever since, in all lands and in all tongues. Till the end of time, and the last man, the ethics of the Sermon on the Mount will impress

On the way across the plain, from the mount, Leah broke the silence:

- "What thinkest thou, Levi?"
- "What thinkest thou?"

"It seems to me," said the girl, "that what he said is right, and that he teaches the truth. What he said is in keeping with what you have told me of his character. But he speaks of Jehovah as we would of an acquaintance."

"That is what he has always asserted without reservation-that he was the son of God, and this is blasphemy."

"Not if it be true," said the girl earnestly. "Did you notice that his head shone as he spoke, at times? It did."

" Nav. I noticed it not, but I noted that he was fearless of all consequences. I believe that had he been stricken down while he taught he would have accepted his fate calmly. And he would not have defended himself. That, Leah, is the strangest part of the character of Christus. Once I saw a soldier, filled with mixed wine, cross the narrow street and smite him full in the face. May the blessing of the Father be yours,' was all that the man Christus said in reply to the blow. I would have taken advantage of his drunkenness and would have cut him with his own sword."

"Could you ever love all alike?" the girl asked, and she paused in her talk and regarded him in-

alike, but not all equally well. While he loved all, some were closer to him than others, but he never paid evil with evil. I have known him to go out of the way to heal the child of a soldier that smote him sorely the day before. This I thought of today when he said that we were to love them who used us badly. But I think it is not for me to do it. I will repay in kind,"

"Levi, he who spoke to-day is not a man such as walk this plain homeward from the place of meeting. He did not learn these things from the people about him. They are not in either the teaching or the practice of his surroundings. Where did he get them? How did he come into this habit of thought and practice? Did you not tell me that he was a poor carpenter, one not learned in the law, one who has not traveled, one who has not sought the company of the great and the learned? And so from whence these teachings that seem as though framed from the experience of ages of the wisest of the world if they came not from a higher power than we know?"

"Leah, I will ask him this night, directly, who and what he is, and if he says that he is the Son of God, I will ask for a sign, and if he gives it then will you and I follow him to the end, even though the way be that of the road to the cross."

"And Levi, I will follow and die with him and with you, if you but lead."

"This night will I ask him," said Levi, and so they parted.

(To be Continued).

OUT-OF-DATE MONEY.

From the Saturday Evening Post we learn that there have been many changes in the coinage of money in this country. Much of it is not in use but still possesses its face value if issued by the govern-

Much of this obsolete money is still outstanding, having never been redeemed by the Treasury. A stream of it comes steadily dribbling into the national strong-boxes at Washington, amounting to a few thousand dollars' worth every year, and the paper part of it is destroyed in the usual way, while nearly all of the coins are sent to the mint in Philadelphia to be melted and utilized as bullion. Under no ordinary circumstances will the Treasury pay out any of these out-of-date tokens of value, inasmuch as it is desired to withdraw them from circulation as far as possible.

Owing to their rarity nowadays, the one-dollar and three-dollar gold pieces are in demand, and applications for them are frequently addressed to the Treasury. So few of them are taken in by the department that, instead of converting them into bullion, it is thought better to keep them, and occasionally a few are given out at the discretion of the Treasurer, though only when it is understood that they are not intended for circulation. They are worth a considerable premium in the market at the present time.

As old preacher once told some boys of the Bible lesson he was to read in the morning. The boys, finding the place, glued together the connecting pages. The next morning he read on the bottom of one page: "When Noah was 120 years old he took unto himself a wife, who was "-then turning the page "140 cubits long, 40 cubits wide, built of gopher wood and covered with pitch inside and out." He was naturally puzzled at this. He read it again, verified it, and then said: " My friends, this is the first time. I ever met with this in the Bible, but I accept it as evidence of the assertion that we are fearfully and wonderfully made."

Two Irishmen were passing some blackberry bushes. "What's these, Mike?" inquired Pat of his companion. "Nothing but blackberries," said the latter. "But, they're red, Mike." "Well, Pat, "I once heard Christus say that he loved all blackberries are always red when they're green."

THE NATURAL BRIDGE, VIRGINIA.

BY O. R. BEACHLY.

A SHORT time ago it was our privilege to visit the Natural Bridge, in Virginia, along with a party of friends en route to the Annual Meeting. It had been my desire ever since my school days to visit this great natural wonder, and although I thought I knew what to look for, I was ready to exclaim, like the Queen of Sheba, that the half had not been told

I expected to see a small stone structure across a shallow stream of water several feet in height; but instead of that I was confronted by a huge mass of solid rock over a creek. The bridge is over two hundred feet high and when I stood on the bridge I was made to think as the Psalmist David did: "The heavens declare the glory of God; and the firmament sheweth his handtwork," as it was the loveliest piece of nature's work that I ever beheld.

As it was early in the morning when we arrived at the Bridge, we sat near it and ate our breakfast. As we were eating we saw a placard up with these notices on it: " Don't go home without seeing 'Hemlock Island,' 'The Ghost River' and 'The Lace Ripple." So after breakfast we started out to explore these three places. What do you think that Hemlock Island was?

It was a small tract of land with a shallow stream of water encircling it, with two hemlock boards fastened together with a wooden pin across the stream so one could walk over to what was called Hemlock Island.

The Ghost River we heard roaring but we could not see it as it was under the ground, but we saw where it emptied into the creek a distance further down.

The Lace Ripple was a large rock about twenty feet from bank to bank and several feet high with lovely clear water running down over it in ripples that just resembled a lovely piece of lace,

There are many other attractions to hold the attention of people in this country, but not one of them is of really greater interest than the Natural Bridge and all who have an opportunity should be sure to pay it a visit, for there is not another greater wonder than this in any part of the world.

TAILORS MAKE ODD CLOTHES.

The tall man took a coat from the rack and turned it round and round slowly.

"What do you think of this?" he asked.

The caller eyed the garment doubtfully.

"I hardly know what to think," she said. "It seems so kind of bumpy."

The tall man laughed. "Well," he admitted, "it is something on the bumpy order. But then, it is intended for a bumpy man. Bumpy people are my speciality."

"O," remarked the caller, apologetically, "1 didn't know that."

"Didn't you read my sign?" asked the tall man. Then he led the way out into the street and pointed to the white letters which informed passers-by that a tailor who sewed for cripples and deformed per sons did business there.

"I didn't notice that," said the caller. "It was hidden by the awning."

"So it was," said the tall man, "but so far as business is concerned it makes little difference whether my sign is visible or not, for everybody knows where to find me. You did not know perhaps, that the tailor business, like every other profession, is gradually being divided up into specialties. I have taken the bumpy people, as you call my particular patrons. For the last five years I have been working almost exclusively along the bumpy line, and now fully two-thirds of my customers are people troubled with some physical imperfection which they want concealed, or, where that is impossible, reduced to a minimum, by their clothes.

"It stands to reason that it is a difficult thing to give a deformed man a good fit. It might seem to the casual observer that any tailor who can turn out a well-fitting suit of clothes for a sound, upright man ought to be able to do proportionally good work for a cripple, but this theory does not hold water in practice. I know scores of tailors uptown

who do first-class work when sewing for their own trade, but as soon as they infringe on my specialty they make a botch of everything they lay their hands on. Their incompetency in that line is due chiefly to the tendency to give attention to the whimsical notions and suggestions of patrons.

" As a rule, a man whose physique is out of kilter is sensitive in regard to his shortcomings. He naturally wants the defect minimized to the greatest possible degree, and he has a grist of ideas which would, he believes, tend to improve his appearance. The tailor who has not learned from experience the cut best adapted to various deformities is apt to be guided by the most plausible of these suggestions, and the result is general dissatisfaction to all concerned.

"As for myself, having studied this branch of the trade for so many years, I consider that I am competent to fit the worst case of crooked limbs or bad back on record, and while I listen patiently to directions and apparently defer to the wishes of my customers, in reality I follow my own judgment, and the consequence is I am troubled by fewer kickers than any other tailor of my acquaintance. I am quite proud of my reputation, too. There are hosts of these bumpy people in town, and it is high time somebody was making a special study of their anatomy."

PROTECTED BY SUPERSTITION.

"THE ancient ruins of Central America furnish the most tempting field for exploration of any spot on earth," said Dr. John Rice Chandler, of Buffalo, who was in the city this week. Dr. Chandler was formerly government archivologist of Guatemala and is peculiarly familiar with the subject. "Unlike the ruins in the far East," he continued, "they have suffered but little from spoliation. The worst instance of that kind was at Santa Anna, in Guatemala. In the early 'So's some Germans obtained a permit from the president and literally sawed off the front of one of the most wonderful old temples in existence. Instead of taking the entire columns, they ripped off strips with stone saws and in that way secured a vast quantity of extraordinary basrelief carvings, which are now in the National museum at Berlin and among the most treasured of all that great institution's possessions. It was a piece of outrageous vandalism and, happily, has never been repeated.

"The most interesting ruins yet discovered are at St. Lucia Cozumalquopa, in Guatemala; at Quirigua and Zaculen and at Uxmal and Tikal, in Yucatan. At Ouirigua there are a number of enormous monoliths, covered with the most intricate and beautiful carving. They lined a sort of pathway up to a temple. At Zaculen the ruins are especially remarkable for the many large buildings. It was evidently at one time a great tribal capital. These and scores of other ruins have hardly been touched by explorers, and there is no telling what wonders they contain. The only considerable work that has been done in that region is by the archaeologists from Harvard, who have been coming down every year. Their surprising discoveries at the so-called "lost city" of Copan are well known to all students."

MAKE BOGUS BUTTERFLIES.

To take a common butterfly or moth and transform it into a beautifully-marked specimen worth a good price, is the business of the "butterfly duster," says the New York Press, and so well is the work performed that only an expert of lifelong experience can detect the fraud.

The markings are produced by applying to the wings a fine dust by means of a delicate spray, and these prepared powders are kept in every shade of color ready for use.

A certain dealer, who was absolutely above suspicion, used to show, by the way in which he refurnished damaged specimens of rare moths and butterflies, that this "dusting" could be done to perfection.

One of the devices of the "fakir" for obtaining much valued monstrosities is to take one bit from one insect and another from another, and then to join all the fragments together, so as to make one apparently perfect specimen. This combining can be done so perfectly as to defy detection, even with the microscope.

Many insects that are common in Europe are | guard.

very rare and worth golden sovereigns in the !. ed States, but there are minute points of differen that even the amateur collector can detect, the astute dealer, with all his appliances, rem the points of difference with the result that dreds of collectors have in their cases specim worth large sums if they were genuine that w caught and then dusted, glued, dyed and general manipulated.

There have been great developments in fraud late years. Say that an insect that has not h seen in this country for years is found in a g locality and scores of well-to-do enthusiasts wil to the place in the hope of catching another so men-artful ones get hold of living specimens some insect rare here but common abroad, turn out in a given district and then set a report of capture about. They, in point of fact, "plan specimens here and there and then lead the uns pecting collector to the spot and offer "faker

Even common caterpillars have by means of d been wholly transformed. Hair and other artific colors are added, so as to transform them into exact likeness of extremely rare species and the are sold for considerable sums.

But, most astonishing of all, there is a notable foreign dealer who makes it his boast that he sold at high prices hundreds of specimens of artificial chrysalis - a chrysalis made of india rul and other things-from which was expected emerge by the innocent purchaser one of the rap moths known. Thousands of collectors-and always youthful ones, either-have been gulled the India rubber chrysalis.

In no line do the men who can make an Ind rubber chrysalis and dye the "hair" of caterpil show more activity than in that of making birds' eggs to order for the young collector. sham eggs are of two kinds. In some cases there a great natural resemblance save as to one or markings, between eggs that are very common. others that are equally rare, and in this case common egg has supplied to it the markingst are peculiar to the rare one. This is done so att ly that the color is added in all but indelible, there are cases where other natural markings are moved so entirely with a combination of chem acids that only the microscope in the hands of expert can detect where they have been.

But much more ingenuity is expected on the of shams where the shells have been absolutely ricated. By means of molds, pigments and a terial which perfectly resembles the natural s substance a rare egg is made and so well is it d especially by the French dealers - that even perts often have been deceived.

ANTIQUITY OF BELLS.

BELLS as a means of calling people togetherh been in use from the earliest ages. We know they figured in the festivals of Isis, in an Egypt, were used in the responses of ancient cles, and were worn on the border of the garr of the Jewish high priests. Bronze hand bells found by Layard in the ruins of the palace of rod. They were used in the camps and garns the Greeks to call the troops together, no don meal times as well as on other occasions.

The Romans also were in the habit of them; it is said to be from their occurrence in icas and heathen temples that they came to be extensively adopted in Christian churches.

A MINISTER, having some children to bank asked the mother of one of them the child's She said "Acts."

"What, madam?" "Acts."

So he baptized the child by that name, and al ward asked why it was given that name.

"Why," was the reply, "this one is the fifth we named the others Matthew, Mark, Luke John."

"What will you do when you came to first Second Corinthians?" inquired the astonished

"Perhaps there may be twins, and then we call them First and Second Corinthians, and it be all right."

Reason is a man's guide, but principle is his s

Nature & Study -

THE GLADIOLUS.

BY J. K. MILLER.

THE Gladiolus is one of the most desirable of all the summer blooming bulbs of the present time, be summer blooming bulbs of the present time, and many people, who, a few years ago, knew only and many people, who, a few years ago, knew only and many people, who, a few years ago, knew only and many people, who, a few years ago, knew only and have them in a profusion of colors, ranging the have the hat are almost black. Those white to reds that are almost black. Those had have never grown the Gladiolus, or have had all the older varieties can not realize the beauty this grand and noble flower.

The Gladiolus is a native of Central Europe and Interpretation of Africa, and in its native state does not again to very much. It obtained its name from the Latin Gladius, which means a dagger, on account of its sword-like leaves which resemble the

Like most of the flowers of the present time they we been greatly improved by cultivation and wondzing, and may be divided into three classes, and may be divided into three classes, and childsii. The former ones we those which are mostly in cultivation, and are those which are mostly in cultivation, and are the world in almost every color known to the

The Gladiolus Childsii is a cross between the finest prieties of Gandevensis, and Saundersonii, and the sult is a flower of larger size, and colorings peculit to themselves. Single flowers will often measing three and four inches across.

Like most bulbs they are of easy culture, and any reasonable amount of care are sure to soom. Planted any time from April to June they all bloom from July to October. The flowers are one on long spikes often three and four feet high, and frequently have as many as twenty-five and bloom from the bottom up, and will last a week the more. As cut flowers the Gladiolus has few quals, and it cut when they first commence to soom they will continue to bloom in the house, and the colors will be even more delicate and beautiful.

There are hundreds of named varieties of ladiolus, among them, John Bull, white-tinged lolet; Isaac Buchanan, yellow; Leander, Islac; ladam Monneret, rose pink; Brachleyensis, scart. African, black red; and so on through a long large of names and colors.

BEES AND-MORE BEES.

RV JOHN E. MOHLER.

In find bees plentiful, go to the Southwest. In talleys of the Rockies south of the zero line, wand them in all imaginable places, and every ok that will shelter a swarm is occupied. Do you atalive for your very own? Put out a box, and at Orget a half-dozen swarms after the same anner. When the Brethren built a church in Arina, they wire-screened the garret windows to out the bees. When the Masons built their w brick hall, the ventilating holes in the loft one were neglected a few days, and a stream of s going and returning told of a colony of workthere, It is reported that a Roman church in da Mexico is breaking overhead from the weight honey stored in the garret, and the colony is so long as to be unmanageable, and that streams of her, from breaking combs, are ruining the seats d walls of the church.

The rocks in the mountains catch the runaway arms from the apiary, and the bee man doesn't swarms long in the Rockies. They are too appears there, and the yield of sweets is business there, and start the clicious-time. And "good" doesn't describe it. The rank, thisn't fit for bee feed there. Their finest honey the Mesquite tree, and a shrub called Cat-

Fron with low prices, the profits in beekeeping good. Honey is produced during the most of year, is easily taken from the hives, and winter old produce one hundred twenty pounds of

honey for the market, per year. Expensive honey houses are unnecessary, as the honey is often extracted out in the open, near the apiary, without the slightest danger of the bees meddling. Most of the honey is run in fifty pound cans, soldered shut, and shipped to the city markets.

DO ANIMALS UNDERSTAND HUMAN SPEECH?

BY H. R. TICE.

I will give the following true incident:

Out in Nebraska a ranchman owns a pet sheep, which he has taught to help him load other sheep for market. When a car is ready to be loaded Mr. Ranchman, says, "Now, Peter, we are ready," and Peter at once places himself at the head of the drove to be loaded.

When his master orders him to go he at once starts for the car entrance.

Should he go too fast, or before the others decide to follow, he has but to call him to wait, which he does until told to go ou.

"BE FRUIT-UL AND MULTIPLY."

INSECTS may be briefly described as small animals with very large families. They think nothing of having a few hundreds of little ones at a single birth. Many of them are never satisfied with less than 8,000 or 10,000, while there are not a few whose offspring resemble the sands of the sea, since they cannot be numbered for multitude.

One of these is the common English oil beetle, a great bluish-black creature which waddles clumsily about in grassy places in spring, and squeezes out an evil-smelling yellow fluid all over your fingers if you venture to pick it up. It cannot walk properly, for its body is so hugely distended with eggs that it drags heavily on the ground behind it.

There are some 50,000 of these eggs altogether, and the beetle lays them in batches in holes in the ground, 5,000 or 6,000 in a batch, and then considers herself as absolved from all responsibility with regard to their future welfare. The little long-legged grubs which hatch out from them, however, are quite capable of looking after themselves. They just scramble up the stems of the nearest flowers, and hide among their petals until bumble bees come along in search of honey.

Then they spring on to the hairy bodies of those industrious but somewhat simple insects, and ride them pick-a-back to their nests where they feed luxuriously on the eggs of the bees and on the food which they had stored up for the young. Another insect with a very big family is the fleshfly, first cousin to the common or household bluebottle. This creature believes not only in having as many little ones as it possibly can, but also in rearing them with the utmost practicable rapidity.

So, instead of laying eggs, as almost all other insects do, it lays live grubs, which come pouring out in a continuous stream, all neatly arranged side by side together, like ribbons from the mouth of a conjuror. These grubs, which are deposited upon carrion, at once set to work to devour it, and the more they can the hungrier they get, so that life is simply one long unbroken meal.

The common hive bee is fairly prolific, for the queen lives for three or four years, and lays eggs at the rate of about a couple of hundred a day from March until the end of October. Her annual output probably amounts to between 40,000 and 50,000.

The queen ant is more prolific still, for she drops eggs wherever she goes for her attendants to gather up and carry away to the nurseries. In many cases her offspring must number at least half a million in the course of a single season.

Even this magnificent record, however, is put into the shade by that of the queen termite, whose body swells out with eggs to such an enormous extent that she looks like a large white sausage, with a tiny head and six absurd little legs at one end. The workers build a strong clay prison around her, inclosing her in a narrow cell, from which there is no possibility of escape. But the precaution is quite unnecessary, since she could not drag her great, lumbering body along for a single inch under any circumstances whatsoever. She can only lie perfectly still for four or five years and pour out

eggs in one continual torrent, while hundreds of tiny workers pick them up as fast as they fall and carry them away. In the subsequent career of her numerous little ones she takes no interest whatever. She is simply a live machine for producing millions and millions of eggs.

But the efforts of the queen termite, great as they are, never result in so vast a family as that of the aphis—the formidable "green fly" of the farmer.

An aphis does not lay eggs, as a rule, until the very end of the summer. All the rest of the season it produces living young by a kind of budding process, little ones sprouting out of its body at the rate of some twenty-five a day. This goes on for a month or five weeks, while the young are born in so advanced a state of development that in a very few days they begin to set up budding operations on their own account. So the original parent very soon finds herself surrounded by descendants of the fourth or fifth generation. And, moreover, all these little ones are females. Aphides of the masculine persuasion are exceedingly rare. They only make their appearance, in fact, once in every season, so that aphides, when they die, are gathered, not to their fathers, but to their mothers.

The consequence is that these creatures multiply with almost inconceivable rapidity.

CAT'S EYES AS TIMEKEEPERS.

It must be conceded that in some qualities of primitive, but practical resourcefulness the Chinese are ahead of most civilized nations. All travelers agree that if in a district where clocks and watches are unknown you ask a Chinaman the time of day . he will, if well disposed, at once proceed to ambuscade and capture the household cat, and after pushing up the lids and looking for a moment into its eyes he will tell the time with astonishing accuracy. The explanation is a simple physiological one. The pupils of the cat's eyes constantly contract until midday, when they become like a fine line, as thin as a bair, drawn perpendicularly across the eye; after twelve they begin again to dilate. It is to be hoped that if the practice is ever introduced into this country watches and clocks will continue to be made, as there will probably be many who will not care to run after a cat whenever they want to know the hour, or who may fear some danger to their own eyes from too close an examination of hers.

The Chinese have by no means a monopoly of the cat as a perambulating timepiece. The negroes of Jamaica are very well acquainted with the method of telling the time by looking at the effect of the sun on pussy's eyes, and those who twenty years ago were quite illiterate and could not tell the time by a watch used to resort to this method for discovering the time of day. I have myself repeatedly, watch in hand, asked a negro to tell the time in this way, and it was very rare indeed for him to be five minutes out by the clock.

DO DOGS THINK?

Do dogs think? Yes, replies Herr Steiner-Brunner, the landlord of the Hotel du Glacier at Meiden, in the Turtmannthal. Herr Brunner left his mountain hotel during the past winter under the guardianship of a watchman, whose only companions were a couple of dogs-a French "griffo" and a little "spitz." A month ago the watchman was cutting wood in the neighborhood of the hotel when he was suddenly overwhelmed by an avalanche. The two dogs were with their master and must have seen him thus buried by the fallen mass of snow. Unable to get at him for his release, his two canine friends, either with or without holding counsel together, rushed down the mountain (which stands at the height of eighteen hundred metres above the sea level) and made their way to Herr Brunner's house in the valley. There, by snorting, barking and other signs of excitement, they made the landlord understand that something extraordinary had occurred at the summit. The host, with three men and the two dogs, ascended to the Hotel du Glacier, a journey which occupied them nine hours. When they arrived at the spot where the accident had happened "it was as clearly indicated by the conduct of the two dogs as if they had said in words, 'This is the place.' " The watchman was soon excavated.

THE INGLENOOK.

PUBLISHED WEEKLY

At 22 and 24 South State Street, Elgin, Illinois. Price, \$1.00 a year. It is a high grade paper for high grade boys and girls who love good reading INGLENOOK wants contributions, bright, well written and of general interest. No love stories or any with killing or cruelty in them will be considered. If you want your articles returned, if not available, send stamped and addressed envelope. Send subscriptions, articles and everything intended for INGLENOOK, to the following addresss.

BRETHEN PORLISHING HOUSE, Eigin, Illinois.

Entered at the Post Office at Elgin, Ill., as Second-class Matter

ANSWER YOUR LETTERS.

THERE is a class of people in the world out of whom it is next to impossible to get an answer by mail. Write them a letter, enclosing an addressed envelope for reply, and you might as well put it in a box in the barn at home as far as ever getting a reply thereto is concerned. These people would be wonderfully displeased if they were to speak to a person they knew, and receive no reply whatever, yet when one of them is asked a question by mail it is the rarest thing for the kind of people we are talking about to answer it. As a pretty general rule it discloses a mental condition that is not to be desired by any one.

We hope no Inglenook boy or girl will ever fall into the habit of neglecting their correspondence. It is not expected that every letter will be answered. If the patent medicine man sends a mass of circulars, with the unstamped envelope enclosed, anybody is at discretion whether it is answered or not. But a letter with a postpaid, addressed envelope, is another thing. It should have the courtesy of an immediate reply, or at as early a date as the information sought is available. The man who carries it around with him, neglecting it, always has his reasons. At the bottom of all of them is a lack of business capacity. If you were running a store, and the man with unanswered letters in his pocket applied for credit you would be very safe in saying no, unless you wanted your bill carried around the same way when it was due. It would not be good business to discount his note, if you were a banker. The chances are that he would let it go to protest, as he does his letters, and it is not a sure thing to make an appointment with bim, for he will forget it and then make excuses when you meet him, usually straining the truth pretty badly in his explanation. All this is not because he does not answer his letters, but because of a mental and moral slackness of twist that makes him neglect his correspondence. He is not a reliable man, and he is all that that implies.

Cultivate the habit of answering all letters at once, and making no delay, for the habit of promptitude and exactness is a valuable one.

SUNSTROKE.

The other day a lady employed in the Publishing House here was overcome by the heat, or, what amounts to the same thing, had a sunstroke. Under prompt treatment, she readily recovered in a few hours. It may not be amiss to tell something of sunstroke, its cause and its treatment, for the benefit of Inglenookers who may be called upon to act promptly in an emergency.

In the first place sunstroke, so-called, may be induced by the heat, sun or no sun. It is the heating of the blood, and the consequent effects, that causes the disease. There is this ever present symptom by which the trouble may be known. The skin is always hot and dry, - always. If the patient is sweating it is not sunstroke. The first symptom is usually a cessation of perspiration coupled with a greater or less degree of dizziness. As long as the person is sweating, even though insensible or delirious, it is not sunstroke, and does not demand sunstroke treatment.

Now for the treatment. A man or woman, reeling, or dropping over, has a hot, dry skin, and all the surroundings in the way of temperature indicating the disease, the first thing to do is to remove the patient to a quiet, shady place, removing all clothing likely to cause heat or obstruct respiration. Then apply cold water, ice water if accessi-

ble, to the head, face, hands and arms of the patient, fanning the while. In a not too severe case this will usually bring the person around. After that it is simply a case of rest and quiet surroundings till a perfect cure is established. It should be remembered that a patient once sunstruck is peculiarly liable to a recurrence, and great care should be taken, for a long time to come, to not repeat the conditions likely to cause a repetition. In some severe cases very grave after-effects follow, but the preliminary and immediate symptoms and treatment herein outlined will be doing all that is possible in the emergency when quick action is called for.

THINGS POLITICAL.

THE INGLENOOK has nothing to do with politics. Around the office nobody ever talks politics, and if anybody has any thoughts about it they are not expressed. The facts are that nobody here cares very much about it. Yet it may not be out of the way to present the names of the regularly nominated candidates. There are more of them than one would think, ten combinations being presented. Nobody, of either or any party, expects anything else than it will lie between McKinley and Bryan.

The present year has been prolific in Presidential tickets. More of them have been put forward than in any year in the country's history. In 1872 there were eight tickets in the field, five of them being Democratic in name or in some form or other. The parties that have held conventions and made nominations this year are given below:

Socialist Labor, Job F. Harriman, of Cal., for President January 27, Max S. Hayes, of Ohio, for Vice-President Social Democracy, Eugene V. Debs, of Ind., for President J. F. Harriman, of Cal., for Vice-President United Christian, Rev. S. C. Swallow, of Pa., for President May 1,..... John G. Woolley, of Ill., for Vice-President People's Party, William J. Bryan, of Nebr., for President May 9,..... C. A. Towne, of Minn., for Vice-President Middle of the Road, Wharton Barker, of Pa., for President May 9, Monnelly, of Minn., for Vice-President DeLeon Socialist, Joseph F. Maloney, of Mass., for President May 23,.....V. Remill, of Pa., for Vice-President Republican, William McKinley, of Ohio, for President June 19, T. Ronsevelt, of N. Y., for Vice-President Prohibition, John G. Woolley, of Ill., for President June 28, H. B. Metcalf, of R. I., for Vice-President Democratic, William J. Bryan, of Nebr., for President July 4,..... A. E. Stevenson, of Ill., for Vice-President Silver Republicans, William J. Bryan, of Nebr., for President July 4, No nominee for Vice President

The strength of the different parties and the votes they received four years ago are important in their bearing upon the contest this year. They were as follows:

McKinley and Hobart Republican	7,104,779
Bryan and SewellDemocrat	6,349,490
Bryan and Watson Populist	149,820
Palmer and Buckner National Democrat	133,124
Levering and Johnson Prohibitionist	132,007
Mattchett and MaguireNational	36,374
Bentley and Southgate Socialist Labor	

There they are, and any reader is hard to please if he does not find some party with which he can affiliate. Ordinarily the conditions are such that the final results can be almost certainly predicted, but it is not exactly that way this year. It will not be safe to be too sure of results until the votes are all counted. It is the unexpected that happens in politics sometimes, as well as in other matters.

CHINESE EGOTISTI.

BY A BOXER.

You Europeans and Americans look at Chinese matters only from your own point of view. Ah! if you could only look at them from ours?

Western civilization is to us a mere mushroom. It is a thing of yesterday. Chinese civilization is unnumbered thousands of years old. We consider ourselves at least two thousand years ahead of you.

There was a time when we had, like you, our "struggle for life," our race for wealth, our ambition for power, our haste and hurry and worry. We, too, had your clever inventions—gunpowder, printing and the rest—but we have lived long enough to find out how essentially unnecessary all these things are.

We have also had our periods of douht, fanancism and dissension in matters of religion, where had our martyrs, our reformations, our non-conformists, our intolerance, and finally our toleration. Yes, thousands of years ago,

But, as I say, we have outgrown it all. From the experience of past centuries we have learned and dom; from the mistakes and disasters of our ancestors we have learned that none of the things for which we strove were really worth striving for.

Our passions and ambitions have settled down into a calm desire for happiness in this world; our religion is reduced to a philosophy of life which the test of the last 2,000 years has proved to be absolutely sound.

We believe that the best thing to pursue in the life is happiness, and we teach our children that their happiness can be secured only by the performance of duty, by the observance of moral and business obligations, and by surrounding one's sel with a circle of equally happy friends and relative

If a Chinaman prospers beyond the lot which falls to his kindred, he finds his greatest happing in sharing his good fortune with them, and in China we never cease to work. There is no such thing a "retiring from business." Work is part of our pleasure because it is part of our duty.

We believe in making the best of this life, which is the only one we know anything about for certain All through China you will find the same level uniform spirit of content. We are as well off as we want to be, and no man can improve on that,

Now these being our circumstances, you of the Western World come to us with what you call you new ideas. You bring us your religion, an infant of nineteen hundred years. You invite us to built railways so that we may fly from place to place at speed which for us has neither necessity nor chain You want to build mills and factories so as to debase our beautiful arts and crafts, and produce law dry finery in place of the beautiful texture and but which we have evolved after ages of experiment.

Against all this we protest. We want to be alone. When we ask you to go away you refuse and you even threaten us if we do not give you or harbors, our land, our towns.

And now, having carefully considered the matta we of the so-called Boxers' Society have decide that the only way to get rid of you is to kill you. We are not naturally bloodthirsty. We certain are not thieves. But when persuasion and argments are of no avail, we find ourselves face to faw with the fact that the only recourse is to put yo out of existence.

Consider your missionaries. They come, as have said, with a new religion, upon the mainpin ciples of which they are divided bitterly and themselves. They tell us that unless we accepted their doctrines we shall suffer eternal punishment. They frighten our children and the more weak minded of the older people, and create all kinds dissensions between families and individuals. We wonder that we will not tolerate them.

If we wanted your railways and machines of could, of course, buy them; but we do not. We have no use for them. Yet you say you will lot us to buy them whether we will or no. Is that just I say it is an impertinence—an outrage.

A good deal is made of the fact that we are a soldiers. Well, we have ceased to be soldiers a cause we have become civilized. War is a barbar ism. In spite of our great mortality, which seems to be very shocking to you, although we recognite in it only a wise provision of nature, the Chine race is increasing at a greater rate than any other people in the world.

We could, if we chose, overwhelm the rest mankind. That we do not do so is due to the period of our civilization, our philosophy and morals. We number 400,000,000 human beings to morals. We number 400,000,000 human beings to who could withstand us if we chose to asset to power? Do you think we are unconscious of the contrary, we understand it only too not the contrary, we understand it only too not they are the masters.

There have been twenty so-called successful vasions of China. Have these invaders dominate the Chinese? No. The conquered have absort their conquerors. All have become Chinese.

Don't seem on the lookout for crows, else for set other people watching. - George Filet.

MRS. McGHEE'S TROUBLE.

MeGHEE is an Irish lady living in Elgin. Mass are mashing, and, as she puts it, also Thitewashin' an scrubbin', when she gets the chance. Mr. McGhee was also of Milesian extraction, working in the quarries down the river. One day a premablast took the husband, and father of the two ture phase boys, up in the air with it. When he came down they gathered him up, and, considering all the circumstances, the wake was as good as could be expected. This untoward event rendered Mrs. McGhee a "widdy woman," much given to dlating on the virtues of the husband who was upfiled in the quarry. Invidious neighbors had the bad taste to say, behind her back, of course, that when Paddy McGhee was alive she made it pretty marin for him at very frequent intervals. Nevertheless, Biddy herself, always referred to him as "a mon among min." But all this is simply preparatory and introductory to the trouble she is in Her story is printed so that some bright Nooker can immortalize himself by helping her out

Teldy and Patsy are her boys, redheaded and fickled, thoroughly boyish boys, good to their mother and standing by her manfully, if she can succeed in finding them when she wants anything done. Now Biddy was thinking one day that she might utilize the services of Teddy and Patsy selling apples at the two stations in town. She had the apples in the back yard, a tree of red ones, and after of yellow apples. So she gathered up two old splint baskets and in one she put thirty red apples, and in the other thirty yellow ones. She had polished them on the edge of her flannel petticoat ill they shone, and they were really good to look at Then she called up the two hopefuls and delivered herself to the effect that they were to take these baskets, one to the Northwestern Station, the other to the Milwaukee, about a good stone's throw apart, and there sell them. The red ones were to go for two for a cent, and the yellow ones three for scent. Mrs. McGhee had worked it all out by laying them out on the table. There would be as many cents in one basket as there were two apples in the whole lot. She found by actual experiment hat the thirty would bring in lifteen cents. At three for a cent the other basket would net ten cents. Now all the world over ten cents and fiteen tents make a " Quaarter," and a quarter a day would work wonders in time. The boys' faces were knubbed, and the two started about noon. In less than an hour they were both back, sold out, "enbely, entirely," as Patsy said. "An', Mither, I kin bitivery day the like of t'day." And Teddy assted that no "ridhid Irish" would be able to best min business. Then they emptied their pockets nd Biddy counted up. "Jist as I made it afore, bilder, dear, a quaarter it is, an' no mistake." And legave them permission to go down to the river th many injunctions to not think of going in amming. An hour later they were ducking each ther in one of the deepest holes in the stream.

The next day another venture in the apple line dled another twenty-five cents, which, by the me token, raised the amount in the cracked sugar in the upper shelf of the cupboard to "fufty ants, an' no mistake." It was clear that the two Pple trees would go a long ways toward extinshing the rent. And then happened something all made Biddy McGhee pretty sure that Auld tekie himself was in figures. It was along this me of occurrences. Teddy McGhee, having been orbidden under pain and penalty as bad as any baginary Boxer torture to cat any apples that Ight be sold, betook himself to unripe fruit, and a special picnic of his own so filled himself with the green ones that he lay doubled up, howling whimpering the most of the night. The next y found him all tuckered out, so that he could on take his apples to the station, and Biddy beoght herself of the scheme of putting the red yellow apples all in one basket, sixty of them, Sure stem go at the same price as before. Sure," she said, "two for a cint, an' tree for a cint 1965t all the same as foive for two cints." And dsy fully agreed to the arithmetic. ouldn't: Isn't it clear that it is just the same? A

Well, in an hour or so Patsy came in sight swingto the house he shouted out to Biddy, "Mither, it's as easy as lyin'. I sold the whole of them and I have the money in the pocket of me." And he emptied it out on the kitchen table. Mrs. McGhee counted it over twice. She turned on Patsy and let loose on him. "Ye little thafe of the wurruld, and wild ye chate your own darlin' mither out of a cint? Hand over that last rid cint or fess up what yez did wid the money,"

" Mither, it's all there. All I got is there, an' no mistake about it,"

"Ye miserable little spalpeen ye, to contrary yer ould mither an' say she can't count. Wull yez count it yersilf, I dunno, maybe?"

Patsy counted it over three times and it came out twenty-four cents each time. There was no mistake about it.

"Mither, if I was to die for it this minnit, an' if Father O'Hooligan himsilf wor here, I'd have to say I dunno, I dunno," and he began to whimper. Mrs. McGhee thought a moment, and then started down the yard toward the apple trees. Patsy believing that this was going for a switch set up a howl. From the depths of the bed in the corner Teddy hoarsely whispered "Rin for it, Patsy, sthay out till daark an' she'll be so glad to see ye aint drown that she niver think o' whuppin' yez."

But Biddy walked in resolutely, her apron full of apples. She counted them out into two piles, thirty in each, and invited Patsy to stand by and see the "thrial," with the entirely gratuitous assertion that she would " teach him the lesson av his loif, in a minnit."

She divided the apples in two piles, thirty in each. Then she set aside two, laying a cent beside the pile. Clearly the amount was fifteen cents. Then she tried it with the other pile of thirty, setting aside three apples and laying down a cent leside each pile. It took ten cents to match the piles. "An' ye miserable little audacious, sneakin, thaving' redhidded by, dy'e see that now? Twenty-five cints."

"Now ye see, I'll joost mux them up togither, an' tree for a cint an' two for a cint make foive for the two cints, it do. An now here do be the twilve piles av foive aich, an' here goes the two cints to th' pile. Dy'e see that same, now?"

Patsy did. Then Biddy began to count up. What! There was only the twenty-four cents, just what Patsy had brought home. Patsy was watching, and he shouted out, "Now thin, who's stole the cint?"

"I'll thry it over, onct," she said.

She tried it many times, each and every way, and when they were sold two-for a cent and three for a cent twenty-five cents resulted. But when she mixed them and sold them for the same price, five for two cents, she was short a cent every time.

"Sure an' I don't understand it at all, at all." Who can tell how it happened?

THEY CUT PRECIOUS GEMS.

Among the hills of the Nahe River, in the grand duchy of Oldenburg, Germany, is the curious little principality of Berkenfeld, with a population of about 42,000 people. For hundreds of years the principal industry of this out-of the-way place has been the cutting and polishing of precious and "half-precious" stones. Although an improved factory system is just beginning to be introduced. into the community, most of the work is still done in the same old laborious manner in which it has been for so many generations.

In the early days there were agate quarries in the hillsides of Berkenfeld, and it is, without doubt, due to the existence of these quarries that the chief industry of the principality lowes its origin. But the quarries of agate have long since been exhausted. and now to the hillsides of the quaint German region come cargoes of agate, amethyst, jasper, opal and topaz from far-away Brazil, lying where the Organ mountains lift their heads to the southern cross beyond strange seas, of which the Berkenfelders only dream.

The usual method employed in Berkenfeld in cutting and polishing these stones is the following:

In a rude but by a stream, which furnishes the power, four large grindstones about four feet in dione foot above the floor, into which a succession, we are a passing dog, and when he got to the that part of the grindstone is below its level. This his jokes. ameter are so fixed that their axes are only about

lower portion passes through the water, thus keeping the stones constantly wet.

The operator has a bench or block of wood ahout eighteen inches high, hollowed out to receive his chest and body. On this bench he lies at full length, and with his fingers holds the small piece of opal, amethyst or other stone which is to be cut against the grindstone, slightly above the level of the floor. In this position the men lie from morning to night, day after day. Consumption usually carries them off at an early age, but other men are found to follow this vocation, as the earnings are comparatively high. The operator usually owns his grindstone, or at least half of one. This represents an investment of about \$500, and a skillful lapidary can earn from \$15 to \$25 per week. He does not usually cut and polish stones on his own account, but generally contracts with manufacturing jewelers, who furnish him the stones in the rough, to cut and polish at a certain price per gem. As the stones, even in the rough, represent a considerable outlay of money, the honesty of the workman must be greatly relied upon, for nobody can say in advance how many grams of finished stones a certain piece of opal, amethyst or the like may yield.

Besides these half-precious stones, precious stones such as diamonds, etc., are also cut and polished there, but this is an entirely different branch of the industry, and is chiefly carried on in factories with modern machinery.

Another branch of the industry in these parts is the cutting of cameos.

Pearls also are polished, drilled and cut and shipped in large quantities to all countries, including the United States.

FATTEN GIRLS FOR MARRIAGE.

Throughour Morocco, and especially in Tunis, the capital city, many of the adult members of the population fullow professionally the pursuit of fattening young women for the matrimonial market of Barbary. The Moors, like the Turks and most other orientals, give a decided preference to "moon-faced" wives over lean ones, and are more solicitous as to the number of pounds which their brides weigh than about the stock of accomplishments they possess.

A girl is put under the process of fattening when she is about twelve years of age. Her hands are tied behind her and she is seated on a carpet during so many hours every day, while her "papa" stands over her with a matraque, or big stick, and her mother at times pops into her mouth a hall of consconssou, or stiff maize porridge, kneaded up with grease, and just large enough to be swallowed without the patient choking.

If the unfortunate girl declines to be stuffed she is compelled, so that ere long the poor girl resigns herself to the torture and gulps down the boluses lest she should be beaten.

A SHERLOCK OF RAUMEN.

A RIGHTZ who was gathering up wornout clothing in the country purchased a pair of discarded trousers at a farmhouse and remarked to the man of the house as he paid for the stuff he had bought: "I see, sir, that you are about to lose your land

on a mortgage."

"Gness you are right," said the discouragedlooking farmer, "but will you tell me how the Sam Hill you found that out?"

"Easy enough," said the cheerful ragman, as he settled back on the seat of his peddling wagon. "I notice that these old pants are completely played out so far as the part of 'em you sat down on is concerned, but they show mighty little wear anywhere else,"

Cyryr is a weight used by goldsmiths and fewclers. Originally the kains bean was used for this jumpose; hence the name. A carat is a weight of four grains, when used in weighing diamonds; and when used in reference to the fineness of gold, pure gold is supposed to weigh twenty-four carats of twelve grains each. The fineness of gold used for ornaments and jewelry varies from eighteen carats down as low as twelve, and even ten carats. Coin is purer. The alloy is various, in jewelry usually

LEARNING TO MILK.

BY ANNA M. MUTCHEL.

Among the various ambitions of the little country lass, the one that usually surpasses all others is the great desire to learn to milk the cows.

But at last the happy hour arrives when the little maid is considered old enough for the grave and responsible position, and the oldest and most gentle cow on the farm is the one selected from which to learn the rudiments of the milking art, and invariably it is the one nearest "going dry," so that a good milking cow will not be spoiled by the slow and uncertain methods pursued by the inexperienced milkmaid.

Well do I remember the gentle old cow we called Fanny, from whom I learned my first lessons in that line. Several generations of Fannies, Spotties and Daisies have arrived and lived to reach sober cowhood, flourished for a while and then passed to the realms of the cattle buyer or the beef barrel, since that eventful day when my long-cherished desire was granted and I was permitted to help to do the milking.

Attired in a calico frock, bare feet and a torn sunbonnet, I entered the field of action-namely, the barnyard-armed with a tin cup and a goodsized bucket, which I fondly hoped to be able to fill with the foaming milk I expected to extract, and thereby surprise the rest of the family who appeared a little dubious as to my success.

But, alas! I was doomed to disappointment in attaining that bucket full of milk. After being informed to always stand at the right side of the cow to operate, I took my place and proceeded to follow the instructions freely given by the other members of the family, but my most energetic efforts failed to induce that milk to come.

After I had tugged and pulled until the sweat rolled down my face and my wrists were decidedly crampy, I was rewarded by a tiny stream that suddenly shot forth, but not having the experience necessary to guide it aright, it failed to enter the tin cup. But the success had revived my sinking spirits and I continued the attack with renewed vim and vigor, and though the result did not come up to my expectations, yet 1 was not utterly discouraged when I found I had the tin cup one-third full by the time the other girls had the rest of the cows milked.

"If at first you don't succeed, try, try again," is a very good motto to apply to the milking business, for there is nothing but experience will make us perfect in that ling. Like all other vocations in life it has its ups and downs, even more so if you are connected with a kicker. In my estimation it requires about as much courage to tackle a kicking cow as to go to war, yet who ever hears of the heroism displayed by many a humble milkmaid?

A few briar scratches judiciously distributed will give a zest and excitement to an otherwise homely task, you would hardly believe possible. As unsuspicious you begin operations as usual, you suddenly discover yourself sprawling around on the ground, while one foot of the cow is executing a war dance in the milk pail, and another foot is sweeping majestically through the air in close proximity to your

Another favorite pastime of some cows-and one about as effective as a small cyclone-is to keep up a steady kicking with first one foot and then the other, until you become accustomed to this move, when the tactics are suddenly changed and with lightning-like rapidity she kicks twice in succession with the same foot. This move is usually accompanied with a switch of the tail into the milker's eyes, given with a zeal and energy entirely uncalled for and decidedly unpleasant.

The above are but a few examples, however, from among the numerous and varied assortment of moves and combinations in cow-kickerism.

Newburg, Pa.

WILD FLOWERS OF COLORADO.

BY NANCY D. UNDERHILL.

Kansas is called the "Sunflower State," but Colorado is her twin sister. During August and early

September we can gaze upon acres and used great golden beauties, holding their lovely sunlit as it is not necessary to his rest. An Arab can great golden beauties, holding their lovely sunlit as it is not necessary to his rest. An Arab can faces up for the King of the heavens to smile upon. sleep as the dogs do, on the footpath, along the Unlike some of the tame varieties, they do not always turn their faces sunward, but most of them does sleep. A bed is therefore by no means and greet him the first thing every morning; just as ev- variable article of furniture; but a large copper by ery happy child of God ought to greet the Sun of sin, called a tisht, is. In it the Arab washes him Righteousness, with a loving heart of pure gold ev-, self and his clothes, and in it, too, he keeps ha ery morning, ere the day's work begins.

When we have plenty of rain, the stalks of this plant grow to a height of five or six feet in many places, and their broad green leaves spread out like dainty green parasols. There is another variety, however, whose blossoms are smaller and more abundant, and whose leaves are more narrow. They are quite as beautiful as the larger variety, though they do not grow so tall.

Then we have the wild cypress, a tall spike of the most beautiful scarlet blossoms, these grow only about two feet or two and one-half feet tall, and the spikes of blossoms are about one-third to one-half the length. We have wild harebells, lilies, roses, flax, daisies, geraniums, bluebells and many other varieties whose names I do not know,

But our flowers are almost odorless, except the cleoma or spider lily, whose odor is disagreeable. The air being so light, even tame flowers do not emit so much odor as in the East. There is a beautiful wild four-o'clock, as we call it, which grows upon hills and mountain sides; it has purple blossoms and grows in great clusters upon low bushes which come up from the living roots every spring. It blossoms the second year from the seed, but the plants live many years. The blossoms, however, like all tame four-o'clocks, do not open until five o'clock, here, and they close about nine o'clock the next morning.

There is a beautiful vine, which clambers over the bluffs, and bears clusters of dainty white blossoms. We call it "wild elematis." Every portion of the State yields some different kinds of wild flowers. But those of which I have written are quite general, as are also the beautiful cactus blossoms which come early in summer and remain through July. There is a small variety, the plant of which looks like a round ball covered with thorns, and bears the earliest blossoms. We call it the "pincushion cactus." The first to blossom has light green flowers opening down among its thorns in the spring before other plants are grown to much size. Then come the red and pink blossoms later.

Then there is the variety which bears yellow blossoms like large roses, and has flat, *thorny leaves. After the blossoms are gone, they bear fruit, which is pale crimson in color and oblong in shape; about two inches long, and one inch thick. It consists of a tough skin, decorated with tiny bearded thorns, and a great many little hard seeds, which resemble tomato seeds.

Then we have the elkhorn cactus, which grows about three feet high, and bears very pretty and durable red flowers. They blossom in July. The most notable feature about these plants, however, is their very thorny surface. They are like some people: pretty, but unapproachable. Should you desire a closer acquaintance, you will receive a sting which will teach you that some things are made to be looked at, but not to be touched.

There are many weeds which bear beautiful autumnal blossoms, and very pretty leaves. But among them all, I believe the little wild daisies, with their pure hearts always open to the sun's warm rays; and the rich golden sunflowers, always reflecting his warm light, are the most useful, and would be missed more than all others, should they cease to exist. So it is, I think with the purehearted and sunny-faced children of God. They make the world more beautiful than all the others put together.

There are daisies and sunflowers among people, as well as among the plants.

HOUSE OF THE ARAB.

In the Arab's house the most conspicuous object is, perhaps, a large wooden box covered with rough Arabic designs in red and yellow lions-this contains his treasures, a copy of the Koran, a tin looking-glass and other curious things.

If the house is a fairly good one there is also a large wadded quilt, bataneyeh, upon a hed, but this is not always in evidence, for a bed is not an indis-

September we can gaze upon acres and acres of the pensable article in an Arab's furnishing, inasmu meat, when he has any.

The Fellah uses his house but little; it is for him a shelter from the heat or from storm; but as heat is at no time unendurable during the winter months and as storms are of rare occurrence, Arab life can be studied where Arabs chiefly live, out of doors,

A group of Arabs seated at their midday meal make a picturesque scene. They sit with their backs against some garden wall, with feet drawn up their favorite pose. Brown earthenware hasing hold the food. The enamel lining of one is a bril. liant green, and it is filled with oil in which tomatoes are swimming. A purple mug has in it a yellow mixture, specks of some finely chopped green vegetable float in the greasy liquid and lengths of coarse bread lie about on the ground. Each breaks off what he needs, and all dip into the dishes, using fingers and bread indifferently.

FELLING TALL CHIMNEYS.

DEMOLITION of a tall chimney, when accomplished in the same manner by which it was erected, brick by brick, is tedious and expensive.] England a quicker, cheaper and more effective way has been devised and a chimney 200 or 300 led high, that took months to build and which weighs several thousand tons, may be thrown down in a few days at an insignificant expenditure of time and money, says the Scientific American.

This scheme consists of removing the greater portion of the base of the chimney, substituting thick wooden underpinning for the masonry and then firing the props, which burn through and the chimney collapses. James Smith, living in a Manchester suburb, originated the idea and has overthrown a hundred chimneys without any mishaps, and some of them were the largest in existence.

An area a little more than the length and breadth of the stack is sufficient for it to fall on. An incision is made in the chimney about five feet hom the ground facing the direction in which it is to lall and corresponding cuts are made on the sides, the bricks from the cuts to the ground being removed As the bricks are taken out an underpinning of six by six timbers is inserted, the work being carried on till two-thirds of the base of the stack has been so treated. By this time it is listed over slightly in the direction it is to fall and rests entirely on the underpinning. On the reverse side of the climney a crack now appears.

When the underpinning is fired the chimney falls. not intact, but telescoping itself. One stack 30 feet high and weighing 3,500 tons required for turns ing the underpinning over six tons of coal, toal tons of pitch, forty sacks of shavings, to8 gallons of tar and 126 gallons of paraffin.

"MARRIAGE a failure! I should say not!" marked an Oregon farmer, whose opinion was sired on one of the questions of the day. "Wh there's Lucindy gits up in the mornin', milks cows, gits breakfas', starts four children to sken looks after the other three, feeds the hens, likewise the hogs, likewise some motherless sheep show twenty pans o' milk, washes the clothes gits die ner, et cetery, et cetery. Think I could hire any body to do it fur what she gits? Not much! Mar riage, sir, is a success, sir; a great success!"

"Bonny," said his mother, "did you give hall o the orange to your little sister?"

"Oh, yes, ma, I gave her more than that?" re plied Bobby, with a generous air

"Did you, indeed, Bobby? Why, that was red

"Yes, ma, I sucked the juice out and gave her? nice of you.' the rest."

"Kinn lady," he inquired as he inspected the staff of a great daily journal, "what is your work this journalistic establishment?"

"I write the Reveries of a Bachelor, kind six she replied sweetly.

ooo The o Circle ooo

AMONG OUR CORRESPONDENTS.

Oxe sister asks some questions concerning Circle we answer them here for the benefit of al who may want the same information. She wants know how these meetings are conducted. We suppose no two meetings at different places are consucted just alike. We can give but a general idea of the programme, as in each locality they vary in mall particulars. The meetings are opened by cipture reading, singing, and prayer. Then some opic is taken up and discussed. We have been giver a topic for each week's meeting in this paper, After spending a short time on that, there should be paper read, bearing on some phase of mission work.

Is some meetings they spend about twenty minutes n reading from some one of the Circle books, each number reading in turn. The meeting is closed y singing and prayer. It is very essential to have 1300d leader, who will assist in getting up good grogrammes. She also asks when and where to hold the meet-

She also asks when and where to hold the meetings, in some places they are held in the homes of the members on some evening, others prefer to ave them in the church, some are held in the burch on Sunday evening before services.

Sometime ago Sister Lovenia S. Andes, of Lanaster, Pa., sent us a number of names; now she
intes as follows: "I rejoice to tell you that our
keading Circle is increasing in numbers here in
ancaster City. Ten more persons have been addad to our number. I have just finished reading the
book, "The World for Christ," and now I am readag, "In the Volume of the Book." We intend to
have another Missionary meeting next Monday
weing; we have a very interesting programme for
that meeting. Our sewing society meets every
Ihursday afternoon in the missionaay room of our
thurch to do sewing. The children's sewing class
meets every Saturday afternoon. We praise God
of the missionary spirit manifested among his peoble."

We are glad to note the steady growth of our linde. This week we welcome the following new numbers:

TEROW OUT THE LINE-LINE - Captain Pritchard disof the rescue of a man who was swept overoad one night in a storm. The British ship unnesslin was weathering the gale, when the Cap-In heard the cry, "Man overboard." He rushed ut and the steersman said he had thrown a life hoy pretty near where the man was. The ship as going nine knots an hour, the sea was frightful, at was pitch dark; the man could not swim. at the Captain determined to do his best to save resilor's life. He sailed back to the place where t man had fallen in. A volunteer crew manned le life boat, and all hands were set to watch and sten for the missing man. The life-boat was imbice of in the darkness, only the of the sailors came faintly to the ears of on the ship. There is anothing and waiting on the ship. There is anothing awesome and dreadful about leaving the p at night in a small boat, and the Captain and anxiously for the return of his men. At last the faint cheers reached them from the direction which the boat had gone. It was returning, by rockets which were sent up from the ad heen clinging to the buoy thrown him by the etisnian, it having fallen within his reach.

We see, here and there, one who is making ship-the faith. What are we doing to save him?

Coulomb the church aroused, and on the lookout to

Sunday A School ...

THE MINISTER'S BOY AND HIS DOG.

WILLIE was asleep and Dan was lonely. Willie is the minister's son. Dan is his dog. It was Sunday morning, and every one was at church but these two friends. It was warm and sunny, and they could hear the preaching, for their house was next door to the church.

"Dan," said Willie, "it is better here than in the church, for you can hear every word,"

In some way while Willie was listening he fell asleep. Dan kissed him on the nose, but when Willie went to sleep he went to sleep to stay, and did not mind trifles. So Dan sat down with the funniest look of care on his wise black face and with one car ready for outside noises.

Now the minister had for his subject "Daniel." This was the name he always gave Dan when he was teaching him to sit up and beg and other tricks. While the dog sat thinking, the name "Daniel" fell on his ear. Dan at once ran into the church through the vestry door. He stood on his hind legs, with his fore paws close beside the minister, who did not see him, but the congregation did. When the minister shouted "Daniel" again the sharp bark said "Yes, sir," as plainly as Dan could answer.

The minister started back, looked around and saw the funny picture. Then he wondered what he should do next, but just then through the vestry came Willie. His face was rosy from sleep and he looked a little frightened. He walked straight toward his father and took Dan in his arms and said:

"Please 'scuse Dan, papa. I went asleep and he runned away."

Then he walked out with Dan looking back on the smiling congregation. The preacher ended his sermon on Daniel as best he could, but then he made a resolve if he ever preached again on the prophet Daniel he would tie up that dog.

WHEN GOD IS SILENT.

However greatly we may rejoice to hear the voice of God, there are times when the soul welcomes the silence which God keeps. When remembered sin urgently presses upon our thought, when remorse is keen, and despair is almost master for the moment, God may mercifully allow the grief to pass with never a word from him. His comfort would shame us sorely, and his censure would only deepen the shadow. As a loving father waits in silence while the tempest of contrition sweeps over his dear son, and then lets his love shine in through the scattered clouds; so our heavenly Father gently keeps us close to himself until the passion is overpast, and then what earnest of his love he gives us in conscious nearness to him, in peace and quiet, and in his promise of forgetfulness! "He will not always chide." Nor will be always speak words of comfort. He will do at the moment what is most needful for us, and the silence of God may well be the comfort we most need at such a time.

To do right is the real obligation that faces us, A thief, defending himself by saying, "But a man must live," was met with the answer, "I do not see that." There is no necessity to live, but there is a supreme necessity to do right. Thousands of men and women have laid down their lives rather than do wrong. Let us never allow what are called the lower necessities of life to say a word in the presence of the imperial "ought."

Toxques alone cannot work much mischief in the world. It takes ears to make the work of tongues complete and efficient. If tongues must be bridled, ears must be stopped. Many a man who would not tell an impure story or give impetus to a ribald jest will do his part in demoralizing himself and his fellows by opening his ears to it. Deafness helps the evil speaker to hold his tongue.

HAVE patience, teacher, the child must learn. To walk in wisdom's way.

From failure and fault, from error and wrong.

You guide him to the day.

A GRAIN of wisdom can be spread over a larger surface than a grain of gold,

For * the * Wee * Folk

SANCHO PANZA.

BY AUNT FANNY,

I AM not going to write about the famous Sancho Panza who figured long, long ago in the story of Don Quixote, but will give you a true history of a namesake of his, who was about as wise if not as noted, and who lived in Ohio forty or fifty years ago.

He was a large, handsome Newfoundland dog. He gave us many proofs of intelligence. One thing he learned when quite young, was to carry a basket, or package, from his master's office, uptown, and never stop on the way or permit anyone to rob him, but with an important look would deposit the parcel when he reached his home, and then look up and expect words of praise, which he was sure to get, before he would run away contented and happy. No matter whether his basket held beefsteak or mail he kept all as a sacred trust for the distance of about three blocks.

On his route there was a certain store where a loafer's bench in front was generally filled with idle men and boys, who tried in many ways to get the basket away from Sancho. He soon learned to turn out into the street just before he came to the place of trouble and when beyond he would return to the sidewalk. Did not that show sense? Was it not better than to growl and fight his way through?

Sancho was very fond of little pets. Every small or helpless creature found safety by his side. Sometimes visitors came to his home with little babies and then he was nearly frantic to be near the child. He would loll out his tongue and talk baby talk after a fashion of his own, and I suppose the babies understood, for I never knew one to be the least bit afraid of him. They would bury their little dimpled hands in his great black glossy curls, and the more they pulled his ears the better he seemed to like it.

One time a stray kitten found a place in the affections of our hero, and shared a place in his bed and board, and so lived happily and well protected. But one luckless day a boy was delegated to destroy the lives of all the feline race in the neighborhood. So this particular kitty was put into a sack with some others. A string tied up the sack and a stone fastened to it so that all might sink in deep water and so drown the kittens. Now there was a beautiful stream of water flowing along one side of the village and the boy mounted the bridge and when about midway he slyly dropped his bundle into the water. We thought he had been so quick and sly that Sancho had not seen him; but not so, for Mr. Sancho was in the water and out again, with the precious bundle before the surprised boy could say "Jack Robinson." The sack was soon undone and the wet kitten nosed about in the dust until she was a sorry sight. But her quick-witted friend soon saw his way out. He grasped her by the nape of the neck, like old cats when they carry their kittens from place to place, then carried her back into the water and swashed her about until the dust was all off her. Then with a high head he marched straight home and laid her carefully under the kitchen stove, as much as to say, "Now stay there till you get dry." And you may be sure that kitten lived about as it pleased after that.

Sancho was generally very friendly with everyone, although sometimes he showed a decided dislike for certain persons, and we had such faith in his wisdom that we thought there must be something bad in every person that Sancho disliked. After these many years I am glad to write this tribute to his memory.

Little sister May and I
Can sing sweetly when we try,
If everything is pleasant and we're glad;
But our voices are so weak
And it hurts our throats to speak,
When everything is dreary and we're sad!

A FITTLE lad of three years when asked why he had opened the gate after being forbidden to do so, replied, "To get a little fresh air."

Unless you believe in the heroic you will never be a hero.

WHERE AND HOW THE DOCTORS GET DEAD BODIES.

Ax old woman in a faded dress and with a threadbare shawl about her shoulders rang the bell at one of the best-known medical colleges in Chicago the other day and waited nervously for a response. In a minute the janitor opened the door.

"I am looking for my son," said the woman in a trembling voice.

"What class is he in?" asked the janitor.

"He isn't in any class. I am looking for his body.'

"Oh, I understand."

"They told me at the county hospital that he was dead and that his body had been sent over here. Can you tell me whether or not you have it?"

"I can take you to the basement and let you see if you can identify it."

The janitor led the way to the room where the bodies are kept that are awaiting dissection. There the poor woman identified the remains of her son. She was at once told by the authorities of the college that she could take the body, but when the woman learned that it would cost \$25 to bury the remains she said that she could not take them. Then she requested that after the college had made use of the corpse the remains should be buried instead of cremated and that the number of the grave be sent to her. The wishes of the mother were respected and after the burial in potter's field out at Dunning the number of the grave was sent to her.

The body of the boy had been furnished to the Demonstrators' association of Chicago by the Cook county hospital in conformance to the laws of of Illinois. In 1885 the State legislature passed a "pauper remains" law which has proven its excellence. The law provides that the warden or superintendent of any State institution, such as the county hospital or poorhouse, shall deliver to the medical colleges all bodies of the dead whose burial would otherwise have to be conducted at the expense of the State. For the refusal by such an official to deliver a body there was provided a fine of \$50 for the first offense, \$100 for the second and \$200 or a year's imprisonment in the county jail or both fine and imprisonment for the third. No fine has ever been necessary. All of the officials to whom this law was directed give up all of those bodies which would have to be buried by the State-in other words, those unclaimed by friends.

For the equitable and fair distribution of these bodies the law provides that they shall be allotted to colleges in proportion to the numbers of attending students. To carry out the intention of the law in the best way possible there was formed by the colleges a representative society, called the Demonstrators' association. Each of the twenty-seven medical and dental colleges in Chicago sends one delegate to the association, and these twentyseven comprise its entire membership.

Once every month the association meets to consider questions of importance that arise in regard to the handling of subjects and to hear complaints from those representatives who think their colleges have not been treated justly in the distribution of bodies, if there should be any such complainants. In the person of Dr. J. M. Dodson the association has a "distributor" whose duty it is to attend to the proper division of all the corpses which fall into the hands of the association. That Dr. Dodson has held this position for eleven years is an indication of the satisfactory manner in which he has filled it. The association is entirely voluntary and was formed by the colleges in the belief that each school could through the ministrations of the society, get what belonged to it more cheaply and more expeditiously.

In the course of a year between 700 and 800 bodies are given to the association. Nearly fourfifths of the bodies are those of men, as women in the county institutions are much more likely than men to have friends who will bury them. If the officers of the institution at which the pauper dies think it possible that some one may turn up to claim and bury the remains a red card is attached to the body. This card is the signal which indicates to the college receiving the body that it is to be held as long as possible awaiting a claimant.

The delivery man of the Demonstrators' association is telephoned that a body is awaiting disposition and the driver goes to the institution with a wagon especially maintained by the association,

and, securing the body, takes it to whatever college Dr. Dodson indicates.

As soon as the body is received it is embalmed, and when this process is contemplated the corpse is frozen perfectly solid by a process designed especially for the purpose. After being properly frozen a body can be preserved in perfect condition for a period of two years. Those that have been preserved have been reclaimed by friends or relatives as long as five months after they have been received at the colleges. After the bodies have been dissected the remains are either cremated or interred in the potter's field out at the county asylum for the poor.

Bodies which are of especial interest on account of death having ensued from some peculiar form of disease are not taken at once to any college, but are conveyed to the county hospital for immediate examination and all of the students from all of the colleges are at liberty to attend the examination and accompanying demonstration. All bodies which go to the colleges are for the purpose of the study of anatomy only and not for the tracing of any disease or its effects.

CATCH FROGS FOR A LIVING.

Among a class of people residing along the shores of Oneida Lake in the vicinity of Upper South Bay the industry of hunting frogs is surpassed in importance only by that of fishing.

Frogs' legs and fish go together in making up an appetizing meal at many of the Oneida Lake summer hotels, and killing frogs and catching fish are kindred pursuits. In this manner a score of Oncida Lake longshoremen make a livelihood. The frog business, however, is comparatively new.

During a greater part of the season frogs are found in marshy places along the lake shore. A frog hunter sometimes uses a spear, but more often a long, stout club. The club has a flat end, and one well-directed blow will add another frog to the collection in a hunter's basket.

During the summer months frogs are found on high ground, having migrated from the bogs bordering the lake. Hayfields are a favorite abiding place for them in summer, and it is no unusual sight to see a frog hunter following a mowing machine and aiming blows at frogs that are exposed to view as the grass falls.

In the southeastern part of the State there are inclosed frog farms with artificial ponds. Here frogs are raised for the New York City market. While central New York cannot yet boast of a real frog farm, an Oneida Lake man is proprietor of something closely resembling such an institution.

The Oneida Lake man has a large yard on his premises inclosed by a tight board fence. In the yard are thousands of fine-looking frogs. They were picked up along the lake shore last spring before they had awakened from a stupor brought on by a few days of cold weather.

The owner of this collection of frogs is able to fill orders from hotel proprietors for fresh frogs' legs promptly. By going into the yard with a lantern at night as many frogs as are required may easily be picked up by hand, providing the collector is careful to make no noise.

Frogs' legs, after being dressed, are left on ice for a day or more to make them good for eating. Twenty or twenty-five cents a pound is the price usually paid by Oncida Lake hotel proprietors.

A POUND AND A HALF OF HUMANITY.

A round and a half of baby has come to Walla Walla, Washington.

An atom of humanity that you could cradle in the palm of your hand is cooing and growing in our neighbor State.

A twelve-inch infant with hand so small that the mother's wedding ring could be slipped over it and up to the elbow, has gone upon record as a western wonder in diminutive.

A pound and a half. Why, even the ghost of a baby would weigh that much.

This phenomenally small human being is a girl. The mother-and a proud, happy mother she is, too-is Mrs. E. E. Ellison. The Ellisons live in a cozy little cottage on West Rose Street, Walla Walla. The wee baby was added to the family circle some six months ago, the fifth child in the fami-

And the remarkable part of this baby story that Baby Ellison is doing beautifully, thank you She is well and "knowing"—every mother under stands what that means—and unless all press signs fail will go on cutting teeth and being as dea and sweet and troublesome as other babies are, Ga bless them, be they girls or boys.

Take a ring off your finger, look at the small golden circle and try to imagine a baby hand that that same ring would encompass; a wrist that could wear the ring as a bracelet, or an arm that could pass through it to the clbow.

Then you will have a good idea of how Baby Ev lison's mite of a hand looked at birth.

The nurse said she never, never, in all her days saw such a baby; a baby that you almost had to put spectacles on to find when you heard it crying somewhere among the downy pillows. And ven naturally, for nurses love their helpless charges; motherly fashion, this nurse was anxious to give specially tender care to a poor little scrap of a creature with such unequal chances of living in a world that big, fat, healthy, roly-poly babies sometime find a rather difficult one to cut teeth in and have awful colic pains in. So she almost watched even breath that baby drew into its infinitesimal ham Never was more professional solicitude and anxiet centered upon one small, red-faced, squirming ob ject than was given Baby Ellison.

Whether it was the care or the love or the prayer that lingered about the little crib in the little cottage where lay the tiniest baby girl, who can tell? At any rate, there isn't to-day a healthier six-months-old in all Washington than the youngster who tipped the scales at a pound and a few ounces over.

There have been other phenomenally small babie in this big world. Medical records relate a number of such instances, but they have all died soon after birth, nature not being able to kee the breath of life in their frail bodies. Baby Ell son is the exception to the rule.

LACKED POWER OF EXPRESSION.

A CANDIDATE for the position of teacher in a New Hampshire district school was found sadly deficient in spelling, grammar and mathematics, and it was with a perfunctory air that the examiner turned to the subject of geography.

"Where is Chicago?" he asked, selecting a ques tion at random from a sheet of miscellaneous qu

"Well, it's out West," replied the candidate wit the tone of one who had unexpectedly landed of solid and familiar ground.

"In what part of the West?" persisted the heatless examiner.

"Well, now," said the young man, with an ingo ious but fleeting smile, "I know whereabouts in the Union Chicago is, just as well as anybody. I could go right there if I had a ticket, but I haven't the flow of language to make it clear, that's the on ly trouble!"

A FEAT BEYOND HIT.

A Scorrish prison chaptain, recently appoint entered one of the cells on his first round spection, and with much pomposity thus address the prisoner who occupied it:

"Well, my man, do you know who I am?" "No, nor I dinna care!" was the non-chalae

reply.

" Well, I'm your new chaplain."

"Oh, ye are? Then I had heard o' ye helord" "And what did you hear?" returned the ch lain, his curiosity getting the better of his digni

"Well I heard that the last twa kirks ye were ye preached them baith empty; but ye will no it it such an easy matter to do the same wi this one

> And all the day you'll have good lack." " SEE a pin and pick it up. We'd all believe that in a mante Of one that has a diamond mill

THE INCLENOOK

"The Inglenook" will be Sent to any Address the Rest of this Year for Twenty=five Cents, or will be Sent the Rest of this Year and all of next Year for One Dollar.

The Best Way is to send the Dollar and be Done with it. After You Have Read it for a Week or two, You'll be Softe that You Didn't Save Money by Subscribing for the Whole Year at Once. It's a Paper that Grows on One. Once Read, Always Read!

We Want Agents, == Real Live Agents

In Every Part of the Country. Anybody can solicit Subscribers at the Twenty-five Cent Rate, and Whoever Sends in Club of Ten of These, Can have his Choice of ONE of the following books:

Beside the Bonnie Brier Bush, Dictionary of the Bible, Natural History of Birds and Quadrupeds, Black Beauty, Dream Life,

Drummond's Addresses,
Ten Nights in a Bar-Room, Adventures of a Brownie, Imitation of Christ, Etc. Intellectual Life,

If he gets twenty subscribers he can have two books; for thirty subscribers three books, and so on. . And they could be had in an hour's work in many a place. Whoever shows himself an efficient agent will be put in line for the Fall work connected with the INGLENOOK. There is a library of Fifty bound books waiting for somebody.

The Agent who sends in the largest list of dollar subscribers between this and the first week in January, 1901, will have sent him a Library of FIFTY BOOKS. Here is the list:

Adventures of a Brownie, Æsop's Fables, Auld Licht ldylls, Autobiography of Franklin, Autocrat of the Breakfast Table, Bacon's Essays, Beside the Bonnie Brier Bush, Black Beauty, Burns' Poems, Child's History of England,

Confessions of an Opium Eater, Dictionary of the Bible, Dream Life, Drummond's Addresses. Emerson's Essays, Ethics of the Dust, Fairy Land of Science, Fifteen Decisive Battles, House of Seven Gables, Imitation of Christ, -

Intellectual Life, Lays of Ancient Rome, Longfellow's Poems, Lorna Doone, Mosses from an Old Manse, Nat. History Birds and Quadrupeds, Poe's Poetical Works, Prue and I, Rab and His Friends, Revenes of a Bachelor,

Samantha at Saratoga, Sesame and Lilies, Sketch Book, Sticket Minister, Stories from the History of Greece, Stories from the History of Rome, Story of an African Farm, Ten Nights in a Bar-Room. Thirty Years' War, Twice-Told Tales,

Window in Thrums, Education. In His Steps, Minister's Woonig, Professor at Breakfast Table, Lamb's Tales from Shakespeare, Lallah Rookh, On Liberty. Tanglewood Tales, Sign of the Four,

The Agent sending in the next largest list will have the choice of TWENTY-FIVE books out of the above list. The third largest list will entitle the Agent to FIFTEEN of the books, his choice; and the fourth largest list will win TEN of the cloth bound books. There is also a cash commission going to the Agent. We prefer the services of the Messenger Agentif he will write at once for the place, but we will put the first live applicant into line, as the INGLENOOK is not going to be the las in anything. If agents desire to enter for the Library they should say so in order that we may keep tab on subscriptions received at the office. Elgin city is barred in the competition for prizes.

The announcement of the successful Agent will be made in January, 1901.

A Live Paper for Live People.

The Inglenook is no longer an experiment. It is regarded as phenomenally successful by experienced newspaper men who know what they are talking about. The reason is not hard to find. It is a FIRST-CLASS PAPER, with nothing of and commonplace about it. It is up to date, and always will be. It will have something new in each issue, it always has and it never will fall below its self-set standard,-being the best paper of its kind in the world. You can't read it without being interested and instructed. The whole wide-spread world is ransacked in the interest of its readers. The INGLEXON isn't made with a dull pen and a pair of shears. It is a five paper for five people.

Some of the best known men and women in the church will write for the INGLENOOK next year. The like of it was never undertaken in the church before. Look at the names, note the subjects! Every man and woman in the list knows what they are talking about.

And there are Others. You Can't Afford to Miss all This.

There will be serial stories especially adapted to the church. They are already written and on file. by members, for members. One is begun in this issue of the INGLENOOK. It will run through four issues of the paper You'll want the next number sure, and if you delay subscribing you may miss something of more than passing interest There will be a story illustrating the old time banning or avoidance, which will be a revelation to most readers.

Strange occupations will be described, and foreign lands visited, and now hear the conclusion of the whole matter. YOU CAN'T AFFORD TO MISS HAVING THE INGLENOOK, and you will do well to write us, enclosing your st scription to-day.

LEVI AND LEAH.

Chapter III.

THE night of the day of the Sermon on the dount the house of Matthew the taxgatherer was he scene of a remarkable group. There was Mattew's wife, his son, Christus, and a visiting neighor, anxious to learn more of what had been said. The men reclined on the divan, a sort of seat that be brounded the room and which served excellently or a resting place.

The youth inquired through his father whether the might ask a question. Then Christus answered: "Levi, have I not dwelt with you and your people for months? Have not the sick been made tell, the crippled to walk, the blind to see, the maked to reason aright, and have not blessings followed those who injured me? Why do you

Levi was struck dumb. His question had been asswered before he had asked it. The reply was nanswerable, Here was a man doing that which man had ever done before, and man or God, it stot within human reason to protract the mental suggle. With all the impetuousness of youth he

"Rabbi, thou art the Son of God. Lead that I ay lollow in thy footsteps. I am not worthy, but save thy blessing, and also thy blessing an anoth"She bath not doubted."

"Son," said Christus, "Thou art doubly blessed."
On the next street a family sat in council.

defewere Leah's father and mother, her brother

Daughter," said the father, "I saw thee at the string of that arch conspirator this day, and in at you do not consort with such."

"Father, may I ask why I am not to be seen with either Levi or Christus?"

"Because Christus is but a common deceiver, and his followers are not those first in the councils of Israel. There is not a law of our faith that he does not willingly and easily break. He is a rough Galilean, a peasant worker, and he will come to the Cross if he does not cease his blasphemous works."

"But, father, how do you account for the wonderful miracles that he hath wrought? He has cured the sick, and helped the poor. And he blesses those who revile him. Is it not so said in our law?"

"Child, thou understandest not. He is not what he seems. Those who know him best, his own brothers, and others nearest him, do not believe in him or his teaching. He is a coworker with the Evil one. Keep from him, and from the son of Matthew, his kinsman, lest thou cast reproach on Israel."

"And why from Levi?"

"Daughter, he is the son of Matthew. He, Matthew, was the first to apply for the place at the Roman customhouse. He wrings taxes out of the Lord's people. He is despised among his kinsmen. For gold he has sold his birthright. As well that he be a barbarian outright, as to sully his people with the reproach he casts upon them. As to Levi, he is the son of a renegade Jew, and he will be as his father when he is grown."

"As to the relation of Matthew to our people he is, as I know, despised among men, but Levi is a comely youth, and should not be held for the sins of his father. Christus I know to be a good man. When the Roman smote him in the mouth he passed by and answered not in kind. Christus owes no man. He is not either a borrower or a consumer of other men's wealth. He asks no question as to causes or conditions when he is approached by those needing his help. He helps and asks not again. If Levi should find that he is really the Son of the Most High willingly would I follow him to the ends of the earth, alone, and deem it a high privilege to be his servant and minister unto him."

"And I say to you, that if you leave your home for Levi, son of the Publican, curses and not blessings, follow thee."

"And I say to you, and to all my kinfolk, if indeed Christus be the Son of God, and if Levi follows him, there will I be also, yea even though the cross waits me. If our lot leads to poverty, I will not murmur. If Levi be called to the palace and from thence to be taken to the arena, and cast among the lions I will be by his side. And when the tawny brutes cast themselves on him I will cast myself between them and him. If he dies for the truth I will die with him. If Levi should staod on the steps of the synagogue and speak to the people, and should there be a stone cast, or a dart thrown, I will be between him and harm. If Levi believes, so believe 1. Whither he goes I will go. His God shall be my God, his people my people, and as I will live with him, so will I also die with him. As well ask the waves of the lake to cease lapping on the shore as for me to conceal truth and forget love. Better that---"

Here a tumult in the street caused alarm, and Leah's father went into the street to ascertain the cause. A body of civilians with clubs and stones came noisily in sight. In the forefront of the throng, lit by the glare of the torches, was Christus, near him was Matthew, and just back of him was Levi. The crowd was a noisy one. It spoke of the tribunal and sedition and blasphemy were the words overheard. Levi whispered to his father,

"Shall I go to the barracks for a file of soldiers and rescue all?"

.For answer Christus turned upon Levi, and said to him, "Angels guard, not men." Just then Leah darted between and seized Levi's hand. She whispered to Levi, "Didst ask him? Is he the deliverer?" "All hell shall not prevail against him. He is the Son of the Ever-living God. I follow him to the death."

"Levi, I will follow you." It was simply said, but it meant much. She never regretted it, not even when, standing in the center of the sands of the arena fifty thousand people saw her torn by the African lions two years later. She said, "Whither goest?"

"To the High Priest's, charged with sedition. We are taken with him."

Here a man noticed the girl. He spoke:

"Is this woman with him? I think I saw her stand on the mount a little back of this deceiver when he spoke this day to the people. Wast there, woman?"

Leah made no reply, and her silence angered the man.

"Speak, vile——," but the name was never called, for Levi smote him in the face. At once there was a riot. Men fought blindly, Christus and Matthew standing apart. In a few moments there came the steady tramp of a file of soldiers, and like magic the crowd dispersed, Matthew dragging Levi after him, and Leah following. Christus had disappeared a few moments before. He was at Matthew's door when the party arrived. He said:

"They who love me will not answer evil for evil, nor will they strive to mar the visage of the rude or the angry. Nought can be of mine save that which is of peace and love. But, Levi, for the sake of her I give thee my blessing, and when thou lovest as she loves me keep my commandments."

Levi remembered then, that he had once more fallen in the pit of the wicked, and that he was the cause of all the trouble. And yet Christus had blessed him.

(To be Continued.)

WAS NOT THE RESIGNING KIND.

"In the days of the old N. Y., P. & O. Railroad Company," said the retired conductor, "there was a superintendent on the Meadville division named Dunbar. It was a season of many strikes, a period of unrest, and he was having a great many petty and unpleasant experiences with his men.

"There was one passenger conductor whom I will call Smith, who was slow, plodding and forgetful. He brought his train in late so often that Dunbar grew tired of reprimands and determined to fire him.

"One day when Smith was away behind time the superintendent wrote him: 'Your resignation will be accepted on presentation.' There was no answer and Smith went on balling up the time tables with his old, serene good nature. Then came a second letter: 'Your resignation will be accepted immediately.' Still there was no response. In a day or so the superintendent asked who was in charge of a certain belated train. It was Smith. Then Dunbar, who was mad all over, telegraphed him: 'On reaching Meadville put your train in care of head brakeman and report at this office immediately.

"Smith showed up, serene and content as ever.
Did you get my first letter?' demanded Dunbar.
I did.' 'And my second?' 'Yes, sir.' 'Then why didn't you send in your resignation?'

"Smith looked at his chief for a moment, in earnest innocence. Then he said: 'See here, Mr. Dunbar, someone has been lying to you. I never thought of resigning. No, sir; I like you too well for that. I don't care if every other man on the road gets down on you and quits—I'll stay by you to the last, and here's my hand on it.'

"Mr. Dunbar was knocked endwise. Then he said: 'All right, Smith, go back to your train. All I wanted to say was that if you don't come in on time hereafter I'll put you on a freight. That's all.'"

Women are always trying to find out things they would rather not know.

🛎 Correspondence 🛎

IN THE FATHERLAND.

In an interesting letter from Munich Sara Stafford writes thus entertainingly:

Surely, the proverbial thrift of the German has not been exaggerated; it is foremost in every detail of life, and especially in the housekeeping, where absolutely nothing is wasted. Economy is the watchword, and where we feel this baneful, though admirable, practice most is in the use of the linen; for, though the rooms are scrubbed vigorously daily, with a thoroughness equal to our own annual house cleaning, the guests must manage with two towels a week. Clothes are washed once in three weeks, and sheets are changed only every ten days Napkins do good service many a meal, while in many places they are not used at all for breakfast. Little rests are provided for the silver, one knife and fork doing the work, the knife being especially busy, for a variety of courses, mostly of meat. And oh! how they love yeal and hare and cabbage -cabbage in every form-- red cabbage, white cabbage, werzing, another species, cauliflower, sauerkraut and Brussels sprouts. No meal is complete without it, until we echo the cry of a clever American who said: "I wish all the hares would eat up all the cabbages in Germany and then go off and die!"

Marketing is done on a small scale, and one meets the pretty bareheaded servant girls constantly running out for a few pfennigs' worth of this or that. And how much is required of these same servants, toiling constantly, doing the work of a woman and several men! Each is the cook, the scrub woman, the chambermaid, the laundress, the porter, the furnace man, the messenger boy and the lady's maid in one. In the last-named service the servants attend their mistresses to and from the theater, where they wait with the cloaks and scarfs to save the fee of checking them. All this work for \$4 or \$5 a month, while an excellent " fraulein ' can be obtained to take entire charge of the housekeeping and do the cooking for \$75 a year! A tax . is levied on those keeping servants, which insures hospital care in case of illness.

Over here "the hand that rocks the cradle" is busy cleaning the streets, hauling bricks, blacking shoes, pushing milk carts, carrying coal and plowing fields, while it is not unusual to see a woman and a dog pulling a cart. In Cologne this is particularly noticeable, but in Munich it is not so common. Calling attention to this one day in the presence of a resident of Munich, he replied proudly and unconsciously: "No, one seldom sees that in Munich. Bavarians are very fond of their dogs."

Perhaps this hard work may account for the number of cripples and hunchbacks one sees, though, as a rule, German children are the most beautiful I have seen. They are not only lovely, but sturdy, and have the most marvelous pink and white skins. In Munich they are especially attractive, as they wear the pointed-hooded cape of the little "Munchener kindl," familiar to us through beer mugs and calendars.

All through Germany the streets are gay with officers and soldiers, who make pretty pictures with their gorgeous uniforms and clanking swords; but they are almost too lovely, and one fancies them self-conscious and vain and quite the puppets they look. Emperor William has set the fashion for the entire German world from the raw recruit up through every station of life, and everywhere is seen the bristling mustache with its abrupt ascent to the eyes, suggestive of much time and enormous perseverance. The shop windows are filled with an arrangement of net and elastic which is used to give this masculine vanity the proper ox-horn curve. One hates to picture the dashing German emperor sleeping in this absurd device, so closely akin to curl papers, yet it is said he does, and is the originator of the invention.

An Englishman who shared the same stateroom with an important German officer during a storm so terrific as to send all on board to bed, says that though the Teuton was too ill even to remove his clothes or touch a morsel of food for three days, he carefully tied on this little aid to beauty and kept it on during his entire illness. Women who have been seasick cannot fail to appreciate and admire the intricacies of a vanity so complete as this, for most of us frail sisters will admit that this is one

moment when we don't care whether our hair is in curl or not, and our personal appearance is a matter absolutely unthought of.

The American girl and the German man regard each other with some animosity, for each is used to reigning supreme, and the antipathy is natural. German men are gods in the eyes of the entire family, and it is pitiable to see in what awe and humility the wife stands of her better half. Especially is this noticeable among the military, who are such exquisites that the insignificance of the wives makes a striking contrast. A speaking commentary on the sphere of man and the sphere of woman in Germany is the tapering, slim waist of the man and the huge, clumsy one of the woman. Surely, though, there are no more polite men in the world than those here. Their bows are incomparable, and in some instances the hat sweeps the ground in a truly D'Artagnan manner, and all this formality for man to man. Even the little boys are masters in the art, and the amount of saluting gets to be fairly wearing. Despite this ostentation of manner, however, we observe that in a rush for a car the men get in first and the women, in consequence, often have to stand on the platform, no matter how severe the weather, as the law forbids any more in the car than can be scated. The street car conductor greets each passenger cordially with "Guten tag," and, if one fees him, which he expects, with a parting greeting. There is perfect safety in offering a fee to almost anyone, and it is astonishing how a few cents will oil the wheels.

A strange contradiction to German character, with its lack of variety, is shown in their arrangement of flowers, which is as effective as it is artistic, the florists' windows being dreams of beauty.

Germany is supposed to be the most comfortable country on the continent in winter, but we, who are used to American ways, find it difficult to accustom ourselves to the economy in the use of coal. The stoves are monumental affairs of porcelain, reaching nearly to the ceiling and resembling nothing so much as a large family tombstone. They are filled in the morning and locked up for the day, which is very irritating to our extravagant hearts. The fire is allowed to go out at night, the feather bed covering or "plume" affording most satisfactory warmth. In the kitchen, in order to save coal, little baking is done, and all the bread is bought.

Although this is a land of spas, the daily bath is a thing generally unknown, and a bathtub a rarity. Perhaps this is one reason the watering places find such constant popularity. The beautiful skins of the people and children at Wiesbaden are accounted for by the use of cold water. A pan of cold water is kept on the floor, and the children upon coming in thrust their bare feet into it and then go bare footed. This is said to be an excellent remedy for cold feet and a great stimulus to a sluggish circulation.

QUEER FANCIES IN CUBA.

A BELIEF that has a strong hold on a certain class of people in Cuba is that certain diseases can be cured by cating dirt, and so when one of these diseases manifests itself the believer does not consult a physician, but instead gathers up a handful of dirt and eats it. If any relief is obtained it must be the result of faith cure, which the patient is unconsciously trying. Why all kinds of germs are not taken in with the dirt is a mystery—possibly they are.

The moonlight seems particularly objectionable and strangers are warned not to go out in it with uncovered head, and not to go out in it at all if it can be avoided; it is thought that this light brings many evil effects, and not under any circumstances will a Cuban sleep in its rays—he thinks that, among other things, it will draw his mouth to one side of his face.

To ward off sickness of various kinds there are little silver or tin images to wear suspended about the neck as a kind of charm. Images of the same kind are offered in the churches as thanksgiving or prayer, and so we find near the altars of certain churches cases in which are hundreds of these little trinkets, hands, feet, arms and babies.

The hooting of an owl is taken as a very had sign. The superstitious Cuban kills any creature of this kind which makes weird sounds near his home. This is supposed to break the spell, and it is not then inevitable that a member of the family shall

meet death in the near future. Butterflies also are

The Cuban women are great helievers in the efficacy of various herbs in sickness and have a remedy for almost every ailment. American physicians find that they have much more knowledgein this line than the women of our own country and more knowledge of sickness in general. In many homes, even the poorest, there is a thermometer, and if anyone is ill his temperature is taken before the physician arrives.

HAS AN ANOMALOUS CLIMATE.

SAGHALIEN, off the eastern coast of Siberia, presents a very curious anomaly of climate. The island is bathed by two cold ocean currents and in winter nothing protects it against the icy northwest winds coming from Siberia. At the sea level the snow falls continually and stays on the ground till the end of May, and the seashore is very cold. Further inland, however, especially as we go higher up, the climate is modified—just the opposite to what is observed elsewhere. It has often been observed in Siberia and in central Europe that in winter the cold is greater in the plains and the villages and that the highlands have a sensibly milder temperature; it is as if the denser cold air accumulated in the lowlands.

The cold air accumulates in the low regions of the island and on the coast the higher regions have a more elevated temperature. So it happens that the lower parts have an arctic vegetation, while the intermediate altitudes have the vegetation of a temperate zone, sometimes subtropical. The birch, the ash, the pine, the fir abound in the low region and form often impenetrable forests, but toward the center of the island appear bamboos, hydrangeas, azaleas and other plants that one is greatly supprised to meet, and whose presence can be explained only by the altogether abnormal climate conditions of the island.

The southern section of New Zealand has been colonized in the main by Scotchmen and their descendants, and, as a result of Caledonian clannishness, a man without a Scotch-sounding name has no chance of getting a contract from the municipal councils in these parts. At a meeting of one of these bodies it was announced from the chair that Sandy McPherson was the successful bidder for a certain contract, and he was requested to come forward and enter into the necessary bonds for its dut fulfillment. In response to the invitation and mond-eyed, pig-tailed, bland and smiling heather Chinee rose from the rear of the hall and stood before the speechless councilors with the brief exclamation, "Me Sandy McPherson."

After a few moments of silent agony the mayor nearly had a fit, and the meeting adjourned in confusion.

In Spain a blacksmith of a village murdered man and was condemned to be hanged. The chie peasants of the place joined together and begged of the alcalde that the blacksmith might not suffer because he was necessary to the place, which could not do without a blacksmith to shoe horses, men wheels and such offices. But the alcalde said "How, then, can I carry out the law?" A labor answered: "Sir, there are two lawyers in the illage, and for so small a place one is enough, you may hang the other."

"WE are going to have pie for dinner," said Bot by to the minister,

"Indeed!" laughed the dominic, amused at the little boy's artlessness, "and what kind of pie, Bob by?"

"It's a new kind. Ma was talkin' this mornis about pa bringin' you to dinner so often, and na said he didn't care what she thought, and mass she'd make him eat humble pie before the day over, an' I s'pose we're going to have it for dinner.

A Sunday-school Teacher asked his class the children of Israel made a gold calf. There may not answer for a few seconds, but just as the teacher was about to explain, a little fellow stood up to said: "Please, sir, I guess it was because didn't have gold enough to make a cow."

Nature & Study

THE CHINESE HORSE.

LOUISE E. DEW, in Pets and Animals says that the Louise animal in the land of the joss stick and the chow dog is the horse, and there are some and the times to be seen in Hongkong. Chinese policy are all brought down from Mongolia, and be English horsemen resident in China pronounce them par excellence for the humid climate of that Their bodies, which have the appearance of being very small, are compact and look much maller than they really are because of their short

They are exceptionally strong, and can stand the heat better and work harder than any other breed that part of the world. The Chinese pony is prorted principally for racing, and when it first mives it is in a very bad condition, due to poor are and chronic starvation, looking haggard and feless. After a few weeks of good care and the ast of food a great change takes place.

Yever having seen any people but Mongoins, these horses are very wild at first, and they are to be put through a series of training before hey can be made to understand what is wanted of hem, and no harm is intended.

Ultimately they make excellent harness ponies, ad they look very trim when well harnessed to a andsome trap or carriage.

The preference for these horses often leads ealthy foreign residents of Hongkong to send exenthorsemen to Mongolia for the purpose of seuring the best stock. They are not only valued or the harness, but are largely used in polo playog, which is a great game with the Chinese.

It may be interesting to know that America has ome credit for the improvement in the Chinese orse's condition, inasmuch as the grains used in eding are shipped from our country for the specifuse of his horseship.

Unfortunately this breed of horse is treacherous. nd can never be fully trusted. They like nothing etter than to take one unawares, and they kick in ne donkey fashion. For this reason they have to esuspended from the ceiling when shod. This is most interesting process, I can assure you, for I tten witnessed such a sight in my journeys through

A band is placed under the hind quarters of the east and another is put under the head; then he is rawn up by pulleys. His legs are secured by ands to the four posts; then one man stands under ach foot, and thus protected, the job is soon finhed by the intrepid blacksmith—a humiliating osition, to be sure, and one resented by the anial, which he plainly shows by his vicious expreson during the whole performance.

If the Chinese would be more progressive they ould improve their horses greatly by breeding and laining, but it seems to be against their principles improve anything.

Since the war in the Philippines, there has been a test demand for Chinese horses, and very many ave been sent to Manila.

THE JOVIAL OYSTER.

When the young woman from the hills sees her ist oyster she is very apt to be prejudiced against Lying in the midst of a hundred of his fellows a bucket on the kitchen table he, or she, or it, los not appear to advantage, either to the sense smell or taste, and Miss Interior expresses herell as being willing to starve to death before she fould consent to so much as touch one of them. h hour later, in the dining room, around the table ompany, and she is there as a matter of orm only. If she can be induced by example and even it to taste once, and she voluntarily repeats even in the small, she is a convert, and it is only Question of time till her eyes brighten and her Rue loosens up at the suggestion of the feast. But it is of the oyster industry that we want to

about in this article. Few persons can realize amount of oysters sold in the country, even hen it is mentioned that twenty-three million thels are opened annually. Most of them come on the Chesapeake region, and over 225,000 peomake their living one way and another in the oyster industry. Over nine-tenths of the canned oysters are put up in Baltimore alone.

The oyster is sexed, and the female lays over sixteen million eggs, and out of these about six or eight individuals survive. If they all survived one pair of healthy oysters would produce a bulk, in five generations, equal to eight times the size of the earth. A baby oyster, in the infant stage is too small to be seen with the naked eye. In six weeks he is as large as a nickel, in a year as large a silver dollar, or thereabouts, and in five or six years "fat enough to kill." If left alone he would live from twenty to thirty years. One would suppose that in an oyster bed there would be peace, if anywhere on earth, but the facts are that wherever there is an oyster bed there is a legion of enemies, scores of them, all striving to get at the bivalves, and all of them doing so, more or less. But a good many survive to be fished out of their native element, and sent all over the country, and to other parts of the world.

An oyster is a rather highly organized animal. It has a stomach, a heart that can be seen beating if opened carefully, a liver, nerves, and other recognizable parts of anatomy. No account of any of them is taken by one who recognizes his excellent qualities. In the language of the street "it all goes," and there are no questions asked. In fact as in other foods the fewer questions the better for our peace of mind.

SILK OF SPIDER'S WEB.

One of the most novel exhibits in the colonial section of the Paris exhibition will be a complete set of bed hangings manufactured in Madagascar from the silk obtained from the halabe, an enormous spider that is found in great numbers in certain districts of the island. It was a missionary. Father Cambove, who was the first to conceive the idea that these insects might be made to replace the silkworm. He succeeded without difficulty in obtaining a sufficient quantity of silk to be of practical use, but he did not pursue his efforts beyond the purely experimental stage. The matter has since been taken up by M. Nogue, the head of the Antananarivo Technical school. The results he has already achieved show that the production of spider silk should quickly become a highly important industry.

The chief problem to be solved was to find a partial process for extracting the silk from the female spiders. M. Nogue has invented a most ingenious appliance for this purpose. It should be said that the female halabe allows herself to be relieved of her silken store with exemplary docility, and this in spite of the fact that she is distinguished for her ferocity; her usual treatment of the males who pay her court is to eat them, and she feasts without compunction on weaker members of her own sex.

M. Nogue's apparatus consists of a sort of stocks, arranged to pin down on their backs a dozen spiders. The spiders accept this imprisonment with resignation, and lie perfectly quiet while the silken thread issuing from their bodies is rapidly wound off on to a reel by means of a cleverly devised machine worked by hand. Each of the twelve spiders thus "milked" simultaneously yields from three to four hundred yards of silk. As soon as a spider has yielded up all its silk it is replaced by a fresh insect and the work of reeling off the thread thus goes on with very slight interruption. The spider whose threads have been exhausted are set free, and ten days afterward they are again ready to undergo the operation. The silk of these spiders, which is of the most extraordinary brilliant golden color, is much finer than that of the silkworm, but its power of resistance is remarkable, and it can be woven without the least difficulty.

DANCED WHEN HE COULDN'T EAT.

An astonished but apparently satisfied spider was one upon which a gentleman recently made an experiment. The result of his investigation is told in Public Opinion:

While watching some spiders one day it occurred to him to try what effect the sound of a tuning fork would have upon them. He had a strong suspicion that they would take it for the buzzing of a fly. Selecting a large, fat spider that had long been known to refuse food for twenty-one months.

feasting on flies, he sounded the fork and touched a thread of the spider's web.

The owner was at one edge of his web, and the thread selected was on the other side. Over his wonderful telephone wires the buzzing sound was conveyed to the watching spider, but from his position he could not tell along which particular line the sound was traveling.

He ran to the center of the web in hot haste and felt all around until he touched the thread against the other end of which the fork was sounding, Then, taking another thread along with him as a precautionary measure, he ran out to the fork and sprang upon it.

At this point he found out his mistake. He retreated for a short distance and stopped to survey this new buzzing creature which should have been a fly, but was strangely unlike any insect he had ever seen. At length, apparently convinced that the object at the outer edge of his web was more suitable for amusement than for an article of diet, he got on it again and danced with pleasure. It was evident that the sound of the fork was music to. him.

SOUTH AFRICAN ANTS.

THE ant hills of the veldt are most curious roundtopped mounds of brick-red earth, which, every here and there, pimple the parched prairie. They look like so many big red balls cut in half and strewn over the veldt.

The ants build these hillocks or domes, which average two to three feet in height and the same width at the bottom. They are made of the soil, which the ants have rid of its sand, and they are cellular or honeycombed inside. The action of rain and dew gives them an almost shell-like outer surface.

You may stand upon them, and thousands of British soldiers have lain behind them in battle, imagining that they afford protection from bullets. Nevertheless they have no solidity. The wheel of a light wagon will cut through them as if they were made of green cheese.

The ants bring up this best part of the earth, and when they have built their houses of it, the antbears come at night and tear them to bits, so that the winds and water may scatter the material over the sandy surface of the veldt.

The ants appeared to me no different from those we have at home; but the ant-bear is a strange beast, indeed. He is, when full grown, about three feet long and nearly as tall, and it is said that his fore legs are the most powerful limbs, in proportion to his size, that are possessed by any creature

His method is to use his front paws to rend an ant hill open. This done, he lies down and pushes in among its cells a long sticky tongue-a yard or more of it; a tongue which has the chameleon's power of changing its color to match whatever it rests upon. The mucilaginous stuff on its tongue is considered delicious by the ants, who crowd upon the member and stick there. When his tongue is all encrusted with these insects, the creature draws it into his mouth and swallows its living freight.

He is a formidable-looking animal, but never attacks mankind.

IMPROVING ON NATURE.

BOTANICAL experts nowadays are much interested in finding out novel and extraordinary results that may be obtained by the process of grafting. It is wonderful what queer things Dame Nature, ordinarily so shrewd and conservative, can be persuaded to do when cajoled in this fashion. Certainly nothing more notable in this line has been accomplished up to date than the grafting of the tomato on the potato. There is no very great difficulty about it, apparently.

Oddly enough, the process seemingly cannot be reversed, and nobody has yet succeeded in grafting the potato on the tomato. This evidently, is too much even for amiable Mother Nature to put up with.

A HORSE will live twenty-five days without solid food, merely drinking water. A bear will go for six months, while a viper can exist for ten months without food. A serpent in confinement has been

INGLENOOK. THE

РИВПІЗНЕД МЕЕКЛА

At 22 and 24 South State Street, Elgin, Illinols. Price, \$1.00 a year. It is a high grade paper for high grade boys and girls who love good reading. INGLENOOK wants contributions, bright, well written and of general interest No love stories or any with killing or cruelty in them will be considered. If you want your articles returned, if not available, send stamped and addressed envelope. Send subscriptions, articles and everything intended for THE INGLENOOK, to the following address:

BRETHREN PUBLISHING HOUSE, Elgin, Illinois.

Entered at the Post Office at Elgin, Ill., as Second-class Matter

THE SIDE YOU DON'T SEE.

Sometimes a boy or girl from the country goes to town, and seeing the town boys and girls envies them their lot. It has been the means of making many young persons discontented on the farm, and very often has about ruined their usefulness at home. Now there are two sides to this story, as there are to pretty nearly all things. It is true that the town has certain advantages over the country. It has libraries, shows, lectures, and the like. The town people dress better than the country people, and they appear to better advantage. The country dweller is nearer nature, and he is better off in many ways than his brother who walks the pavements.

He is better off in the freedom the country allows, and he has more and better food. If half a dozen people were to happen in on the ordinary town family for dinner it would be the undoing of the household. True, there are the corner grocery, the baker's and the butcher's places near at hand, but there would be a disarrangement of affairs to which the country is a stranger. The best of city dwellers naturally and necessarily lead a hand to mouth life. The drib of milk daily, the loaf handed in from the wagon, may answer all purposes, but the plenty of the farm is an unknown quantity. In large cities, among the middle classes, it is still worse. The boy or girl would miss their springhouse and its contents, while more eatable material goes to waste on any considerable farm than would keep a city family.

If any INGLENOOKER is pining for town life, let him consider his advantages, making friends with bird and beast, live a cleanly life, and thank God for his advantages over the city where there are more wrecks and tragedies than are suspected from what may be seen on the streets by the casual visitor who never sees the seamy side.

WHAT WE CALL INSTINCT.

When we note anything in the habit of an animal, or bird, that we can not readily account for we sum it all up in the wording, instinct. Now none of us can tell what that is. Some thoughtful In-GLENOOK reader may ask what it really is. In answer we say, frankly, that we do not know, but we believe it is an exercise, in a modified degree, of what we call mind in man. And the gift is not always a modified matter, for it is often enormously in excess of man's endowment. When a boy loses his father on the street he wanders aimlessly about, asking perhaps, or guessing, and he blunders around till he finds him in one way or another. Now the dog simply takes a sniff of his footstep, among thousands of others, and overhauls him as far as possible, without any outside assistance whatever. As far as the ability to get about is concerned almost any animal can beat man. If a man was put in a bag, hauled on a winding railroad for a hundred miles, then let loose in the night, not one in a million could take the straight back track for home. Nearly all animals can do this, and most of them have done it to some extent in their lives. Call this what we will it is nothing short of a marvel.

But some evidences in the case of birds and animals go to show that what we call instinct is not always a good thing for the individual. Curiosity to know what a strange thing may be is the cause of the death of uncounted millions of insects that fly into an open light. The hen hides her nest with the utmost care, lays her eggs in absolute secrecy, all thu time.

and will almost allow you to tramp on her rather than disclose her presence. Yet every time she lays an egg the very next thing is to cackle it out to the whole world. Every farmer knows this. Here are cases where instinct does not go far enough to complete the chain of safety. Yet when the little chickens are hatched the sign of a hawk in the air sends them flying to cover. Yet they had never seen a hawk in their lives before. This is a case of what we call inherited instinct. This view can be fully proven. If we were on an uninhabited island, never before explored by man, all the birds and beasts would allow our approach, and would, of themselves, approach us. This condition would be outgrown in from two to four generations, when all, both old and young, had learned that the great, lumbering giant on two legs, was the most destructive thing on earth.

A great deal can be learned from the study of our dumb beasts. And it is a study that nobody ever completes. There is always a side to them that we cannot understand, always a mystery that is never unraveled and never will be until we can enter their world and live as one of them. As this is never to be the final facts of their lives will not be completely known. Their thoughts, their reasoning, and the outcome in the way of the following act we sum up in the word instinct, but it is simply a convenient term for what we do not understand, and probably never will.

OUR SHORT SERMON.

Text: Criticism.

Some people are born with a nose for ill-smelling things, and not for those which are fragrant. This class of people may have their methods modified, but not materially changed. On the other hand there are those who naturally seek out the pleasant and the desirable things of life. The first class is always on the lookout for something to find fault with, and the second is watching for the commendable. In this world people usually find that which they earnestly seek. The man with the muck rake, and he who seeks flowers usually get in kind. Now there is not much margin for difference as to which is the more desirable when there is a personal choice in the matter, and there always is, unless one is morbidly constituted. Nowhere in the Bible are we enjoined to go forth seeking life's garbage, while everywhere that it is spoken of at all we are directed to seek out the praiseworthy. This is what Paul said to the Philippians: "Whatsoever things are true, whatsoever things are honorable, whatsoever things are just, whatsoever things are pure, whatsoever things are lovely, whatsoever things are of good report; if there be any virtue, and if there be any praise, think on these things." There is not much encouragement here for the man who is on the watch for the evil side of things. Paul's directions are all the other way. His advice is to seek out the good that is in people and think of that, and not its opposite.

Alas that we should be ever so ready to listen to the evil surmise, and to entertain criticism in our souls. It is a plant of such rapid growth that once it finds a lodgment in our lives we get away from it with difficulty. Like some noxious weed that vexes the farmer the only way to get rid of it is to fill the field with some crop that can be cultivated and thus kill the thistles. So in our lives let us keep our hearts full of good thoughts and there will be no room for bad ones. The cup that is full will hold no more.

THE INGLENOOK desires to acknowledge the receipt of a considerable number of well-written articles for its columns. These will appear from time to time, and more will be appreciated. In the preparation of material for these columns remember the requirements-clean, clear-cut expression, and brevity. The long-winded essay or so-called philosophical discussion will not find favor. Things bright, catchy, and instructive are wanted

QUESTIONS AND ANSWERS.

Do animals cry? I mean in the sense of shedding tears Undoubtedly they do. Have you never heard, puppy crying when hurt?

I know a place where there is any amount of what see like gold. It is in larger or smaller square blocks. Is it as

It is iron pyrites. It is worth about five dollars ton to make sulphuric acid. Waste no money o

I can write a good story. Will you print it in the lact. NOOK, if I send it on?

We will print all the good stories you write, and do it gladly. But there may be a difference opinion about its merits. Don't be in a hurry to send it if you have any other work to do,

Is it likely that the shirt-waist fashion will become general!

It is very apt to. Nobody can foresee the result of the fad. It may never be heard of again after this season, or it may become general. But looks as though it had come to stay.

I have committed a great sin and have repented. Should tell it to the church and ask forgiveness?

If it is a sin involving no others and you have to pented, or if it has been settled between you an other persons affected, we see no reason for advertising the matter by any public confession. If it is against the church you might, with propriety, state the case and, saying you are sorry, let it rest.

Why can not the Kate and Bobbie letters be published in book form?

* * *

We never thought them worth that attention, There will be another series soon. Bobbie is going to college and he and his mother will correspond.

What does the term Final Restoration mean?

It means that somehow, somewhere, sometime, not stated, all souls will be with God. A close and perhaps plainer definition is that after sufficient punishment of the lost they will be among the saved.

Is artificial ice made with chemicals?

Yes, but they are not in the ice itself. Artificial ice is apt to be purer than the natural product.

How shall I go about getting a book published?

Just the same as you would any other job of printing. Take it to a properly equipped published and bargain for so many copies, at so much for the lot. Best submit the manuscript to a competent and disinterested party to first determine whether it is worth your while.

Dare I solicit subscribers outside of the church?

Why not? Nothing would please us more than your success in this way.

Who were the so-called Fathers of the church?

After the church had been fairly started in early days men wrote histories and comments on thin that had happened, and these people are called the Fathers. They were usually some high officials in the organizations then existing. Their books are only valuable as they corroborate sacred history

* * * Why can a daily paper be sold for a cent? Does it not of many times more?

It costs much more, but it makes it on the advertising, and perhaps other matters.

Will it pay me to buy a cheap typewriter?

No really good machine is a "cheap" one machine to stand the continuous racket must solidly made. A second-hand good one can be bad cheap.

Is it morally right to rob animals like squirrels of their size ter store of food?

Is it right for a giant to come along and take all your folks had laid up for winter use?

THE MIDNIGHT MARKET.

A 6000 many of the Inglenook folk have seen A good large of vegetables with their wagons po push carts, though few have known how or bere the sellers get their stock. A trip through the wholesale market along the sidewalk, at midght in Chicago, would tell the story.

About an hour before midnight, when everything About an closed for the night, the market begins come to light. Wagons loaded to the guards th potatoes, beans, lettuce, beets, peas, berries d every other kind of garden truck ever heard dreamed of begin coming in from the west and orth. At first they come in ones, twos, and threes, thefore the hands of the clock point to the hour they are arriving by the score. A lantern nging over the dashboard gives out a feeble glow at seems still fainter when it arrives within the are of the electric lights. As the wagons come they turn down the street and are backed up ainst the curbing on either side. The horses are hitched and taken a short distance away and nen a midnight lunch, while their drivers get own to the business of the day, so to speak.

By midnight 200 or 300 wagons have arrived and acked into position. The lanterns are brought ound to the tail gates, which are in a way the unters over which the trades are conducted. betruck carts are scarcely well in position before buyers, with their empty wagons, appear on the ene. These are the hucksters who drive through streets peddling fruits and vegetables during e day, especially in the morning hours. To acmmodate these street merchants the wholesale arket is conducted at night. Accordingly the uck farmers from Niles Center, Ravenswood, vanston, Rosehill, Gross Point and other centers gardening activity make up their loads of proee at night and start for the market in order to me just before 12 o'clock. Enough of the night then left to enable them to get a fair chance at buyers and perchance dispose of all their goods. Business starts promptly at midnight or a little dore. The farmers station themselves at the tail ues of their carts and the hucksters are soon huring from one wagon to the other trying to get st chances of the best fruits and vegetables. ben the market is in full blast it presents a most deresting sight to the uninitiated. The wagons tunate enough to arrive in time to obtain stations arthe electric lights naturally have the points of mage for showing off fine produce, but they are on very poor localities for working off any stuff the second or third class on the buyer. Away m the street corners the electric light grows pidly weaker until at a distance of half a block tiny flame of the lantern is all that enables the yer to see that he is getting good money in the pt amount for his goods.

"Well, what you goin' to take fer these poor ass?" says a huckster, stepping up to a wagon.

"What ye talkin' about? Them's the finest beans growed in Cook County and you know it," e larmer replies.

No, they're not, but what ye goin' to sell 'em

Them's the last I got and ruther'n to take 'em tk home I'll let ye take 'em along fer five cents a ntil ye'll take 'em all,"

No, you don't say? You just oughtn't give yer ans away like that fer nothing, old man."

Well, do you want 'em?" says the old man, a le nettled by the satire of the huckster.

I should say not. I can get beans twice as good them fer four cents right up there at the fourth

Well, why don't you go and get 'em then?''

Why, cause four cents is too much this late at th. In a little while you'll be offerin' me yours three cents and a half."

No I won't. I'll take 'em back bome first and

Rell will you let me have 'em at four cents?'' You bet your life I won't,"

The never give you five. I'll drive around a By wagon all day to-morrow before I'll do

Well, I'll let you have 'em for four and three-

hall and much. I'll give you four and that and not a single, solitary smidgeon more," subdued his desire to annoy cats.

"Done. Take 'em along," snaps the farmer, and the trade is made.

Both of them know all the time that four cents and a half is the figure at which they will trade, but the transaction wouldn't be of the regulation pattern if there were not a certain amount of haggling between the two before the beans are bought and

So goes the market all night long. The farmers with their open-faced stores await the bucksters, who go round and round and round again, leokingfor bargains. Often the buyers visit the same truck dealer four or five times trying to beat him down or waiting for the fall of prices, which he feels sure will come along toward four or half past four o'clock in the morning. No dealer on the Stock Exchange or the Board of Trade keeps bis eye more closely on the blackboard full of quotations than does the huckster on the state of vegetables and fruit prices at the truck wagons.

At last morning dawns; the truck wagons are empty, the huckster wagons are full and as the sun comes up over the tops of the buildings the hucksters start on their rounds through the streets bawling their fruits and vegetables at prices sufficiently in advance of those at which they bought them to make it worth while to be hucksters.

A DOG THAT TALKS.

Some time ago we asked Inglenookers for instances in which animals seemed to understand speech. In the Chicago Record we find the following account of a dog that can talk:

"Bow, wow, wow!" "Orpe wa orc!" "Wow, wow, wow!" "Shank you!"

Tatters was being taken to St. Joseph, Mich., from Chicago, on board a boat recently, and he wanted to enter his master's stateroom. Tatters is a fox terrier, but not an ordinary one, for he can talk and understand the English language to a startling degree. So pronounced are his accomplishments in this respect that when he stood outside the stateroom and shouted "Orpe wa ore," the purser of the boat, who was passing at the time, readily construed the plea to mean "Open the door" and promptly complied with the animal's request.

Inside the stateroom Tatters' master, A. M. Herring of St. Joseph, was enjoying a nap. Tatters sat down beside him for some time, but finally began showing signs of impatience. The agile little animal darted about in the stateroom moaning in apparent despair. Finally it threw itself back on its hind legs and began talking some more.

"Awan yeek" it whined, but there was no response from the bunk.

"Awan yeek" pursued Tatters in a louder tone. "Awan yeek, wow, wow, awan yeek, awan yeek." This volley aroused Mr. Herring and Tatters scampered about the room, meantime pleading carnestly for a "yeek." Mr. Herring secured a pail of water and placed it before Tatters. The dog whined out a "Shank you" and proceeded to "yeek" the water which it "awaned."

Tatters is by no means an ordinary dog, neither is he a "spring chicken." He was born thirteen years ago and since that time Mr. Herring has raised him with all the care a father would bestow upon one of his children. Under this training Tatters has gained an education possessed by few dogs. The fox terrier has a son, Rags, who is eleven years old, but has never learned to converse as intelligently as Tatters does.

Mr. Herring declares that both Tatters and Rags have strongly distinguished characters, Tatters being serious and apparently thoughtful. He is inordinately inquisitive, but has no sense of humor or playfulness. He looks a person directly in the eye and is proud and fearless.

Rags, on the other hand, is playful and full of mischief. One of his favorite jokes is to catch a person's clothing, give it a quick shake and then pretend, by looking for imaginary rats or flies, that he was nowhere near. He hides articles, and at home generally slips into some corner from which he can see everything, but cannot himself be seen. In one respect Rags is greatly like other dogs-he is passionately fond of chasing cats and during his canine career he has killed twenty or thirty. His last encounter cost him one eye, but it in no way

While Rags bas caused the feline tribe in St. Joseph no end of worry, Tatters has taken life quietly and spent most of his time within the Herring family circle. Through this constant association he has picked up to a slight extent the power of human speech. He can readily understand apparently everything that is said to him by his master and other members of the Herring family and is able to pronounce all of his wants in distinguishable Eng-In his pronunciation he neither barks nor squeals, but utters a sound resembling that made by a person speaking without moving the lips.

The dog's pronunciation, Mr. Herring says, is quite plain and easily recognizable, but no spelling would wholly cover the sounds uttered. While the dog has never been regularly trained by Mr. Herring he can do all the tricks performed by "show" dogs. Mr. Herring is firm in his belief that Tatters understands a large number of ordinary words, as it is immaterial how he is asked to do any special

The dog will perform what be is told to do without any sign being made. As an instance a stranger can say: "Tatters, I feel a draught," and Tatters will immediately run back of the door in the room, if it is open, and close it. If asked to tell how a cat talks, or what the cat said when he had a fight with it, Tatters will give an exact imitation of the cat's meow and angry cry.

Mr. Herring was extremely reticent about praising his dogs. "Few persons except those living in St. Joseph, who are informed, will believe that Tatters is able to talk," he said. "I have studied this case to quite an extent and can find only one other instance of a speaking dog. There is an authentic record in the French Academy of Sciences of a dog which could utter a few sentences-that is, repeat the vowel sounds with the proper emphasis and syllable values.

"I have never trained Tatters and would not have it classed in any way with a 'show dog.' I would not sell the animal for thousands of dollars. Tatters is approaching old age. His gait is no longer spry, his eyes are somewhat dimmed, his bead is gray, but his mental powers and interest in things are as clear as ever,

"He has so much interest in things in general that he looks in the store windows and on entering a store often begs to be lifted up to be shown what is in the showcases."

LIGHT AND HEAT.

In one sense of the word light and heat are the same thing. That is, they are simply different modes of motion, and by their different effects on the organs of sense produce effects that we know by one name or another. The sun is the center of light and heat, and it will probably require no description or demonstrative experiment to convince you that the heat waves of the sun may be entirely dissociated from those which give us the impression of light. You can feel the heat of the sun even through the black silk of a parasol which entirely cuts off the light. But if you wish an experiment, here is one, as described by Tyndall, and a beautiful one it is. Perhaps you will not have the facilities to perform it, but you can rely upon the truth of the description.

Close a room light-tight, except for one hole in a shutter that will allow the passage of a strong beam of sunlight. Let this beam pass through a lens, or, better, let it fall upon a concave mirror. The result, as you know, will be to concentrate it at a certain point-bring it to a focus. At that focus the ordinary experiments of the burning glass can be performed. The hand will feel an unbearable heat, and the paper will be set on fire.

Now, where the light enters the room, introduce in its path (in such a way as not to disturb the present arrangement and focus) a solution of iodine. dissolved in bisulphide of carbon. Ignore the smell in the interest of scientific investigation. The light is absolutely cut off, If you had introduced a slab of slate, it could not be more thoroughly extinguished. Now, put your hand in the dark, at where the light was formerly focused. You feel the same unbearable heat. Put a slip of tissue paper there-it smokes and bursts into flame. So you see that the heat waves are still passing, although the light waves are cut off.

WE DO KNOW.

John J. Ingales was at one time a Senator of the United States. He was remarkable for the elegance of his language, the incisiveness of his invective, and his general brilliancy. At the death of Senator Hill, of Georgia, Senator lugalls, of Kansas, spoke as follows:

"Ben Hill has gone to the undiscovered country.

"Whether his journey thither was but one step across an imperceptible frontier, or whether an interminable ocean, black, unfluctuating and voiceless, stretches between these earthly coasts and those invisible shores—we do not know.

"Whether on that August morning after death he saw a more glorious sun rise with unimaginable splendor above a celestial horizon, or whether his apathetic and unconscious ashes still sleep in cold obstruction and senseless oblivion—we do not know.

"Whether his strong and subtle energies found instant exercise in another forum, whether his dexterous and disciplined faculties are now contending in a higher senate than ours for supremacy, or whether his powers were dissipated and dispersed with his parting breath—we do not know.

"Whether his passions, ambitions and affections still sway, attract and impel, whether he yet remembers us as we remember him - we do not know.

"These are the unsolved, the insoluble problems of mortal life and human destiny which prompted the troubled patriarch to ask that momentous question for which the centuries have given no answer—' If a man die, shall he live again?'

"Every man is the center of a circle whose fatal circumference be cannot pass. Within its narrow confines he is potential, beyond it he perishes; and if immortality is a splendid but delusive dream, if the incompleteness of every career, even the longest and most fortunate, be not supplemented and perfected after its termination here, then he who dreads to die should fear to live, for life is a tragedy more desolate and inexplicable than death."

Beautiful as the above may be, viewed from the rhetorician's angle, yet it lacks true beauty and true knowledge. There are some things we do know, though we may not be able to adequately describe them or even so much as locate them.

When the Spring morning opens on the world, and the lark is overhead and the bluebells are opening underneath, when all Nature sings, we respond in feeling for we do know that the ever recurring miracle of the resurrection of plant and fruit and flower on a thousand hillsides is in progress.

When the blossoms fall and the fruit forms, when the bird's nest in the trees and the zephyrs fan the cheek of labor, we do know that in good time the fields will yellow with the barvest, and that the promise of the Spring is borne out in the showing of Summer

When the Autumn comes, and the peaches redten, and the apple falls, and the yellow corn shows in golden heaps in the Indian summer time, we do know that the outlook has not failed, and that the husbandman's faith in the promise has not been misplaced.

And when the wind sweeps down from the Northland and locks the laughing brooks, and the children of fin, fur and feather, sleep in silence under the snowdrift, or have winged their faith-directed flight to a more genial sky, we despair not, for we do know that the Spring will come again in the morning of the year and all will live again as it has lived, brighter, better, maybe, but living and proceeding on an endless procession of birth, life and death. These things we know because we feel them to be true.

So when man passes from the glamour of child-hood to the effort of manhood, when the listening multitude applauds, when the form bows and the hair whitens, and when at his appointed threescore and ten he sits, waiting the call, shall he think that with his godlike equipment of knowledge he is of less import than the furred ball in the burrow, or of less importance than the bulb under the mold, or of less hope than the dumb brook that shall gurgle and laugh again when the buds of the maple redden and unfold under a coming sun? Nay, by

all parity of reasoning he shall live again. And the Christian does know it. The old woman who is utterly unlettered, tells her surviving companion to meet her over there: The father and the mother do not believe that the child that faded as a blossom before their eyes has simply died as the beast passes. When the last of the circle of friends sits alone, the others having gone before, he feels to a certainty, that the end is not a wall or the shore of a sea of oblivion with its hopeless lap of black waves, but he feels, yea, he knows, that after the passing there will be a land of rest, of light, of peace and of reunion with those who have but gone before. Created a little lower than the Angels, we shall be freed from the dross of time and be forever with God and the Redeemed. These things Christians know as well as they know anything, though all may not be able to tell it.

MANY USES FOR DEERSKIN.

Guides and the native hunters of the Adiron-dacks region have a variety of uses for the deer they kill. There are still a good many hunters who know how to tan the deer's hide, and a few who use as one of the tanning agents liquid extracted from the brain of the deer. From the tanned skin many articles of use are made. The thick hide from the neck of an old buck is excellent for moccasins, and the art of moccasin-making still lingers here among those whose ancestors learned it from the Indians. The men and women of French-Canadian extraction are especially apt in household arts of this sort, learned from the savages. Cheap as factory-made gloves are, a few women of the region still cut and stitch buckskin gloves.

Whole suits of buckskin are made by expert women of these parts. Such suits were once much used by the thrashers, who traveled from one mountain farm to another to thrash the small oats crop of the region. A buckskin suit is good for a dozen years of hard usage, and with care will last a lifetime. It is remarkably warm and impervious to water.

One rarely sees nowadays such a suit with the hair on. A garment with the hair on to be serviceable must be made from the skins of deer just coming into the "blue," as the hunters express it, for then the hair is short, smooth, and tough. Later it is long and brittle. It is necessary, too, if such a suit is to be of uniform color, that it be made from corresponding parts of skins from deer about the same age and shot about the same time. Even if the law did not stand in the way, it would be difficult in these times to shoot in a single week enough deer of the same age to yield the desired quantity of hide of uniform color, so a deerskin suit with the hair on is rarely seen. One still does see, however, moccasins, with bair inside and out, and very soft, warm, inviting slippers they make. Raccoon skin now lurnishes cheap fur garments, and winter residents buy or hire overcoats of coonskin to brave the January winds.

Raw deer hide is used for many purposes. It makes excellent thongs for tying articles of one kind or another, good whips, and indestructible shoestrings. You may buy in the Adirondacks rustic chairs with seats and backs of woven rawhide. The green skin is cut in thin strips, stretched until it is almost translucent, and then woven into a seat. The result is a comfortable, elastic chair of almost indestructible material. Deerskins with the hair on arc still used for carpets and mats, though here again, as in the case of the deerskin suits, the skin is not serviceable unless the deer be shot just at the right season. Nobody is more fastidious than the Adirondack guide in these little matters. If he cannot have his deerskin coat or carpet just as it should be, he will go without, though he is indifferent enough as to store clothes and ordinary household furniture.

Out of the marrow from the shank bones of the deer the guides make, by a laborious process, a beautifully clear, sweet oil, which will keep in good condition for years. It is much used by jewelers and watchmakers, because of peculiar qualities that exactly fit their needs. This oil is sufficiently scarce and useful to sell for a high price.

THE nut trees alone of the world could at a pinch feed a population three times as great as the present number of inhabitants.

ORIGIN OF VERY COMMON WORDS.

Some words have histories. Other words body history, as, for example, the word rigman Everybody understands it as signifying a confus and meaningless jumble, but precious few reco the fact that it comes from ragman's roll. None ragman's roll is a crown document of no small portance. It is a real roll of ancient parchner and records categorically the incidents and deby which Scotland's nobility and gentry gave their adhesion and swore allegiance to Edward England toward the close of the thirteenth centur Naturally it is a somewhat confused docume but possibly not so much confused as confusing the good people of its own era. It must have upsetting in those days to discover that the and gentlemen thought to be stanchest for the order had gone over to the invading king. there is something to be said for the lords and tlemen—they loved not Scotland's independen less, but their heads and their estates more,

Venison, which nowadays means always strictly the flesh of a deer, is truly any hunted—that is, meat of venery. Venery is the name for hunting-thus foxes and wolves and bac ers furnish "venison" no less than the lord stag. Cur, the synonym for a worthless dog. somewhat the same derivation. In feudal Engla the dogs of the villenage, no doubt mostly stan ing mongrels, were by law required to be cur-tail -that is, have their tails cut short, so they migh readily be distinguished from the stag and b hounds of the lords and gentlemen. The st hounds ran true upon the scent, the mongre would confuse and draw them off from it. So times the villien-dogs had to suffer also "h bling "-that is, cutting away the two middlet from each fore foot, so they could not run with hounds. A curtail-dog, or curtle-dog, in time came a cur. His owners, the villiens, who lived clustered hovels outside the castle walls, in manner gave rise to the word village.

Another wonderfully expressive phrase all comes from the hunting field, where it is to this do in common use. It is "to run riot." Fox hour run riot when they leave the drag of the fox and gracing and chasing off upon the scent of hares at rabbits, whose company the fox seeks when he find himself pursued. Indeed, in fox hunting parlant hare scent is known as "riot." The familiar phrase on the pad," as signifying going hither and you also throws back to Reynard the Fox. His feare known technically as pads when he gets a and begins to move about sportsmen say he is "of the pad."

It seems a far cry from the hunting field to name of a fashionable coach, but it is from hunting field the tallyho gets its title. Tallish pronounced tally-ho, Norman French for "out the thicket," was the proper cry when the broke cover. The huntsmen and the master of hounds answered the cry with long blasts of horn. Then when public coaches began to their horns blew the tally-ho blasts, further as ury progressed finer coaches often took to the and the throwing off fine people who did no tend to follow the hounds, but to see them tacularly. Between use and luxury, the with seats on top crystallized as the tally-ho. tally-ho it is likely to remain, unless all the m should go automobile mad.

Lombards, money changers at Venice, sat benches round about the plaza of St. Mark Banco is Italian for bench. When one of the money changers defaulted the others fell to a broke his bench in little pieces. Afterwards here known as "banco-rupto"—that is, the man of the broken bench. Hence comes our word bankrupt.

An anxious, nervous looking woman, followed a bewhiskered farmer, stepped up to the state master at a little station in Massachusetts asked: "Has the 3:15 gone yet?" "Yes, about asked: "Has the 3:15 gone yet?" "Yes, about along, then?" "Not for quite a time along, then?" "Not for quite a time along, then?" "Not for quite a time aspecial?" "No." "Any freight trains?" "Nothing at all?" "No." "Are you quite sur." "Yes." "Then, Amos, let's cross the track"

CIRCLE MEETING LESSON.

The Seed and the Sower .- Matt. 13:18-23.

This parable springs out of one of the most famil scenes and duties of the daily life. Sometimes think our little tasks and worries which crowd daily are beneath God's notice, but here we have Rofthe richest spiritual lessons drawn from the

We cannot save ourselves. The seed must be stinto the earth to produce a harvest. The seed the kingdom which is the Word of God must be mointo the heart, only thus can the kingdom of od be within us, and we can have life everlasting. The sower scatters the seed indiscriminately. sows the seed, some of it falls in places where brings forth no fruit, but some of it brings forth bundredfold. What are we doing to scatter the adof the Word of God? There is so much good nund ready for the seed, are we doing all we can? Let us see why all the seed did not bring forth a untiful harvest. That which fell on the wayside, all not sink into the earth, it just lay on the ad-packed ground which had been tramped by uny feet. There are men who have said, "I will thear" when they listened to God's Word, over dover again they have turned away the Spirit, ev have resolved not to come to Christ. Each marate time that they refuse, their hearts grow uder until they may be likened to the wayside, hir hearts are so hard that the Word does not

The seed that fell on stony places sprang up but iked root. Some people come to the church, and em to be very enthusiastic in the beginning, there quick growth, but they lack patience and enduree, and when trials come they do not walk with

Some fell among thorns. The soil was deep and mile, it struck its roots far down, but the thorns rang up, too, and with rapid growth they overpped and shaded and crowded out the valuable ain. Do not attempt to grow worldly thorns mg with the seed of the kingdom. Determine to now nothing but Jesus Christ and him crucified, there will be no room for worldliness.

NEEDS IN THE HOME FIELD.

The Herald and Preshyter calls attention to the reneeds of our own country:

"North Dakota appeals for help on account of evasttide of immigration setting in. This is a ale nearly as large as New York, New Jersey, onecticut and Massachusetts combined. These wofthousands of settlers need Sabbath schools, dwe have but one Sabbath-school missionary in Ithe State, Letters from South Dakota show the The influx of settlers into that great State. Pathe appeals have come for six additional Sab-A letter from Montana, where we have only a Sabbath-school missionary, beseeches us to send to their help. Now there reaches this office a trising appeal for twenty additional Sabbath-hool missionaries for the mountain region of West Inglia, Kentucky, Tennessee and North Carolina Chen described as the region of the mountain thingle missionary; we should have six."

In the vast State of California we have but in not time that we bestir ourselves and domething for the card ask

toggething for those who want the Gospel, and ask to give it to them?

A FATHER does not deal with his children by one d the same universal rule. The delicate child is most shielded; the infirm is the most helped; fimid is the most encouraged; the dull is the ont taught; the tempted is the most prayed for; rheavent is the one most rejoiced over. So Theavenly Father knoweth us all individually.

More raises the price of a blessing like its re-Retained a state of a blessing time and whereas, it was its continuance which should Betaught us its value.—Hannah More.

📥 Sunday 🖪 School 📥

LABOR, ONE THING; WORK, ANOTHER.

HARD labor may be wholly in vain; but good work is never lost, whatever its apparent result. We may labor to no purpose, and have no fruit of our toil or anxiety. But good work is its own reward, even if there were nothing beyond it. There is success in merely striving for success, and the prize of success may be our added reward. As Dr. Griffis has reminded us, "both the Hebrew and the Greek originals of the Bible make clear distinction between labor and work. With the former are associated the ideas of toil and sweat, weariness and waste; with the latter, triumph, value, beauty, and permanence." What added meaning does this thought give to the inspired assurance for those who die in the Lord, "that they may rest from their labors; for their works do follow them!"

IS IT YOUR DUTY, OR OURS?

Doing our duty is doing our duty. What is our duty may not be another person's duty, and what is another person's duty may not be our duty. We ought therefore to know just what God would have us do, in order that we may know just what zee ought to do. This may require, on our part, more attention than we now give to God's requirement of us, even if we have to pay less attention than at present to God's requirement of our neighbors. Thoughts of duty do include our neighbors as well as ourselves, but we need to rightly divide our time in giving attention to these two parties severally.

REMEMBERING THE DAWN.

JOYFUL expectancy is one of the blessings we never need forego. Whatever may be the present sorrow, we can look beyond it to times of joy which are sure to come. This the past has taught us. This the future is to reveal yet more fully. Whether we come into just the form of joy we have anticipated, or not; we can never be robbed of the gain of having expected joy of some sort. In every night of sorrow let us cling to the memory of yesterday's dawning, until we shall see the light of another day breaking through the present darkness. "Weeping may endure for a night, but joy cometh in the morning.'

MISTAKE OF MAKING NO MISTAKES.

His own timidity is the last thing a timid man ever fears. And yet timidity has lost many a cause which could have been won without rashness or even boldness. The man who is afraid to invest his money loses an income just as truly as the man who has no money to invest. A policy that continually straddles and hedges in order to avoid the possibility of error is itself an error. No great scholar, statesman, or reformer is non-committal. It has been well said that he who never makes a mistake never makes anything.

THE Sunday school should cherish the child for Christ. Our children are primarily and properly hutch by the coach-house door, his. We have lost many of them to the church by assuming that they must go conspicuously to the bad in order to have a striking conversion, a dramatic experience in evidence of salvation. They have gone to the bad far enough, but their return to Father's house and its better living has not been so general. Yet the Sunday school is not merely, not mainly, for the purpose of conversion. It is not simply to confirm children and young people in church relation, though that is something of appreciable importance. It is for development and culture, life and character, to place the affections and properly associate the will with Christ in the world's work. "The Sunday school is to teach the way to Christ, but it has also to give very much more time to training lives for Christ."

Has Christ put away your sin? If he has, be as happy as the days are long in the sweet summer time and be as bright as a garden in the month of June and sing like angels, for you have more to sing about than angels have. - Charles H. Spurgeon.

BE loving and you will never want for love.

For * the * Wee * Folk

ABOUT A LITTLE BOY WHOSE TAME RABBIT TOOK A JOURNEY ON HIS OWN ACCOUNT.

"What beautiful rabbits you have, Mr. Budd!"

And Norman drew up his little brown pony in front of the postman's garden, where he was busy tying up his roses before it was time to take the letters round on his bicycle.

The rabbits were in a new hutch close against the fence, and one of them, a gray one, was standing on its hind legs and looking out of the bars of its cage.

"Yes, sir, I am very proud of them. I bought them in York last week. All gray, except a white one that got among them by mistake. If you care to have that one I shall be very glad."

Norman's face flushed with pleasure.

"I never heard anything so kind! Of course, I will only be too delighted to think of having a white rabbit all my own."

And the next moment he was off his pony and in the garden, feeding the white rabbit with a cabbage leaf he found on the hutch.

"I will send him up this evening to the hall," Mr. Budd suggested.

But that seemed such a very long way off that Norman felt he could not possibly wait till then.

"I can button him in my coat, and take him back on the pony,"

So bunny was put inside the little gray coat, and Norman carefully got onto the pony's back and started off home.

"I shall call him King John," he said to himself, as he rode cautiously along.

For he had just got as far as that in his English history, and was very proud indeed of the fact.

The schoolroom party was on the lawn under the big cedar tree, having tea with mother, because it was Winnie's birthday, and there was a great scramble as Norman rode by to see what he was carrying so very carefully in his coat.

"It's a white rabbit that Budd, the postman, gave me for my very own, and I shall ask Thompkins to make me a hutch for it. May I, mother, dear?"

But mother looked very grave as she sat there in her pretty white frock in the shade of the tea table.

" Have you forgotten the canary that father gave you, and the guinea pig that you bought in Hinckley on the Christmas holidays? You know they both had to be sent away because you never looked

Norman grew very red as his mother spoke.

"I know I was very silly, but I am nearly a year older now, and I would never be so foolish again. Besides, a rabbit's such a very different thing. Do let me, mummy? See if I don't win father's prize for the best-kept pcts."

And he jumped off the pony and threw an arm around her neck, and kissed her again and again.

"Well, you can keep it this time, but unless you look after it and feed it you can never have another

And mother smiled at the rapturous hug she got at these words, and saw the way Norman rushed off to the stable yard.

And before night King John was in a nice little

He had a lovely time at first. His cage was cleaned three times a day, and he could hardly move for the quantity of delicious green stuff that was put in the cage. But after a little time it wasn't quite so nice. His cage would go uncleaned for days, and his greens were not fresh, and his water was forgotten; and at last he found matters so uncomfortable that he made up his mind to leave, so he nibbled through the bars, and went off one night to the woods to find a new home for himself.

Norman was terribly upset when he heard that King John had vanished.

"I call it dreadful ungrateful of him. He had such a lovely hutch, and I took such care of him!

But King John would not have agreed if he had been listening, and neither did mother when she heard the news.

"If I had been King John I should have done just the same. So I hope it will be a lesson to you in the future."

So Colin won the cricket bat for the best-kept pets; while Norman, who wanted one badly, because his was split, had to go without.

Which would have rejoiced King John's heart if he could have heard it; but he was making a home on the moor among the heather, and too busy to think about his old master.

WONDERFUL RESTORATION OF HEARING.

BY A. J. WATERHOUSE.

Suppose that of a sudden you stepped from a long silence as of death into the world of sound; suppose that for you the noises of earth finally broke in upon what had been interminable stillness—then I think you would appreciate the value of the sense of hearing; you would appreciate it as does William Billings of Berkeley, who not long ago stepped from the world of silence into the world of noise.

We, who have always heard, do not appreciate our hearing more than we appreciate sight. We have heard, we have seen, and that is enough; we give no further thought to the matter. The sun shines; we heed it only to growl if it does not shine. The birds sing; ordinarily we do not know it.

It is not so with William Billings. For twenty-eight years he lived in a world "as voiceless as the Sphynx," then, without a moment's warning, he passed to the country where the voices of men are heard, and the ways, manners and customs of that country still are new to him, so new that he has but learned to understand the language of men, so new that to speak the language still is but a half-learned task. He understands what you say, but his own words stumble.

Thirty years ago this month William Billings was born in Iowa. For a year and a half he heard as babes hear, then a severe cold left him totally deaf. It was a long silence that followed, a silence of more than a quarter of a century. His parents brought him to Berkeley when he was about eight years old and soon thereafter he was placed in the State Institution for the Deaf and Dumb and Blind in the University town. There he remained in a beautiful world of awful stillness, about nine years; then he was discharged, presumably to walk through the halls of silence until he came to a silence no greater, that of Death. Nobody entertained a hope that he ever would hear.

On his discharge from the Institute, he returned to his home, but, not being happy there, soon ran away, and for ten years worked on ranches in the Sacramento valley. Then he again went to his home. There it was, not very long ago, that the great change came. It came suddenly, mysteriously, awfully, as life must have come to dead Lazarus in his tomb. It came, and Billings was sorely afraid. For days he did not realize that he heard. He merely knew that something he deemed as terrible, as strange, had come to him, and he cowered and went half mad in its presence. To him the roar and clamor of the everyday world, to which you and I are so accustomed, was a thing to be feared beyond expression. Noise-he knew the word as it is found in books, but he knew not what it really meant, and so when the experience of it finally eame to him, after twenty-eight years, he had not the faintest conception that the word and the sensation walked hand in hand.

I think that we, who have heard since birth, can form no conception of the emotions of this man, to whom no voice of Nature, animate or inanimate, yet had spoken. The trees whisper to us, and we searcely know it; at last they whispered to him, and he felt that the hiss of unseen demons was in their murmur. The birds sing for us, and if we heed their songs at all, it is with but a momentary sense of pleasure; to him, after the impenetrable silence of the years, their songs came with a shrill clamor that terrified by its mystery. The chirp of a cricket was a thing to fear; the shriek of an engine whistle might drive him mad.

Billings was standing in a field near Berkeley, when, without a moment's warning, hearing returned to him. Of a sudden the world was filled with something new and terrible, something he could not see nor touch, something for which he had no name. From the terror of this unnamable Thing he ran; ran until he was ready to drop, and still it pursued him. He could find no place where it was not; the inconceivable horror was with him everywhere.

Remember that up to this time he had not the least conception that he heard. He only knew that something strange and, as he deemed it, awful, had come to him. In his great fear he determined that he would fly to the home of his sister in San Francisco. Thither he started, still running from he

knew not what. The roar of an electric car as it passed him well nigh dazed him with terror, but still he ran. He ran until, in Oakland, the shriek of the noontide whistles beat upon his ear. Then he absolutely surrendered, and slunk to his home on Telegraph avenue as best he might.

When he reached his home his people thought he was mad. They did not understand what ailed him, and he could not tell them. How could he when he did not know himself? Here he remained all night, and here, after he had gone to bed, he made a discovery: he could cover his head with the bedclothing, and the strange, new demon that haunted him was largely exorcised.

But in the morning he again awoke in the same mysterious, fearful world in which he had lived on yesterday. Then he again concluded to go to the home of the sister who was nearer to him than others, and this time, despite the insistence of the world-roar he could not comprehend, he succeeded in doing so.

If you were to tell your loved sister of an experience that frightened you inexpressibly, you would be surprised, I take it, to see her burst into tears which evidently were those of joy. So was William Billings surprised, but his surprise was less than his joy when he first learned from her that the wonderful, strange world in which he now lived was the world of hearing; so new to him, so old to most of us. Two people were very happy together that day.

Since then Mr. Billings has devoted his time to learning what sounds mean. His experiences have included both the grotesque and painful, but gradually he has succeeded. Most of his time has been passed in the country, where the tumult of noises is less overwhelming. Slowly enough he has learned to recognize the names of things; still more slowly he has learned to pronounce them. In a manner he talks now, but his words yet totter and stumble and fall over one another.

He now lives in the family home on Telegraph avenue, between Oakland and Berkeley, and there, at more than thirty years of age, each day yet brings to him some of the pleasures of sound—pleasures that are still novel to him, although they are so old and stageworn for the rest of us. On the whole, should he not be congratulated? Is, or is it not, a great thing to leave one of life's major sensations untouched until after the years of maturity are upon us?

DOORKEEPER FOR PRESIDENTS.

BY RENE BACHE.

SIMMONS is the right hand of the McKinley Administration. He has acted in that capacity for every President since Lincoln, save one who voluntarily dispensed with his services, and, as might have been foreseen, failed of reëlection. Political parties come and go, but he remains and tends the door through which only is it possible to reach the august presence of the Executive.

Simmons was born a slave on a plantation in North Carolina. In one respect he was very fortunate, inasmuch as he received an education as good as that bestowed upon any white child-a favor which he owed to two old-maid sisters, his mistresses, who had made the boy a sort of body-servant. He slept every night in a cot at the foot of their bed, and thus was ready at all times for duty. Being the kindest of women, they never whipped him, but, when he got into mischief, inflicted upon him a highly original species of punishment. This consisted in obliging him to go at night into a neighboring cemetery and get a handful of earth from the grave of a certain man who had been murdered. It was no agreeable job, for, as was well known to all the colored people of that vicinity, the ghost of the murdered man was apt to be on the prowl after nightfall, and would certainly wreak a vengeance horrible, though vague, upon the youthful Simmons if it caught him in the act of despoiling its burial-place. So the boy would run through the burying ground at top speed and snatch a sample of soil from the grave as he passed it, and would fetch it to the sisters as token of penance performed.

Great events were maturing, however, while Simmons was taking care of the old ladies and doing ghost-races for moral exercise. The storm cloud

of the Civil War gathered and broke, and the you was no indifferent listener to the thunders of the conflict. When the time seemed ripe, in the a tumn of 1864, he gathered his modest chattels in a bundle and started northward, making Washingto his goal, because Abraham Lincoln lived that Once arrived, he soon learned that Mr. Lincoln to be found at the White House, and to a persond his energy and singleness of purpose the rest was easy. Within a week he was regularly employed the Executive Mansion in the culinary department.

After Lincoln's death Simmons was informed that Andrew Johnson was going to discharge all of the "Lincoln niggers" employed about the White House. It was a prediction that seemed only to likely to be fulfilled, and obviously the emergence called for energetic treatment. So Simmons looked up the career of his new chief, and discovered the by a strange coincidence, the latter, like himsely had been born in North Carolina. Next Monday morning, when Mr. Johnson was making a form inspection of the force on the premises, he cast cold eye upon the colored youth and said gruffly:

"What are you doing here?"

"I was born in North Carolina, Mr. President replied Simmons, ready with his answer.

"That settles it, said Mr. Johnson; "your stay."

The historical records are silent as to the mann in which Simmons came to be promoted to the sition of guardian of the Presidential doorknothe post of responsibility which he now holds is not even known exactly when he first took up to important duty—whether just before the death Mr. Lincoln or early in Mr. Johnson's Administration. Suffice it to say that General Grant four him installed and, appreciating his worth, retain his services.

Meanwhile Simmons had ventured upon matrin ny, and there were consequences. Several your Simmonses opened wide their mouths like robin in the home nest. Domestic expenses were proportionately augmented, and the President's doorkee, began to meditate on the chances of securing and crease of salary. Primed with a felicitous specmost carefully composed, he waylaid General Grain the library one morning and requested a ment's interview. Said he:

"Mr. President, I find myself in a grievous per dicament, being embarrassed by multitudinous sponsibilities. Because of my position at White House, my children are obliged to furnian example to all the other pupils at the published in respect to dress and deportment. It involves an expenditure to which my pay is har adequate, and I wish to ask if, under the circumstances, you will not put me on the military of which will add materially to my remuneration."

That is how Simmons got his raise.

Alas! that it should be necessary to record event which followed the incoming of the Haming regime—an event which, in the judgment of the partial historian, must cast a blot upon an other creditable Administration. To put the material crudely, Simmons was bounced. The blow hardly softened by the fact that the discharge to the form of a transfer to the Treasury Department where he was put to work in the sub-cellar, in place locally known as Botany Bay.

"Think," he says, "of the degradation which I was reduced. I, who had been accustoment to associate daily with Presidents, Cabinet officerally into sand statesmen, was thrown back literally into says. They shut me up in a cellar, tied a leaf apron on me, put a knife in my hand, and set me work untying bundles."

Verily, no man is so great that he may not himself subjected to humiliation.

Since McKinley came in Simmons has mentioned the solution that himself so valuable to the Administration that President asked the last Congress to raise his safrom \$1,200 to \$1,400. The Senate put the intrinto an appropriation hill, but the House strait out, and Simmons missed the reward he had well deserved.—Saturday Evening Post.

"I have the following to say: As an up-to-bliterary paper, either for young or old minds. Inglenook cannot be too highly recommend Truly, it is worth many times its weight in gold Frank B. Myers. Mt, Pleasant, Pa., Sept. 3. 1900.

GIRDLING THE GLOBE Minnesota,

By ELDER D. L. MILLER,

Author of "Europe and Bible Lands," "Seven Churches of Asia," and "Wanderings in Bible Lands."

The Authorxxx

visited the Land of the Midnight Sun in the northern part of Europe. He passed through the continent from north to south, stopping at a number of places of interest not heretafore described. He dwells upon the conditions of Asia Minor at considerable length, takes up new subjects, and comments upon changes in Palestine. He devotes one chapter to new points of interest in Egypt, and gives in a copious and interesting way an account of life in India and Japan." In these two last-named countries the author seeks to give information concerning the idolarry of the country, the customs and habits of the people. This portion of the book is well worth the price for which Printed Matter, write to it is offered. As to

Illustrations

the author has been careful in his selection, sparing neither money nor effort to get such as are interesting and useful. Over 125 full and part page illustrations are distributed throughout the book, making it really a pictorial book of the countries visited.

The Appearance

of the book is extra good. The paper throughout is the same as is used to bring out the delicate shades of the photogravures, making the book strictly first-class. One style of binding is a rich Buckram Cloth, stamped, in a handsome style, in ink and gold. The Red Morucco has the same design on the cover, only and in gold, making the book a superb one for a present. The Labrary Building Quite a Few Sunday Schools Subscribe for the INGLENGOR is plain.

Samantha at Saratoga, Sesame and Lilies, Sketch Book. Sticket Minister, Stories from the History of Greece. Stories from the History of Rome, Story of an African Farm, Ten Nights in a Bar-Room. Thirty Years' War, Twice-Told Tales,

Window in Thrums, Education. In His Steps, Minister's Woung, Professor at Breakfast Table, Lamb's Tales from Shakespeare, Lallah Rookh, On Liberty, Tanglewood Tales, Sign of the Four,

The Agent sending in the next largest list will have the choice of TWENTY-FIVE books out of the above list. The Agent sending in the next largest list will have the choice of TWENTY-FIVE books out of the above list. The choice of the above list is the choice of the above list. third largest list will entitle the Agent to FIFTEEN of the books, his choice; and the fourth largest list will win TEN of the cloth bound books. There is also a cash commission going to the Agent. We prefer the services of the Messenger Agent he will write at once for the place, but we will put the first live applicant into line, as the INGLENOOK is not going to be thela in anything. If agents desire to enter for the Library they should say so in order that we may keep tab on subscriptions ceived at the office. Elgin city is barred in the competition for prizes.

The announcement of the successful Agent will be made in January, 1901.

A Live Paper for Live People.

The INCLENOOK is no longer an experiment. It is regarded as phenomenally successful by experienced newspaper in who know what they are talking about. The reason is not hard to find. It is a FIRST-CLASS PAPER, with nothing of and commonplace about it. It is up to date, and always will be. It will have something new in each issue, it always and it never will fall below its self-set standard,—being the best paper of its kind in the world. You can't read it with being interested and instructed. The whole wide-spread world is ransacked in the interest of its readers. isn't made with a dull pen and a pair of shears. It is a live paper for live people.

Some of the best known men and women in the church will write for the INGLENOOK next year. The like of it is never undertaken in the church before. Look at the names, note the subjects! Every man and woman in the list kno what they are talking about.

No. 38.

THE FOOL'S PRAYER.

THE royal feast was done; the king Sought some new sport to banish care, And to his jester said, "Sir Fool, Kneel now and make for us a prayer."

The jester doffed his cap and bells, And stood the mocking court before; They could not see the buter smile Behind the painted grin he wore.

He bowed his head and bent his knee Upon the monarch's silken stool; His pleading voice arose; " O Lord, Be merciful to me, a fool!

"No pity, Lord, could change the heart From red with wrong to white as wool; The rod must heal the sin; but, Lord, Be merciful to me, a fool!

"Tis not by guilt the onward sweep Of truth and right, O Lord, we stay; 'Tis by our follies that so long We hold the earth from heaven away.

"These clumsy feet still in the mire, Go crushing blossoms without end; These hard, well-meaning hands we thrust Among the heart-strings of a friend.

"The ill timed truth we might have kept, Who knows how sharp it pierced and stung? The word we had not sense to say, Who knows how grandly it had rung?

"Our faults no tenderness should ask, The chastening stripes must cleanse them all; But for our blunders-oh! in shame Before the eyes of heaven we fall.

"Earth has no balsam for mistakes; Men crown the knave and scourge the tool That did his will; but thou, O Lord, Be merciful to me, a fool! "

The room was hushed; in silence rose The king and sought his garden cool, And walked apart and murmured low, " Be merciful to me, a fool! "

LEVI AND LEAH.

Chapter IV.

Some two years after this Levi and Leah, married, having left all to follow the Galilean, found mselves in Rome. They were locked in a room hother Christians, and they sat apart from the

Levi, do you remember the cool street in Camaum? Do you recall the laughing waves on shore of the take front? The crowds on the tets, the people going to the synagogue—do you number them? And to-day we die. If you ald, would you undo it all?"

hah, do you remember the day of the cruci-We were both there. We forced our way the front, and I shouted to Christus, as he stood the cross, 'Courage,' and he looked at me and When the day comes for thee I shall meet at its close.' And the day is here. Would I to Capernaum when this night I shall be in Parwith Him,—and you?"

the spoke in a whisper, "Levi, shall we know th other there?"

And do you think we shall know less then than

ht sat silent a long time, when she began singand a hymn of the Roman converts floated on The door pounded on its panel with the of his sword, and commanded silence, but the inians only sang louder. The beasts on the tring the ring roared and howled. It was their enclosure, intentionally so, and they Not the hour. So they said they would pray, a silently, and so they did. Only God knew ched had the heart, but not a face would have

had they been seen in full daylight.

agonya was a rattling at the door, and it was The full, strong, overpowering light of the come," was a rattling at the door, and it is a system of the full, strong, overpowering light come," was all the Roman soldier said.

And they all arose and walked out. What a sight met their gaze! They were in the arena, the circular enclosure of the great amphitheater.

Tier upon tier of seats rose around on all sides. There must have been fifty thousand people present, and out of the whole lot not one friendly face. Yet as they walked slowly across the sand to the center of the arena, Levi and Leah, hand in hand, she said,

"Levi, look yonder, the top and rear row of seats! See the man standing there holding something up to us. What is it, and who is he?"

Levi looked, and said: "It is Aquila, and he has the cross, and holds it up to us. Make you the sign of the cross, that he may know we see. And tell the others."

"Nay, not so," said Leah, "for if the Roman sees him he will be cast among us. Still, I will make the sign," and she did.

When they had reached the center of the arena, a side door opened, and a Roman on horseback rode in and around the outer edge of the enclosure, making proclamation of the sport, and announcing that the lions would at once be admitted.

"Leah," whispered Levi, "it is not yet too late. Shall I say the word of recantation?"

For answer Leah laid her slim, brown hand on the mouth of her husband and held it there close and tight. "Remember what you called to Christus on the cross. Am I to go alone to Him?"

Levi looked up to where Aquila stood, with clasped hands, invoking courage for the doomed. He remembered what he shouted to Christus at the cross, "Courage!" and he loosed Leah's hand and said to all, "Courage! Courage!" Leah kissed him and then she began to sing, in a voice clear and strong, "Christus et ecclesia," and every Roman man and woman present heard and understood the import. Then one after the other took up the hymn, and the fear of death had taken wings.

There was a snarling of brazen trumpets, three times repeated, and the great crowd hushed into comparative silence, and the Christians bowed their heads, some looking upward, however, and ail waiting. Then a man read in a clear, over-mastering voice that all who would recant might be saved. Leah's hand tightened on Levi's and there was silence for a moment. Then Levi's voice rang out loud and clear with the hymn, "Christus et ecclesia." The defiance was understood and in a moment the side doors opposite were thrown open.

Four lions strode into the ring. One circled slowly around the enclosure, another bounded into the center, another lay down, and the fourth crouched to the spring.

"Levi," said Leah, as calmly as though at far Capernaum, "do you remember the time when we were children, and you told me that you would not cease to love me, even to the death?

"I do," said Levi, "and what of it?"

"And I say to you, Levi, son of Matthew, that there is naught in this world we are so soon to leave, that is worth living for save love. Remember thou what Aquila, yonder, once said to you and me? Was it not that, of faith, hope and love, love was the greatest? Faith will soon pass into knowledge, hope for our bodies there is none, and all that will live forever is the love we have for him and for each other. And we will continue it with Christus. I know that now, for I see beyond the hour in which we live. I see it clearly now, Some moments ago I was looking upward and I saw Christus in the air. He was holding out a hand for each. . If I go first I will be waiting with him for you, and if you pass to him wait thou on me."

A lion passed by snarling and showing his white teeth. He crouched on the sand and gathered for a spring on the group. Even as he was in the air Leah stepped lightly in front of Levi, and was borne down by the beast, "Courage, Levi," she shouted, " and Victory." There was a tearing of flesh and a snapping of bones now on all sides. The Romans gloated in absorbed silence on the scene, and the yellow sands of the arena swallowed up the blood of the martrys.

The amphitheater is in majestic ruins to-day. The Roman has passed, and the graves of Levi and Leah are not known, for in the night their friends took them away to a place of sepulture in the depths of the quarries.

And yet they live. Their names are not Levi and Leah, yet with other names and under other skies they live everywhere, people who would go to the lions rather than recant their faith. Out of the blood stains on the sands of the arena has grown an edifice, the Christian church, that will one day cover the earth, its towers in the heavens, and all built on the man Christus, as the corner stone.

WORLD'S SUNBONNET CENTER.

A SUNBONNET that Mrs. Roberts of Indianapolis made for herself attracted the attention of a neighbor. It was not elaborate. It was simply made, but natty, and the tastiness of it added practically nothing to its cost. Would Mrs. Roberts make one for her? She would. She did, That started the trouble. There were other neighbors and friends, Bonnets had to be made by the dozen, Perhaps other women in the city would be glad to get such bonnets? The large retail stores were visited and trial orders were obtained. These orders were soon duplicated. Perhaps there would be a sale of them in Chicago, in Louisville and St. Louis. There

Once they were sampled there was too much of a demand for them. Three or four days after there had been a shipment of one hundred dozen would come the order, "Ship another one hundred dozen at once." Mrs. Roberts had converted sitting room, dining room, bedroom into sewing rooms, but the facilities were overtaxed. Part of the large barn was remodeled and fitted up with sewing machines, cutting tables, etc., but there was no catching up with the orders. The large customers seeing that the demand could not be supplied in this way started to manufacture their own sunbonnets. Sunbonnets were not patented, and there was nothing to prohibit anybody from making even Mrs. Roberts' pattern of them.

As one large factory after another was started with unlimited capital behind it Mrs. Roberts saw that it was useless to try to compete in the making of the populer cheap bonnet, and immediately set to work to manufacture the better and more expensive kinds and began the making of sun hats. Competition was headed off this time by the securing of a patent in a simple device which enabled the hat and bonnet to be taken apart to be washed and be easily put together again and appear as

ONE OLD SAW'S ORIGIN.

In olden times, when a person died, it was customary to toll the church bell a certain number of times, to indicate whether it was a man, woman or child. For a woman it tolled three times, and for a man thrice three times.

The stroke of a bell was called a "teller," and hence it was nine tellers for a man, or, as folks said in those days, " nine tellers mark a man."

This saying, which was continued long after the tolling system was abolished, finally became converted into the present saying, "Nine tailors make

"In a case of this kind," said the lawyer, "there are many things to be investigated, and before I take the case there is one thing in particular that must be looked into,"

"I presume," said the client, "that you refer to my pocketbook."

W Correspondence W

PEKING -A STRANGE CITY.

PEKING has always been an interesting and mysterious city. Its ancient walls, its forbidden imperial quarters, its swarming and uncounted population have attracted foreign eyes. Now the city is the center of interest for the civilized world.

The capital of China is estimated by the New York Mail and Express as a city of approximately 1,000,000 inhabitants. It stands, the account says, in a desert, and since there are within its walls large plots of ground which are not built up, it covers an immense area. There are no sewers in the city; and, as a result, it is unusually filthy, even for a Chinese city. There is no public water supply, and water is hard to get and never very pure. None of the streets is well paved, and it is difficult to make one's way around the city, especially after dark.

Many streets are impassable for vehicles. The main part of the city is surrounded by a wall, but for years the place has been outgrowing its bounds, and thousands of persons now live in the suburbs.

About the only clean places in the city, according to the foreigners, are inside of their compounds. The legation of the United States occupies a small compound near the wall of the city. Both the British and Russian legations occupy compounds of good size, which have been made quite attractive. There is almost no market for imported goods in Peking, and, therefore, few merchants try to do business within the city. They are, in reality, forbidden to transact business within the city walls.

All the walls of Peking, unlike those of most cities in China, are kept in good repair. The outer walls measure about thirty miles in circumference. Those of the oldest portions of the city—the Tartar portion—are fifty feet high and have a width at the base of sixty feet, while at the top they are forty feet thick. The walls of the Chinese part of the city are thirty feet high, twenty-five feet thick at the base, and fifteen feet thick at the top. On the outer faces of the walls are square buttresses, built at intervals of sixty feet, and on the top of these are guardhouses which are occupied by troops.

The "Forbidden City," which contains the imperial palaces, would be interesting to foreigners if they could inspect it, but no foreigner, the *Boston Journal* says, ever sets foot there, except when the staffs of the legations carry their congratulations to the emperor on the New Year day—the sixth of February of the Chinese calendar—and in the rare cases of special audience, one of which took place when Prince Henry of Prussia was personally received by the emperor at the very door.

This question of audience has for the last hundred years been of the highest political importance. First came the demand for the performance of the kotow; then the right of audience completely conceded in 1873; lastly, the place of audience, toward the satisfactory solution of which much was done when Sir Nicholas O'Conor was received, not, as formerly, in the Hall of Tributary Nations, but at a palace within the Forbidden City. Chinese prejudice is daily being broken down by its own weight under external pressure.

The Chinese houses also are described by the Boston Journal. In the four cities which make up the capital, it says, and particularly in the imperial city, live most of the leading and opulent class, and, therefore, the houses are of a more important and solid appearance than is the rule elsewhere. High brick walls, with a single stone entrance, surround a multitude of courts, flanked by the tileroofed dwelling rooms.

It is a curious and universal custom among the Chinese to put up immediately facing the outer door a stone or brick screen bearing tablets or painted scrolls, inscribed with the names of ancestors or classical texts. The object, according to time-honored superstition, is to ward off evil spirits, for the demon, on entering, knocks his head against the obstacle, and, being devoid of all sense but an elementary hatred of mankind, is repulsed and goes away sorrowful.

Why the aforesaid demon should have the cleverness to turn in at the gate, yet not sufficient to wheel round the screen, is difficult for the uninitiated to understand. There is no attempt at ostentation or even of decent comfort about these dwelling

places. Within they are mere ramshackle bungalows, with stone-flagged floors and paper windows, fantastically cut up by wooden partitions, and papered without taste or cleanliness.

The furniture is of polished wood made in the stiff, square style that is not unfamiliar. Ornaments are few, and of the commonest foreign make, while the bronze vessels to be seen are all modern and coarse in workmanship. A Chinese window is a quaint subterfuge for obscuring the light of day. It is an intricate pattern of woodwork in straight lines, with pieces of glass stuck on the surface, and filled up with strong yellowish paper. Its principal use is in sealing up an apartment against any inrush of fresh air by normal ventilation.

The tiles used for roofing are rounded and well made of various colors—yellow for the emperor, green for the gods, blue and red for the rest—the ends are capped with a flat embossed circle and crested with mythical animals and horned heads. When the Chinese discover the cheap and congenial hideousness of corrugated iron the one attractive element in Chinese architecture is doomed to disappear. White paint is generally put on to cover up the mud with an occasional contrast of coral red.

In the summer months European officials who are obliged to remain within reach and the students from the legations hire temples in the western hills from the priests, suspend the religious services and use them as fixed camps. They bring in their train their own households and their own furniture and very pleasantly do these temples serve their purpose.

BIRMINGHAM'S JEWELRY QUARTER.

BIRMINGHAM jewelry is known all the world over, and the jewelry quarter, occupying some miles of streets half a mile from the center of the town, presents a curious aspect to the stranger. Outwardly, save for the signs over the doors, the houses look like respectable middle-class dwellings; within they are hives of industry, and the swarms of respectable and well-dressed workers—a large proportion women—pouring in and out of the workshops at midday is one of the sights of Birmingham.

The wealth stored in the shops of these makers of chains, rings and cutters of diamonds is almost fabulous. The supervision of the quarter is one of the most serious anxieties of the police superintendent of the division, and day and night the streets are patroled by lynx-eyed detectives and plainclothes policemen. Hundreds of the jewelers keep lights burning in their rooms near the safes in which they store their valuables, and their curtains are removed from the windows, so that the safe is under police observation from the street.

The disappearance of the light would immediately be reported and the darkened room would be entered by means of keys kept at the police station. At holiday times some of the jewelers prefer to consign their valuables to the bank, and in that case the messenger conveying the parcels is always shadowed by a couple of colleagues or police detectives on either side of the road.

At the same time intimation is sent to the police station that the usual light will not be kept burning. A large number of the houses are electrically connected with the police station, so that the entry of any marauder would promptly be intimated to the police. This has inconvenient results sometimes when, during a thunderstorm, the sergeant in charge hears a dozen alarm bells all ringing together, and for the moment assumes that a big jewelry raid is in progress.

A curious development in the management of the shops quite recently adopted is the elaborate series of arrangements for preventing waste. Years ago sharp speculators made handsome bargains by the purchase of the sweepings from the various shops. Generally the first man who came along with an offer for the shop "rubbish" got it at his own price. The rapid growth in prosperity of such speculators opened the eyes of the jewelers, and the screenings are now offered to the highest bidder, with the result that one firm alone realizes \$7.500 a year by the sale of its refuse to refiners.

All the work is done over tins, which draw out from the workman's bench. The contents of the tins are collected each day, and passed through a sieve to separate the filings and dust from the larger pieces of silver. Eventually the dust is cast into bars, which are paid for by the refiner in

proportion to the quantity of gold or silver hands in them. The sweepings of the shops are also taken care of.

Every day they are collected and burnt with paper or other jewelry wrappings, and the ash that dust is well mixed, and samples are sent to various assayers, and the highest bidder becomes the purchaser. Even the water used in the washing basin by operatives before leaving the shops is treated with the same care. The soapsuds pass through a drain in such a way that all sediment is left behind,

The residuum is periodically taken out and allowed to dry, and sold in a similar fashion to the sweepings. The dust produced by polishing is similarly carefully collected in boxes, and workmen especially liable to accumulate dust on their hands are required, after finishing work, to brush them hands with a hare's foot. After a time this is burnt, and the ash deposited in the dust tub already mentioned. The black aprons share the same fate.

LEE YIP'S DESICATED OYSTERS.

"A FEW days ago," said a New Orleans Bohemie an to a Times-Democrat man, "I dropped in to see my friend, Lee Yip, who keeps what he calls 'glocely stlo,' which is as near as he can come lo grocery store. He gave me an excellent cigar, and presently he said: 'You likee dly oystel?' asked before I realized that he was talking about dried oysters. 'Come; I show,' he replied; and opening the lid of a big box, he took out a handful of what appeared exactly like dried oysters carved in mahogany. They were not shriveled and warped, like other dried foods, but were as plump and symmetrical as any well-conditioned bivale fresh from the deep shell. The only difference was they were dark brown in color, and as hard a bricks. When Lee Yip tossed them back into the box they rattled like a handful of marbles.

" Of course, I was greatly surprised, and before I left I took pains to find out all about them. 1 oysters are caught and prepared at the big nation shrimperies on the other side of the lake. T process is a trade secret, but as nearly as I could gather from Lee, they are spread on the tops of large sheds and exposed to the sun for sev weeks. What prevents decomposition? I do know; but they come out of the operation as suc and brown as nuts. Last night I tried some special invitation in the back room of a laundry by another Mongolian friend of minc. They w brought in a bowl, and formed a sort of a sen sauce, which was really delicious. The oys themselves were firm, but exceedingly tender, had a peculiar peppery flavor, different from thing else I have ever tasted. The Chinaman did the cooking told me he had simply boiled dried oysters in water and added a small strip pork and 'seasoning.' When I tried to probe the seasoning feature, he suddenly lost comm of English, so there, I suspect, the secret resides

"I am told that the local colony consume man barrels of these oysters every month, and that lar quantities of them are sold in San Francisco and Chicago."

WAITING FOR DINNER.

A MINISTER while relating some reminiscences his early days in the ministry, said:

One day, while traveling between stations, to timed myself as to arrive at a good brother's interest and went in. Brother H. was absent from her and the wife and daughters appeared glad to me. We chatted pleasantly for half an hour more

I was very hungry and was sure dinner was been prepared, as the girls dropped out of the room of by one, so I tarried, but was very uneasy thought the lady of the house was becoming so thought the lady of the house was becoming so

Finally she excused herself and went out of a room for a moment. A small boy, who had to running in and out of the room since my and entered, and I said:

"Come, here, my little man," and as he catewords me I asked:

"How soon will you have dinner here?"
"Just as soon as you go," was the ready ansate
I went.

Nature & Study -

PEAT.

PEAT exists sufficient to warm the continents a thousand years and "keep fires" twenty hours in the day. So in the out-set let us not worry nor be afraid, though our host of the gloomy visage insists afraid, though miserable and unhappy.

afraid, though appears and unhappy.

spon our being miserable and unhappy.

Peat is found in many parts of the world, but unlately Ireland seems to have had a monopoly of a But now Canada steps to the front and points with pride to her forty thousand acre plot—and statisfaction of this valuable possession.

These peat beds may be called our future coal deposits, and thus far have not entered into the economy of the country, as a full and complete product, as they some day will. Maybe you do not exactly know what peat is? Briefly, it is a substance formed by a decomposition of plants, in wet, marshy places,—the vegetation constantly and abundantly growing above the surface and decaying beneath—making a mould, and this by aid of moisture, becoming a clean, compact substance, which, in time, is known as peat. Mosses, especially, enter largely into its formation, and reeds and rushes, and other mater or moisture loving plants, play an important

The peat deposits in Canada are the finest and most extensive in the world, some of them twenty ket deep! How long this has been in forming, can only be conjectured—thousands and tens of thousands of years perhaps. Always in Ireland as far back as the history of the country goes, peat has been used as a fuel. It was taken out of the ground in chunks or cubes—any way to get it out—dried and burned as coal, but in this country, in Canada, the process of preparing it for burning is more elaborate and satisfactory. A writer in an Eastern paper describes the process in this way:

The peat is cut and air-dried, after which it is pulrenzed by being passed through a picker and automatically deposited in a hopper which feeds a steel
be about two inches in diameter and fifteen inches
long. The pulverized peat is forced through this
be by pressure, and formed into cylindrical blocks
be inches in length and almost equal in density
to anthracite coal. The fuel is nonfriable and
meatherproof by reason of its solidity and the exteme glaze imparted to it by frictional contact
with forming dies. The inherent moisture of the
peat is reduced to twelve per cent of the mass. In
reight it compares with coal as follows: Eightythree pounds a cubic foot of peat equal seventybree pounds of bituminous or ninety-three pounds
of anthracite coal.

TIRED WINGS.

ANYONE who has crossed the Atlantic or Pacific annot have failed to notice the land birds which stek shelter and rest upon the vessel, often hunteds of miles from shore. Sometimes it is an ele that alights on the truck or yard arm, again a cop of delicate sparrows, or even a humming bird all so weary and exhausted that they have lost all an beings.

A fisherman on the Maine coast who daily sailed but ten miles from shore said that he frequently a visited by shore birds, which alighted on his much birds and those which visit the steamers out at have been blown from their course during the ason of migration. Thus in the fall and spring the lines of migrating birds extend up and down to coast. The majority fly at night, high in the following the shore line or a mountain range, the their bearings, become confused and fly on, when skin it is a said that he frequently exhausted.

When ships and boats are not available birds will ight upon almost any object. I have seen a gull inding on the back of a sleeping logger head the in the Gulf of Mexico, apparently much at an on the surface, its brown back exposed, has adoubtedly thought a shark a log or a piece of shark rolled over or sank beneath the waves.

The laughing gulls of the Gulf of Mexico and southern California waters have a singular (ancy for roosting upon the back of the brown pelican, which I have often observed. But this is not always to rest, as the gull reaches out when the pelican secures a sardine and often snatches it. Sometimes the gull roosts upon the round head of the pelican, its wings held aloft in the effort to preserve its balance. A singular feature of this intrusion and impertinence on the part of the gull is that the pelican never resents it—at least not in the scores of instances observed by me, so far as appearances went, being aware that it was being trampled upon by the inquisitive, laughing gull, which, when it had secured its fish by the most barefaced methods, went flying away with a victorious "Ha, ha!"

The Santa Catalina channel, in southern California waters, is a favorite field in summer for the giant mola or sunfish—one of the most remarkable of all the denizens of the sea, a rotund, chopped-off creature which resembles nothing. Some wit has described it as the fish that was originally very long and was chopped off to suit its requirements, and apparently this is what happened, as the fish has literally no tail, its place being taken by what appears to be a mere rim or frill, which can be moved to a limited extent. The sunfish, like the basking shark, has a singular habit of lying on the surface in the wash of the waves, and is almost always taken for a piece of wreckage.

In August in the Santa Catalina channel they are frequently seen floating in a heavy sea, lying broadside up, the pectoral fin slowly fanning the air—the only evidence of life about the strange object. Why the fish takes this position is to a certain extent unknown, but I think it is due in some instances to the fact that the creature is infested with many parasites which live in the thick mucus which covers its skin and that it endeavors to destroy them by exposing itself to the direct rays of the sun.

These fish form an excellent roost for various sea birds, and the spectacle of a sunfish bearing several gulls or a cormorant is often witnessed. In such a case it might readily be taken for wreckage.

It is possible that the gulls aid in freeing the great fishes of their parasitic enemies, alighting upon them as the little African bird enters the mouth of the crocodile, which patiently opens it for the purpose. Such resting places are more or less unsteady, but by continual practice the birds become skilled in holding on. This is well exemplified by the gulls, which follow the steamers which ply between San l'edro and Avalon, California. The birds follow the steamer out and back, a flight of forty miles, and when they become weary they appear to take turns in alighting on the round golden ball which surmounts the mast. This almost impossible resting place pitches about in all directions, now forward or backward, or from side to side, sometimes jerking the bird off, but, as a rule, these feathered acrobats retain their position, even in the roughest weather.

The camel is often used by several birds as a roost, and undoubtedly all these birds repay the animals by destroying the various parasites which infest them. During the present winter, in riding across country in southern California, I came upon a flock of sheep grazing on a little mesa. Many of the sheep carried about on their backs from one to three or four blackbirds, which perched there apparently perfectly contented. On another occasion, in the same country, I saw pigs serving as roosts instead of sheep. Nearly every black pig was mounted by one or two blackbirds. Some stood on the head, another clung to an ear, while in another instance four blackbirds perched upon the back of a pig, all noisily talking or singing in their peculiar language.

DO THEY EVER DIE FROM GRIEF?

Some one sends us an article from the New York Herald, giving three cases in which a horse, a dog, and a canary bird died from grief on account of the absence of their friends, the owners, and adds that a hundred instances could be cited of animals that have died of grief at being separated from those they love.

The following which appeared in an address to the Boston public schools, shows very clearly how sensitive even birds are:

"To show how this power of the voice extends through the whole animal creation, I will say that I

know one of the best ladies in Massachusetts, who lives within five miles of this schoolhouse. She had, a few years ago, a beautiful canary bird which she dearly loved, and to which she had never spoken an unkind word in her life.

"One Sunday the church organist was away, and she stopped to play the organ for the Sunday school,

"In consequence of this the dinner had to be put off an hour, and when she got home her good husband was very hungry, and as the girls may find out some time, when husbands get very hungry they sometimes get cross, and he spoke to her unkindly.

"The things were put on and they sat down in silence at the table, and presently the bird began to chirp at her as it always had to attract her attention. To shame her husband for having spoken so, she turned to the bird, and for the first time in her life spoke to it in a most violent and angry tone. In less than five minutes there was a fluttering in the cage. She sprang to the cage—the bird was dead.

"When I was at New Orleans, winter before last, Mrs. Hendricks, the wife of the late Vice-President of the United States, came there. And she said she had once killed a mocking bird in the same way. It annoyed her by loud singing. To stop it she spoke in a violent tone and pretended to throw something at it, and within five minutes it was dead."

FAMILY OF HORNED TOADS.

A HORNED toad from the plains of New Mexico came to Kansas City about a week ago stowed away in the pocket of a hotel cook who brought it along as a curiosity. For a while the cook carried it about and finally gave the toad to George P. Huckett, who placed it in a box of sand in the window. The borned toad is a member of the lizard family, and this peculiar specimen, with its spiked back, attracted considerable attention.

Yesterday morning when he went to look after the toad he found it busily engaged in catching flies, but the reptile was not alone. Basking in the warm rays of the morning sun were five and twenty little horned toads, perfect counterparts in shape of their mother. They are odd little fellows, no larger than a thumbnail, looking very much like baby turtles. Their coats vary in color from the gray of a dusty road to the rich red-brown of desert sand. They are as lively as crickets, but when handled roughly will curl up and "play 'possum."

But alas for maternal devotion, Mrs. Toad has forsaken her children. She pays no attention to them and in the farthest corner of the show window she stands with her face against the pane, looking for some one to take her away. However, the desertion does not weigh heavily on the little horned toads. They catch flies and scuttle about as merrily as if shifting for themselves was an old experience to them.

THEY DEVELOP INTO EELS.

In the course of a series of lectures recently delivered by Prof. Ray Lankester at the Royal Institution, London, particulars not generally known were given concerning the breeding habits of the eel.

It is quite erroncous to believe that these creatures breed anywhere except in the sea, where eggs are laid and hatched at great depths—often five hundred fathoms.

A dozen years ago some fishes called leptocephali were regarded as a distinct species, but at length one of them, kept in an aquarium, developed into a conger eel. Later on the transformation of various kinds of leptocephali was followed, and they were found all to change into eels, one species being recognized as the common cel.

Immense numbers of these must exist at great depths in the sea, and they sometimes ascend the rivers and will sometimes push their way across wet grass to ponds which have no direct communication with the rivers.

MOTHS fly against the candle flame because their eyes can bear only a small amount of light. When, therefore, they come within the light of the candle their sight is overpowered and their vision confused, and as they cannot distinguish objects they pursue the light itself and fly against the flame.

INGLENOOK. THE

PUBLISHED WEEKLY

At 22 and 24 South State Street, Eigin, Illinois. Price, \$1.00 a year. It is s high grade paper for high grade boys and girls who love good reading. INGLENOOR wants contributions, bright, well written and of general interest. No love stories or any with killing or cruelty in them will be considered. If you want your articles returned, if not available, send stamped and addressed envelope. Send subscriptions, articles and everything intended for THE INGLENOOK, to the following address.

BRETUREN PUBLISHING HOUSE, Elgin, Illinois

Entered at the Post Office at Elgin, Ill., as Second-class Matter

LESSONS IN VISITING.

Ir very often happens that the Sunday-school teacher is in a position to attend other schools than his own. It is always well to go when such an opportunity offers itself. There is much that may be learned in seeing how others manage the work Teaching in the Sabbath school is, to a certain extent, like teaching in a public school. It resembles that work in the instruction that is to be conveyed, and the methods of imparting instruction are varied and of different values. It will be at once seen in a strange school whether or not there is anything to be learned. It is not always the case that we learn something new and valuable every time we go away from home. We may have better methods of our own, and then, again, the methods of others may be superior to our own. It can only be told by personal observation. This is where the advantage of an occasional visit to other fields of labor than our own may be found.

WHY WOMEN LIVE LONGER THAN MEN.

THE fact that the anticipated length of life is greater for women than for men is one which, has most probably been noticed by comparatively few people, yet it is borne out by statistics.

What is the reason of this difference? Physicians do not credit the fair sex with superior vitality. We usually regard a woman as a being of finer susceptibilities, an aggregation of nerves, and finer natures generally wear out more quickly than the rougher ones. In short, women are the "weaker' vessels, and as such they should not last so long. Man, who leads a freer life and goes in for athletics to a far greater extent, ought to outlive woman by many years, yet he succumbs sooner than she.

One reason commonly assigned for the difference is that so many men are engaged in unhealthy occupations. That is true, but those who advance this reason forget that numbers of women are employed in professions or businesses in which they run very great risks. Think of the women, young and middle aged, who are acting as norses, attending on patients suffering from infectious or contagious diseases. Even in the household it is the woman who attends to the sick members of the family. And the women workers at injurious trades are to be counted by thousands.

The most probable causes of woman's longevityare the regularity of her life and her innate cheerfulness. They are potent factors in existence, but they are often lost sight of by the stronger sex.

Women are apt to call their lives monotonous rather than regular, but whether this is so or not, it is this sameness which serves to lengthen the duration of their existence. More so than men, they have the same duties to perform day by day. They rise at the same time, have their meals at stated intervals, superintend this or that household duty on given days, and retire to rest at about the same hour. They have their worries-their children fall ill or the servants give trouble—but these are light compared with the anxicties to which men are subject.

Men, either through necessity or neglect, do not maintain the same regularity in the times of rising, eating and retiring. They are more given to pleasures that take them out of the groove, and as it is upon them that falls the responsibility of keeping the house together by providing the necessary financial resources, they are subjected to business worries and troubles of which their partners know little or nothing.

earn her own living, she is not troubled to the same extent; she is less ambitious, is satisfied with a little, and that little is earned with more ease.

Another thing to be borne in mind is that by nature woman is intended for household duties, and, therefore, she is doing work which she likes; if she does not actually take pleasure in it, at least it does not annoy her.

But with men it very frequently happens that the occupation is not the one which would have been selected had there been any option, thousands of men are employed in work which they dislike, but are forced by circumstances to continue in that particular line. Women might take this with resignation, but men fret and fume and so wear themselves out more quickly.

The tranquillity of the fair sex when in trouble or pain is well known to doctors and others who have the opportunity of careful observation.

APT PHRASES.

A 6000 many words and phrases are apt to be regarded as slang when in reality they are only expressive English. Words are like people. They have their ups and downs in the social scale, so that the expression that yesterday was only allowed to creep in with apologies, by the back door, to-morrow may be welcomed in the most exclusive society. It is interesting to note, in this connection, that classic literature has furnished us with many of our slang expressions.

Shakespeare is full of slang as "she is spoke" today, and many of our modern pictorial expressions come from the Bible. The first person who made any reference to anything being as " fat as grease ' was probably David, who says in Psalms 119: 70, "Their heart is as fat as grease, but I delight in thy law." Job declared, "I am escaped with the skin of my teeth." Again David sized up the flatterer in these words, just as we use them to-day, "The words of his mouth were smoother than butter, but war was in his heart," Psalms 55: 21. In Ps. 72: 9, he says, "His enemies shall lick the dust, "Solomon declares in l'roverbs that "he that is surety for a stranger shall smart for it." Isaiah speaks of "the merchant prince" and of Tyre. He also says (Isaiah 25: 6), "The nations are but as a drop in the bucket." Ezekiel writes of the wheel within a wheel when he says, "As if a wheel had been in the midst of a wheel," and it was not Patrick Henry, but Jeremiah, who exclaimed, "Peace, peace, when there is no peace."

Innumerable other illustrations might be quoted, but enough has been given to show that a good deal of new slang is pretty old, and can justify its right to the society it keeps.

GIRLS, TAKE THE HINT.

Mex admire the girl who is her mother's girl in household matters, and who is not above taking an interest in the most trivial things in connection with house duties. They admire the girl who is a bright, entertaining companion, and who has ever a kind word and pleasant smile for those around. They admire the girl who is always neatly gowned, no matter if in inexpensive materials, and who never dresses loudly, or in questionable taste,

They admire the girl who can adapt herself to any society, who never puts on affected airs, and who would scorn to do an action of which all the world might not know. They admire the girl who in an emergency can turn her hand to anything. They admire the girl who is unselfish enough to give up some pleasure of her own without considering herself aggrieved at having to do so. They admire the girl who can talk of more important things than dress or the last new play, and who can listen intelligently when deeper subjects are introduced-

THE MEDICAL PROFESSION.

" Тик great doctor is greater than ever, especially in the field of research and discovery," writes Dr. Even where a woman remains single and has to George F. Shrady, of New York, in Success; "but the sometimes helps herself.

average doctor is a smaller personage than he en was before, and that is why the profession seemhave declined and lost many of its old-time attra tions for educated men. An ordinary pill pulvey and diagnoser will soon be regarded with no m reverence than the man who sells the pills. 0_{11} dead level, the profession is overcrowded, bad paid, and has lost much of the old-time homage society. I would say to the young fellow who m be graduated to-day, if he has not a great capital enthusiasm and energy, and if he loves mon there is more reason now than ever hefore that should let this profession alone. The title M. per se, is of no special merit. On the other han the surgeon who takes out the stomach of a man d ing with cancer and preserves his life, or the server who defines and destroys the microbe yellow fever, is ranked with the masters and miracle workers. Climb to the summit or he shop."

OUR SHORT SERMON.

Text: Money Getting.

One of the most disastrous things that can over take a man or woman is to become so wrapped in money getting that they think of nothing e We all know such people, and nobody ever thin of appealing to them for any considerable belowh it is wanted for some charitable object. Like a other habit, good or bad, it grows on one, and who it once becomes fixed nothing but death loosens grip on the spirit of accumulation.

There is no sin or discredit attaches to have money, but with its possession there is a duty the is often neglected. Those who have the most of are hardly ever the foremost in helping others is need assistance. They come to look on all gifts money lost, forgetting that it is only what I give away that they can take with them when the cross over. A man may be very rich and yeth Christian. But if he thinks more of his money the he does of Christ he is in the situation of the r young man who once asked Christ what he sho do to inherit eternal life. When the answer volved the disappearance of his fortune he left! eternity of happiness for the present moment opulence

Some men have the gift of money making. It a real gift, from God, and is not to be despised. is only when the use of it is forgotten, and the hal of accumulation gets uppermost that sin entered heart. All through the Bible the dangers of rich are spoken of. Not money, but the love of the said to be at the root of all evil. And so it When a person gets the disease in such a way the they think of nothing but their money they are useless as the barnacle on the ship's plank. The are carried on by society, but play no parl in a good done. They are simply stoppers of some money that comes their way, and they die gretted and leave it all behind to be squandered others. Get all the money you can, honestly, out interfering with your duty, and then use the glory of one who gave you the gift of getting The rich man, at death, is not he who has the money, but he who did the most good with what

The calls for back numbers continue. Adscriber scans his sample copy of the Nook. when sending in his subscription is pretty subwant the back numbers. It has been repeated announced in the columns of the INGLENOUS only current issues can be furnished. There are back numbers available.

As we go to press with the Indennik we for with pleasure the efforts being made to aid the fortunate people who lost their all at Galveste the cyclone of last week. Such contribution h not only those who receive but those who give

Before marriage a young man sometimes his sweetheart a lock of his hair, after marriages

HOW THEY CAN CORN.

Here in Elgin is a canning establishment, and at this writing corn is being put up. It is a common, everyday matter to see rows of canned common, everyday matter to see rows of canned common the shelves of the grocery, and doubtless a corn on the shelves of the grocery, and doubtless a corn on the shelves with the uniform experience and at it themselves with the uniform experience hat the cans "hust." But here is a regular cannot the cans "hust." But here is a regular cannot the cans and it is a very interesting sight when it is in any and it is a very interesting sight when it is in the word, pack corn, bust. They pack, that is the word, pack corn, bust, pumpkins, and baked beans and lima beans in their several seasons. Right now corn is being

Now in order to get at the facts in the case let us ake it our own way-the 'Nook has a way of its an anyhow. Let us go out into the country and upat a farm where they grow sweet corn. We ould learn that the cannery people furnished them heir seed, and that early concord, old colony, ountry gentleman and early and late Stowell's regreen are the varieties used. The idea is to ting the season out as far as practicable. If it all ame into the factory at once it couldn't be hanand. Now suppose that it is ready for the canners Theears are stripped off and loaded into a wagon ad hauled, husks, cobs and all, to the factory, as it sometimes called. Here a man inspects the old, and either passes it or growls about its being phard in the grain, and then it is weighed and heman is paid by the ton for what he brings in. legets from \$5.00 to \$5.50 a ton, and he can raise rom two to four tons to the acre if wind and weathwhave smiled on him.

He then drives his load up to a long shed open the sides and unloads his corn where he is told, tisstacked up breast high along the edge of the hed floor, and the day we were there one hundred and filty tons of corn had been brought in. That takes a pretty good pile of roasting ears and the eason's lot amounts to about three thousand tons, takes about six niles of adjacent territory to use this amount. Even the greediest boy who had could get his fill out of that pile.

Seated in this long, big, high pile of corn, are the uskers. The whole gamut of human existence is presented from the cradle to the grave, the bigotkind of a husking bee, and they are stripping egreen off the ears and pitching them into bushbaskets before them. Three cents a bushel they aforhusking, and as fast as husked it is emptied nan endless, broad belt and starts on its trip to efactory proper. The husks make a bigger pile an the original corn in the ear. These husks the ackers are glad to get rid of, and the farmers are lad to get them. Each wagon bringing in a load from takes out a load of husks, and the cows alle when they see the wagon coming home, ough it is not nearly as good as throwing down a and of fence and getting in the field over night r themselves.

Now when the corn travels up the belt to the entail drops into its place before a man who feeds into a machine that resembles somewhat a horizonal corn sheller, whiz and out pops the cob, and into the hopper drops the corn, cut, scraped, sped off by a system of knives and let it be rembered that the husking, and the feeding the man hand touches the corn. There is always the empresent bugaboo of dirt in thinking of this are stuff, but really there is as little or less chance that then there is in the home kitchen. It admitted that no cannery smells like Analy the satisficant of the country smells like Analy the

Affort being freed from the kernel the cobs are len away to anybody who will haul them off, differ away to anybody who will haul them off, and differ are taken by the wagon load. They are read out to dry in a field and used as kindling as on when the winds howl over Northern Illical revolving sifter of meshed wire to get out the first that the results of cob that may have been as added and away goes the mess to another cans, so much into each can, and then each can and at each step something is done to it. I puts the lid on the can as it passes in procession, and on down the line it goes till it

is soldered automatically, inspected, and comes out at the other end of the belt where the cans are taken off and put in big iron baskets. It must be remembered that this procession is practically endless. The belt is slowly moving along, and the cans are marching along with it very close together, and they get their touch of what is needed as they pass. You can have an idea of the way things have to move, as the season lasts six weeks, and one million five hundred thousand cans of corn are worked through in that time. It takes about three thousand tons of corn to do this. There is very little idling about a cannery that is in full blast. Each man has his stunt of work to do and it comes to him and waits not.

Now up to this point all that has been done could be similarly done at home. But here comes the hitch. These caps are put in big iron baskets, a barrel or so of them, at a time, and they are lowered into retorts which resemble huge iron cylinders. The corn in the can is not cooked, is nothing but pure corn and a little brine, and the subsequent cooking is where the process will fail at home. The cans are locked hermetically in these iron retorts, live steam turned on, of 241 degrees temperature, and the heating is kept up for an hour. The cans are soldered shut when they go into these retorts and there get their steam bath. That is the point of failure at home. The highest temperature that could be had at home is that of boiling water, 212 degrees, and at the cannery they get 241. This used to be the great secret in the business. They stay in their hot bath for an hour, and they are then taken out and ranked on the floor in another building. The cans are bloated, bulged, and apparently ready to exploite. As they cool down over night they resume natural proportions. After that it is simply a matter of packing in boxes and selling to the city people who handle and distribute such things. It occasionally happens that through some bitch in the process there is a failure to secure perfect results. This happens about once in three hundred and fifty times,-that is one can in three hundred and fifty is a misfit. If not too badly gone it is doctored over again. Taking it all around the process is infinitely superior to home methods, the only difference being that that which is done in your own kitchen, from vegetables out of your own garden, is apt to be better in flavor because quality and not bulk is sought for in the private handling.

Each vegetable requires a different treatment, and as we go along we will tell how these different vegetables are worked. The management at the cannery was all courtesy, and there was nothing to conceal. A visit is a pleasure. A good many people think the profits in such a business are large, and while it is satisfactory, yet there is not as much to it as one would imagine. If the proprietors of the cannery could get a cent a can profit they would be happy.

MAINE FOWN'S BIG BEAN KILN.

THERE IS a comfortable little town called Blue Hill, because it is situated under the brow of a little mountain of that name, way down in one corner of Hancock County, Maine, which claims the distinction of being the only town in the universe which has a town bean kiln. "beankill" the natives call it. It is an old institution, whereby over ninety-nine per cent of the beans eaten in the town are baked.

It was way back in the '66's when the Linscotts went to Elne Hill. One of the family while on a visit to some of his people in Blue Hill chanced to get mired in a mud puddle and while scraping the clay from his boots noticed that the consistency and grain was that of the finest brick clay. He prospected a little and found that the hills about the place were of the same kind of clay and that sand of prime quality was close at hand. Blue Hill Bay was a natural harbor. There was a steady demand for bricks everywhere, and so it was that the Linscotts went to Blue Hill and started the brickmaking business. The Hackensack people were enterprising and their crew of employes grew larger and larger until it absorbed all the available natives, and it was necessary to import men from the neighboring towns. This necessitated a boarding house and so it was that Mrs. Linscott's big lour-story frame house became the shelter of forty or fifty able-bodied men with enormous appetites. They

were not particular as to the menu so long as there was plenty of food and Mrs. Linscott's beans were pronounced just about right.

Although the house was equipped with a spacious brick oven, what with the bread and pies and puddings and other things, the capacity was considerably strained. Mrs. Linscott was complaining of this when her busband, "Ol' Dave Linscott," said be'd see about it. He talked the matter over with the foreman, and so it happened that one Saturday afternoon, when work was a little slack, the crew turned to and built an enormous arrangement in the Linscott dooryard. It was like a huge brick oven as much as anything else. They called it a "beankill," because it was not much of anything else. The firebox was arranged to take in four-foot wood and the arrangement of flues was the result of many conferences, and the consensus of opinion of all the expert brick burners of the works.

"Build 'er big enough," said Dave, and it was big enough for bundreds of bean pots.

The "kill" was a great success. Nothing was ever seen like it. No such beans ever tickled the palate of a hungry brick worker as came out of the Linscott bean kiln. Then the neighbors began to bring their beans just as a sample order. And when they brought them once they did again. Finally the "kill" became so extremely popular that thrifty David thought there might be a chance for "spec'lation," and so a fee of one cent per pot was established.

And this was the origin of the kiln.

The original structure has been rebuilt and altered many times. The Linscotts got rich and moved back to New Jersey, but their successors kept up the kiln. The price has been advanced with the increased price of wood, but the custom has not fallen off, as more people have moved in, and the town has become a famous summer resort. And now of a Friday night all the youngsters of the village may be seen about sunset heading for the "bean kill" with the family bean pots.

"Bill" Meader, the present proprietor of the kiln, is a jovial old soul, and crams in the dry, hard wood in cordwood lengths, and anon runs his arm into the immense ovens to gauge the heat, while his purse becomes heavy with the nickels and dimes which flow in.

He knows just how all his customers like their beans; how Mrs. Perkins wants hers "rather under," and Mrs. Peabody likes hers "most burnt," how the hotel people want theirs "thout the lasses."

WIVES AS LOTTERY PRIZES.

Only last year a fair Hungarian, a lady of long lineage but abbreviated purse, made public offer of ber hand and heart as a lottery prize. She secured the consent of the finance minister of Hungary to sanction the issue of a lottery loan of 700,000 florins; each ticket was to be of the value of a florin, and the owner of the lucky ticket was to be rewarded with her hand and a third of the spoil, another third she was to retain herself, and the balance was to be distributed among local charities.

She was not deterred by the experience of another lady, also a member of an impoverished but high-born Spanish family who, a few years earlier, had offered herself in a similar way. In this case the lady was neither very young nor very fair, and that the lottery might lack nothing of attractiveness on this account, the winner was to have the option of declining her hand whilst sharing the money prize, amounting to half a million florins, with her,

The winner of the prize was, by a curious caprice of fortune, a coachman, who, in more flourishing days, had been in the employment of the lady's father; and, to her dismay, he insisted on marrying her. The marriage was disastrous, the husband squandered every florin of her dowry, and ultimately descrited her.

At Smolensk, in Russia, the lottery is a recognized matrimonial medium, and every three months a local heauty is offered as a prize. The tickets, of which there are 5,000, are of the value of a rouble, and the winner thus secures a wife dowered with 5,000 roubles. It is, however, within the girl's power to decline to marry him, and in this event she shares the lottery money equally with the disconsolate winner,

Good Reading

THE NOISES IN BATLLE.

An English writer who has been with the British forces all through the south African invasion has written an article giving some impressions as to the sounds made by the various missiles used by Boers in defending their country. The conclusion he reaches is that every brand of rifle and cannon has its own particular note, never to be mistaken when once clearly heard. In the Boer war the perfection of the weapons used made these various notes very marked, so that during a brisk engagement a storm of war music filled the air. After being in three or lour fights the English soldier gifted with an ordinarily acute musical ear had no difficulty in telling, with shut eyes, what kind of weapons were being used by the defenders. This was equally true in regard to rifles and artillery. In regard to the latter, its caliber could easily be determined.

The most common note heard was that of the Mauser bullet. Doubtless it was also the most unwelcome, judging from the deadly accuracy of that rifle in the hands of the determined Dutchmen. The sound of this missile was a long note, nearly always in G, but occasionally a trifle flat. It is a long-drawn out note, which sounds flat in proportion to its distance, hardly rising or falling at all, so great is the velocity. When the Mauser strikes earth it gives a sharp "put," which is not particularly terrifying, but no combination of letters will give an exact idea of the savage "pack" it makes on finding its billet in the body of man or horse. The novice who hears this sound without a sick, throbbing sensation in the throat is a man gifted with an exceedingly low nervous organism.

A lower note than that of the Mauser is that produced by a dum-dum or split bullet, which is about as unwelcome to the men against whom it is directed. This is on account of the rending wounds produced by the diabolical thing, regarding which many an Englishman now in hospital can give accurate information.

Above the persistent song of the musketry bullets rises the long note of the common or bursting shell. A seven-pounder's shells can be heard some time before they arrive, and are heralded by a shrill whistling screech like a locomotive's signal, vibrating if there is any wind. Then, if all goes well-or ill-comes a rending "Wang!" and the hiss of the flying fragments of the missile. An unexploded shell strikes the ground with a sounding thump.

A very unmistakable and trying note is that of the pom-pom, the new Maxim of the Boers, which fires one-pound shells. These come in at terrific speed, singing a persistent song of

" ли-аа-ла-оо! "

and finishing with a cruel "R-r-rack!" that shakes the drum of your ear. The gun itself says "Pompom-pom" as plainly as a man could say it; it is a eapital name. Ordinary Maxims say

" RR-EE-EE-EE!"

in the key of the Lee-Enfield, but a semitone flatter, and as regards the flying bullets, the explosions sound like a continuous "Rum-pum-pum!" that reminds one of a tattoo.

Larger shells from the guns of position sound a much deeper note, a long-drawn, throbbing

" BOO-OO-OO!"

that lasts quite a time, and the explosion is a splitting crash that can be heard miles away. Nothing tries the nerves so much as this, together with the continual thudding of unexploded shells, for Boer ammunition is not of the best, and shells do not always go off. But a sound that nobody who was in Ladysmith will ever forget is that same vibrating "Boo!" and the splintering-crash that follows it.

But of all the battlefield sounds there is none to equal that of the mighty lyddite shell from a great gun. The first note is a shrill moan in this instance.

" EW-EW-EW!"

which rapidly rises to a hair-raising howl far greater in intensity than that of the ordinary big gun shell. Then a last, overpowering shriek and a frightful metallic explosion, as if a load of dynamite had burst in an open boiler, while the air fills with flying earth and rocks. Anyone who has ever heard the splitting "R-r-rack!" that stuns the hear-

ers when a big lyddite shell bursts will never forget

There was not much pistol shooting in the Boer war, but the British service revolver bullet says

" YU-U-U! "

when on its way, and the Boer's Mauser repeating

"WEE-EE-EE!"

These are, however, comparatively rare sounds, though, of course, the revolver or pistol bullet at its proper range is not one whit less deadly or effecttive than its bigger brother, the rifle or the gun. It must be remembered, too, that, while the screech of the shell gives a certain warning of the impending danger, no such signal of its coming does the pistol or revolver bullet herald forth, the closeness of range preventing this.

YOUR PORTRAIT IN CRAYON.

"Honest and upright young men can make \$25 weekly by working for us. No canvassing." ran the advertisement.

It was the "ad." of an "art establishment" whose sole business is to make crayon portraits for \$1.95, including frames. And the concern does exactly as it agrees to do. It makes a portrait for the price named and makes a whole lot of money for itself out of the business. An art connoisseur might hesitate to recommend these portraits for exhibition in the Art institute, but for all of that they are portraits, though generally they are a very base and glaring counterfeit presentment of the original, which is a photograph.

Of course something more rapid than the usual way of producing a portrait is required and the needed rapidity is secured by a not very ingenious machine, but which can "do" from thirty to thirtyfive a day, according to the dexterity of the "artist" in working the machine. The pay of "artists "ranges from \$6 to \$20 a week, the most expert operator of the machine getting the highest scale. The volume of business depends on the persuasive powers of the corps of solicitors to convince women more especially to avail themselves of the extraordinary opportunity to have their dead and living friends done in "life size, hand-made crayon, including an exquisitely designed frame." Women are easier to work upon than men, so solicitors say, because they are more sentimental. The idea of having life-size portraits of their loved ones, especially of those who have gone to the other world, appeals to them, to say nothing of the portrait as a wall ornament, and all, including a beautiful frame, for only \$1.95.

Strictly speaking, these portraits are hand, or rather hand-foot, made, for the foot plays an important part in applying the crayon, which is not crayon at all, but ink which the machine sprays over the outlines. The first process is to take what is called a solar print, enlarged to the desired size of the photograph. But it is not a solar print at all, The sun is too uncertain in casting its rays, so a powerful electric lamp is substituted for the sun. By this means the work of getting a print is greatly expedited; besides, no time is lost in waiting for the sun to shine. Total darkness is just as good as the noonday glare of a July sun, for the lamp is there all the time.

The print, mounted on heavy cardboard, goes to the "air brush artist," who quickly daubs black about the eyes, nose and chin; then he turns his machine loose upon it. The machine is worked by one foot and it throws a heavy or light spray of ink over the outlines just as the brain and the hands of the artist direct. The spraying finished, the artist seizes his tools, which are a wad of cotton, a hard rubber eraser and bits of rolled paper which come to a point like a pencil. In a jiffy he rubs in and rubs out the blends and shades and sends the product of his handiwork to the drapery artist. The tools of the drapery artist are two bunches of cotton and two ostrich feathers, for he works with both hands. He thrusts his bunches of cotton in a box of powdered crayon, daubs here and there and then "throws up the lights and shades" and the drapery is done. When he reaches the hat he uses the feathers to give the lights and shades. It must be remembered that he is working on a solar print, and, in fact, the whole process seems to have but shoe lasted for about eight miles of travel.

one object, which is to cover up the earmark the print and yet retain the likeness. The lights" are made with the hard rubber eraser and is "dead easy," as an artist puts it. The "an tablishment" figures on a total cost of not \$1.25 for a complete portrait, including the w of the artists, the solicitor's commission and frame. The evidence that it is or was a pay business is in the fact that the establishments h multiplied until the competition is very sharp.

The social conventions of the establishment severe. The air brush artist is a genius above a apart. He is an aristocrat and his superiority n be recognized. Next comes the lace artist. works in high lights and other kinds of lights out the black daub to imitate lace and the like. lowing him comes the drapery artist and then solar, or, rather, the electric print, artist. These clude the "art department." Next on the lista pears the solicitor for orders, but he has to as ciate with the framers. All below the print art are mere hewers of wood and drawers of water as stand in about the same social relation to the tists that the mechanic who makes the piano d to the world's most renowned performer. He ever, the solicitor may speak with any artist when wishes to convey the information that the party whom the portrait was made remarked that a work of art it is equal to any of the efforts of 1 old masters. The framemaker, too, may speak the artists if he wishes to say that he finds it ha to make a frame that will do the picture justi The \$1.95 portrait artist and the business he in and the people with whom he deals represe all stages of human character from monument egotism to stupid credulity.

HOW TO FALL GRACEFULLY.

"ABOUT the first thing that I teach my pupi said a trainer of circus gymnasts, "is how to That, you know, is the secret of the great'h dive ' from the roof, which remains up to date greatest feat in the way of gymnastic tricks the the world has seen."

"It looks almost too perilous to be interesting remarked a friend.

"But it is not in the least dangerous if one of knows how to fall," he continued. "Now, if untrained performer should attempt to fall in a from any height whatever he would be almost to break some bones. Should he stretch out arm to save himself he would be very likely break it in two places. Should be light on heels he might break his leg, or, more likely, forward and break his jaw. But just fill your with air and hold them full, double yourself up a knot, leaving no limb free, and fall on the back your shoulders, just above the shoulder blades. you can fall from what height you like and come no hurt. This explains the cannon and cala tricks. Why, once we attempted the catapult in a hall where the roof was so low that we had sink the catapult below the floor. The gra forgot all about having his net lowered a d ponding distance, and when shot 150 feet lorn and upward at the same time-didn't he down underneath the net and land slap-bang of shoulders on the bare floor? We picked his for dead. You may hardly believe me, only knocked the wind out of him and shaken up a bit. The next night he was performing well as usual. That just shows what the musc the shoulders together with an elastic cushion of in the lungs, will resist.

HORSES SHOD WITH STRAW.

STRAW is put to strange uses in Japan. the horses are shod with straw. Even the d est of eart horses wear straw shoes. In their the shoes are tied around the ankles with rope, and are made of the ordinary rice braided so that they form a sole for the foot half an inch thick. These soles cost about a penny per pair, and when they are worn out are thrown away. Every cart has a stock of new shoes tied to the horse or to the front cart, and in Japan it was formerly the cur measure distances largely by the number of shoes it took to cover the distance, horseshoes made a day's journey, and the at shoe lacted

GOD is Love.—A teacher said to a heathen: "Do Dur gods love you?" "Our gods never think of hing," was the reply. "Then hear this, 'For God ploved the world that he gave his only begotten on, that whosoever believeth in him should not this, but have everlasting life." Only when it added to the decistand the blessed message.

JAPANESE BUDDHISTS STUDYING CHRISTIANITY.—
Tom Chicago comes the report that two Buddhist
nests have come to this country to study the regious and social institutions of America both
bristian and Jewish. Just how much significance
gen that these people from the Sunrise Kingdom
and the come and see whether God is with us. It
correct will help them to find the true God.

Some people will never know anything about bus Christ except what they see in the lives of ing the Christ life ourselves. We must walk so the behind Christ life ourselves. We must walk so hist.—Bishop Thoburn.

Is the British museum is a carved box made in his own hands.

Sunday A School

THERE is no power of love so hard to keep as a kind voice; but it is hard to get it and keep it in the right tone. One must start in youth and be on the watch night and day, while at work and while at play, to get and keep a voice which shall speak at all times the thought of a kind heart. But this is the time when a sharp voice is more apt to be acquired. You often hear boys and girls say words at play with a quick, sharp tone, almost like the snap of a whip. If any of them get vexed you hear a voice which sounds as if it were made up of a snarl, a whine and a bark. Such a voice often speaks worse than the heart feels. It shows more ill-will in tone than in words. It is often in mirth that one gets a voice or a tone which is sharp and which sticks to him through life and stirs up ill-will and grief and falls like a drop of gall on the listener. Some people have a sharp voice for home use and keep their best voice for those whom they meet elsewhere. We would say to all girls and boys: " Use your best voice at home." Watch it day by day as a pearl of great price, for it will be worth more to you in the days to come than the best pearl hid in the sea. A kind voice is a lark's song to heart and home. It is to the heart what light is to the

How deep rooted, how gloriously prophetic, is the idea of moral order. Man has never been without it; it is part of his make-up, his stock in trade. Let him believe in no God, like the Buddhist; in two gods, like the Zoroastrian; in many gods, like the Greek; or in one God, like the Jew and Christian,—he yet holds to a supreme ideal of moral order. Rooted in the heart of man is the sense of duty as profound within as the starry heavens are exalted without. There is something he owes himself, his fellows, and his God, which becomes his "ought," something due which is his "duty." He is "haunted forever by the eternal mind." Appeal to this sense of right in children, reverence and obey it in ourselves, clarify, dignify, glorify it in the light of Jesus Christ, and one day duty and delight will

Are you questioning what course in life you shall take? Let love tell you. Love is the only prophet, love is the only teacher. Love will answer all problems, because God is love and love is God. We are in this world like a child who plays upon the floor with a disintegrated map; which she does not know how to put together. Here is some father-love, and here some mother-love, and here some brother-love, and here some wife-love, here some love that is wrathful against wrong, and here some love that is merciful and compassionate toward the sinner—love all broken up in fragments. Put them together; take your life for this task, and put them together; and when all the fragments of life are put together you will find the map is love, for life is God, and God is love.

A nying judge, the day before his departure to be with Christ, said to his pastor, "Do you know enough about law to understand what is meant by joint-tenancy?"

"No," was the reply, "I know nothing about law, I know a little about grace and that satisfies me."

"Well," he said, "if you and I were joint-tenants on a farm, I could not say to you, that is your hill of corn and this is mine; that is your blade of grass, and this is mine; but we would share and share alike in everything on the place. I have just been lying here, and thinking with unspeakable joy, that Jesus Christ has nothing apart from me, and everything he has is mine, and will share and share alike through all eternity."

There is a legend which says that when the Empress Helena found three crosses on Calvary and could not tell which was the Savior's, she had a dead body brought and laid in turn on each of the crosses. When it touched the true cross life was restored. It is only a legend, but it reminds us of the real truth that when a soul is brought in personal touch with Christ by faith that soul lives. As the cross was the instrument of death, so it has become the instrument of life. There is no death beneath the cross of him who died to save the world. He lives who touches that cross by faith; he is immortal who finds refuge beneath the accursed tree.

For * the * Wee * Folk

A QUEER LITTLE CRADLE.

THERE'S a queer little cradle in each little flower Where the wee seed-babies are sleeping, Though so small, they are growing hour by hour, And the nurse-flower watch is keeping.

All around and about are the stamen trees
Where the gold pollen cakes are growing.
And the birds and the butterflies shake these trees
And the seed-babies think that it's snowing.

But the snow in flowerland is yellow snow, And the wee seed-baby loves it, And it eats and eats, and this makes it grow, While the nurse-flower smiles above it.

MRS. QUEEN BER AS A MONOPOLIST.

BY JOHN E. MOHLER.

When Mrs. Queen Bee had raised over a hundred thousand children, and all of the older ones had died, the younger children noticed age creeping upon their mother, and decided it was time for another Mrs. Queen Bee to come into the world. But Mrs. Queen Bee positively opposed this. She thought she was good for many years yet, and there was no need of a younger Queen. But the bees thought different, and slyly made preparations for a new Mrs. Queen Bee. The way they did this was to take an ordinary lice egg and make a much larger pocket for hatching, and feed the young bee while there, on an extra fine food, purposely prepared. When Mrs. Queen Bee saw these preparations going on she became indignant, and declared it should not be. She even tried to destroy the little pocket where the new Queen was to be grown, but the bees formed a wall around it, and kept her away. Then she determined that if it had to be, she wouldn't live in the same house with the new Mrs. Queen Bee. When the bees saw how determined she was, they decided it would be best for her to move into another place, and therefore a crowd of them was selected to accompany her, and help her fit up a new home. So one day when the sun was shining they all went off together. There were thousands of the bees from the old hive, a few drones, and the old Mrs. Queen Bee; and the noise they made by each one humming was astonishing. After flying about in the air awhile, they concluded to settle on a peach tree, until they could decide where to locate their new home. But the man who owned them was on the lookout, and when they were all bunched together on a limb, he spread a cloth upon the ground under them, placed a new hive on the edge of the cloth, then shook down the entire bunch. The sudden fall surprised them, and some of the bees were angered. But when the Mrs. Queen Bee saw the hive she walked right in, and the others followed as quietly as a drove of sheep. Then Mrs. Queen Bee began housekeeping anew, and since there was no other Queen Bee to interfere they became a happy family again.

The new Mrs. Queen Bee, who took possession of the old homestead, was also a monopolist, and the very first thing she did, after getting out into the hive, was to run around and examine every wax pocket, where bees were hatching, to see if they contained another Queen. She would know it by the pocket being much larger than the rest, and resembling the closed end of a sewing thimble. If she found one she tore it open and killed the egg at once, for she was determined to be sole mistress of the family she ruled. When this was done she settled down as a very wise and industrious Mrs. Queen Beg should, and none of her adopted children were ever known to utter a complaint.

Warrensburg, Me.

A VERY small boy one morning strayed into the kitchen just as breakfast was being sent in. Seeing a dish of poached eggs on the table, he looked at them curiously for a minute, then said:

- "Cook, do the hens lay poached eggs?"
- "Yes, Master Gerald."
- " And which of them lays the toast?"

"That cat made an awful noise last night in the back garden," remarked Mr. Bennett.

"Yes, father; I think that since he are the canary he fancies he can sing."

DOG CEMETERIES.

LONDON has a cemetery for dogs a corner of Hyde Park; at Windsor Queen Victoria has one; at Lacken, near Brussels, the Queen of the Belgians has set aside a corner of her grounds for a similar one; and in Prospect Park, Brooklyn, there is a section devoted to the same purpose. But one has to go to Paris to find the queerest cemetery on the footstool.

About two years ago a law was passed in France requiring that dead animals must be buried at least one hundred yards from any human habitation, and be covered with at least a full meter of earth. This law has resulted in the making of an extensive dog cemetery, just outside of Paris, and the Parisians have brought to bear in a surprising way, in their treatment of the place, their faculty for the ex-

There is a little island—Isle des Ravageurs they call it-between Asnieres and Clichy, on the route of the Madeleine-Genevilliers tram cars, and it is this island which contains the canine necropolis of the great French capital.

You would have to visit a great many towns this side of the Mississippi to find among the God's acres for the interment of the dead bodies of human beings one presenting so artistic a front as the entrance to this "Cimetiere des Chiens."

Just within the cemetery gate are two pavilionsone used as a porter's lodge, and the other occupied by the registrar. The graves are arranged in avenues, some of them prettily shaded, and all of them kept with that fine trimness one sees from end to end of France. A great many of the graves are marked by pretty monuments in stone, and a few of the marbles are from the studios of famous sculptors, and have received most careful treatment. A notable example in this connection is the monument, several meters in height, sculptured by Honri Edeline, in memory of Barry, the celebrated St. Bernard. Barry is not buried in the Paris cemetery. His body is preserved in a museum at Berne; but so highly did his exploits commend him to the people of France, that they were not slow in erecting a monument expressive of their appreciation.

There is a good story in the life of that dog-a story worthy of the pen of a great writer. He saved forty lives by his unaided efforts, and he went to his death at the hands of the forty-first person whom he attempted to rescue,

The monument to Barry shows the dog in the act of saving the life of a child found in an ice cav-

Another important monument in this cemetery is a stone-hewn campaign tent, under which are interred the remains of Pompon, the dog of the Camp of Challons. This monument was raised in memory of Pompon by the artillerymen of Challons.

The queerest feature of the cemetery has to do with the Parisian fad of treating dogs much as though they were human beings-that is to say, the dogs of the very rich. It is by no means unusual to find arranged beside or on the grave a number of the articles belonging to the outfit of the deceased during his life; and a person unfamiliar with the extremes to which the Parisians go in furnishing a dog with articles of one sort and another, is certain to be startled on examining these collections.

It is common enough, of course, in any dog cemetery to find a disused chain and collar here and there, but in Paris one runs across muffs, card cases, reticules, souvenirs of birthday parties, china dinner pieces and the like.

This last paragraph suggests somewhat the extent of the Parisian fad for dog furnishings. There is in one of the principal streets of Paris an establishment devoted expressly to the sale of articles used by dogs. It is an establishment requiring the attendance of a large retinue of clerks, and a very valuable stock of goods is carried. Poor people have no business in this establishment-its patrons are the rich, and for the greater part the very rich. Pretty nearly everything that one can think of as pertaining to the every-day life of a well-to-do person may be found in this establishment, but adapted to bear a reasonable proportion to the sizes of the various types of dogs that have the good or ill fortune to be the pets of wealthy women.

It is a fashion in Paris for rich dogs to have their birthdays celebrated in much the same way that rich children have their birthdays observed; and one feature of this store is its stock of tiny candles | air revolving around a center where there was an

and flowers for the adornment of cakes to be baked for use on these auspicious occasions. A condition of the fashion calls for the invitation to dog functions of the honored dog's rich friends in dogdom; and this involves the proprietors of the establishment in the need of providing invitations printed on stationery that has by custom been accepted as the proper thing for dog parties only.

Card cases for dogs are very common, and a rich French dog never thinks of starting from home without his card case, provided he is out on a visiting excursion. When his rich owner has occasion to leave her card she leaves the card of her pet dog if the person upon whom she is calling is similarly addicted to the fad. The cards are preserved as souvenirs.

Everybody in America knows that a bath does not hurt any dog, rich or poor, but the practice that is pursued with reason here is pushed to the extreme over in Paris, with the result that the dog who is in affluent circumstances is provided with a bath tub of costly make and has as accessories of the toilet a complete outfit of silver-backed brushes, shell combs, expensive perfumery and all that.

One department of the store referred to is devoted to hats and caps for dogs. It all depends on the sex of the dog, the season and the places to be visited. There are silk hats for the male dogs and the daintiest of straws and felts for the females-strictly up to date, both, and after the modes peculiar to human beings of to-day. If a dog is to be taken to one of the French watering places his outfit of cape, hat, and so on, is adapted to the resort to be visited. A rich French dog never thinks of dressing at the seaside as he dresses when in town.

Puck was right, wasn't he? "What fools these mortals be!

MONEY IN OLD TIN CANS.

Down on the south side of Chicago, near Seventy-ninth Street and Vincennes Avenue, there is a Klondike discovered and worked to its utmost capacity by two bright young mechanics.

Out toward Englewood, near the tracks of the Chicago, Rock Island and Pacific railroad, half a stone's throw from Seventy-ninth Street, can be seen an immense quantity of old tin cans piled into hills of very decent proportions.

There are hills of tomato cans, miniature mountains of peach and pear cans, mounds of milk cans, cans from far-off France, that were once filled with delicate truffles, cans that were once ready to burst with the luscious fruits which California sends to less favored States, oil cans, old kitchen pots and pans, all gathered up from one end of the city to the other, and from hotel garbage boxes.

The assay office of this "tin-can Klondike" is near by in a little 16x20 foot frame building, used also as storehouse for refined metal.

The factory itself is half a block further down toward Eighty-first Street.

These old cans are placed in a furnace and brought to a red-hot heat by a rousing fire under them, which melts the solder and zinc or "spelter," these sinking to the bottom of the pot, while the tin remains on top.

The solder or "spelter" is ladled out and cast into bars, in which form it finds its way to the metal market; while the tin is run out into frames and rolled into sheets of various sizes, and sent to the stock yards and other factories, where they are made over.

THE GALVESTON DISASTER.

To understand the manner in which Galveston was laid under water and why many of its buildings collapsed in the storm last Saturday it is necessary to examine the site of the city. Standing on a low island facing the Gulf of Mexico, a large part of the city was situated only a few feet above the normal level of the gulf. The soil is chiefly sand, and, while the more substantial buildings had foundations laid solidly, some of the smaller stores and houses must have been set on the surface or to an insufficient depth. When the water rose several feet above the street level and heavy waves rolled in upon the buildings, the soil upon which many of them stood was washed out and they necessarily crumbled away.

The storm that raised the gulf level was one of the kind known as cyclonic; that is, it was a body of

area of very low barometer. There are two form of motion in the cyclone; the center travels generally northeasterly course, while the around this center continues to revolve in a conplete circle. The area affected by a cyclone m extend two hundred miles from the center, in whi case the velocity of the wind is not likely to be great as it is in one which has a smaller radius, a its forward movement will also be slower.

In the northern hemisphere the wind revolve "against the sun," as the seaman says—that is, from right to left, in an opposite direction from the most ment of the hands of a clock. Consequently when a cyclone approaches a ship or island any one wig ing to know where the center is may find out of bearing by facing the wind, since the center will on a line exactly ninety degrees to the right, the West Indies and in the Southern States the course of the center is somewhat north of west, the wind begins to shift to the right the observe will know he is on the right hand of the cyclone, track; if the shifts of wind are to the left he wi know he is on the left-hand side of the storm

We know that Galveston was on the right-han side of this particular storm, and consequently t wind shifted to the right. The cyclone had bee reported approaching the gulf since the first of the month. It was not a very rapid traveler. Saturda afternoon last the center had reached a point in the gulf bearing southeast from Galveston, as w shown by the low reading of the barometer in the city - twenty-nine and twenty-two-hundredthsinche -and the velocity of the northeast wind-for miles an hour. It is highly probable that the cent had passed sufficiently to the southward of t Florida straits to bring the full force of the no. half of the revolving storm against the outward to of the gulf stream, thus raising the general level the water in the gulf. Then, with apparently quic ening movement, it rushed toward the Texas to

Throughout the northern half of the swiftly volving circle the wind was driving the water to west and southwest until the normal height of t gulf in that locality must have been increase But when the center had swept still farther w the direction of the wind had gradually work around to the east, and then to the southeast, till whole force was concentrated upon the coast right angles to the shore line. What wonder the this final effort of the hurricane should have hear the water higher and higher on the doomed of It did not take long for the waves to complete the mission of destruction, and, although the constant shifting wind finally allowed the flood to subsi the rain had been wrought.

Against such a combination of the elements forethought could provide. Practically the wh gulf was blown in upon the city, and no dikes breakwater could have kept it out. And again recurrence of this disaster the only protection sible is the raising of the city far enough above t gulf level to be out of reach of a similar rise.

IN A HURRY.

THE merchant had arrived at his office rath early in the morning, and five minutes after he down to his desk a foxy-looking, bright-faced came in. The merchant was reading, and the bo with his hat off, stood there expectantly, but sayin

At the end of two minutes he coughed slight and spoke.

"Excuse me, sir," he said, "but I'm in a hurn! The merchant looked up.

"What do you want?" he asked.

"I want a job if you've got one for me." "Oh, do you?" snorted the merchant.

what are you in such a hurry about?"

"I've got to be, that's why," was the sharp sponse. "I left school yesterday afternoon to to work, and I haven't got a place yet, and I afford afford to be wasting time. If you can't do thing for me say so and I'll go. The only p can stop long is in the place where they pay not it."

The merchant looked at the clock. "When o you come?" he asked.

"I don't have to come," replied the young"
"I'm here now, and I'd been at work before the you had said so.

Half an hour later he was at it, and he's like! have a job just as long as he wants one.

GIRDLING THE GLOBE Minnesota,

By ELDER D. L. MILLER,

Author of "Europe and Bible Lands," "Seven Churches of Asia," and "Wanderings in Bible Lands."

The Authorxxx

visited the Land of the Midnight Sun in the northern part of Europe. He passed through the continent from north to south, stopping at a number of places of interest not heretofore described. He dwells upon the conditions of Asia Minor at considerable length, takes up new subjects, and comments upon changes in Palestine. He devotes one chapter to new points of interest in Egypt, and gives in a copious and interesting way an account of life in India and Japan. In these two last-named countries the author seeks to give information concerning the idolatry of the country, the customs and habits of the people. This portion of the book is well worth the price for which it is offered. As to

Illustrations

the author has been careful in his selection, sparing neither money nor effort to get such as are interesting and useful. Over 125 full and part page illustrations are distributed throughout the book, making it really a pictorial book of the countries visited.

The Appearance ***

of the book is extra good. The paper throughout is the same as is used to bring out the delicate shades of the photogravures, making the book strictly first-class. One style of binding is a rich Buckram Cloth, stamped, in a handsome style, in ink and gold. The Red Morocco has the same design on the cover, only ALL in gold, making the book a superb one for a present. The Library Binding Quite a Few Sunday Schools Subscribe for the INGLENOON

INGLENOOK

"The Inglenook" will be Sent to any Address the Rest of this Year for Twenty-five Cents, or will be Sent the Rest of this Year and all of next Year for One Dollar.

The Best Way is to send the Dollar and be Done with it. After You Have Read it for a Week; or two, You'll be Some that You Didn't Save Money by Subscribing for the Whole Year at Once. It's a Paper that Grows on One. Once Read, Always Read!

We Want Agents, == Real Live Agents

In Every Part of the Country. Anybody can solicit Subscribers at the Twenty-five Cent Rate, and Whoever Sends in Club of Ten of These, Can have his Choice of ONE of the following books:

Dictionary of the Bible, Beside the Bonnie Brier Rush, Natural History of Birds and Quadrupeds, Black Beauty.

Drummond's Addresses,
Ten Nights in a Bar-Room, Adventures of a Brownig, Imitation of Christ, Elc. Intellectual Life,

If he gets twenty subscribers he can have two books; for thirty subscribers three books, and so on. And they con be had in an hour's work in many a place. Whoever shows himself an efficient agent will be put in line for the Fall wo connected with the Inglenook. There is a library of Fifty bound books waiting for somebody.

The Agent who sends in the largest list of dollar subscribers between this and the first week in January, 1901, will be sent him a Library of FIFTY BOOKS. Here is the list:

Adventures of a Brownie, Æsop's Fahles, Auld Licht ldylls, Autobiography of Franklin, Autocrat of the Breakfast Table, Bacon's Essays, Beside the Bonnie Brier Bush, Black Beauty, Burns' Poems, Child's History of England,

Confessions of an Opium Eater, Dictionary of the Bible. Dream Life, Drummond's Addresses. Emerson's Essays, Ethics of the Dust, Fairy Land of Science, Fifteen Decisive Battles, House of Seven Gables, Imitation of Christ,

Intellectual Life, Lays of Ancient Rome, Longfellow's Poems, Lorna Doone, Mosses from an Old Manse, Nat. History Birds and Quadrupeds, Poe's Poetical Works, Prue and 1. Rab and His Friends, Reveries of a Bachelor,

Samantha at Saratoga, Sesame and Lilies, Sketch Book, Sticket Minister, Stories from the History of Greece, Stories from the History of Rome, Story of an African Farm, Ten Nights in a Bar-Room. Tbirty Years' War, Twice-Told Tales,

Window in Thrums, Education, In His Steps, Minister's Wooing, Professor at Breakfast Table, Lamb's Tales from Shakespeare, Lallah Rookh, On Liberty, Tanglewood Tales, Sign of the Four.

The Agent sending in the next largest list will have the choice of TWENTY-FIVE books out of the above list. third largest list will entitle the Agent to FIFTEEN of the books, his choice; and the fourth largest list will win TEN of the cloth bound books. There is also a cash commission going to the Agent. We prefer the services of the Messenger Agent he will write at once for the place, but we will put the first live applicant into line, as the INGLENOOK is not going to be theh in anything. If agents desire to enter for the Library they should say so in order that we may keep tab on subscriptions ceived at the office. Elgin city is barred in the competition for prizes.

The announcement of the successful Agent will be made in January, 1901.

A Live Paper for Live People.

The Inglenook is no longer an experiment. It is regarded as phenomenally successful by experienced newspaper of who know what they are talking about. The reason is not hard to find. It is a FIRST-CLASS PAPER, with nothing It is up to date, and always will be. It will have something new in each issue, it always be and commonplace about it. and it never will fall below its self-set standard,—being the best paper of its kind in the world. You can't read it with The INGLENC being interested and instructed. The whole wide-spread world is ransacked in the interest of its readers. isn't made with a dull pen and a pair of shears. It is a live paper for live people.

The like of it Some of the best known men and women in the church will write for the INGLENOOK next year. never undertaken in the church before. Look at the names, note the subjects! Every man and woman in the list known in th what they are talking about.

No. 39.

THE TIME FOR PRAYER.

WHEN is the time for prayer? With the first beams that light the morning sky, Ere for the toils of day thou dost prepare, Lift up thy thoughts on high; Commend thy loved ones to His watchful care:-Morn is the time for prayer!

And in the nountide hour, If worn-by toil or by sad care opprest, Then unto God thy spirit's sorrows pour, And He will give thee rest: fly voice shall reach him through the fields of air:-Noon is the time for prayer!

When the bright sun hath set, While yet eve's glowing colors deck the skies; When with the loved, at home, again thou'st met, Then let thy prayer arise For those who in thy joys and sorrows share:--Eve is the time for prayer!

And when the stars come forth, -When to the trusting heart sweet hopes are given And the deep stillness of the hour gives birth To pure bright dreams of heaven,-Kneel to thy God-ask strength life's ills to hear: -Night is the time for prayer.

When is the time for prayer? In every hour, while life is spared to thee -In crowds or solitude—in joy or care-Thy thoughts should heavenward flee, Athume-at morn and eve-with loved ones there, Bend thou the knee in prayer!

CAPTAIN JACK.

You would never know who Captain Jack was by name. So let us introduce him to the INGLEk circle as the middle-aged father of a family nsisting of a boy and girl, both pretty well grown, dawife that, in another age, and time, would re been made into a saint. There are more of th women than we are apt to think possible. But tall that go for this time. Everybody called him ptain Jack, for he had been in the army, though ver a captain. There were other Jacks, and to stinguish them he was called the Captain.

The Jacks lived in the country, on the edge of a usiderable town, near a brook in which the spotittout played on shingle and in the deeper swirls. ne day in the springtime a youngish man from the I was whipping the stream for the speckle-sides, len a storm came up and he sought refuge in the ouse of Captain Jack. Inside everything was of modrous clean, and all the marks of honest poverty the everywhere. But everything was neat. The by were all at home. Mrs. Jack was mending meold clothes, Jennie, the girl, was patching Edd's old coat, and Captain Jack, himself, was king baskets. We forgot to say before, that the plain was stone blind. All he could do since the ident was to help what little he could in basket lt was pretty hard making ends meet, but

Ywere doing it, and just a little over.

Now it so happened that the fisherman visitor a student in the office of one of the most celeated oculists in the city, and he was at once inusled in the Captain's eyes. He looked long and refully. Then he looked again. And then he ought a while, and after another good look he are it as his opinion that the Captain should go to city and be operated on. He would write and what his preceptor had to recommend in the In a week longer he walked into the Jack week longer ne walked into Substanby it amounted to one thing. He couldn't tell tould be done until an examination was had, sibly not then. An operation would likely be then. An operation would amount, all told, raildiage and everything, to about one hundred and dollars. It was an uncertain result, but nothcould be told without a trial. Then the student his way to the brook and gave the matter no

hat night the household held a consultation in Garden back of the house with Mrs. Captain in It was not a question as to whether they

That was taken for granted. But how? That was the matter at issue. There was only one conclusion and it was unanimously decided that they would do it. Not one of them had the faintest idea of how it was to be had, but they hoped to get it in some way. Then they set about it by each working at whatever could be done, and putting all the savings in a common fund. And never a word to the Captain. He would worry, and so they let him out of the councils.

Then they went at it. Jennie secured a situation in the largest store in the town, and Edward worked wherever he could get a job. Mrs. Jack took in sewing and washed at night. It would be hard to tell when the berries were picked that Ed sold on the streets, but there was rejoicing on Saturday nights, when the whole family pooled their earnings in silent conclave in the kitchen, out of the reach of Captain Jack's abnormally sharp hearing. The result of the first two weeks showed, conclusively, that it could be done in six months, or less, if luck held out. And it did hold. When they came within sight of the last ten dollars they decided to tell the Captain himself what was expected of him.

It was then that the unexpected happened. Captain Jack developed a hitherto unknown mulishness. He refused to go to the city. He was blind now, always would be blind, and would not take the hardearned money and squander it on any useless and painful experiments. It took a week to wear him out, when he consented at last, unable to stand the continual pressure.

It was a bright day in the Autumn when he stood at the station waiting on the train that would carry him to the city. His ticket was in his pocket, his money sewed into his coat, the simple lunch in the paper box, and consigned to the care of the conductor, the train creaked and rumbled around the curve and away to the city. The family went back home to wait.

A week passed and then came the word that he had arrived safely, and that the doctor had said that an operation was necessary. He held out no hope. Then in a day or two along came a letter saying briefly that the operation itself was safely over, and that nothing could be told for some weeks as a result.

Then came the long weeks of waiting. Nobody but those who have gone through with it knows the desperateness of unrewarded vigils. It was a race between hope and despair, now one in the ascendency, then the other, and so the weeks wore away. Then one late Autumn evening, the boy came in from the town, threw down on the table an opened envelope with the city stamp and the return address of the oculist, and walked on through the room dejectedly. The woman opened the letter with feverish haste, and read in a mist the words that Captain Jack would never see any better than he did now, and that he would be at the station on next Thursday's train, at which time they were to meet him.

There was no talk at the supper table. They had done all they could, and it was a failure. He would never see any better than he did, and it meant a concealed depression, and a lifetime of work, for the doctor's letter said that "he will never see any better than he does." Then the next day they all went to the train together, even the dog trailed along, none of them having the heart to turn him back.

Presently the train came and out stepped the Captain, handed down by the brakeman. He groped out painfully, and his wife clasped his hand and they all kissed him. He was paler, but looked fairly well. Then the dog had his inning. He leaped on the Captain in an effectual effort to salute him in true canine fashion, for he had been the inseparable companion of Captain Jack all through his home life. The Captain pushed back his green goggles for a moment, and the dog looked steadily into his eyes and then was seized with a fit. He rolled and barked, and ran around the mad, which the participate in the evening meal.

whole family wended their way slowly along, Jennie leading her father.

(To be Continued.)

HOW PEPSIN CHEWING GUT WAS FIRST MADE.

TEN years ago Miss Nellie Horton was a stenographer earning as many dollars a week. Destiny put her in a pepsin manufactory. So much for environment. Her one supreme weakness was a great love for spruce gum as it comes fresh from the balsam fir tree. So much for the habit. All day long Miss Nellie Horton played her typewriter to the accompaniment of a bit of spruce gum. In every order, every letter or bill the word "pepsin" occurred. She spelled out pages of dictation on the virtues of pepsin. She believed in the virtues of spruce gum. Somehow the thought struck her that here would be a happy combination.

One day she came to her work at the pepsin manufactory with her determination glued to the point. She had made up her mind to confide in her employer. It took courage to talk to the "boss" who grunted orders from behind his roller-top desk. She took an extra chew at her spruce gum and then put the question:

"Don't you think," began Nellie Horton, timidly, "don't you think," she repeated, with a choking sound, "that it would be a good idea to put pepsin in gum?"

Of course her employer looked at her as if she were crazy, and laughed the idea to scorn. This, by all the chronicles of inventions, great and small, is the first sort of encouragement given to inventors. Nellie Horton had half hoped for better, but fully realized that this was to be expected. She only set her teeth all the harder into the fresh piece of spruce gum. Then she began her experiments. Nellie Horton had one characteristic common with all men and women who gain success where thousands aim and where only an occasional one hits the mark. She was absorbed in a single idea.

For months she worked and experimented. The gum must have the proper consistency and substance. It must have just the correct amount of pepsin to make it valuable for indigestion. It took a vast amount of time and trouble.

Her favorite spruce gum was finally abandoned. It didn't meet the requirements. At length, after many months of experimenting, Nellie Horton made a pepsin gum that suited her. It was a simple matter to find a market for it, once the dealers were shown its merits.

Ten years ago Nellie Horton was a slip of a girl eking out a living at the typewriter. To-day she is a woman enjoying the luxuries that an income of half a million permits. And all because she hit upon the happy idea of pepsin gum.

DOGS AMONG HIS CUSTOMERS.

A FAVORITE uptown chop house has a regular dinner clientele of high-bred dogs. These dogs accompany their owners, who are of the feminine sex and are chronic diners out.

The dogs are of every variety, from the pug and the smart French bull to the poodle and the sky terrier. They are ornamented with huge bows on their collars and are invariably well behaved and quiet, sometimes occupying seats during dinner without in any way offending onlookers by the occasional refined nibble of a morsel daintily fed them.

Sometimes a conservative diner objects to the doggy air of the place and asks the proprietor if he hadu't better have a special room for the dogs, but the owner says that while the dogs behave he has nothing to say. A disorderly dog would be put out immediately.

He does draw the line at St. Bernards and mastiffs-only the smaller animals being allowed to

Correspondence

AT A FREE DISPENSARY.

It makes no difference how poor a man is-if he is sick he may have the best of care and medicines. It is not necessary to be sick enough for a hospital. It is not necessary to have a faint ailment. The toothache, a cut finger, a touch of ague, anything is enough to call forth the sympathetic care of the free dispensary. The dispensary people are kind to their patients-because they need them. There is a professional as well as a humanity reason, for the existence of the dispensary, and for this reason, if no other, the public can count on the continuance of its services. The patient is as necessary to the dispensary as is the dispensary to the patient.

Dispensaries are run by colleges and hospitals for the benefit of their students and the benefit derived by the public is by way of payment. The patient gives himself as a practice case, the dispensary gives its treatment in return. This is not to say that the treatment is in any way unreliable or that the patient exposes himself to any danger. Quite the reverse is the case. The situation is simply this: The dispensary is not a charity institution, and the patient is not a charity patient. Everything which is given and taken from the patient and institution is paid for, and paid for liberally.

It puts the institution on quite another footing when thus viewed, and it gives the patient quite auother air.

Therefore, if you see people in line at the door of the dispensary do not think they are paupers. They are poor people certainly, but that is nothing to their discredit. This notion of beggarism having been spread abroad among the people has prevented many a crippled baby from receiving care which would have made him a strong man. The world is full of people who would rather see their children die than become beggars. They are perfeetly frank to say so when asked why they do not go to the dispensary. They have made up their minds it is not a decent thing to do, and no amount of persuading will dissuade them. To their notion it would never do to have the neighbors know "Johnny" was taken to a dispensary. If he is ill enough for a hospital then-all right. That is quite a different thing.

The teachers in the public schools of the poorer districts have to take the children to the dispensary themselves if they would have it done. Mothers promise repeatedly but never fulfill their promises and never intend to. In spite of this there are thousands of people under the care of the dispensary doctors, and if there were twice as many dispensaries there would be twice as many patients. They have scarcely time to open their doors before the patrons begin the siege. And from that time on so long as the building stands each morning will find the street crowded with people waiting their turn in the visiting. The lame and the halt and the blind line up on the sidewalk and wait patiently, sometimes for hours. There is a line of them, old men and women and babies, their thin faces and sunken eyes telling the story of suffering. It is not necessary to ask the name of the building where they wait. The people tell its name, giving eloquent praise to the care of the young physicians. It is a curious study, this gathering with its ailments. The old men confident of help, nursing a rheumatic limb, the consumptive confident of recovery, the workman who has an injured hand and is fretting to be at work again.

The children with all kinds of diseases and every manner of deformity; quiet, long-suffering babies that have been born crooked and peevish, and children who have been hurt in the crowded street are there. The scar of an overwrought city life is upon each one of them, and in spite of their loyalty to the noisy crowd each one is suffering for a quiet open space in which to breathe. And yet they stand very close together against the narrow side door which gives entrance to the dispensary. One would think to look at them that they were suffering from the cold or that they were afraid of never getting in. Each man has his place in the line, and let none get aside from it under penalty of discord. As the door opens, ever so narrow a crack, to let out some unfortunate one, everyone on the outskirt pushes forward to get through. The pain of the

crowding makes many of them cry out, but still they push on as though life and death were in the balance. It is just a moment before the door is again closed and there is but one left in the line outside.

. From 8 o'clock every morning until 12, and sometimes 5 in the afternoon, this struggle keeps up. Some of the patients who come early to be in plenty of time and have found others before them are almost the last to receive care. They are too weak to join in the general push and must sit outside on the curb until the others have been cared for and gone away. If a doctor sees them and takes them in it is well and good, but the doctors are busy men during these hours of dispensary work and find small time for sympathy. One by one the patients march into the consultation-room, are cared for and go away. There is no delay in the line, no hitch as the work goes on. Each man gets his portion of medicine and advice sprinkled with a bit of sympathetic assurance, particularly if the patient is a

Every doctor has his line of patients, whom he knows from "A to Izzard," and for whose statements he can allow accordingly. Often the children who come from week to week find a flower or a piece of candy waiting for them. They are great friends with the doctor and find in him some recompense for the pain of coming. Then, too, inside the dispensary, where it is cool in summer and warm in winter and always clean, there is to be found a rest and comfort which many houses cannot furnish. The line of people inside, seated on comfortable chairs, is a quieter, happier line than that outside. There is something worth waiting for within and something to be waited against. The patient is near enough to the doctor's door to be satisfied that he will reach it, and near enough, too, to be afraid to go any farther. It is not all pleasure, this going to the dispensary, no matter how much candy there is in waiting. There is a quiet certainty about the doctor's movements which assures each patient he is in for a siege. The doctor says "Come" in such a quiet, businesslike voice that it would frighten the bravest. But all this is true of doctors wherever you find them and is no more pronounced at the dispensary than in their private offices. Indeed, the doctors at the dispensary have a certain friendliness of tone they would not assume elsewhere, and it gives them an air of good-fellowship which relieves the patient of suspicion.

The doctors are not all young and inexperienced by any means. Most of them are the regular physicians of the hospital or the college professors, as the case may be. They are assisted by students and nurses, who take a more or less active part in the treatment, but always under the advice of the elder. It is to college seniors and post-graduates that much of the dispensary work is given.

How many free dispensaries are there in Chicago? Forty. Every college and every large hospital has its dispensary, and added to these are the dispensaries conducted by philanthropic institutions, clubs and so forth. Every philanthropic organization has a dispensary, or at least one to which it lends support. Every social settlement has its nuise and a neighboring dispensary to which it has the privilege of sending patients. Every schoolteacher knows the nearest dispensary and often knows its doctors, who in turn know her as one of their regular patrons. It is one of the self-imposed duties of the teacher in the poor district to see that her children are in good physical condition or have medical care. It is as much her work to care for a child's ills as it is to teach it the ABC's. If it is crippled the first thing the teacher will do is to take it to a dispensary and find out if any help can be administered. If there can be an operation to straighten the limb she will persist in her endeavor until the task is over and the child relieved. It is one of the everyday duties of the teacher and she thinks nothing of it, often not realizing how rare is the humanity of her work. She is paid a certain small sum each month and in her eyes the money pays for all. Of course, she has the satisfaction of her work, and she has the pleasure of a large acquaintance among the parents of her pupils, and so true is her philanthropy that this acquaintance is dearly prized.

"Bad men excuse their faults, good men will leave them,"

HOW HE CHOSE A CLERK.

A LAWYER advertised for a clerk. The next morning the office was crowded with applicants all bright and many suitable. He hade them no until all should arrive, and then arranged them in a row and said he would tell them a story, their comments and judge from that whom would choose.

"A certain farmer," began the lawyer, " troubled with a red squirrel that got in through hole in his barn and stole his seed corn. He solved to kill the squirrel at the first opportunit Seeing him go in at the hole one noon he took shotgun and fired away. The first shot set the ba on fire."

"Did the barn burn?" said one of the boys. The lawyer, without answer, continued:

"And seeing the barn on fire the farmer seized pail of water and ran to put it out."

" Did he put it out?" said another.

"As he passed inside the door shut to and the barn was soon in flames. When the bired rushed out with more water --

"Did they all burn up?" said another boy, The lawyer went on without answer: "Then

old lady came out, and all was noise and confusi and everybody was trying to put out the fire."

"Did anyone burn up?" said another.

The lawyer said: "There, that will do; you ha all shown great interest in the story."

But observing one little bright-eyed fellow deep silence, he said: "Now, my little man, wi have you to say?'

The little fellow blushed, grew uneasy and stan mered out: "I want to know what became of t squirrel; that's what I want to know."

" You'll do," said the lawyer; "you are my ma you have not been switched off by a confusion barn burning, and the hired girl and water pa You have kept your eye on the squirrel."

BROTHERLY COUNSEL.

THE more nervous a man is the more he tries say the right thing, and as a rule the more lam tably he fails, says the Youth's Companion. I not always the man who attempts to set him rig however, who covers himself with glory.

There is a story told of a certain English cu who was afflicted with a painfully nervous temperature ment and whose nervousness was in the habi affecting his tongue and causing him to make most awkward remarks when he particularly sired to pay neat compliments to those high in thority or position.

It happened one day that he had distinguis himself beyond his wont during a gathering clergymen at an afternoon tea at the bish palace. On the way home a senior curate took! to task for his blunders.

"Look here, Bruce," said the senior, decide "you are a donkey! Why can't you keep quet stead of attracting everybody's attention by) asinine remarks? You need not be offended. speaking to you now as a brother

At this point loud laughter interrupted the spea er, and for a moment he wondered why.

NEW SCIENCE.

"YES," said the pale-faced doctor, who had diploma, "I cure by absent treatment."

"How do you accomplish it?" asked the seed for Information.

"I sit in my office while you stay at hell For instance, at 4 o'clock you will put your on me and I will put mine on you. By this I cure your malady."

"How much will it cost?"

"Ten dollars."

"Well, I'll take a treatment. And moreover, 5 o'clock you put your mind on me and I will my mind on you, and you will imagine that I paid you the ten. That's absent payment. long."

A LITTLE girl once said she would be very to go to heaven, because they had plenty of serves there. On being cross examined, she down her catechism and triumphantly read: cause he makes, preserves and keeps them."

Nature & Study -

A MODEL PHEASANTRY.

WALLACE EVANS, a slender, thirteen-year-old lad, in knickerhockers, owns the largest pheasantry in the West, selling 800 eggs in a season and hatching the West, selling birds.

such an enterprise conducted by a boy is generally a make shift, but the Evans pheasantry is perally a make shift, but the Evans pheasantry is perally a make shift, but the Evans pheasantry is perally a make shift, but the Evans pheasantry is perally a make shift, but the latest improved hatcher and ander wire, with the latest improved hatcher and loves. It is divided into a network of special rands, every gate closing and locking automatically so there is no danger of the birds escaping.

The flock of golden pheasants is a gorgeous sight, with their brilliant yellow heads, capes of orange and blue, lined with vivid green, scarlet bodies, burnished wings, and long, graceful tails, dotted with black. They are a fad among fanciers, and their pick is increasing, as they now bring \$30 a pair.

The beautifully-plumaged hen lays thirty eggs in ageson, which are worth \$10 a dozen. Wallace has a large number of English pheasants, furnishing her contrast to the golden beauties. They lay hem fifty to seventy-five eggs, which are readily add for \$5 a setting.

His covey of quails would make a hunter's heart tap as they fly to cover with a whirr of wings and parting cries. The old birds were imported from Innessee, where thousands of the luckless birds bllow a trail of grain leading straight into a wire-inclosed corral, and are then shipped to breeders. In the centre of each yard is a neatly-stacked file of brush and straw, which affords a native retreat for all the birds. The English pheasants are ery hardy, and frolic in the snow and ice like chillen, but the golden hover in their houses in bitter old weather.

Taken as a whole, the pheasantry reflects unounded credit on its boyish proprietor.

SOMETHING ABOUT DOGS.

BLENHEIM or Marlborough spaniels, which greattiesemble the latter in form and general appearce, get their English name from Blenheim Pals, in Oxfordshire, where the breed has been premed since the beginning of the eighteenth centy.

Mastiff is the term applied to a very large and werful species of the canine family, and there is usiderable conflict of opinion regarding the origin the word. Some claim that it is derived from that it is derived from that it mastin, or the French mastin, both of hick signify large-limbed.

This word, they say, was gradually corrupted inmasty, a Lincolnshire expression, meaning very ge, nuscular, or big, until it gradually assumed present form. Others, again, say its true origin the old German masten, to fatten, because the uiff is a large dog, and seems better fed than yother.

These animals were very highly prized by the ly Romans, who matched them to fight in the a with wild animals. It is related that very the lwo or three mastiffs defeated a lion in such

blanket that is thrown upon the snow, and

there they stay. When you crawl into your sleeping bag, and pull a robe over it, the dog will get under the robe. Unless you are careful he will be inside of the bag in the morning. The animals' endurance is phenomenal, and they are capable of strong affection. They are great fighters. A traveler who recently returned from Alaska says of the treatment accorded these faithful animals: "The whip that is used on them is the cruelest thing of its kind that is known to man. Thirty feet in length, and two inches thick near the short handle, it has a lash ten fee't long that cuts like a knife. The Russian knout isn't to be compared to it. When a dog is struck you hear a sharp yelp, and then your sleigh whirls past a bit of fur or possibly a piece of bloody skin lying on the snow."

Recently a little girl named Lillian could not be found. It was early in the afternoon when she was missed. There was great excitement, for it was feared the little girl had been stolen, or fallen into the river not far away. Searchers were sent in every direction, but there was no trace of the little girl even when night came. Among the most earnest searchers was Lillian's pet dog, Rover. He ran about with his nose to the ground hunting everywhere. When night came lanterns were lighted, and the people still looked for, and hoped they would find, Lillian.

Rover had come back to the house, and in some way he went down an unused stairway. At its foot was a window that opened into a small room that had not been used in a long time. Rover gave three sharp barks, and the little girl's grandfather hurried to the part of the house where the dog was. When Rover saw him he barked more sharply, and sprang at the window, in front of which was a chair. The chair was moved, and there sat the little girl, just waked up. She had gone into this room to play house, and had fallen asleep. Rover is the hero now in that family.

NEW YORK'S BIG CAGE.

THE Zoölogical Park at Bronx has just completed the banner show piece within its grounds, a mammoth flying cage for the animals. This structure—taking a half a year's time to build and \$8,000 in money—has been put up expressly for the purpose of giving spacious quarters for the large and showy water birds as well as affording an opportunity for studying their flight.

It is the largest cage of the kind in the world. Nothing on so huge a scale has heretofore been attempted by any zoölogical institution.

The cage is constructed of steel pipe and wire netting, and in shape is like a colossal Gothic arch. It is one hundred fifty feet long, seventy-five feet wide and fifty-five feet high. One of the unique and striking features of the structure is that it encloses three spreading forest trees, whose heavy foliage and branches form a delightful resting place for the birds.

Encircling the ground of the cage is a stream of water sufficiently deep to afford good diving and swimming for the birds. Another new and artistic feature of the interior of the cage is the arrangement of the landscape background along the several sides to correspond with the original homes of the bird inmates.

There are at present some twenty-five specimens of fresh water and marine birds in the cage, numbering eighty different representatives. When the full quoto has been installed there will be nearly 300 swimming and flying birds in the interior, representing a complete collection of those species native to our country. The following comprise some of the principal water birds now in the cage, and there are several species of each: Herons, egrets, bitterns, cormorants, pelicans, flamingoes, geese, gulls, limpkins, cranes, demoiselles, storks and ducks.

Professor Beebe, "curator" of the birds, says that when the bunch of eighty birds were first set free a few days ago in the big inclosure a veritable ecstasy and pandemonium of delight followed their long release from their confined quarters.

The chief idea of the cage was to house the flying and water birds in natural and commodious quarters, as well as to place in convenient view to the public, in one picture, a systematic collection of some of the most important types of the aquatic and bird world. With the completion of the flying cage, together with a series of proposed new buildings planned for erection, and the new specimens to be housed therein, the New York Zoölogical Garden is destined to outrival any similar institution of its kind. In time it will contain a population which will represent the entire animal kingdom of our globe.

A BIG TURTLE.

THERE has been put on exhibition in the Peabody museum at Vale the most remarkable fossil skeleton that has ever been restored. It is the skull of a giant turtle that lived 10,000,000 years ago.

He had exactly the same characteristics that the skull of a turtle of to-day possesses, and its restoration conclusively proves that the turtle is the only object in the world which is directly connected with the far distant ages of geological times. In a word, the turtle, which is nowadays regarded as one of the lowest and most uninteresting forms of the living world, has the greatest and most important history of all living things.

The skeleton which has just been restored for the Yale museum was found five years ago by Dr. G. R. Wieland, a graduate of the Pennsylvania State College, who is now connected with the Peabody museum at Yale. Dr. Wieland found the skeleton while digging for fossils on the banks of the Cheyenne River in the Black Hills country, South Dakota. The skeleton was imbedded in a cetaceous formation, which indicated that this country was once covered by a salt water ocean, in which this great turtle and many other prehistoric creatures lived.

The skull, which Dr. Wieland has restored, is twenty-nine inches in length and sixteen inches in depth. The skull of the largest turtle known to be living to-day is barely one foot in length. The skull of Dr. Wieland's turtle must have belonged to a turtle that weighed at least 8,000 pounds. To-day the largest marine turtles weigh less than 1,500 pounds, and the largest skeletons in the museums belonged to turtles that weighed less than 1,000 pounds.

Dr. Wieland has made a long and careful study of the turtle, as he is and as he was. He has discovered many interesting and remarkable things about this obscure creature.

FAMOUS RAT CATCHER.

Ar the present time there is no royal rat catcher at the British court, though not so long ago this appointment was held under the sign manual, and in old pictures one may see the men who occupied this post, gorgeous in their green and gold costumes, decorated with the words, "Rat Catcher to his Majesty."

In the little Lincolnshire village of Friskney there is living Bolland Skipworth, famous for miles around as a rat catcher. He is eighty years old and has seven sons and seven daughters living. He is still keen after his quarry and is never so happy as when adding an honest penny to his store by ridding some neighbor of the rodents that eat his corn, spoil his garden and do an infinite lot of damage.

He is helped in his work by his terrier, Broovh, and his ferrets, the latter being kept in a picturesque building near his own pretty thatched cottage. In the course of his long life he has caught many thousands of rats, but unfortunately has kept no record. If he had he undoubtedly would hold the championship. Rats are arch robbers, eating any and everything. One man found all the fresh-laid eggs were being stolen and went on a still hunt. Removing a big builde of sticks in the woodhouse, he came on a hundred eggs, most of them imbroken.

There was once killed in England a rat which holds the record for size. He was gray as a badger, weighed two and three-quarters pounds and measured twenty inches from the tip of his nose to the tip of his tail.

What does the word Indexnook mean? So asks a subscriber, and he says that others want to know. It means a fireside, a chimney corner, but it is a word not in common use. It was chosen as the name of the paper because of its catchiness and its homelike ring.

THE INGLENOOK.

PUBLISHED WEEKLY

At 22 and 24 South State Street, Elgin, Illinois. Price, \$1.00 a year. It is a high grade paper for high grade boys and girls who love good reading-INGLENOOK wants contributions, bright, well written and of general interest. No love stories or any with killing or cruelty in them will be considered. If you want your articles returned, it not available, send stamped and addressed envelope. Send subscriptions, articles and everything intended for THE INGLENOOK, to the following address:

BRETHREN PUBLISHING HOUSE, Elgin, Illinois

Entered at the Post Office at Elgin, Ill., as Second-class Matter

THE LONG EVENINGS.

IT will not be a great while until the evenings are very appreciably longer, and there will be more time to read and study. The Autumn and the Winter are naturally enough the season when there is more time to read and study than when long days and outside duties claim our attention. Soon the inglenook of thousands of homes where this paper goes will begin to glow, figuratively speaking, and there will be many a picture more homelike and natural than there is on our cover to-day. Of course people read all the year around, but there is more of it done in the cold months than in the heated ones. The Winter is a good time to take up systematic reading and study. It is a mistake for the heads of the house to not provide good read ing for those around them, not to speak of themselves. And what constitutes good and interesting reading is a thing that is capable of a very elastic interpretation. The writer once brought the matter up in a household where there was a number of growing boys and girls. The father said that there were books enough, more than they would read, and it subsequently developed the available library consisted of the Bible, a government report, and a book without a name or either back. The man of the house had but one dominant idea, and that was the purchase of all that joined him. Books and papers were, to him, a useless, not to say wicked expenditure. The children brought up under such environment had open before them two ways, one an imitation of the father, and another in breaking loose from the dreary home and seeking enjoyment in outside circles composed of kindred aimless spirits.

There is a better way. In these days when a dozen of eggs will buy a book, or two cents a week the INGLENOOK, what excuse is there for a desolate fireside and a starving progeny? It would pay, it will pay, every reader to surround himself with all the high grade books and papers that he can read. What a man reads is what he thinks, and as he thinks so he is.

. THE UNITED STATES IN WAR.

Ir five years ago anyone had predicted that at the present date our country would have soldiers in Cuba, in the Philippines and in China, the prophecy would have been very skeptically received. Yet such is the case, and the chances are that the end is not yet. It is a peculiarity that when one goes into a fight there is no telling where it will end, for no person living can forecast the complications. Viewed from a political standpoint there is a wide difference of opinion as to the propriety of this country enlarging its possessions and engaging in colonial enterprises. Yet that is what it has done, and there are none who can foretell the result.

But viewing it from the religious standpoint a mistake is being made. All war is simply a sort of systematized, legal murder, and murder is wrong. The ethics of it are never considered by governments, no matter what professions are made as to the religious claims of the country. Indeed it was once said by a brilliant statesman that any hope of the right of a movement in government affairs receiving consideration was an "iridescent dream." And his statement seems true. It does not appeal very strongly to the religious side of an unprejudiced observer to see two lines of men facing each other, and in the interval prior to the battle two men, one on each side, chaplains, invoking the aid of God in what they are about to undertake. And what is it? Is it a mission of love and help that

they are entering upon? Oh no, not that. They are asking God for power to kill, maim, slay and utterly destroy each other. If they are right in their petitions then the Sermon on the Mount is a fiction, and Christianity a dream.

The facts are that the world is not yet fully civilized, not Christianized, and never will be as long as men agree to settle their differences by trying to kill one another and call the victorious side blessed of God.

OUR SHORT SERMON.

Text: Buying and Selling.

In the transfer of a piece of property from one hand to another is it possible for the seller to acquaint the intended purchaser with every fault of the thing sold, and is it possible for the buyer to keep from depreciating his intended purchase? Unquestionably it is feasible, but undoubtedly it is uncommon to the point of the impossible. Straightforward dealing is a rarity. The seller puts the best on top, the best side outside, he hides and minimizes the defects and magnifies the good. The buyer expects it and does his best to belittle the wares offered. Now is the proceeding an honest one? Hardly. Is the method a Christian one? In answer to this let us suppose that Christ was either buyer or seller. What would the method be? Would it be that of hiding defects and depreciating advantages? There need be no answer.

The preacher imagines that the man who is strictly honest and truthful in his dealings stands a good chance of being left behind in the market, even by his own people. There is a disposition to believe in one's own eyes rather than in the honesty of a neighbor, and the man with the big apples all on top sells out his load and goes home, while the honest man with his apples alike through the load waits. Perfect confidence is a plant so rare as to deserve a place in a glass case.

It is best to be absolutely honest in all commercial matters. It will not be a short cut to success, but it is a solid road without breaks in it. He who follows it without deviation will, in the end, come to be a man after whom no one will count or measure. It will be recognized that what he does is right, and there is no need of following him up to see whether there has been a "mistake" in the matter. Here is the Bible of it: As a man measures so it shall be measured out to him. It is not told just that way, but that is what it all comes to.

FAITH WHICH OVERCOMES.

"FAITH," says the voice of inspiration, "is the substance of things hoped for, the evidence of things not seen,"

It is a most comfortable thing to have too. We cannot doubt that if religious faith were a matter of volition everyone would have it. No one would willingly be without that which sustains and supports men in stress and peril, in sickness and death. Unfortunately, it is not a thing concrete and tangible. It cannot be taken up at will. Men say, "I believe," but the iteration is useless unless it is sustained by inward conviction, and that conviction comes spontaneously. It is not the result of resolution.

Fortunately for humanity there are many people who have faith, who enjoy the assurance of immortality, who believe in life beyond the grave as firmly as they believe in life on its hither side. Such people are happy, confident, brave.

When Lord Tennyson was enduring his last illness, his physician told him the story of an aged couple in the parish. The wife was about to die, The husband, also ill, lay in a bed in the same room. His wife requested that he should be moved close to her side.

Stretching out her hand to the old man who for over half a century had been her companion, she said, "Good-by, dear. Don't be long coming to me," and so expired.

Tennyson called that true faith. So it was, It was the spirit which inspired his own swan song:

"For though from out this bourne of time and place.

The tide shall bear me far,

I know that I shall meet my pilot face to face
When I have crossed the bar."

An episode strikingly similar was related in the newspapers last week. Elizabeth Minter, of Williamsburg, N. Y., was on her death bed. She back her husband good-by. She was eighty-five; he was eighty-seven. "Never mind, dear," he said; "land not long for this world either."

He was right. As the preparations for the wild funeral progressed John Minter said: "Wait a little I am going too. I want to go to heaven with her He was buried in the same grave with his wife week ago to-day.

Faith is the evidence of things not seen. John Minter had it. He went down into the dark valley as confident of meeting his wife on the sunlit slope beyond as he had gone out to meet her countless times in this material world.

The evidence of things not seen! John Minter saw them with the eye of the spirit. He was a happy man.

A PATHETIC FIGURE.

Oom Paut. Kruger, with his Bible under his atm has arrived at Lorenzo Marques. Things have not fallen out as his faith in the good book led him to believe, yet he has not lost confidence in its teachings. They say he spends the most of his time reading psalms, and takes little interest in the sparmodic twitchings of the dying republic of the Trans vaal.

Poor Oom Paul! He has, perhaps, more than hi share of faults, but he is not so black as English brushes have painted him; and he has simple, rugged virtue that maintain him a gallant figure though a crushed one.

History has few more pathetic figures than the Oom Paul of to-day, clinging to his psalms while the Transvaal republic tumbles in ruins about his unattending ears. He is a victim of progress, lethe individual this is called coveting thy neighborgoods, and there is a divine commandment against it.

It is not likely that England will ask Portugate to surrender the fugitive, or that Portugal will de ny him asylum. He can do harm to neither.

ALL OF WHICH PLEASES US IMMENSELY.

"THERE is something peculiarly fascinating about THE INGLENOOK in its present form; the free, eary racy manner in which it gives the people the interesting information and abundant truth it contains to be coveted by most papers which aspire to be place which the INGLENOOK now holds."—Exhibition a Private Letter.

Who will get the prize library of fifty volume It is worth working for, and the one who gets it is have a year's reading put at his command without cost to him. We predict that these books wil to an unexpected place. It could readily be in some of the larger churches, but it is likelie fall into the hands of some person who works en getically and who leaves nothing untouched might be available. Elgin city is counted out that the country at large has an unhamped chance. If you want sample copies for your as agent for the Inglenook all you have to do b ask for them. We will furnish all you can use telligently and advantageously, and do it cheef ly. Go in to win. It is worth while. See the of books on the second page of the cover.

The Inglenook predicted that the paper in the bring to the fore a new class of writers. They here and still coming. As the publication in takes up the time," or pads out with common places, it is plain that the contributors are bring to learn something of clear-cut, interest interest writing. Many contributions have been recent writing. Many contributions have been recent most of them up to the mark, and more are interest and themselves and others, if they only had courage to make the effort.

WHERE THEY PUT THEIR TRAPS.

THE average furniture storage warehouse in Chiago is a curiosity shop. Anything from richly inaid pianos to frying pans, from Smyrna rugs to mora-out door mats, may be found there, though not in confusion. Most of the Chicago warehouses for the storage of household goods have rooms or bins in which goods are stored. That arrangement mables one to keep one's "traps" separated from those of others, but there is a "barn room" in which goods are piled in separate heaps. The furalture storage warehouse is a great convenience to the public; generally it is a profitable investment of the owner. Many warehouse companies have a chattel mortgage department as well as an insur-Ince department. These enable them to loan money on furniture in store, and also to insure goods gainst fire. Many people store their household klongings during the summer months to save rent while the women and children are out of town. Parties going abroad for any length of time usually gore their furniture if they live in a hired house, and not a few of all classes that store their goods to gie rent for a given period or for an indefinite period borrow all the money they can on their stored articles. Not that they want the money, but they are willing to pay the interest so as to be sure of something in case of fire and failure to collect ingurance. Such persons usually deposit the money bank on small interest for a length of time corresponding to the time when they will want their things" to resume housekeeping.

There is another class of people who store their miture for one of two purposes. In the first place their goods are mortgaged. If business or pportunity to earn wages worth while is presentd during the absence of the women and children sho are away on a few months' visit with kinfolks, be goods are taken out of storage, the mortgage provided for and housekeeping resumed, but if things go from bad to worse the mortgageor is prety tertain to go elsewhere, leaving the mortgagee ad the warehouseman to scramble between themwives for their claim. As a rule it takes every cent the receipts from the sale to pay the legal dains. That, however, the mortgageor knows and regards the transaction the same as he would tere his goods destroyed in his hired house by fire then he had no insurance. To him it is the sacrike of all he has in the way of household goods and the commencing anew in another part of the

There is another class of mortgageors who fully blend to resume housekeeping and pay the mortage when the family returns, but who meanwhile lave accepted a business offer in a distant part of the country. They figure that the bill for storage, the mortgage and the interest, cost of packing, cartage and freight would amount to about as much as an outfit would cost at the new house, and they let mortgage and storage go by default. This man does not deem it dishonest, as all that not of thing is provided for, besides, in most States thrage and insurance charges are preferred claims and come in ahead of the mortgagee's bill when the thouse are sold. Patrons of storage houses who are doubts about their ability to resume house-the family portraits, heirlooms and the like, nor they often included in the list of articles mortaged.

It is when boxes are opened and packages untied the day of sale that revelations are made, and any is the family secret as well as closet skeleton at is exposed. Letters that should have been Stroyed when first read are scattered about for tourious to gossip over; linen that should have one through the laundry before packing; ward-bes that carry secrets in their pockets; goods that oths have reveled in; baby toys that mutely tell mother's joys and hopes; books that treat of olish or wise subjects and countless other chattels to disagreeable revelation to those who know morigageor and his family. At these sales tee distinct classes of people are found. The go for material for neighborhood gossip; Se who, like Mrs. Toodles, are hunting for bardand who will buy anything if it is "dog cheap,"

The latter, the dealer in second-hand goods. The latter, bog experience, knows how to secure the most aticles and let the Toodleses have those

that are gilded and worthless. Back of the sale is an influence which manages the bidding so that the net proceeds will provide for the claims of the warehouse and the mortgage, but not once in a thousand times is there a cent left for the mortgageor.

Sometimes goods are stored for the purpose of putting the largest possible mortgage upon them, and sometimes the most valuable of them have not been paid for in full, nor is the creditor likely to know that he has been tricked until his customer is out of reach. But stolen goods are rarely ever stored, though there have been sales which revealed articles that had not been secured in the regular way. It is the storage of goods by parties who intend to and do take them away in time that pays the warehouseman, and, in fact, a very large percentage of his business comes from that class, especially if he has private bins in a fireproof house. As a rule the utmost care is taken of stored property. The warehouseman assumes when goods are stored that they will be called for, and he knows they must be delivered in as good condition as they were when received. It is that feature of the business, together with immunity from fire, rats, vermin, dampness and theft that makes public household goods storage houses a convenience. These, as a rule, are owned and managed by parties of ample financial responsibility.

HOW WAX FIGURES ARE MADE.

THE manufacture of wax figures and papiermache forms and novelties is extensively carried on in Chicago, although there are not more than three concerns in the business. The principal demand is for figures and forms to display goods in show windows, but only the face, neck and bust are wax. These are mounted on papier-mache forms to suit the display wanted. Where hands or arms are exposed they are made of wax. The preparation of the wax is supposed to be secret, but it is known that it is a combination of several materials so as to give the forms the greatest possible immunity from heat or cold. Under the old system of using the pure wax of bees there was danger of the finished product melting in extremely warm weather and of cracking if exposed to the cold. The present process provides a material that is not affected by extremes, though storekeepers are careful not to expose the forms to the glare of the sun nor to below zero weather in winter. Wax heads, including busts, cost all the way from \$18 to \$40-the cost depending on the finish, especially of the hair. The hair is inserted hair by hair, the wax first being punctured with a fine needle. The stability of the hair depends altogether on the depth of the puncture. When finished it may be combed, shampooed and otherwise treated as hair on the human head. Nearly all the hair used by wax figure-makers comes from the convents, prisons and rural districts of Europe, where there is a large traffic in the commodity.

The Chicago wax figure-makers first make a model of clay, then the form is molded in plaster of Paris—the mold being made in parts so that it will not have to be broken to release the figure. From this mold as many figures may be cast as the maker likes. But when the clay mold is from life or a photograph, as a special order, only as many figures are cut as are ordered. However, all figures for store windows are modeled from photographs or paintings of celebrated beauties. This is done to make the figure as attractive as possible for itself and also to add "tone" to the articles of wear displayed upon it. The wax is colored through and through with a flesh tint so that the "touching up" will be confined to the cheeks, lips and about the eyes, together with whatever shading may be required. It is this "touching up" coloring that fades after months of exposure, but for a small sum the maker will wash it, retouch the faded places and shampoo and dress the hair. Of course the hair must be dressed in the very latest fashion. In selecting eyes for a figure, especially for one that is modeled from life, great care has to be taken, for these must "fit the style of the figure's complexion and beauty" and must be set with reference to the pose of the head, the expression of the face, etc. The soul of a wax figure expresses itself through the eyes just as the soul of the living does. The demure face, the haughty face, the

smiling face and the contented face all must have eyes that give the proper expression.

These days all wax figures are given what is called "marble finish," which makes them retain their freshness for a long time, and also prevent "sweating." High-priced models are worked upon with as much care as if they had been shaped from life for a likeness, but cheaper grades are ground out, so to speak—that is, a good workman will do the head, eyebrows and lashes of one figure in a day, but the needle is inserted just deep enough to hold the hair, but it cannot be shampooed or brushed hard, and the face coloring fades in a little time.

No anatomical or museum wax figure work is done in Chicago, but a good deal is done in repairing, recoloring and the like. Nor is there any demand of consequence for novelties in wax. Such articles are made of papier-mache, though some of them are given a thin coating of wax. Practically all wax dolls are made that way, but such work is liable to crack, scale and lose its coloring when the weather is at an extreme. An expert maker of wax figures is supposed to be equal to any sculptor in the work of modeling in clay, but at that point they separate, the sculptor transferring his "study" to marble and the wax figure artist his to plaster of Paris molds with a stereotype product—as many as his wax will make. In the item of eyes, those in high-class work are made in Europe, and they are exactly the same make, quality and naturalness that opticians deal in. The thickness of the head and bust of first-class wax figures is from threequarters to an inch, but only on special work is the inch thickness required.

TESTING GOLD AND SILVER COIN.

Another department which combines many important duties is that of the Treasury. It engraves and prints money, puts up buildings, runs the lifesaving service, collects the taxes, keeps track of navigation, manages the lighthouse service, runs the marine hospitals, attends to the immigrants, and a great many other things. Most people do not know that this department makes the official examination of the coins. A commission meets at the Mint in Philadelphia and goes carefully into the value of the people's money, but the really important work is done by an assayer, who for a number of years was Dr. Cabell Whitehead, a noted metallurgist, who has recently gone to Nome, Alaska, to report upon its gold. The coinage is kept from debasement in this way: two coins each week from the new minting are sent to the assayer in order that he may find out if they are up to the standard. This is necessary, not only for the protection of the people, but in order that the value of American money may be absolute throughout the whole world. The excellence of the Government's workmanship is shown by the fact that gold coins have been condemned only once in the past ten years, and this was due to ingots made from Spanish gold coin, which either contained a small amount of zinc or had been counterfeited. The whole lot of \$125,000 was melted down. On three occasions silver coins have been found deficient,

SYMPTOMS CAUSED BY ANGER.

A srupy of anger from experiences in about 2,000 cases, collected from reliable observers, has been made by G. Stanley Hall. The causes were many and various, often being very trivial, and the physical sensations accompanying it differed greatly with the individual.

Flushing was very general, although pallor was a characteristic in twenty-seven per cent of the cases. The heart beats were violent, several cases of death from rupture of this organ being reported, and there were sometimes peculiar sensations in mouth and throat, sometimes dizziness or faintness, frequently tears, and generally copious salivation, which might produce "frothing at the mouth."

Common sounds were animal-like cries in children, oaths and threats in adults, while in many cases the throat was paralyzed, and there was inability to speak above a whisper, or without crying or trembling. Butting with the head, biting and scratching are noticeable in childish anger.

WEANING A CALF.

BY ANNA M. METCHELL.

THERE isn't a big lot of fun connected with teaching a calf to drink. That is, not for the teacher. Whoever attempts it should have a good stock of patience in reserve, for nine times out of ten it will be all needed before he is through.

To have your most cherished corn or bunion ruthlessly trampled upon doesn't add much joy to the occasion. Even a sudden bump on your "funny bone" from the calf's head will often fail to awaken the hilarious part of your disposition.

Occasionally you encounter a call that surprises you by its readiness to learn to eat and drink, but those are few and far between. The ordinary calf generally eyes the approach of you and your bucket of milk with a look of meek wonder. You imagine he is going to be pretty easy to manage, and attempt to corner him up. When he begins to realize your hostile intentions the meek look disappears and one of headstrong obstinacy takes its place. The young rascal breaks from your restraining hand, kicks up his heels and gives you a fine chase around the stable. But finally you get a firm grip on him and bring him up in a corner with a bang! An assistant is generally required to take care of the bucket of milk while you take care of the calf. Holding him firmly with one hand you dip the other hand in the milk, then place your fingers in his mouth, thus deluding the poor innocent into starting up his suction machinery.

When in full operation gently lower his head to the bucket, spread your fingers apart in an artistic manner, so that the milk will have a chance to enter his mouth. A calf likes to breathe occasionally. Some greenhorns forget this fact, and in their efforts to get the calf to drink, they hold their hand tight over the nostrils and cram a solid row of fingers into his mouth, thereby effectually shutting out both air and milk. And then they wonder why the calf is so balky and hard to teach. As a calf is bitterly opposed to taking nourishment with his head down, you have no little difficulty in keeping his nose at par with the milk in the bucket. He seems entirely possessed with concentrated contrariness, and is quite frantic in his efforts to have his head everywhere but the right place and the place it should be. But after much perseverance and a great deal of splashing, gurgling, backing and prancing around, he suddenly takes a notion to drink. Then you can gradually draw your hand away from his mouth and let him go it alone. After once learning the art, he generally clings to the habit as long as he lives. The principal difficulty now will be to supply material for the demand his appetite creates. After gulping down his share, like Oliver Twist, he usually wants "some more."

MANY USES OF CELLULOID.

Since the coming of celluloid collars and before, the uses of celluloid have spread to half a hundred lines of manufacture. Only one company in the United States manufactures it, with offices and works at Newark, N. J., but there is not a household anywhere that has not some article of celluloid about the premises. An elderly person, indeed, may have a set of store teeth imbedded in a foundation of celluloid, and wear a pair of eyeglasses set in the same material.

Its uses in toilet articles are almost universal. Tooth brushes, hair brushes, combs, hand mirrors, knife handles, glove buttoners, nail files, handkerchief boxes and scores of other paraphernalia of the dressing-room and house at large are in daily use.

In offices and business houses the celluloid articles range from the blotting pad with celluloid top to the calendars on the wall. Cane heads, umbrella handles, harness rings, and even doll heads are made from this substance. Bicycle handlebars are tipped with its enamel. Name plates, buttons, badges, signs, and scores of useful and ornamental things are made of it. It is the basis of much of the amateur photography of the present, and no one knows better how inflammable the celluloid base is than does the amateur photographer who has had a dry film too close to a gas jet.

seventies. Its name comes from cellulose. Forms of this vegetable substance, treated with nitric and sulphuric acids, become the gun cotton which is such a powerful explosive. The ordinary gun cotton is made from tissue paper, treated with these powerful acids. .

To make celluloid this nitro-cellulose is mixed with camphor and whatever pigment may be desirable. The mass is subjected to heat to a certain degree and the whole thoroughly mixed. Afterward it is subjected to great pressure and alcohol is introduced to assist in expelling the water from the plastic stuff. With the water expelled the stuff becomes the hard, shiny, springy article of commerce, capable of division into sheets so thin as to be almost impalpable.

In the manufacture of cellulose the risk is regarded as extremely hazardous by insurance companies.

"The insurance risk on a celluloid factory is almost as great as it is on a powder factory," said the superintendent of inspection of the Chicago Board of Underwriters. "Even for business houses handling celluloid articles such as collars, cuffs and shirts, the risk is regarded in the ratings. It has not been established that a stock of celluloid, under certain conditions, may not lose certain explosive gases that in proper mixture with air would produce explosion from fire."

With the passing of the elephant and his ivory tusks, and with the drain upon the rubber forests, celluloid came into place of both of these in great measure. Half a dozen substances of the same general character and characteristics have followed it. Away from fire, all of them are harmless; in conjunction with it, all are exceedingly dangerons.

The thinner the sheets the more inflammable are these substances. To touch a match to a thin sheet of celluloid, it bursts into a fierce flame, which gives off a strong odor of chemicals and the last vestige of the stuff is consumed. To a thick piece of the stuff fire must be held until it has become heated through. Just beyond the scorching point it bursts into flame with a puff almost as marked as in the touching off of a pan of gunpowder.

A PENNY'S WORTH.

In New York one may buy a cent's worth of anthracite coal, half an ounce of tea, or a quarter of a pound of flour.

This sign is displayed by a little Italian grocery in Minetta street: "Pure milk, one cent a glass. The following articles by the cent's worth: Coal and Wood, Macaroni, Italian Olive Oil, Tobacco, All Kinds of Fresh Candy and Soft Drinks."

"One has to measure carefully," said the grocer, "when he sells a cent's worth of anthracite coal, but we seldom have a call for so small a quantity. Most of our customers order three cents' worth, and even five. We sell in one cent quantities many articles not mentioned on the sign. For example, we can let you have a cent's worth of flour, of sugar, of coffee, or of tea."

"How much flour do you give for a cent?"

"A quarter of a pound. A pound is four cents, two pounds are seven cents. We can give you an ounce of coffee for a cent, or half an ounce of English tea. We sell our tea at two cents an ounce, or three ounces for five cents. It may surprise you, but uptown are first-class groceries with a brownstone front trade, that sell tea by the ounce to their poorer customers.

"Here is white lump sugar. A customer comes in, calls for it, and lays down a cent. We count out seven white lumps.

"This plan of selling goods in small quantities is a benefit to people of limited means, for with a few copper coins they may buy a cent's worth each of flour, coffee and sugar, and with a cent's worth of fuel cook a warm supper."

On a bakery window on Bleecker street is the sign: "Two Large Loaves of Bread for Five Cents." "They are pound loaves;" said the saleswoman. "We used to sell them at four cents apiece, but, since flour came down, we charge only two and a half. It is the same as selling the two-pound loaf for five cents. The loaves are of wheat flour, rye and graham."

The East side is also sprinkled with one cent soda fountains. In Lewis street a soda fountain placards these prices: "Lemon, one cent; Vanilla, one cent; Celluloid as a substance came to light in the Strawberry, one cent; Pineapple, one cent," Soda else." So said a visiting subscriber the other

water with vanilla ice cream or French chocola cream in it is sold at two cents a glass.

This sign indicates the cost of food on the Fa side, which is full of neat little restaurants with to scale of prices: "Pure Java coffee, two cents cup; English tea, two cents; milk, two and the cents; sandwiches, three cents, two for five; h fried eggs, with bread, butter and coffee, twelve cents; salmon, twelve cents; two rolls and coffe five cents."

CARELESSNESS WITH MONEY.

THE secretary of the treasury has a very large directory of careless people of people who have money to burn or otherwise destroy, and who peal to him for reimbursement. Uncle Sam is k enough to restore lost money when he is satisfi that it is actually out of existence, and the treasur department has to look after this branch of financial affairs. Hardly a day passes that the se retary is not appealed to, to make good money stroyed, and he often receives remnants of b more or less recognizable, with queer tales of hor the work of destruction was wrought.

One of the latest applications was from a Ver mont farmer, who sent a mass of remnants of bi that approached the condition of pulp, and asked for \$280 in return, which, after some delay he re ceived. He said he had very carefully hidden the money under the rafters of his barn, and somehow it had gotten into the hay and bran fed to one of his cows. The cow was chewing the green feed when its nature was discovered.

Another farmer, from Kansas, has sent a lot of chopped bills that he says represents \$40. According to his story they were in the pocket of a vest tha was hung on a feed cutter, and when it was being operated the corner of the vest that held the mone got between its knives and with the money was form in shreds. The claim is now in process of adjust-

A Boston man took from his pocket what he says he thought was a piece of paper and burned half of it in lighting the gas. The gaslight revealed the fact that he had used a \$20 bill for a lighter.

A Washington man a couple of weeks ago wer in person to the secretary to get \$35 for some badly mutilated bills that his playful pup had been ex ercising with for an hour.

A Wisconsin woman has sent a lot of tinder that she says was once \$90. Several months ago s hid it in a stovepipe hole, into which a pipe from laundry fire was recently placed. As the pi rested on the bills tinder was the result.

Another woman, this time in Indianapolis, g Sto in greenbacks mixed with greens she was po paring for dinner and boiled them into an almo unrecognizable mass.

A loving Philadelphia papa has asked \$20 for few strips of greenish paper and a score of pellet of the same material. He says they once const tuted a \$20 bill, which his pet boy had torn pieces, rolled into balls and blown through a glas tube at the cat, canary bird and nursemaid.

An Ohio man wants to sell the treasury depart ment a mouse nest for \$100. He says he had the amount in bills in a bureau drawer, and that the mice appropriated it in bits to build a home which to rear their family.

This list is continually growing, and the munications giving the remarkable details are frequent as to cause no smile or comment in the di partment. Each one is simply a new case that for lows along a line of red tape until it is adjusted.

PERHAPS there is no more characteristic sight Mexico than the so-called "evangelistas" who p their trade in the plazuela de Belem and the plan

ela of Santo Domingo. They write love letters, blackmailing letters a all sorts of letters for those who do not know h to write, at a rate of three, six, nine or more cent according to the length of the missive. They undertake without extra charge to write the dress on the envelope and to attach the requi stamp, but for the latter they make an extra charge of one cent.

PRECISELY.

10 "OUR BELOVED MISSIONARIES."

FAR in that land, with deep waves circling round thee, Fat, far removed, sad in that lonely land, Shall we forget with love's sweet thoughts to woo thee, Guided and blest by God's Almighty hand?

So far temoved, yet fondly we remember
Why the loved home was left for foreign shores.
Biessed indeed the heart is whose bright embers
Burn with pure 30y, to enter." open doors."

Dear one in Christ, we never can forget thee,
While life's swift tide is bearing us away.
Precious to God, angelic hosts shall keep thee
Fill earth's dark night gives place to heaven's day.

A NEGLECTED CHILD.

THERE are many in happy homes, surrounded by every comfort and blessing, who little know the sourow and misery and sin which may come through some poor neglected child. There is a story of me neglected little girl, poor Margaret, who never lad a home, and who grew up a wretched outcast, fiving a life of sin and shame. After seventy-five years it was reckoned that her descendants numbered twelve hundred, 280 of whom were paupers, and 140 habitual criminals, while most of the whole degraded family cursed the country with vice, rime, pauperism, and insanity.

It is estimated that the neglect of that little girl out the State more than thirteen hundred thousand that; and the mischief is not ended yet, nor are health all paid.

It may be that there is to-day some little forgoten, lorsaken child, the neglect of whom may cause
u much evil as resulted from the neglect of poor
largaret. Let us look around us and see if we
mow of any poor neglected children; and if we
ind them let us see to it that they are neglected no
onger, but let us win them with kindness, and lead
them to the house of prayer, and instruct them in
the ways of righteousness, and so save them and
where from sorrows, sins, and unnumbered trou-

HEART THOUGHTS.

Does your life convince those who do not mow you that you believe the kingdom of God to a the first thing in the world?

You condemn zeal without knowledge, which is all. But is not knowledge without zeal quite as outly of condemnation?

You want to be zealous; then seek to have the "I move" of a genuine experience.

The kingdom of God will come when you get adm earnest about it.

Suppose all the rest of the church were as indiftent as you are: what do you think would beour of it?

We believe that the era for which good men and one have been hoping and praying, now broods the China, The Gospel, which has been at such ut disadvantage when it approached the frontiers the empire, is about to have its more abundant trance. Merchants, promoters, traders, speculasand many unworthy men have been willing in t past that the missionary should be misunderod, abused, beaten and perhaps killed. The inof the white man has been under difficulties, the very conditions of that entrance have made white men rivals, competitors and almost the relative absence of Chinese suspicion, and newer campaigns of the truth will be undertakunder vastly more favorable auspices. This prestouble will simply aid to reorganize the Gostions approaches and the miracles of God's truling providence will be manifested.

"On, lead me, Lord, that I may lead
The wandering and the wavering feet;
Oh, feed me, Lord, that I may feed
Thy hungering ones with manna sweet;
Oh, strengthen me, that while I stand
Firm on the rock, and strong in thee,
may stretch out a loving hand
To wrestlers with the troubled sea."

Sunday A School

WHY DO WE HESITATE?

A STRANGE reluctance comes over many when they try to talk about the soul and its relations to God. It is felt alike by the converted and unconverted persons. Very often the gay girl whose heart is running over with fun and mirth and whose speech sparkles with wit and humor, has deep in her consciousness the feeling that she is unsatisfied, that she wants something better, purer and higher. She wishes that the Christian woman who is talking with her would ask her a question, would give her a hint, would lead the conversation to the subject of personal religion. The other has no thought of the kind. She has even a faint, undefinable dread that any effort on her part would be received coldly, or made occasion of ridicule.

So the opportunity passes. The souls have been within speaking distance, but have failed to communicate with each other. Each goes on its way. The friend of Christ who might have won a soul to him, has been silent, afraid, ashamed. What wonder if to that faithless friend there comes the sad experience that the Beloved has withdrawn himself and is gone; that, seeking the Spirit, finds him not, and calling, there returns no answer! Can there be perfect serenity and the full sense of communion with God to one who refuses or neglects so important a duty?—Margaret E. Sangster.

THE ADDED "BUT."

THE Germans have a saying: "Everything might be well if there was no 'but' added to it." A very simple little word it seems, and yet it is important in getting the proper construction of life.

This new acquaintance with whom you are becoming so intimate is undoubtedly very attractive. His manners are good, and he has a fund of anecdote which makes him a most entertaining companion. He is agreeable, courteous, winning—but he speaks lightly of sacred things, and his jests are not always clean.

There is a certain home where you are always welcome, and where hospitality is carried to the point of an art—but wine is always served at dinner, and with the best of intentions your hosts make it difficult for you to be true to your principles.

There are pleasures which you enjoy especially—but they leave you nervous and irritable, unfitted for the next day's work.

"Everything might be well if there was no 'but' added to it." Yet the "but" is there, and must be taken into consideration or everything will go wrong. Do not examine half the sentence merely. See what lies on the other side of that significant word of three letters. Do not overlook nor ignore "but."

The unjust steward of the parable exhibited much worldly wisdom in his extremity. He made such use of the goods in his control that after he was deprived of jurisdiction over them they inured to his comfort and support. Of course his actions were wicked, but others in the same circumstances might have acted foolishly, just as wickedly. He had no right to change the amounts of the credits due his master. The Savior is not speaking of the moral quality of the steward's actions, but of his foresight in self-preservation.

We are stewards. Many among us are using the property with which we are intrusted so foolishly we derive nothing from it save food, raiment, shelter and the gratification of an inferior form of pride.

By sustaining the Lord's church and feeding the Lord's poor we could with that money buy us a building of God—a house not made with hands, eternal in the heavens, where no good thing would be lacking to minister unto our felicity forever.

If we have been remiss heretofore, and improvident in our expenditures, let us zealously strive to make amends for the past, redeem the time, and so use the mammon of this world as to receive the encomia of the Lord of all, who will bestow on us the true riches and receive us into the everlasting habitation.

A TRUE friend stands by you when you are under a cloud. Swarms of insects surround you when the sun shines.

For * the * Wee * Folk

THE GRAY GOOSE TELLS HIS STORY.

One of the best friends I ever had outside of my own flock of geese was a turkey gobbler. He wasn't hatched on the farm, but the farmer traded four hens for him and brought him home in a box.

We had other turkeys, but they gave the stranger a cold welcome, and neither the geese nor the ducks had much to say to him. It was for this reason and because I thought him a pretty sensible fowl that I showed the gobbler around the farm and gave him all the information I could.

I soon found that he was only two years old, but he knew more than most old ganders. He had kept his ears open and heard a great deal of talk, and we were soon good friends.

You perhaps know that a goose passes most of her time swimming about on the pond or paddling in the mud after young frogs, snails and roots, while a turkey never goes near the water except to drink. I offered to teach the gobbler how to swim, but he was afraid to try it, and so, to keep him company, I had to be on land a great deal.

The turkeys, goese and hens poked fun at us for being so much together, but we went our way and paid little attention to them. Once or twice, as I returned to the pond after a walk, a young gander cried out, "Gobble! gobble! gobble!" to make fun of me, but after I had cuffed his head with my wing a few times he had no more to say.

On our farm the people always used to have duck for Thanksgiving, turkey for Christmas, and goose for New Year's. As I had become old and tough I wasn't afraid of being served up, but when Christmas day was only a week off I heard some news to make me feel sad. I heard the farmer say that he would kill my friend the gobbler for that day, and that he was fat enough to make fine eating.

I lost no time in telling the gobbler what I had heard. He was dreadfully upset about it, as you may believe, and he could hardly stand up as he said:

"Yes, I know I am plump and fat, but I don't want to furnish a Christmas dinner for any one. Tell me how to escape."

He could have gone away from the farm, of course, but if he had some one else might have killed him, or he might have furnished a dinner for a fox. I told him to keep quiet and wait, and he promised to obey me.

I knew he would not be killed until the day before Christmas, and after he got over his first alarm he walked around as before and no one suspected that he had heard anything.

Two days before Christmas I told him it was time to carry out our plan. I went with him to the cellar beneath the barn, which was a pretty dark place, and saw him safely hidden behind an old box. I could not bring him food, but it was a warm, safe place, and he would not suffer for two or three days.

The next morning the farmer's wife was out looking for my friend. When she could not find him she called her husband and sons, and they searched for two long hours. Then they said the gobbler must have been carried off by a fox, and they killed another in his place.

Not till the day after Christmas did my friend come out, and when the farmer caught sight of him he shouted to his wife:

"Hey, Mary, but here's the missing gobbler, as big as life! I'll bet the old gray gander put him up to hide away to save his neck. Well, it's too late to eat him now, but he'd better look out for next year!"

"Now, Willie, dear," asked his mother, "why did you not come when I called you the first time?"

"Because I did not hear you till you called the third time," said little Willie.

The heart of the mother was pained at this evidence of depravity. For how, she reasoned, could he have distinguished the third call without hearing the second?

"I know it was the third time, mamma," little Willie hastened to explain, " 'cause you sounded so mad."

She clasped him to her bosom. A boy who could bolster up a poor story with a better one was not doomed to remain in obscurity.

LAZY LIFE ON SOUTHERN RIVERS.

PERHAPS the dreamiest, laziest existence in America is the life on the southern rivers in summer. It is at this season of the year that thousands of people—men, women and children—are to be seen catching turtles, hunting pearls, collecting mussel shells, fishing on the sand bars, capturing water snakes or dragging submerged walnut logs from the water. Hundreds of shanty boats taking fish and bartering all sorts of goods with the natives, ply from one landing to another. The river people are satisfied with no other mode of existence and rarely ever abandon its seductive charm.

The Tennessee River is the greatest fresh-water turtle stream in the world, and the Cumberland is famous for its prolific turtle fields. The Tennessee has its source in the mountains and cuts its way through a rocky country, rendering it perfectly clear at normal depth. The turtle of the clear streams, though smaller, are more valuable in the markets than the huge monsters taken from the muddy Mississippi. There are huge turtle pens along the Tennessee River, where hundreds of them are kept securely after being captured. Some turtles have been taken from the Tennessee and Mississippi Rivers which the natives declare would weigh from 400 to 600 pounds. These enormous catches are rare, and the moncy is made by selling the smaller ones. Washington and New York furnish the best markets, and many "a diamondbacked Chesapeake terrapin" of the famous caterers really comes from Tennessee.

Turtle meat is as great a favorite dish with the Southerner as the 'possum. The Southern negro has a proverb that the turtle feeds on fish, chicken, eggs, cresses and the choicest country delicacies, until his own flesh partakes of all their various flavors. They positively assert they can distinguish all these flavors. The small turtles are captured for fund and the larger ones for their shells, of which many domestic articles are made. The heaviest hauls are taken in huge frame traps set in the swiftest channel of a bayou. The negro locates a turtle sitting in shallow water and wades in after him with a forked stick. They tease the turtle until he becomes mad and pokes out his head to hiss, then the forked stick goes over his head and the turtle is hauled out of the water. The large ones are killed outright and boiled in giant pots until the shell comes off. The shells are then scraped and polished.

The pearl hunters throng the rivers every summer. Thousands of them are wading and dredging for the mussel, or fresh-water clam. The shells of several varieties are gathered by the ton and shipped up the Mississippi River to the pearl-button factories. There are a dozen varieties of the mussel, but only two-the niggerhead and the sand shell-are valuable to the factories. Some years ago an Austrian button manufacturer accidentally discovered the value of the American shells in an Illinois town on the Mississippi. He found that, if anything, it was superior to the shells dug up from the Danube. It is said that until 1896 every pearl button sold in America was imported. American factories then imported shells and manufactured the buttons, though under the tariff regulations the shells cost nearly fifty cents a pound. Factories were then organized and operated in Illinois and Iowa. The trade has grown until an army of collectors are strung out along the big river from New Orleans to La Crosse.

Along the river are shacks in scores, in which the families engaged in the hunt find shelter. Outside are long troughs filled with water. Huge chaldrons are mounted on brick foundations, and the shells are boiled in these. Punts, rafts, flat boats and skiffs are used in the catch. A trap made of heavy plumbers' pipe is placed over each boat. To the pipe are strung lines set at six-inch intervals, which run fore and aft. Four pronged hooks made of old wire are fastened to the lines. The boat is pushed out from the bank for work.

The fresh-water clam points his nose upstream and invariably keeps his mouth open. He lies on the river bottom waiting for something to come along, when he will greedily seize it and never let go. The trap with the dozens of hooks is tilted over the side of the punt lying upstream and the clams at once lay violent hold upon it, as many as can get a grip on a prong. The fisherman hauls

them in until his boat is filled. At the factory the shells are soaked in a fluid for some days. The shell goes through a half-dozen processes before it is finished as a pearl button. The shell must be thick enough to stand the trimming to the proper size.

WHERE POSTALS ARE MADE.

Where do all the millions of postal cards used annually by citizens of the United States come from? Where are they made and printed? The average man would answer these questions off-hand with: "Why, Washington City, of course." But the average man would be wrong, for the modest plant that turns out millions of postal cards every month for Uncle Sam is located in a little West Virginia mountain town, high up in the Appalachian range, not far from the border line of Maryland.

The town is Picdmont, Mineral County, West Virginia, and here the busy factory is at work six days in the week, making the little oblong sheets of cardboard on which so many messages of all sorts and kinds are written by all conditions of people. Here the cardboard is made from the fresh, sweet spruce trees; here it is cut into the requisite size and here the cards are printed, packed and shipped, eventually finding their way into every State, city, town and hamlet in the country and to Cuba, Porto Rico, Hawaii and the Philippine Islands.

The population of the town and the surrounding country within a radius of six miles aggregates 7,000 people. Like all of the citizens of our glorious union, everyone here is enjoying this era of prosperity. Everything appertaining to the town resembles a beehive in industry. It is a law-abiding community, too, for every citizen is apparently on friendly terms with his neighbor, and even during the excitement attending a political campaign there are no quarrels or criminations and recriminations. Every voter casts his ballot according to his own political views and in accordance with the dictates of his own conscience.

The paper out of which the postal cards are manufactured is all made by the West Virginia Pulp and Paper Company at the large sulphite pulp and paper mills located here and adjoining the postal works. This is the largest pulp and paper mill in the United States and has branch plants at Davis, West Virginia, and Covington, Virginia, and Tyrone, Pennsylvania. These plants are not in the paper trust.

The postal works proper are situated at Luke, a suburb of Piedmont, on the banks of the north branch of the Potomac River. The works are between the West Virginia Central and Pittsburg railway on the north and the Baltimore and Ohio railway on the south, but the tracks of both companies run into the yard of the postal works to facilitate the loading of full car lots for shipment. The distance by railroad from Piedmont to Cincinnati is 373 miles, to Washington 180 miles and to New York City 418 miles.

The postal card works are located in a two-story fireproof brick building, with a cement roof and in which are patent automatic fire sprinklers, with an abundant supply of water at all times for fire protection. The building is not large—100x60 feet.

The power to run the machinery is furnished by the plant of the paper company, whose large plant adjoins that of the postal works. The building is lighted by electricity and in winter is heated by steam. Neither matches nor smoking of pipes nor cigars are allowed on the premises. The front door of the works is always under lock and key. During the summer months large lattice doors are used, with lock and key during the day. A time-registering clock is used at night, which the watchmen have to touch at regular intervals in their rounds.

Major E. H. Shook, the United States agent and inspector, takes the greatest care and precaution to guard against theft, fire and visitors interfering with either the cards after or during the process of manufacture and with the employes while at work.

The first floor of the building is used for a press room, casing room and a dry room for the printed postal cards. There are two presses in this room and each press has a capacity of 1,200 impressions an hour.

clams at once lay violent hold upon it, as many as can get a grip on a prong. The fisherman hauls presses is 50x30 inches and each sheet contains

nincty postal cards ready to be cut and packet when it comes from the press. The dies used on these presses are furnished by the government four men work at the presses. The men all work eight hours a day. One man is used in the casing part of this room to put together the knocked down pine boxes in which the cards are packed for ship ment. The boxes are made of pine grown in West Virginia and are shipped "knocked down" to the contractor. The boxes vary in size, holding 5.00 to,000, 25,000 and 100,000 cards, respectively.

UOHII

CIGAR-STUMP gathering as a business is lollower by men as well as by boys in Chicago. They know when and where to go for the largest supply. For instance, they will gather about places of amuse ment before the time for the performance to begin but they will not be found there later. Very man gentlemen smoke en route and throw away what left of their cigars before entering the rotunda, b on leaving after the performance they light free cigars. These habits of sniokers stump gatheren know, and they govern themselves accordingly Another rich field for stumps is the hotel on pleas ant evenings, when the guests are lounging on the sidewalk. But at all hours the streets and gutter are carefully watched, and very short must be to stump that escapes the searcher's eyes.

Of course there would be no sense in gathering cigar stumps if there was not a market for then but there is a market, though just what they a converted into is not quite clear. It is said the Chicago buyers reduce them to small bits by grinding machine, when they are packed and so to snuff factories, from which they reappear in ja and damp-proof sacks under labels that indica Turkey, Egypt, Persia and other Eastern country as their original home. Just why it is so layne do not know, but the assertion is often made th no tobacco makes as good and satisfying a snuff; the stumps of cigars. It is said that the unsmoke part of a cigar goes through a tempering proces which cannot be secured in any other way, a which gives snuff a poignancy and flavor that chemist has been able to impregnate any otherki of tobacco with. But be that as it may, gathering cigar stumps is a business in Chicago that is le lowed by a certain class of people, and presumab it pays, or they would not follow it.

TOWNS TO ORDER.

When the atlas maker visits a state in the centre west, say five years hence, he will find seven torm which do not now appear on any map. Friends a certain railroad president could tell him the names to-day, although the towns have not be built. The president, who has just completed a extension of his line, has picked out seven place where settlements would look pretty—and "make business." To save time, he has already name them

This ingenious gentleman is not the only railous magnate who cherishes town-building scheme. The Western papers tell of seven other railous which are planning to distribute assorted importants to lonesome spots along their various route. One road in the southwest wants fifty new town a northwestern road designs to found thirty-eight and the other five roads have hopes of building to from five to twenty towns each.

There is room for these towns. In fact in the places where it is proposed to establish them the is nothing but room—and railroad track. To does not mean that they may not some day be lart and prosperous.

and prosperous.

A notion prevails that villages and cities by and grow because of conspicuous natural advances. That is not always true. Many plantages. That is not always true always true and towns, by merely "happen." The new railroad towns, by deliberately planned, may enjoy benefits and operation of tunities which chance-created towns are liable tunities which chance-created towns are liable lack. For one thing, the paternal mads will have vital interest in their welfare. And to be not to being born rich.

"Ich gleich der Inglenook besser as der lie Companion. Er hat may fershtont im glana in ganse libe." -D. A. L., h.:

What They Say!

Chicago Says:

The Make Companion in our in our church publications.—John E. Mohler, population number seems hetter than the meeding one. I have a Sunday-school class receding and girls, from thirteen to eighteen eus, and all get the INGLENDOK as a Sunday-

THE INCLENOOK

"The Inglenook" will be Sent to any Address the Rest of this Year for One Dellar will be Sent the Rest of this Year and all of next Year for One Dollar.

The Best Way is to send the Dollar and be Done with it. After You Have Read it for a Week; or two, You'll be Sorn that You Didn't Save Money by Subscribing for the Whole Year at Once. It's a Paper that Grows on One. Once Read, Always Read!

We Want Agents, == Real Live Agents

In Every Part of the Country. Anybody can solicit Subscribers at the Twenty-five Cent Rate, and Whoever Sends in Club of Ten of These, Can have his Choice of ONE of the following books:

Dictionary of the Bible, Besule the Bonnie Brier Bush, Natural History of Birds and Quadrupeds, Black Beauty, Dream Life,

Adventures of a Brownie, Drummond's Addresses, A Ten Nights in a Bar-Room, Imitation of Christ, Etc.

If he gets twenty subscribers he can have two books; for thirty subscribers three books, and so on. be had in an hour's work in many a place. Whoever shows himself an efficient agent will be put in line for the Fall wor connected with the INCLENOOK. There is a library of Fifty bound books waiting for somebody.

The Agent who sends in the largest list of dollar subscribers between this and the first week in January, 1901, will have sent him a Library of FIFTY BOOKS. Here is the list:

Adventures of a Brownie, Alsop's Fables, Auld Licht Idylls, Autobiography of Franklin, Autocrat of the Breakfast Table, Bacon's Essays, Beside the Bonnie Brier Bush, Black Beauty. Burns' Poems, Child's History of England,

Cunlessions of an Opium Eater, Dictionary of the Bible, Dream Life, Drummond's Addresses, Emerson's Essays, Ethics of the Dust, Fairy Land of Science, Fifteen Decisive Battles, House of Seven Gables, Imitation of Christ,

Intellectual Life. Lays of Ancient Rome, Longfellow's Poems, Lorna Doone, Mosses from an Old Manse, Poe's Poetical Works. Prue and 1. Rab and His Friends. Reveries of a Bachelor.

Samantha at Saratoga, Sesame and Lilies, Sketch Book, Sticket Minister, Stories from the History of Greece, Nat. History Birds and Quadrupeds, Stories from the History of Rome, Story of an African Farm, Ten Nights in a Bar-Room. Thirty Years' War, Twice-Told Tales,

Window in Thrums, Education, In His Steps, Minister's Wooing, Professor at Breakfast Table, Lamb's Tales from Shakespeare, Lallah Rookh, On Liberty, Tanglewood Tales. Sign of the Four.

The Agent sending in the next largest list will have the choice of TWENTY-FIVE books out of the above list. The third largest list will entitle the Agent to FIFTEEN of the books, his choice; and the fourth largest list will win TEN of the cloth bound books. There is also a cash commission going to the Agent. We prefer the services of the Messenger Agenti he will write at once for the place, but we will put the first live applicant into line, as the INGLENOOK is not going to be thelas in anything. If agents desire to enter for the Library they should say so in order that we may keep tab on subscriptions a ceived at the office. Elgin city is barred in the competition for prizes.

The announcement of the successful Agent will be made in January, 1901.

A Live Paper for Live People.

The Inglenook is no longer an experiment. It is regarded as phenomenally successful by experienced newspaper me who know what they are talking about. The reason is not hard to find. It is a FIRST-CLASS PAPER, with nothing 0 and commonplace about it. It is up to date, and always will be. It will have something new in each issue, it always be and it never will fall below its self-set standard, -being the best paper of its kind in the world. You can't read it without being interested and instructed. The whole wide-spread world is ransacked in the interest of its readers. isn't made with a dull pen and a pair of shears. It is a live paper for live people.

The like of it was Some of the best known men and women in the church will write for the INGLENOOK next year. never undertaken in the church before. Look at the names, note the subjects! Every man and woman in the list know what they are talking about.

THE INGLENOOK.

VOL. II.

ELGIN, ILL., OCT. 6, 1900.

No. 40.

THE PLOWMAN TO HIS BRETHREN.

We own normasters, we that walk with God In workday garments smelling of the sod; We bear no yoke that others must not bear, Except of greater love and tenderer care; We bow not down with burdens on us laid, But lift them up for whom the load was made; For upright must we be, and stand erect, The almoners of God to his elect.

Not ours to judge who 'tis that makes demands, Ours but to see the piteous, outstretched hands, For unto us the cotters be as kings—All all in need of what the harvest brings; And be that what it will we must be just, For it is only given us in trust;

We will not question whose the cry or call, But be God's almoners to one and all.

CAPTAIN JACK.

(Concluded)

At the house they seated the Captain in his acstomed place in the corner, and then set about eparing the supper they had planned in honor of shome-coming, sad as it was. After the meal, hich was largely in silence, the family adjourned the front room where Captain Jack proceeded to form them of his visit to the city, his experiences here, and "what he had seen," a favorite exprestom of his.

He detailed the trip to the city, his difficulty in ding the place where the doctor lived, the introtion and the examination and the subsequent eration. He told of the weeks in the darkened m with no sound save the muffled footfall of the se, and the street noises that penetrated the alls of the private hospital. He and the doctor came warm personal friends and it had ripened oan intimacy that was especially pleasant under circumstances. There was one thing that was pecially interesting to the family. The young who had been fishing for trout, and who was a udent in the office, had told the doctor all about family, their honest poverty, and the hard methis whereby the money had been saved. So when came to the time of settlement with the doctor, d the roll of bills, amounting to fifty dollars, had en produced and tendered to the oculist, he simy laughed and waved it back to the Captain. He le it a present to the family, to "entertain fishen in the future." He might want to go a fishin that neighborhood himself, and he wanted a ditagainst the time. One day near the close of Ptain Jack's stay the doctor consulted him about letter that was to be written to the family, and was to be brief, saying simply that he would not ain see better than he did. So the letter was and here he was himself.

Its. Captain was softly crying to herself, the boy ked glum, and the girl was not in a very hopeful od. There was the satisfaction, however, of it having done all that was possible, and there will be no after regrets on that score. All there ained to do now was for each one to do best for the good of the whole, and waste no tin vain regrets. If the lather was dependent them they would take up their burden and do deantime Captain to the satisfaction.

Meantime Captain Jack had moved over to the bit, near the window, and took from his pocket the mout on his knee, the whole family watching the was doing. Money was such an unusual d, that a sight of it was sufficient to arrest attention, benth.

ben the Captain began a monologue. Counting twenty-five dollars he said, "Here is the money will buy a cow for Mrs. Jack, two tens and a five. five for the dollars for the boy, ten for the girl, will not again see any better that he now Mrs. Jack had immediate visions of an

Alderney that she had long coveted, and the boy had a new suit of clothes, while the girl had visions of a new dress, long a dream. It was a hopeful gleam in the darkness.

And Captain Jack went on: "Hereafter Mrs. Captain will have better clothes, and she will have a new dress, with no need to continue wearing that old one, the blue dress that she has on, with the tear in the right sleeve, and Miss Jennie Jack will have better shoes than she now has on, with the hole in the side of the left one, and the boy will have a better cap than that torn one he has in his hand, while the black and white kitten on the chair there,"- here Mrs. Jack gave an inarticulate cry, reeled in her seat, and promptly fell over in a dead faint. The Captain jumped to her aid, the girl and the boy were helpless, while the dog hearing the confusion, and mistaking it for a general jollification, bounded in and mixed up promiscuously with the crowd.

"Oh, why didn't you tell us?" said Mrs. Jack when she "came to," and the Captain said that they were all informed in the letter the facetious doctor had written, for had he not told them that he would never see better than he did? Was it not good that his sight was what it was? He, personally, didn't want to see any better, for he saw as well as ever he did. The boy cut and run for the town to tell everybody, shouting as he ran, "Pa can see, Pa can see," and all the people were glad and they came in droves to the house to "see" for themselves, and congratulate everybody.

Now there was a call by the railroad officials for the station agent at Captain Jack's town to go farther up the road, and so when the whole town had recommended the once blind man for the place he was appointed, and when you visit there it will be Captain Jack who will sell you your return ticket.

HOW THE CHINAMAN IS SCHOOLED.

The reverence for things antique, for manners and customs that date back 2,000 or 3,000 years, is nowhere more noticeable than in the Chinese system of education. Suppose that the young men of America were sent to college to learn nothing except to repeat by heart the writings of the ancient Greek philosophers, and that the extent of a man's education was reckoned by the number of quotations from those writings he could glibly repeat. Would America be the progressive country that she is if her educated classes had received only that kind of an education?

Chinese education consists in just that sort of learning, nothing more. When one considers that the system has been in existence for centuries, and that for hundreds of generations the Chinese have been taught to look backward and not forward, it is not surprising that the present generation should look with disfavor on the new ideas that, in spite of them, have crept into the country and made an impression on a part of the people that can never be effaced, no matter how many Boxer movements are started and supported by the conservative classes.

There is no public school system in the Chinese empire. Only the well-to-do or wealthy have the advantage of an education, except the missionaries of generous Chinese open schools in behalf of the masses. The Chinese boy starts to school when about six years old. The girls are practically never educated. The Chinese recognize three great superiors—the emperor, the parents and the teacher—so when the boy presents himself at the school he bears a present for the teacher and bows his head to the floor three times, signifying that he is willing to obey the teacher's commands. His next duty is to burn incense before a tablet on which is written the name of Confucius. Then he is ready to begin to learn his lesson.

The walls of the school are usually decorated with scrolls on which are pictures and writings, quotations from the ancient sages. Each pupil has

a little table on which are an ink stone and the brush with which he learns to write. There are no regular hours for the opening and the closing of the school; the pupils come and go as may be convenient, and there are, therefore, no classes, each being taught separately, and they are advanced as rapidly as they can be. The pupils are taught to read and write the Chinese language, and this is no easy task, for there is no alphabet in the language, which has 214 root characters entering into the formation of all the characters in the written language, each of which represents a word. There are about 40,000 words in the language, but only a small part of these are known to any except the most highly educated.

The primer which is used in the schools is at least 2,000 years old, and contains a number of proverbs, which the scholar has to learn. He is then taught that there are three great powers—heaven, earth and man, and three great lights—sun, moon and stars. He is further taught that rice, millet, wheat, rye and barley are the five kinds of grain on which man subsists. This sort of teaching is followed by a summary of Chinese history, and the examples of the sages of antiquity are commended to the youthful pupil. He is also taught to despise foreigners, and that China is the only great nation of the earth. Filial piety is taught from the first day of school to the last.

When the Chinese pupils have learned these elementary things they begin to learn the sayings and writings of the ancient sages. Chinese education is not a drawing out of the youthful intellect, it is "cram, cram." Thousands of young men in China can repeat for days the sayings of Mencius and Confucius. After studying for ten or fifteen years the students begin attending the annual examinations held under the auspices of the government. The examinations are very severe, and probably not more than one in one hundred passes the first examination and receives the degree of "Siutsoi," corresponding to our bachelor of arts. Those who have attained this degree can continue their studies if they will, and afterward take examinations for the degrees of "Cu-ing," master of arts, and "Cing-seu," doctor of philosophy. Men with these degrees possess official prestige and power. It is considered a great honor to obtain a degree, and when the lucky holder arrays himself in classic robes and calls on his friends, they give him presents, make feasts for him and show him great respect. About fifteen per cent of the male population has some education along the lines outlined. Very few of the females are educated at all. Not more than one per cent can read.

CHINAMAN AND CHRISTIAN.

A Chinaman of great dignity and some splendor of dress was getting off an elevated train at Twenty-third Street the other day when a white rowdy called after him:

"Say," said the tough, "are you a 'boxer'?"

The other tough added some abuse and roared with laughter after the Chinaman, who got off the car, then turned. He waited till the gates were closed, then he answered in pretty clear English:

"Say, you Clistian?"

Then the gateman and some passengers laughed, and the toughs slunk into the car.

THERE are several trees and plants in the world whose berries, juice or bark, are as good to wash with as real soap. In the West Indian Islands and in South America grows a tree whose fruit makes an excellent lather and is used for washing clothes. The bark of a tree which grows in Peru and of another which grows in the Malay Islands yields a fine soap. The common soapwort, which is indigenous to England, is so full of saponine that simply rubbing the leaves together in water produces a soapy lather.

RAISING RICE.

BY J. H. BOWERS.

THERE is a section in the southwest part of Louisiana, extending from New Orleans to Houston, and from the Gulf north about forty miles, which is the greatest rice section in the United States. Rice in ancient days was only grown by the natives. It was planted only in low places and was flooded by rainfall, thinking that it would not grow elsewhere. But it is a mistake, providing that irrigation can be had, to water or flood the land which is situated in higher localities. Experience has been had by industrious men from the North along the line of irrigation. It is no longer an experiment but a reality. Now there are different ways to irrigate. About five years ago it was planned by men of business ability to place a pump by the side of a river or stream that does not go dry in summer. There are some pumps that throw a solid stream thirty-six inches in diameter; these are the largest, and from that to a six inch stream. There are some plants that have as many as six pumps. There are flumes built at the river. Some are thirty feet high and their use is to raise the water to a level with the land that is to be flooded. Some flumes are two or three hundred feet long and then the canals set in, some of which are ten or twelve miles long. The area varies from one hundred to four thousand acres, according to the size of the plant. The land, as you look over it, seems to be almost level, but it is rolling enough that the most of it will drain readily. Now to flood these vast tracts of land that do not lay level the water must be carried around a piece of land varying from one to forty acres. It is carried all around a tract the same as if one was fencing it and we call them fields. These canals are placed on the highest land through the plant, and there are water gates that one can let water in these fields at will. As a general rule a man, who is called the water or canal Boss, walks the length of the canal and opens and closes these gates. This is one system of irrigating and now there is a second way, used in the last year or so. Deep wells have been sunk, finding, at the depth of one hundred to two hundred feet, an abundant supply of water. They average from six to ten inches in diameter. The wells vary in numbers from one to a dozen, and are connected and are run with one or more pumps and the water is conveyed around over the plant the same as the large river plants.

The farmers begin to prepare their land carly in January by plowing it. The plowing is done by gang plows and mules. The ground is prepared for sowing very much the same as for any other small grain. The sowing time begins in March or April, and May is the main month, but it is sowed as late as July. When it makes its appearance it looks like a slender grass blade. When it reaches the height of six inches it is ready to be flooded. The farmer's enemy is a wild rice that is red. It does no harm, only in the sale of the rice, and then it lessens the prices very much. The rice, when ripe, will average from three to five feet in height and no prettier grain is ever seen. For instance, a field of twenty mutton of from five to seven pounds costing from acres, rightly matured, looks as even as a floor, with a rich golden hue that resembles a summer sunset. It is harvested with binders the same as other small grain. The water is turned uff when the grain begins to ripen so that the ground will be dry when the grain is ready to harvest. The early rice will be ready to harvest in August. It is threshed as other grain. The yield is enormous when the scason is all right and a good stand is had. Some fields have yielded one hundred bushels per acre, but the average yield is about forty bushels. It is sold by the barrel. One hundred and sixty-two pounds is a barrel. It varies in prices from \$1.50 to \$5.00 per barrel. Rice has a husk on a little like barley and it must go through a milling process before it is ready for table use. The construction of a mill is a little expensive, some costing as much as forty thousand dollars. It goes through about six different processes, and is then placed on the market. The country is a prairie land with streams winding their way to the Gulf, while woods are on either banks. We have a healthy climate, there being a breeze from the Gulf in summer, making it pleasant,

There is a small but commendable little flock of Brethren around the vicinity of Roanoke, a little station, but beautifully situated on the Southern Pacific R. R. There are tracts of land still for sale, which will make beautiful homes for our people providing they are industrious, but the land is on an advance and will soon be out of the reach of

Any inquiry concerning the Sunny South will receive my carliest attention and all questions will be answered according to my knowledge and ability.

Roanoke, La.

LIFE IN VIENNA.

In a very readable letter from Vienna, W. L Hubbard tells some home-like facts that cannot fail to interest Inglenookers, and we append portions of it for their information.

Of all cities in Europe Vienna, Paris, and St. Petersburg are acknowledged to be the most expensive, and of these three many Europeans declare Vienna the leader in costliness. Be this as it may, a few prices will serve to show that living here is no cheaper, if as cheap, as it is in Chicago.

As regards rents, a habitable flat costs no less than \$10 to \$12 per month, the flat consisting of one living-room, one or two small bedrooms, and a kitchen. A four or five-room flat without bathroom costs \$18 to \$20, with bathroom \$2 to \$3 a month more. Flats of six to ten rooms range from \$40 to \$125 a month. And it must be remembered that a flat in Europe is not what it is in America.

Only in the few modern houses in Vienna is steam heat to be had. The monumental tile stove of the "sacred-to-the-memory-of" type is the only means of heating found in the average house in Vienna.

Electric light wires are now beginning to be laid, but if the tenant would avail himself of these or of the gas connections he must furnish his own fixtures. Not a chandelier or gas jet is rented with the house in Vienna—each renter brings his own.

Roller shades are not used here, so windows are bare save for the Venetian blinds, which belong to the house and are about the only thing movable which the tenant doesn't have to supply. Clothes closets are also almost an unknown quantity in European houses.

The rent, therefore, of a house pays for a mere suite of rooms, minus heat, and bare of fixture or convenience of any kind whatever,

The prices paid for certain staple articles of food also have a high range. These prices fluctuate somewhat, of course, with the season and the supply, but those quoted here are such as obtain under normal conditions, and are demanded in the average market and store.

In meats, beef is the most expensive, the cost being 26 cents a pound for steak and roast, and 18 cents for pieces suitable for boiling. Veal ranges from 15 to 18 cents for roast, steak, or chops. Pork costs 22 cents a pound for chops, 20 cents for roast. Hams when bought whole bring 18 cents a pound; when sliced, 4 cents more. Lard costs from 13 to 15 cents a pound, when tried, and 2 cents less when bought in leaf.

Mutton is the cheapest meat, only II cents a pound being demanded for chops, and a leg of 75 cents to \$1.05.

Chickens weighing 11/2 to 21/2 pounds bring from 60 to 80 cents, and ducks and geese are sold at about 15 cents a pound. Butter, under normal conditions of supply and demand, ranges from 22 to 26 cents per pound.

For sugars, the Viennese has to pay from 61/2 to 81/2 cents a pound, and, although his country is one blessed with many salt mines, for that common but indispensable article he is asked 21/2 cents a pound, while the price charged him for flour is from 3 to 4 cents a pound. Coffee of fair quality commands from 24 to 44 cents a pound, and tea may be had from 75 cents upward.

In Vienna all milk is skim milk. The customer who wants cream may buy it "straight," but the purchasing of it in any other way is impossible. For the milk minus cream he is charged 41/2 cents a quart, for cream 18 cents, and for whipped cream so cents a quart.

The stranger who comes to Vienna, expecting to find "Vienna" bread, will be doomed to disappointment. The elongated scarred loaves, with their they are usually bought for presentation purp

crisp crust, which in America we style Viennes can be obtained here only by seeking for what he is called French bread.

The semmel, a roll, which for crispness and de licious flavor has no equal, is the prevalent bread stuff here, and he who buys it in the bakery, pays for it in the restaurant, gives up an Austria coin equivalent to four-fifths of an American cent

In the matter of light and fuel, the resident in a Austrian capital pays 14 cents a gallon for ken sene, and for a rather mediocre quality of anthra cite coal he must give about \$3.50 a ton. Soft co is somewhat cheaper, but is little used, those n burning the hard coal preferring coke, for which \$2,75 to \$3 is asked.

Servant hire is nominal. For a maid of all work S4 to S5 a month is paid. Waitresses and secon girls command \$5 to \$6 a month, and a cook first-class abilities may be had for from \$6 to \$1

Included in the wage is lodging, breakfast, and dinner, but as to supper no calculation is made, this meal the servant must provide. The V_{lenne} is rarely at home for supper.

It may be asked how, with such prices for ten and food, one can manage to live more cheaply Vienna than in Chicago? The manner of livi makes the difference. Breakfast here consists coffee, tea, or chocolate, and two or three semme and butter. An egg may be added if one wishes a especially hearty breakfast.

Dinner usually consists of one or two courses of meat and vegetables and a simple dessert. A so may be served first, but soup-eating is not so prev lent here as in Germany. In the afternoon, at 4 5 o'clock, tea or coffee, with a roll or bit of cake, taken, and in the evening a supper of cold mea or a stew or chop finishes the eating of the day,

Far less of entertaining of friends and acquain ances is done here than in America-the "con and-have-dinner-with-me" habit is virtually a known among the Viennese - and when friends; out together each pays his own bill.

Less company requires less dwelling space an less expense, and it is by doing with less, not cause things are inexpensive, that living in Europ is cheaper than in America.

WATCHES THAT COST THOUSANDS.

Four-thousand-dollar gold watches are not vi common in New York.

The announcement that Mr. Gould's missing watch was valued at \$4,000 naturally led to the inquiry as to how many New Yorkers carry line pieces of such value. This resulted in the inform tion that watches of that sort are by no means common in this city, and that recently a watch made to order that cost \$20,000. The name of owner is kept secret, as well as the names of other who have had watches made for them that has cost \$5,000 to \$10,000. Were the names of the people to become public they would be incessan in danger of visits from sneak thieves, burglars pickpockets.

A reporter visited a well-known jeweler's asked in what respect a \$4,000 watch differed in

"So far as timekeepers are concerned, they do in no respect from the very best watches that made," was the reply. "It is simply a matter jeweling. Of course, if you stud the back of watch with diamonds and rubies you can pay? most any price for it.

"There is nothing extraordinary about a state watch, unless it is a split second or has s extraordinary features. The works are not me more than \$400. These works are of the very

"We recently finished and delivered a finished costing \$20,000 for a New Yorker. This amount, was expended on the diamonds with the back of the watch was studded and on a su ruby, almost as large as a pigeon's egg, formed the center of the ornamentation.

"For another customer we made a watch \$10,000, in which the distinguishing feature flat diamond let into the case. This watch made for a woman. For reasons which can munderstood understood and certainly appreciated by the it would not be politic to divulge the names of the purchase of the purchasers of these high-priced watches

"It is rare that watches of such great valurchased or purchased or worn by our well-known million pur

Nature & Study

YALE'S MONSTER TURTLE.

YALE is the proud possessor of a turtle weighing eight thousand pounds.

It is the biggest turtle in the world. An elephant would look small beside it. Our attention being called to a previous article on this turtle and much interest being manifested, we gladly tell more

Dr. G. R. Wieland caught this turtle while fishing on the banks of the Cheyenne river, in the Black Hills country. Needless to say it was the most exing moment of the doctor's life when he caught the monster. No fisherman can ever have felt as much emotion as he did.

Dr. Wieland is a graduate of the University of Pennsylvania, and is now connected with the Peabody Museum at Yale. With the least possible deay he brought his monstrous prize home to the latterinstitution. It made a good carload.

It may be added that the turtle is dead, and has been so in fact for about ten million years. Dr. Wieland was fishing for fossils when he caught it. Turtles live to an indefinite age, and it is possible that this one did not die until it was a thousand years old or so, but ten million years is rather too long to expect an animal, however slow-blooded, to survive the accidents and changes of time.

The turtle is undergoing a complete restoration and will soon appear as one of the chief attractions of the Peabody Museum.

The head of the great turtle has already been thoroughly restored. This is twenty-nine inches in length and sixteen inches in depth. The size of the creature in other respects may be judged from

It would open those jaws about twenty-five inches, more than two feet. That would be quite enough e enable it to swallow a man whole. The turtle ould have swallowed him whole or chopped him pif it preferred, for it was provided with terrific utting jaws. It was built on the plan of the modm hawkbill turtle, and any one who is familiar ith those creatures knows how easily they can chop off a man's arm.

Agreat many other instructive comparisons may made enabling one to realize what sort of a companion this turtle would be.

He was fourteen and a half feet long from the nd of his nose to the further end of his shell. He as about twelve feet wide across the back and four et through at the thickest part.

He could have carried a two-ton elephant as easily aone hundred and fifty pound man can carry a venty-five pound boy. We can imagine the sacious elephant sitting on the turtle's back and en-Jing a ride. If there had been plenty of boys ound at least fifty of them could have ridden on e capacious turtle.

We may prefer to think of the turtle supplying up. The Aldermen of London would certainly we to think of it in that capacity. Let us say, as liberal estimate, that one-third of his bulk of eight ousand pounds is available for soup-making. at would be two thousand, six hundred and sixtypounds, which would surely furnish as many lants of soup. A quart is enough for two, and this tle would therefore furnish five thousand, three and thirty-two people with turtle soup and enty of green fat for all of them.

It would be able to tow a full-rigged ship through water with ease, not quite as fast as a tugboat, lt does not need much science to appreciate eight thousand pound aquatic animal, with

urflippers, would exert more power than a steamp many times its weight.

It would take eight good draught horses to haul te big turtle any distance.

A man beside the big turtle would look about as gas a spring ehicken walking alongside a big, fat

The turtle lived in what is known in geology as Thassic period. This is roughly estimated to the been ten million years ago. It was certainly gago, for it was the age when the earth was just ginning to emerge from its chaotic, steamy condi-No animals higher than the turtle were alive control animals higher than the turtic were animals higher than the turtic were animals higher than the social scale than the ordinary reptile. The turtle was quite a personage, so to speak.

The river bank in which Dr. Wieland found the remains once formed the bed of a prehistoric ocean.

Such discoveries as this help us to realize those strange, dim geological ages when life seems to have been one long nightmare, when birds had teeth, the swamps were filled with bullfrogs weighing a ton apiece and sea serpents were an ever present reality.

Dr. Wieland has made a long and careful study of the turtle as it is and as it was. He has discovered many interesting and remarkable things about this obscure creature. In the first place, Dr. Wieland has discovered that the big turtles of early geological times are directly connected with the turtles of to-day, and that of all living animals known to science the turtle is the only one whose anatomy is exactly the same as it was one million years ago.

Most forms of the life of those days have entirely disappeared. Those that have not disappeared are hardly recognizable to-day, even to the scientists. The only respect in which the turtle has changed is that his race has decreased and his size and character have deteriorated.

In geological times, when the development of the turtle seems to have reached its zenith, turtles were from twelve to fourteen feet in length. They had flippers from four to six feet long. They weighed from four to six tons. They were swift swimming and tremendously powerful. They had a beak shaped like that of the eagle, which showed that they were fierce. They preyed upon many of the living creatures of geological times.

GEMS FOUND IN MUSSEL SHELLS.

PEARL fishing in Tennessee is now a thriving, lucrative industry, while the gem-from the streams in the old Volunteer State is gaining a wide reputation in the eastern markets for its brilliant luster and fine formation. 'Pearl fishing in this State is conducted on an extensive scale in the mountains of east Tennessee, especially in the Clinch river, where many valuable "strikes" have been made the past few months. A small party of pearl hunters is now engaged fishing for the gems, this being the season of the year in which they carry on their interesting work.

The fishermen are always ready and willing to tell the story of the Clinch river pearl, using purely mountain terms. They will tell you that the mussel varies as to kind and shape, there being three separate and distinct kinds. There is the yellow mussel from which is taken the white pearl, also the pink and gold. The "sheep-nose mussel" contains the pink pearl, while in the "biscuit" mussel a second or inferior grade of the pink gem is found. From the first group come the valuable pearls known as the round, button or pearl-shaped gems.

The pearl is constructed pretty much on the principle of an onion. They can be peeled, each layer being very thin, but distinctly a separate portion of the pearl. When one is found and proves to be below the average in luster it is peeled by a professional pearl man, and often a valuable gem is found after removing several layers of the film.

This Clinch river pearl is noted for size as well as its exquisite beauty. A single Tennessee pearl, not larger than a pea, has been known to sell for as a work on natural history that if an earthworm were high as seven hundred dollars. The best pearls, those which have brought the highest prices, present a variety of tints and coloring not found in other pearls, ranging from a dark wine color to that of a beautiful pink.

There is an element of chance in pearl fishing in the Tennessee streams that gives it a fascination. There is no more certainty that a summer's work will bring reward than a claim staked in the Alaska gold region. Nevertheless the work goes on. One man's "strike" is enough to keep the river full of pearl seekers for a month. It is estimated that the average is ten thousand mussels to one really valuable find.

The season for pearl fishing begins when the shoals in the river appear after the winter's high water. Usually the first valuable find heightens the fever, and it is not an uncommon sight to see one hundred or more men and women engaged in fishing within a space of forty or fifty miles. They will be seen scratching and digging in the sand, much after the fashion of a hen feeding her brood.

The pearl fisherman enters the water barefooted and proceeds to feel carefully with his toes for mussels which lie half buried in the sand. He is well accustomed, or, as the fishermen express it, their toes are so well trained that they know them as soon as they come in contact with a mussel. When the shell is found they grasp it with the foot and land it in a boat. When a sufficient quantity have been gathered the shells are opened with a wedge.

Two of the most unique characters in the pearl district are Joe Gosset and his brother James. Joe has been stone-blind for many years, yet he is the best fisherman on the river. Promptly upon the opening of the season he is led daily into the river by his brother and left to shift for himself. Joe uses the foot method to advantage, and has succeeded better the past year than his brother. For one pearl he received three hundred and fifty dollars. They are typical mountaineers, but successful pearl fishermen.

Formerly the business was done through local agents or buyers, but now Tiffany, of New York, and other dealers negotiate direct with the fishermen. The attention of English buyers has been directed to the pearl and before a great while the Tennessee pearl will find a ready sale in the markets of England.

CHESTNUT SEASON IS NEAR.

As each day passes the smile on the face of the cliestnut vender grows broader. Next week he will begin to polish up his roaster and ask the price of charcoal from the man who supplies the trade. In the Greek and Italian quarters one can find little groups of chestnut men talking over the prospect of a good fall and winter business and wondering when the first chestnuts will come in.

Reports from the nut region are to the effect that a big crop is in prospect, although it may be a little late in reaching the market. One will still have to look out for worms, for, in spite of the best efforts of the experts of the Agricultural Department, the chestnut weevil still defies the grower and will bore its way into many a brown hull.

The first chestnuts, which should reach the market by next week, will be of the Japanese variety. They will be larger than the nuts which will follow. and will cost from \$10 to \$14 a bushel. It has been more than twenty years since the Japanese chestnut was introduced extensively into this country. The start was made in the neighborhood of Cleminton, N. J. American chestnut trees were cut down and the sprouts received from Japan were grafted on the old trunk. In three years they began to bear, and in ten the average yield was a half-bushel for every tree. The European chestnut is about two weeks behind the Japanese variety in reaching market, and sells at from \$6 to \$8 a bushel. The American chestnut, with its finer flavor, is not far behind, but the price comes down to \$4 a bushel, and the venders cut rates to rock bottom prices.

A QUEER EXPERIMENT.

At a recent meeting of the Springfield, Massachusetts, Zoölogical Club a paper was read, giving an interesting bit of experience in growing earth-

The lady whose experience was given had read in divided, the anterior part would grow a tail, and the posterior part would grow a head. She said:

"I took twelve worms and divided them, placing the divided parts of each worm in a separate glass. In less than a month I had twenty-two worms, losing only two tail parts. The head parts had grown tails, and the tail parts had grown heads.

"A second experiment was made later. I divided two worms into halves, and put the four parts into a glass, into which I placed earth but no food, and the head parts are the tail parts."

Fish are great gluttons. This is probably the reason why fine-looking bait tempts so many of them to destruction. A single bluefish has been known to kill and devour ten cod each as big as himself in rapid succession. Birds are also blessed with fine appetites. The robin can easily devour two-thirds of its weight in earthworms in a day, and the ordinary pigeon can get away with his own weight in grain between sunrise and sunset and then go to sleep hungry.

INGLENOOK. THE

PUBLISHED WEEKLY

At 22 and 24 South State Street, Elgin, Illinois. Price, \$1.00 a year. It is a high grade paper for high grade boys and girls who love good reading. INGLENOOK wants contributions, bright, well written and of general interest. No love stories or any with killing or cruelty in them will be considered. If you want your articles returned, if not available, send stamped and addressed envelope. Send subscriptions, articles and everything intended for THE INGLENOOK, to the following address

BRETHREN PUBLISHING HOUSE, Elgin, Illinois.

Entered at the Post Office at Elgin, Ill., as Second-class Matter.

ONE THING TO REMEMBER.

THE question as to the reason for the church's adherence to the ordinances with such tenacity is not always explicable on the part of the member when he is requested to account for the faith that is in him. Let us help the young brother or sister in this matter. It appears that whenever there is a great principle laid down in the Bible, enunciated by Christ, there is always some corresponding external observance required at the hands of the follower. Thus the rite of baptism is the door of entrance into the church, the ceremony of feet-washing is the form that shows equality before God, the full meal indicates the common family to which Christians belong. And so on.

Now where the Brethren church takes its stand is in regarding all these ordinances as equally important, and not subjects for discussion. They are what Christ instituted, and that is enough for the follower of Christ. He does not question their inportance at all. He does not either think or say that they are a mere form. He does not know how or why they are associated with the result of salvation. All he knows is that they were ordered by Christ and that is enough. That they were regarded as important by Christ himself is shown in Matthew's last chapter, where Christ tells the people before he disappeared that they should teach all people to observe everything that he had commanded.

Now the Brethren church not only follows out these commands, but it attempts to get as nearly as possible to the original method of carrying them out. Here is one of the great differences between the Brethren and other churches. Others say that the form is not important. A few drops of water symbolize baptism, the love feast is an imitation of a meal, while the ceremony of feet-washing is never heard of. There are other things, notably that nearly all the popular churches go to war. They believe, and they say, and live it out, or rather fight it out, that much of what Christ positively ordered is to be atterly ignored.

Now the main differences between the Brethren church and the other so-called worldly churches, are that we believe in letting nothing go, but in holding on to all, "all things whatsoever," and not only in holding on to them but in actual practice observing them as nearly after the original manner as possible. If our young brother and sister who are not as sure of their standing as they would wish to be will read over and over this article they will have one of the most substantial reasons for our literalness. Summed up in one word it is obedience to all commands, and asking no questions about it.

FREAKS OF CLIMATE.

WHEN one goes to the far North he reasonably expects that he will find cold weather, and he is not disappointed. When he goes South he expects to find it hot. And he is sometimes niet with very cold weather, unpleasantly so, dependent on the altitude. In fact there is more in the altitude in the determination of the temperature than there is in latitude. In some places in the tropics a traveler would freeze to death any day in the year if not adequately protected.

There is no place where this is shown so conclusively as along the slope of the great plateau of Mexico. That country is built on the plan of the mansard roof, and on the top is one great plain, a part of the roof of the world. All the temperate zone fruits and grains thrive, and many half vegetable and half fruits we of the North never even

heard of. Supposing you were on this plateau, and started for Vera Cruz, on the gulf of Mexico. First would be a long ride over a level plain, then the edge of the roof, so to speak, and a dropping down right into the tropics. On the top of the hill we would find corn and some wheat growing, while on the road down the hill every gradation of climate would be passed, from the eternal snow on the top of Mount Orizaba to the palms and pineapples of the hot and unhealthy coast.

At certain points on the hillside one can have any climate he wants. Does he want cold—there is the snow-clad mountain; does he prefer a climate embodying perpetual spring—then a little lower down it can be had. In fact every gradation, from eternal Spring to the depth of winter cold on one hand to the red-hot coast on the other is available in a few hours' travel. There are places where any crop can be had the year around. If it is thought that it would be a good place to live, a residence for a short time would readily disprove this. While you could raise anything without trouble, to whom could you sell it? Others would have the same crops at the same times, and there is no demand that you could supply that Nature does not furnish in lavish abundance to all residents. The variability of climate adds a zest to the seasons that is unknown here where it is one continual smile the year around. In the rainy season it is like Fairyland. In the dry season it is always two o'clock in the afternoon. There is no change of weather or of season. It is one long siesta, and not even the shaking up of an occasional earthquake makes much difference.

The effect of all this on the people is to the end of making them decidedly lazy. What need is there to labor? Food is readily available, and as for clothes what need is there for them? What is worn is simplicity itself, and of the cheapest material imaginable. A house, if it could be called such, is simply a structure on four poles, thatched over with banana leaves, without doors or windows-in fact it is often a mere shelter, all doors or windows. Here the native lives, indifferent to the surroundings, perfectly satisfied with the supplies of to-day, knowing by experience that there will be as much to-morrow, and that all he really needs, in fact all that he wants, is to be had for the taking.

Man never reaches his highest estate in such a climate. He becomes idle, indifferent, and careless of the future. There is no need to work, and he does not do so. He simply takes life easy, and the bananas are a sure crop, and cost only the gather-

OUR SHORT SERMON.

Text: The Complaining Habit.

Some people are natural born whiners. They have acquired the complaining habit and nothing ever suits them. They see only the defective side of things, and if the defects are absent, or not visible, they imagine them. And they keep it up in season and out of season. Now is this Christian? Assuredly it is not. There is no record of the immediate personal habits of Christ and the early Christians, but it is said that the Master was invited out to dine with people, and we may be very sure from what we know of the man that his time was not taken up in complaining about things. The child of a king, journeying to his inheritance, has neither the time nor the disposition to occupy his moments with searching out weaknesses. He has a better habit of thought. If he thinks of his surroundings it is that he may help them, not criticise

There is a great deal better way than that of eternal nagging. The party who reads and who recognizes his own failings in this respect should at once attempt a complete reversal of habit of thought and action. He can readily do it, though it may be difficult at the outset. If there is nothing good to say then say nothing. After a lifetime of deliberately searching for defects it will be no little trouble to leave the barnyard for the meadow, but

it can be done, in fact it must be done, if there to be any claim, any real basis for our pretensions to Christianity. Devote the larger portion of each day to the search for good in people, and it astonishing how much of it we can find if we loo

OUR QUERY BOX.

What is meant by the partition of a country like China?

THE division of it according to the wants wishes of the conquerors. If Russia should design a portion of the territory of the yellow man, and England should want another slice, that would b partition, if they got it.

Are the prize books offered in the Inglenook bound, paper or cloth?

They are all cloth-bound books, and would be an ornament to any library.

There are many black walnuts in my vicinity. Is there a good market for the kernels?

There is a steady demand for nut meats, as they are called, and you should address some manufacturing confectioner for prices. They are bough and sold by the pound.

What is a cold frame mentioned in agricultural writing? Something very much like a hot bed, only with out the heat. It is designed to carry small plan over the winter, those not injured by freezing.

What is putty made of?

Whiting and oil worked together into a dough. Whiting is powdered chalk.

What lies to the far North in the way of farm land?

Directly North of the middle part of the United States is a plain, sparsely covered with stunted vegetation which finally disappears, when there is a bleak extent of frozen earth. It is not of any value for farming purposes.

Is the Belgian hare industry likely to hold out?

For a time at least. The money will be made in buying and selling stock.

Does the Inglenook believe in societies in the churches such as a Reading Club or its like, for the Winter?

If the meetings did not degenerate into meet parties, and if all were allowed to join, good might result. The tendency of such gatherings is only good when the original programme is adhered to

Would it not pay to put up ice in the far North and shipil South in Summer?

Enormous quantities of ice are handled in that very way.

How is a colored picture in two colors made, red and his

It is run through the press twice, printing on color at a time. Any number of colors can be had in a picture, but the more of them the more trong ble,

What is printers' ink made of?

That depends. Any color imaginable can be fire nished on order. Some of it is worth dollars per pound, others only a few cents. The costliness the component materials determines the different

Will potatoes mix in the blossom?

No. Not unless you plant the seed from the potato ball. New varieties are often made way. It is tedious and uncertain.

Father left brother and me a little property which we is e can dissist the can we can divide better than he indicated in his will.

do it?

Yes. Draw up three agreements, setting for what you want to do, having your signatures p erly witnessed by two others of age, and then tach one to the will, you and your brother take and then divide as suits you best. If there are ers in interest they must be agreed. It should in writing, very plain and clear lt is what is what is ten that will hold.

FIRE HORSES.

* MANY INGLENOOKERS have witnessed the fasciusting sight of an alarm of fire in the city and the racing of the steamer and the hook and ladder companies down the street, everything givog way to them. Few, however, are familiar with the inside management of the business. Take the matter of the horses in a large city like Chicago.

The buying of horses for the Chicago Fire Department, in which five hundred horses are emplayed, has been done by Chief Veterinary Eugene sullivan for fifteen years, although under the direct appervision of Chief Swenie.

Down at the Stock yards, in and about Dexter Park, is the world's greatest horse market. From all parts of the country, and especially from the South and West, the pick of the young horses are brought here for sale—heavy draught horses, light gariage horses, cobs—every sort of horse, in fact, is here sold for the local trade or to be shipped to Eastern cities or abroad. And in this open market, bidding against competitors from everywhere, Dr. Sullivan picks out the horses that will make the best for the department, and buys them if they can be had reasonably. "Reasonably" means, for an engine horse, all the way up to two hundred dollars, and for a light driver, maybe, one hundred dollars. Inselecting these horses the veterinarian has instructions to buy for a certain purpose. If he is after engine horses he must watch the market for equines that show fair speed, willingness, and inteligence, and are clean and sound. Above all else bey must be young. Most of the young horses of heavy type that come to the market come fairly well within the other classification, but the shrewd eye of the veterinarian detects faults here-and there nd picks out the very cream of the lot for final

Having decided what horses he wants, the veterimanan does not himself go to bid on them. If it rere known that a horse had been chosen for the Fire Department and was to be bought for such work the price would be sent soaring and there would be a score of bidders, each anxious to secure the animal. Instead, Dr. Sullivan gives his commission to a regular buyer, who includes the chosen horses in his purchase for the day and turns them over to the department. The horse then passes inbection by Chief Swenie and, if satisfactory, is put into training. From forty to one hundred horses are bought this way in a year.

"When a horse begins to train in Chicago," says Chief Swenie, "he does it by beginning hard work. Of course, all these horses come in from the county, and when they begin work they get sick from the city air, the change of water, and one such thing or another. We put them in the supply wagon in n outlying station until they get used to these flings and get a little work every day. They get used to the noise and confusion and to being around files and fire engines. Then we bring them downtown. They are put in the big engine-houses, where alarms are frequent, and run with the supply there for awhile. Then each horse is taken into a stall and led three or four times from there to the place nder the harness. He is taught what he must do hthat way and is usually quick to learn. Then he blocked in. An automatic switching device, conswitches fixed in a pipe, which devolves as a weight descends, are suspended over him so the whips will strike his back. When an alarm sounds this weight is released as the stall door opens and the switches immediately begin to play. So the horse learns to run to the engine. He learns this quickly and in a few days is an old-timer. To select horses to do that requires an eye to the intelligence of the brutes as well as to their Once in a while, in spite of the exercise of ere, we get one that refuses to learn or cannot We do not even then discard it, but try it first in several different engine-houses and often and that it works well somewhere else.

When I was Captain of a company, many years ones the had a 'mule' horse, as we call the obstinate of barrel refused to learn anything. We got a lot of barrel staves and fastened them together, two and two, so that when we hit the horse with them kouldn't hurt him but would make an awful acket. Every time the alarm sounded we hit the with them. About the third day an alarm and in and the horse broke his halter—they were hitched in stalls then—got first to the engine, broke and is much eaten in the city of Albany."

through the front door in his eagerness to get away, and hauled the engine all by himself for the first mile. He was the best horse we ever had.

"When a horse has served several years downtown we transfer him to an outlying station and then to one further out, but we hate to let him go altogether. An old horse knows the business. He fits like an old boot. He will work single or double, nigh or off. Horses stay eleven years in the department on an average. When we sell them we get from ten to seventy-five dollars for them. I never advise any one to buy an old department horse, because they are used to sudden bursts of work, petting, and the best of care. When one attempts to work them ten hours a day or to keep them up in poor stables with poor care they last no time at all.

"Of course we have many different grades of horses in the service. For the double hose wagons we buy what used to be known as 'railroad' horses -animals weighing about eleven hundred pounds. For the light carts of the battalion marshals and my own use we get still lighter animals, which show by their paces as they are tried in the park that they have a chance of developing considerable speed and endurance. We cannot pay fancy prices for trotters and thoroughbreds, but we manage to get speedy animals. One sometimes hears talk of our sending here and there to watch out for horses and to send them to our 'training stable.' Now, we haven't got any training stable, and we buy all of our horses right here at the Stock yards, which is the best place in the world to buy them."

YOUR CAN OF SALMON.

When you go to the store and buy a can of salmon you may sometimes wonder where it comes from, and how the fish are caught. The fishermen are at it now up in Oregon and along the Columbia river. A writer in the Wide World magazine has the following to say about the catch:

If the voyage is made at the height of the fishing season-that is, during the leafy month of June-the traveler witnesses on every hand the extremely interesting work of the fishery going forward, till he marvels that the river has not been altogether bereft of its riches. He will see the aboriginal red man standing on some jutting shelf of rock, plying his long-handled net with the inherited skill of many generations, and deftly lifting out his struggling quarry. Then again there are nets being drawn on the shingle, and dozens of shapely, shining bodies quivering in the dazzling sunlight.

In another place there is a great troubling of the waters, where countless victims are struggling in a trap, made by a complicated device of many nets. while they are being slowly drawn to the surface. Occasionally, too, one sees a boat dart silently across the stream, turn suddenly at right angles, and shoot out a net in the shape of a letter L. This mode of fishing is called "gill-netting," because the nets so spread, meeting the fish running up stream, generally entangle them by the gills.

Perhaps the mode of fishing which appears the most striking of all is the fish-wheel, which is simply the white man's improvement on the Indian's primitive dip-net. Fishing by machinery sounds strange and emphatically not sportsmanlike, but still the apparatus is curious and interesting. It is fixed in a narrow channel where there is known to be a salmon "trail." One of these wheels will sometimes lift out eighty-five thousand pounds of fish in one day! How is that for a haul? The wheel goes round in the same direction as the stream. The fish are led into it by converging walls, built in the riverbed. The wheel is formed of three or four wire nets so arranged, at equal distances apart and gathered in towards the axle, that they form a funnelshaped bag. This bag scoops up the salmon and empties them into a trough, whence they slide down into an apartment on the shore to be conveyed thence to the factory. The thing works magnificently from a business point of view.

"ALBANY BEEF."

JOHN RUSSELL BARTLETT, in his Dictionary of Americanisms, says that "sturgeon is called Albany beef because a part of the sturgeon's flesh has much the look and not a little of the taste as well as texture of ox muscle. It abounds in the Hudson river,

John S. Farmer, in his collection of Americanisms, also says that "the flesh of the sturgeon, in color and taste, has some resemblance to beef, especially when cut in steaks and grilled."

"Albany is a town on the Hudson river as high as which the fish in question is or was to be caught in large numbers, and, as a matter of course, consequently formed a not inconsiderable factor in the food supply of the inhabitants—hence the term 'Albany beef.''

All this was once true, but as a matter of fact now sturgeon are not so abundant in this market as they formerly were, and there are many of our younger citizens who have never tasted sturgeon and have never heard it called "Albany beef."

WHEN FOES TALK THE SAME LANGUAGE.

Then came the horror of a war between two nations familiar with the same language. "Second R. B.! Second R. B.!" shouted our fellows as a watchword and rallying cry. "Second R. B.!" shouted every Boer who was challenged or came into danger. "B company here!" cried an officer. "B company here!" came the ccho from the Dutch. "Where's Captain Paley?" asked a private. "Where's Captain Paley?" the question passed from Boer to Boer.

In the darkness it was impossible to distinguish friend from foe. The only way was to stoop down till you saw the edge of a broad-brimmed hat. Then you drove your bayonct through the man if he did not shoot you first. Many a poor fellow was shot down by some invisible figure who was talking to him in English and was taken for a friend. One Boer fired upon a private at two or three yardsand missed him. The private sprang upon him. "I surrender! I surrender!" cried the Boer, "So do I," cried the private, and plunged his bayonet through the man's stomach and out at his back .-From "Ladysmith: A Story of the Siege," by H. W. Newison.

NEW DANGER FROM BOTTLES.

It has been discovered that many of the prairie fires that have destroyed the grass on the ranges in Montana and in the western part of Dakota have been started by the concentration of the rays of the sun upon broken beer bottles that are scattered freely along the cattle trails and wagon roads, which offers a new argument for the use of the temperance folk. Numerous fires have started far away from human haunts and habitations, miles beyond the reach of sparks from the smokestack of a locomotive, and the farmers and ranchmen have been so mystified as to their origin that several investigations have been made. When a fire has been traced to its source, in almost every instance a hroken bottle has been found with evidences around it to convince the investigators that it was the cause of the mischief. The curved glass was found in such a position as to focus the rays of the sun upon a tuft of dry bunch grass and start a flame.

A MAGIC LETTER.

Dip you ever think what a strange letter S is? It is a serpent in disguise. Listen, you can hear it hiss. It is the wizard of the alphabet. It gives possession and multiplies indefinitely by its touch. It changes a tree into trees and a house into houses, Sometimes it is very spiteful and will change a pet into a pest, a pear into a spear, a word into a sword, and laughter into slaughter, and it will make hot shot at any time.

The farmer has to watch it closely. It will make scorn of his corn and reduce every peck to a speck. Sometimes he finds it useful. If he needs more room for his stock it will change a table into a stable for him, and if he is short of hay he can set out a row of tacks. It will turn them into stacks. He must be careful, however, not to let his nails lie around loose. The serpent's breath will turn them into snails. If he wishes to use an engine about his farm work he need not buy any coal or have water to run it. Let the serpent glide before his horses. The team will turn to steam.

If ever you get hurt call the serpent to your aid. Instantly your pain will be in Spain. Be sure to take it with you the next time you climb a mountain if you desire to witness a marvel. It will make the peak speak. But don't let it come around while you are reading now. It will make this tale stale.

Good Reading

ORIFFIN BEASTS.

A REMARKABLE discovery regarding primeval man is announced on such authority as to be entirely beyond cavil on charge of sensationalism. It is that natives of Patagonia, savage or semi-savage, did, some thousands of years ago, keep in captivity and domesticate, for their meat and possibly for their milk, gigantic sloths nearly related to the extinct megatherium. To prove the fact, Dr. A. Smith Woodward, a well-known English investigator, and Dr. Moreno, of the National Museum of Argentina, have laid before the Zoölogical society of London specimens of the bones and hide of the animals, which were found in ancient stone-walled stables, unmistakably such, together with great stores of cut hay, the latter being obviously fodder for the beasts, the shoulder blade of a man, and implements of human manufacture.

The animal in question, to which the name grypotherium, or "griffin beast," has been given, was much like the megatherium, but only about half the size. It was about as big as two large oxen, measuring perhaps ten feet from the snout to the tip of the tail, and weighing perhaps 3,000 pounds. Exceedingly stupid and clumsy, it was so sluggish of movement that one might easily imagine a whole day expended in leading it to the water of a nearby stream, and another day consumed in leading it back. It is probable, however, that water as well as food was brought to its pen. Certainly it is impossible to conceive of a domesticated brute more uncouth and strange. It was covered with long, yellowish hair, considerable quantities of which were found in the "stables."

Incredulous of some of the facts reported Dr. Nordenskiold, the famous naturalist and traveler, made a trip recently to Last Hope Inlet, in southern Patagonia, near which the remains were discovered, and investigated the matter for himself. He came back convinced, bringing with him an additional piece of "grypotherium" hide, together with a few claws of the animal. Since then Dr. Rudolph Hauthal, geologist of the La Plata Museum, has made further excavations, and has obtained many bones of the beasts, which were in such a remarkably fresh state of preservation that they were only slightly discolored, and had lost none of their gelatine apparently. Remnants of cartilage, dried ligaments, and shriveled muscles were found attached to them in some cases.

The reason for the excellent preservation of the remains was simply that the natives who domesticated the huge sloths built the pens for them, in this instance, at all events, in a cavern where there was an exceeding dryness. Some of the bones were so white that they did not look as if they had been buried at all. Caves commonly afford conditions most favorable for the dry-curing and safekeeping of animal skeletons, and much of the knowledge possessed by science respecting the earlier fauna of the earth has been furnished by these natural places of storage. All of the material unearthed in this case has been obtained by digging beneath the floor of an enormous chamber, which seems to have been enclosed formerly by rude walls built of rough stones. The enclosure was, in fact, a stable or corral, in which the "griffin beasts" were confined, and in one corner of it was discovered the great store of hay, evidently cut by the natives for forage.

In digging, three distinct strata were found. First, there was a thin surface layer of ashes, shells, and bones of various no-account animals. Next came a layer of leaves, interspersed with portions of Ilama skeletons, and beneath this was a stratum about three feet thick composed mainly of brownish dust and containing "grypotherium" bones and hair, a few large pieces of the hide of the sloths, certain human remains, and the bones of beasts identified as an extinct species of horse, and a large creature of the cat tribe, likewise extinct. This cat was about as big as a modern Bengal tiger, much larger than the existing jaguar, and seems to have corresponded in a sort of way to the extinct cave lion of Europe. It was nearly related to the modern ounce [Felis onca.]

Man was found represented in this stratum by a shoulder blade, which showed signs of disease, and two awls made from the leg bones of a dog. Other | you will wait until they are not worth advancing.

evidences of his presence, however, were supplied by the bones and hide fragments of the griffin beasts. One skull showed a fracture which was undoubtedly made when the animal was killed, presumably with a stone ax, and other indications proved that the huge creature was thereupon cut to pieces-for cooking and eating, one may suppose. A piece of skin, over three feet in length, had been partly stripped of its long hair by means of blunt tools of some kind, marks of which were still perceptible. This piece appeared to be from the upper back part of the right fore leg. Some of the bones, it should be mentioned, bore marks of fire, as if they had been charred incidentally to the roasting of the flesh.

The notion that the Patagonians may have milked the griffin beasts is nothing more than a suggestion—a mere surmise in fact, though entirely within the bounds of possibility. They may even have bred them—an idea which obtains some plausibility from the circumstance that some of the bones unearthed are comparatively small in size and evidently those of young animals. Three of the skulls were found in such good condition that casts were made of the brain cavities, thus reproducing the exact form of the brain of the "grypotherium." These casts are exceedingly interesting, and from them it is ascertained that the great sloths, though so stupid, possessed keen scent, the offactory lobes being largely developed. In two cases the little bones of the inner ear were preserved, being retained in the cavity behind the drum by the dried soft parts.

Dr. Moreno is inclined to believe that a few specimens of the "grypotherium" still survive in the unexplored wilds of Patagonia, and this notion is shared by Dr. Ramon Listai, who discovered the first bones of the beast that were found. Indeed, Dr. Listai goes so far as to declare that he caught a glimpse of a living specimen disappearing in the forest, though, most unfortunately, the circumstances were such, a stream intervening, that he was unable to follow it. Other naturalists, however, are exceedingly skeptical on this point, believing that the creature has been extinct for some thousands of years. It was a short-legged, shapeless, ungainly brute, with four toes on each of its front feet and three toes on the hind feet. It fed on grasses and the leaves of trees, which latter it frequently uprooted, being enormously strong, and one of its peculiarities was an arrangement of little bony processes put together like the stones of a pavement beneath its skin. These ossicles were irregular in shape and size, but in some parts were set in parallel rows quite symmetrically. They may have served to some extent the purpose of a coat of armor, the beast being incapable of running away and possessing no weapons of defense except its claws. Very likely the tiger already mentioned was its most deadly and dreaded foe.

Some years ago footprints of supposed giant men were discovered in the neighborhood of Carson City; Nevada. They were interesting until it was ascertained that in reality they were fossil tracks of the "mylodon," an extinct species of sloth, slightly bigger than the "grypotherium." The footprints had been made in mud thousands of years ago, and the mud had hardened into rock, thus preserving

There seems to have been three species of giant sloths on this hemisphere in ancient times. One, which was much the largest, now known as the megatherium, ranged from Patagonia as far north as Virginia, though occurring in the United States only in a small belt from Florida up. Another was the "mylodon," which ranged from Patagonia up through our Western States into Oregon. Finally there was the "grypotherium," which appears to have been exclusively South American. These beasts were much like modern sloths, except that they were of enormous size and had long tails. If, as would seem to be the case, the primitive Patagonians succeeded in domesticating one species of the mighty brutes, it was certainly a wonderful achievement. Apparently they utilized both the hair and the hide for some purposes, but there is no evidence that they tanned the latter, the pieces found in the cavern near Last Hope Inlet showing no signs of such a process,

ENGLISH DEMAND FOR TOMATOES RAPIDLY

"English statistics show that of late there ber been a large and rapidly growing importation tomatoes," writes Consul Hanauer, at Frankfon Germany, "the Canary Islands furnishing the sun ply, which importation amounted to 16,389 to during the first half of this year. The wholesal price of this quantity was about \$1,655,000.

"Tomatoes were but a short time ago an article of luxury in Great Britain, only used for the pampered palates of the rich; but now they have be come a common dish on the table of the working classes.

"In Germany fresh tomatoes are sold at six to fourteen cents a pound, according to season; there are chiefly used to flavor meats, not stewed. Only the best hotels and the wealthy buy fresh tomatoes. which are supplied mainly by southern France Canned tomato pulp is found at the groceries of large German cities, offered at a lower price comparatively than the fresh fruit.

"Cantaloupes are a great delicacy—even motess than the pineapple-in German cities. They sell at 50 cents to \$1.50 apiece. Some of these are brought from Spain, others are raised in German hothouses. Considering that tomatoes have been sold as low as Ss a ton in Delaware and New Jersey and that fine cantaloupes can be bought in Philadelphia at one to three cents apiece, the question arises, Why don't we export fresh vegetables to Europe?

"The growers of our Atlantic States should form an export association which-if it will send out men of mercantile ability who can speak German and French-would find the European continent, a well as England, an excellent market for their produce. No country could compete with us in the export of agricultural and industrial products, were we to adopt the mercantile methods of European traders.''

THE SMALLEST WATCH.

OVER in Berlin, Germany, there is a timepiece which is considered the most marvelous piece of mechanism that human skill ever put together.

It measures less than one quarter of an inch in diameter, and has a face about the size of the head of a large-sized tack or nail. The case is made t the very finest of gold, and the whole watch weigh less than two grains, Troy. It can only be realing how exceedingly light this is when we consider the in Troy weight it takes 480 grains to make an ound and that twelve ounces constitute a pound, or the 5,760 grains are contained in a pound. This won derful piece of mechanism weighs only 1-2,880% part of a pound.

So great a curiosity was this midget considered that the owner paid \$1,946 for it.

The numerals on the face of the watch are is Arabic, and if the hands were pul end to end they would not measure five-twenty-fourths of an ind in length, the large one being less than one eight and the small one less than one-twelfth of an inch long. It has, besides, just as an ordinary watch of clock, a second indicator, which is less than one sixteenth of an inch in length. The numerals had are also in Arabic, but are engraved in red to k more easily seen.

The works and hands are made of the finest-len pered steel and are set throughout in diamo chips. It is constructed on the most improve plan, being wound by the stem and set by pul the stem out a short distance. It is an excellent timekeeper.

QUEER CUSTOMS OF THE CHINESE.

THEY drink wine hot. Old men fly kites. White is worn as mourning. Their babies seldom cry. Soldiers wear petticoats. Their compass points to the south. The family name comes first. Carriages are moved by sails. Seat of honor to the left. School children sit with their backs to the reach.

Fireworks are always set off in daytime. If you offend a Chinaman he may kill himself your doorstep to spite you.

HINDRANCES TO CIRCLE WORK.

In some places Circles have been organized and but little has been heard from them since. Perhaps they have had a few good meetings, and then the programs became dull and monotonous, because there was no one to introduce sufficient variety. To keep up an interesting program the year round, it is necessary that one of the number should have the art of getting up good live programs that will necessary.

There are a few Circles existing of varying degrees of inertness, in which the routine has become monotonous and no real progress is made. In some of these the remedy consists in giving them some object to work for. Let them decide to dothe the poor children, who are in need, and win them to the Sunday school. Appoint some of the members to visit the sick and relieve those who are in distress, Hearty, willing, active service should the outgrowth of our missionary reading.

Now is the time to begin work. Make your influence felt, as you read of those who "left all" and lollowed Jesus, resolve that you will be more selfdenying, and work faithfully in your "own vinepard," at home, in your own neighborhood, your

Ir you stand half a mile off from a man, and throw the Gospel at him, you will miss him! but if you go close to him and lay hold upon him, giving have an affection for him, you will, by God's blessing, lead him in the right way.—Spurgeon.

OUR DUTY.

It is a work of heaven, surely, to make people happy. There is much more happiness than misery in the world; so much so that we grow to think we have a right to happiness and that when trouble comes, we are in a way defrauded. And there is some right and truth in the feeling, for plainly the Lord we love meant that we should be happy; and when we are not so it is the fault of those who have disobeyed the eternal order of things-sometimes, alas, ourselves. Rousseau says that "the opportunity of making happy is more scarce than we imagine; the punishment of missing it is never to meet with it again; and the use we make of it leaves us an eternal sentiment of satisfaction or repentance." But in one thing the philosopher mistakes —the opportunity is not scarce. On the contrary it lies all about us. The opportunity for kind words and for the simplest acts of brotherhood are in the daily path of all of us. An encouraging word to the servant, of thanks to the pastor, of something outside his righteous fee to the doctor, the seat yielded to another, the precious chance for pleasure surrendered, the confidence given, the trust reposed—these are opportunities shared by all; and the people with whom such things are habitual by reason of the inspiration to do them for the love of God and the love he bears his creatures do not need heroic deeds and mighty sacrifices in order to come within the scope of angelhood.—Harriet Prescott Spofford.

LISTENING TO GOD.

A FRIEND of mine told me that he called one day upon a brother clergyman, who had been ill in bed for six months. He said to this man: "I expect that, God almighty had a good many things to say to you, but you were too busy to listen and so he had to put you on your back, that you might be able to give him time."

When he was going out the thought struck him, "I, too, am a busy man and God almighty may have to put me on my back, that he may tell me all he wishes."

So he resolved that each night he would sit quietly in his study, not reading, not writing, but opening his heart, that God's spirit might impress upon him what he designed to teach, and criticise the life of the previous day.

"WHICH WAY ARE YOU GOING?"

A LITTLE girl went home from church one Sunday full of what she had seen and heard. A day or two afterward, when talking with her father, who was not a godly man, she said suddenly: "Father, do you ever pray?" He did not like the question, and in a very angry manner asked her:

"Is it your mother or your aunt who has put you up to this?"

"No, father," said the child; "the preacher said all good people pray, and those that don't pray can't be saved. Father, do you pray?"

This was more than the father could stand, and in a rough way he said:

"Well, you and your mother and your aunt may go your way and I will go mine."

"Father," said the little creature with great simplicity, "which way are you going?"

The question pierced his heart. It flashed upon him that he was in the way to death. He started from his chair, burst into tears and began to pray for mercy.

Which way are you going?

BE CONTENTED.

Nothing makes us happy but contentment. No difference how much we have, if the mind is not at rest we cannot enjoy our possessions; and no difference how little of this world's goods we have, if we are contented we will be cheerful and happy. Real contentment is found alone in cheerfully taking things as they come, while doing the very best that we can, looking on the bright side, trust God as we go singing on our way, very truly contentment is wealth.

For * the * Wee * Folk

THE TROUBLES OF A DOLLIE.

OH, the troubles of a dollie are very hard to hear,
They really are enough to turn one's ringlets white with care;
And just because you never see the hitter teardrops start,
You think I have no feeling in my little sawdust heart.

First they placed me in a window for the gaze of passers-by, Which was really most distressing for a dollie young and shy;

Then in a little maiden's care I found a home at last, And in my joy I fondly dreamed my troubles all were past.

She admired my golden tresses, my tiny waxen toes, My rosy cheeks, and bright blue eyes, and lovely little nose— But, alas, she has a brother, a schoolboy big and strong. Who is just as full of mischief as the summer day is long.

He has cut away my golden hair, he says 'twill grow again, My waxen charms are vanished quite—well, maybe I was vain;

My "roses" he has washed with soap to make them lify white,

And now at last, I must confess, I really am a fright.

But my little mother loves me, though my beauty all is gone, In the sweet eyes of affection I'm still fair to look upon; So though my cheeks are white and wan, and cracked my lovely nose,

I find there is a soothing balm for even dollies' woes.

THE WHITE CAT.

In a cottage by the wayside there lived a white cat. She was a Persian cat and very beautiful, of a graceful shape, with a coat of thick, soft fur as white as milk; she had a pretty face and a long, feathery-looking tail.

Ohe day she was sitting sunning herself on the low wall in front of the cottage and smoothing her dainty paws. All at once she looked up and saw a dog come trotting along the lane towards her. He was a coarse-haired dog of no particular breed; he was not handsome, but strong and wiry.

"Good day to you, stranger," said the white cat in her soft, purring voice.

The coarse-haired dog looked up in surprise at hearing himself addressed, for he knew that cats usually fled at his approach. "Good day," he said, stopping beneath the wall.

"Who are you?" inquired the white cat, "and where do you live?"

"Oh, I live anywhere," answered the dog. "My master, the tinker, goes about from place to place, and I go with him. And who are you?" he asked.

"I am the delight of my master's heart," said the white cat. "I live here in the cottage with him. In the summer I sun myself outside among the flowers; in the winter I sit inside and warm myself at another kind of sun—the glowing fire."

"The only fire I know well is the one which glows red in my master's can with round holes," said the dog. "I've plenty to do. I guard my master's belongings, and when I'm off duty I run about and pick up what I can get. I share my bones with friendly dogs, and the dogs that are not friendly I fight," concluded he. "And what do you do?"

"I please the aesthetic sense," said the white

"What is that?" asked the coarse-haired dog.

"The sense of the beautiful," said the white cat, purringly; "the delight one takes in looking upon lovely things, and in having them always near."

The coarse-haired dog stood with his paws planted firmly on the ground and gazed at her in wondering silence for some time, and then turned to go. "Good day, Mistress Cat," he said, quite humbly, and he trotted off down the lane and disappeared. He had unconsciously paid his tribute—the tribute that is owing to beauty.

A BRIGHT LITTLE PUPIL.

"Give me some familiar proverb about birds," said the teacher.

Tommy Tucker raised his hand. "The early bird—" he paused a moment and tried it again; "The early bird—"

"Yes," said the teacher, encouragingly. "That's right."

"The early bird gathers no moss."

MAMMA- Why don't you cat your apple, Tommy? Tommy-I am waiting till Jimmy Post comes. It wouldn't taste half as good if there was nobody to see me eat it.

Good Reading

GRIFFIN BEASTS.

A REMARKABLE discovery regarding primeval man is announced on such authority as to be entirely beyond cavil on charge of sensationalism. It is that natives of Patagonia, savage or semi-savage, did, some thousands of years ago, keep in captivity and domesticate, for their meat and possibly for their milk, gigantic sloths nearly related to the extinct megatherium. To prove the fact, Dr. A Smith Woodward, a well-known English investigator, and Dr. Moreno, of the National Museum of Argentina, have laid before the Zoölogical society of London specimens of the bones and hide of the animals, which were found in ancient stone-walled stables, unmistakably such, together with great stores of cut hay, the latter being obviously fodder for the beasts, the shoulder blade of a man, and implements of human manufacture.

The animal in question, to which the name grypotherium, or "griffin beast," has been given, was much like the megatherium, but only about half the size. It was about as big as two large oxen, measuring perhaps ten feet from the snout to the tip of the tail, and weighing perhaps 3,000 pounds. Exceedingly stupid and clumsy, it was so sluggish of movement that one might easily imagine a whole day expended in leading it to the water of a nearby stream, and another day consumed in leading it back. It is probable, however, that water as well as food was brought to its pen. Certainly it is impossible to conceive of a domesticated brute more uncouth and strange. It was covered with long, yellowish hair, considerable quantities of which were found in the "stables."

Incredulous of some of the facts reported Dr. Nordenskiold, the famous naturalist and traveler, made a trip recently to Last Hope Inlet, in southern Patagonia, near which the remains were discovered, and investigated the matter for himself. He came back convinced, bringing with him an additional piece of "grypotherium" hide, together with a few claws of the animal. Since then Dr. Rudolph Hauthal, geologist of the La Plata Museum, has made further excavations, and has obtained many bones of the beasts, which were in such a remarkably fresh state of preservation that they were only slightly discolored, and had lost none of their gelatine apparently. Remnants of cartilage, dried ligaments, and shriveled muscles were found attached to them in some cases.

The reason for the excellent preservation of the remains was simply that the natives who domesticated the huge sloths built the pens for them, in this instance, at all events, in a cavern where there was an exceeding dryness. Some of the bones were so white that they did not look as if they had been buried at all. Caves commonly afford conditions most favorable for the dry-curing and safekeeping of animal skeletons, and much of the knowledge possessed by science respecting the earlier fauna of the earth has been furnished by these natural places of storage. All of the material uncarfhed in this case has been obtained by digging beneath the floor of an enormous chamber, which seems to have been enclosed formerly by rude walls built of rough stones. The enclosure was, in fact, a stable or corral, in which the "griffin beasts" were confined, and in one corner of it was discovered the great store of hay, evidently cut by the natives for forage.

In digging, three distinct strata were found. First, there was a thin surface layer of ashes, shells, and bones of various no account animals. Next came a layer of leaves, interspersed with portions of llama skeletons, and beneath this was a stratum about three feet thick composed mainly of brownish dust and containing "grypotherium" bones and hair, a few large pieces of the hide of the sloths, certain human remains, and the bones of beasts identified as an extinct species of horse, and a large creature of the cat tribe, likewise extinct. This cat was about as big as a modern Bengal tiger, much larger than the existing jaguar, and seems to have corresponded in a sort of way to the extinct cave lion of Europe. It was nearly related to the modern ounce [Felis onca.]

Man was found represented in this stratum by a shoulder blade, which showed signs of disease, and

evidences of his presence, however, were supplied by the bones and hide fragments of the griffin beasts. One skull showed a fracture which was undoubtedly made when the animal was killed, presumably with a stone ax, and other indications proved that the huge creature was thereupon cut to pieces- for cooking and eating, one may suppose. A piece of skin, over three feet in length, had been partly stripped of its long hair by means of blunt tools of some kind, marks of which were still perceptible. This piece appeared to be from the upper back part of the right fore leg. Some of the bones, it should be mentioned, bore marks of fire, as if they had been charred incidentally to the roasting of the flesh,

The notion that the Patagonians may have milked the griffin beasts is nothing more than a suggestion-a mere surmise in fact, though entirely within the bounds of possibility. They may even have bred them-an idea which obtains some plausibility from the circumstance that some of the bones unearthed are comparatively small in size and evidently those of young animals. Three of the skulls were found in such good condition that casts were made of the brain cavities, thus reproducing the exact form of the brain of the "grypotherium." These casts are exceedingly interesting, and from them it is ascertained that the great sioths, though so stupid, possessed keen scent, the olfactory lobes being largely developed. In two cases the little bones of the inner ear were preserved, being retained in the cavity behind the drum by the dried soft parts.

Dr. Moreno is inclined to believe that a few specimens of the "grypotherium" still survive in the unexplored wilds of Patagonia, and this notion is shared by Dr. Ramon Listai, who discovered the first bones of the beast that were found. Indeed, Dr. Listai goes so far as to declare that he caught a glimpse of a living specimen disappearing in the forest, though, most unfortunately, the circumstances were such, a stream intervening, that he was unable to follow it. Other naturalists, however, are exceedingly skeptical on this point, believing that the creature has been extinct for some thousands of years. It was a short-legged, shapeless, ungainly brute, with four toes on each of its front feet and three toes on the hind feet. It fed on grasses and the leaves of trees, which latter it frequently uprooted, being enormously strong, and one of its peculiarities was an arrangement of little bony processes put together like the stones of a pavement beneath its skin. These ossicles were irregular in shape and size, but in some parts were set in parallel rows quite symmetrically. They may have served to some extent the purpose of a coat of armor, the beast being incapable of running away and possessing no weapons of defense except its claws. Very likely the tiger already mentioned was its most deadly and dreaded foe.

Some years ago footprints of supposed giant men were discovered in the neighborhood of Carson City; Nevada. They were interesting until it was ascertained that in reality they were fossil tracks of the "mylodon," an extinct species of sloth, slightly bigger than the "grypotherium." The footprints had been made in mud thousands of years ago, and the mud had hardened into rock, thus preserving them.

There seems to have been three species of giant sloths on this hemisphere in ancient times. One, which was much the largest, now known as the megatherium, ranged from Patagonia as far north as Virginia, though occurring in the United States only in a small belt from Florida up. Another was the "mylodon," which ranged from Patagonia up through our Western States into Oregon. Finally there was the "grypotherium," which appears to have been exclusively South American. These beasts were much like modern sloths, except that they were of enormous size and had long tails. If, as would seem to be the case, the primitive Patagonians succeeded in domesticating one species of the mighty brutes, it was certainly a wonderful achievement. Apparently they utilized both the hair and the hide for some purposes, but there is no evidence that they tanned the latter, the pieces found in the cavern near Last Hope Inlet showing no signs of such a process.

WAIT for others to advance your interests and two awls made from the leg bones of a dog. Other you will wait until they are not worth advancing.

ENGLISH DEMAND FOR TOMATOES RAPIDLY

"English statistics show that of late there had been a large and rapidly growing importation of tomatoes," writes Consul Hanauer, at Frankfor, Germany, "the Canary Islands furnishing the supply, which importation amounted to 16,389 toos during the first half of this year. The wholesale price of this quantity was about \$1,655,000,

"Tomatoes were but a short time ago an article of luxury in Great Britain, only used for the pan. pered palates of the rich; but now they have be come a common dish on the table of the working classes.

"In Germany fresh tomatoes are sold at six in fourteen cents a pound, according to season, they are chiefly used to flavor meats, not stewed. Only the best hotels and the wealthy buy fresh tomatoes which are supplied mainly by southern France Canned tomato pulp is found at the groceries of large German cities, offered at a lower price comparatively than the fresh fruit.

"Cantaloupes are a great delicacy—even more so than the pineapple—in German cities. They self at 50 cents to \$1.50 apiece. Some of these are brought from Spain, others are raised in German hothouses, Considering that tomatoes have been sold as low as S5 a ton in Delaware and New Jersey and that fine cantaloupes can be bought in Philadelphia at one to three cents apiece, the question arises, Why don't we export fresh vegetables to Europe?

"The growers of our Atlantic States should form an export association which-if it will send out men of mercantile ability who can speak German and French-would find the European continent, as well as England, an excellent market for their produce. No country could compete with us in the export of agricultural and industrial products, were we to adopt the mercantile methods of European traders."

THE SMALLEST WATCH.

OVER in Berlin, Germany, there is a timepicte which is considered the most marvelous piece of mechanism that human skill ever put together.

It measures less than one-quarter of an inch is diameter, and has a face about the size of the head of a large-sized tack or nail. The case is made of the very finest of gold, and the whole watch weigh less than two grains, Troy. It can only be realize how exceedingly light this is when we consider that in Troy weight it takes 480 grains to make an ounce and that twelve ounces constitute a pound, or the 5,760 grains are contained in a pound. This wonderful piece of mechanism weighs only 1-2,880h part of a pound.

So great a curiosity was this midget considered that the owner paid \$1,946 for it.

The numerals on the face of the watch are in Arabic, and if the hands were put end to end the would not measure five-twenty-fourths of an inc in length, the large one being less than one-eight and the small one less than one-twelfth of an inch long. It has, besides, just as an ordinary watch of clock, a second indicator, which is less than on sixteenth of an inch in length. The numerals held are also in Arabic, but are engraved in red to be more easily seen.

The works and hands are made of the finest-to pered steel and are set throughout in diamond chips. It is constructed on the most improve plan, being wound by the stem and set by pull the stem out a short distance. It is an excelled timekeeper.

QUEER CUSTOMS OF THE CHINESE.

THEY drink wine hot. Old men fly kites. White is worn as mourning. Their babies seldom cry. Soldiers wear petticonts. Their compass points to the south. The family name comes first. Carriages are moved by sails. Seat of honor to the left. School children sit with their backs to the test

Fireworks are always set off in daytime If you offend a Chinaman he may kill himself your doorstep to spite you.

SISTER C. TEMPLE SAUBLE, of Baltimore, Md., writes the following: "In answer, to your letter, writes the following: "In answer, to your letter, will say that I am glad to send you nine new names; how I wish that the number were larger. I shall take advantage of every opportunity to get new members. I left the school at Bridgewater, new members. I left the school at Bridgewater, June seventh. Then I visited in Virginia before I large here. May the Lord bless the Circle, is my

Bro. J. B. Leatherman, our local secretary, at Burlington, W. Va., sends us one name, and his promise to do all he can for the Circle.

This week we mail certificates to Sister Grace E. Gnagey, of Waterloo, lowa, and Sister Eva Falkenstein, of Germantown, Pa. They both enjoyed reading the books, and will do all they can to persuade others to complete the course.

Sister Mae Stover Wine, of Fruitdale, Ala., writes an interesting letter about the Circle work there. She says: "I was attending school, also teaching, last winter, and so was kept very busy, could not do as much for the Circle as I wanted to. We have a set of the books, so we will gladly loan them to all new members. I think I shall read the books over again, this winter, as if has been a long while since I read them, and they make me feel the importance of doing all we can for Jesus' sake."

We are glad to place the following new names on our Circle roll:

1304,	Leoti V. Leatherman,	- B	Burlington, W. Va.
1305,	S. Maggie Bowman,		Ottobine, Va.
1306,	Densie Hollinger,		Broadfording, Va.
	Wm. H. Sanger,		
	W. K. Conner,		
	Mrs. J. W. Wayland,

HINDRANCES TO CIRCLE WORK.

ls some places Circles have been organized and but little has been heard from them since. Perhaps they have had a few good meetings, and then the programs became dull and monotonous, because there was no one to introduce sufficient variety. To keep up an interesting program the year round, it is necessary that one of the number should have the art of getting up good live programs that will interest all.

There are a few Circles existing of varying degrees of inertness, in which the routine has become monotonous and no real progress is made. In some of these the remedy consists in giving them some object to work for. Let them decide to dothe the poor children, who are in need, and win them to the Sunday school. Appoint some of the embers to visit the sick and relieve those who are in distress. Hearty, willing, active service should the outgrowth of our missionary reading.

Now is the time to begin work. Make your influence felt, as you read of those who "left all" and denying, and work faithfully in your "own vine-own church.

Is you stand half a mile off from a man, and row the Gospel at him, you will miss him! but if you go close to him and lay hold upon him, giving have an affection for him, you will, by God's blessing, lead him in the right way.—Spurgeon.

"A FAITHFUL man does not ask whether it is a sinhful, It is always large enough if Christ wants in to do it."

THE WHITE CAT.

In a cottage by the wayside there lived a white cat. She was a Persian cat and very beautiful, of a graceful shape, with a coat of thick, soft fur as white as milk; she had a pretty face and a long, feathery-looking tail.

Ohe day she was sitting sunning herself on the low wall in front of the cottage and smoothing her dainty paws. All at once she looked up and saw a dog come trotting along the lane towards her. He was a coarse-haired dog of no particular breed; he was not handsome, but strong and wiry.

"Good day to you, stranger," said the white cat in her soft, purring voice.

The coarse-haired dog looked up in surprise at hearing himself addressed, for he knew that cats usually fled at his approach. "Good day," he said, stopping beneath the wall.

"Who are you?" inquired the white cat, "and where do you live?"

"Oh, I live anywhere," answered the dog. "My master, the tinker, goes about from place to place, and I go with him. And who are you?" he asked.

"I am the delight of my master's heart," said the white cat. "I live here in the cottage with him. In the summer I sun myself outside among the flowers; in the winter I sit inside and warm myself at another kind of sun—the glowing fire."

"The only fire I know well is the one which glows red in my master's can with round holes," said the dog. "I've plenty to do. I guard my master's belongings, and when I'm off duty I run about and pick up what I can get. I share my bones with friendly dogs, and the dogs that are not friendly I fight," concluded he. "And what do you do?"

"I please the æsthetic sense," said the white cat.

"What is that?" asked the coarse-haired dog.

"The sense of the beautiful," said the white cat, purringly; "the delight one takes in looking upon lovely things, and in having them always near."

The coarse-haired dog stood with his paws planted firmly on the ground and gazed at her in wondering silence for some time, and then turned to go. "Good day, Mistress Cat," he said, quite humbly, and he trotted off down the lane and disappeared. He had unconsciously paid his tribute—the tribute that is owing to beauty.

A BRIGHT LITTLE PUPIL.

"GIVE me some familiar proverb about birds," said the teacher.

Tommy Tucker raised his hand. "The early bird—" he paused a moment and tried it again; "The early bird—"

"Yes," said the teacher, encouragingly. "That's right."

"The early bird gathers no moss."

Mamma Why don't you eat your apple, Tommy? Tommy—I am waiting till Jimmy l'ost comes. It wouldn't taste half as good if there was nobody to see me eat it.

STEALING FROM THE BIO STORES.

have to hunt up new jobs. Among the thousands who would be scurrying around looking for something to do would be discerned a host of quietlooking, well-dressed men and women who spend all their waking hours watching for thieves. They are not connected with the detective department of the city, nor are they "operatives" of any of the great detective agencies of Chicago. They are known as "house detectives" and they are employed at the big department stores to prevent shoplifting.

In many instances their identity is unknown to the clerks among whom they work. They are clerks themselves, so far as appearances go, although they get twice or three times as much salary as most of those around them. Assigned to some department of a great mercantile establishment, they perform the same duties as the other clerks, but instead of gossiping or reading during spare moments they stand watching the crowds of shoppers flowing up and down the aisles. They never take their eyes from the constantly-changing panorama of faces. They are looking for shoplifters whom they know by sight.

When one is "spotted" the detective's real work begins. Leaving her counter on some pretext, she mingles with the crowd in the aisle and draws as close as possible to the suspect, always taking care not to be seen, for most of the professional shop-lifters know the detectives as well as they are known themselves. The sharp eyes of the detective never leave the hands of the shoplifter as the woman moves from counter to counter, and just when she is slipping a bolt of silk or a pair of shoes into one of her capacious pockets a firm hand is laid upon her arm and she is requested to come to the manager's office.

All this is done as quietly as possible to avoid a "scene." Department store managers do not like to have their customers know an arrest is being made. If the shoplifter is sensible and an old hand she will walk quietly to the manager's office and submit to a search by the woman who saw her stealing. If she is a novice she will cry out and make a fuss in the aisle. But it amounts to the same thing in the end. She winds up by accompanying the store employes to the seclusion of the office, where the search can be made. There she usually breaks down and cries and begs for mercy. Sometimes she gets it and is dismissed with a warning. Again, if she is an old offender, she is turned over to the police and prosecuted.

Just how much of that class of robbery known as "shoplifting" goes on it is impossible to say, but one thing is certain—there is not so much of it now as there once was.

Time was when the "business" netted thousands of dollars a year in comparative security. There were arrests now and then, but they never resulted in convictions. The thieves escaped on technicalities or got brief sentences in the house of correction. Then the big retail houses on State Street banded together and determined to rid themselves of the annoyance and expense of perpetually fighting against shoplifting, and the result was wholesale arrests and determined prosecution, which effectually broke up the two gangs.

Whatever shoplifting gues on now is not done by any organized gang. There are occasional individual cases, of course, enough to keep the store detectives on the alert, but nothing like the wholesale work of former days.

Knowing that anyone of the shoppers crowding around a counter may have a skirt with three footwide pockets, the clerks watch them pretty carefully to see that they replace in the stock all the articles they have been examining.

The professional shoplifter goes equipped for her work with a skirt especially made for the business, having capacious pockets reaching almost to its lower hem, the openings of which can be easily reached. A shawl or long cloak of some kind is necessary to cover these openings and under shelter of such a shoulder covering the shoplifter drops the articles pilfered from the counters into the big pockets.

One especially bold operator, who was effectually checked a few years ago, used to visit the stores in a carriage and elegantly attired. Halting the rig outside one of the larger shops she would enter

and, after pricing a score of things, make a few trivial purchases for a blind. Then she would go out to the carriage and deposit not only the purchases but the contents of the false pockets as well, which she had been loading up during her stroll in the store, and returning, as though she had forgotten to make a purchase, would actually re-enter the store for another load.

Such boldness brought its own undoing, for the employes soon had their attention attracted by her splendor and her frequent visits, and remark was made upon her habit of invariably returning for a forgotten purchase.

Investigation showed her to be a very clever shoplifter. The plea of kleptomania, which is a favorite one with shoplifters when detected, does not fool the store employes. When a richly-dressed woman is caught with some trivial thing in her muff or hidden under her wrap, something she could purchase for a quarter, there is evidence that something is wrong.

She does not steal for the value of the articles. But women with false pockets in their skirts, who grab off bolts of silk and rolls of ribbon, cannot very easily get away with any kleptomania plea. The evidence is too strong against them. The gennine kleptomaniac, the wealthy woman who steals for love of stealing, usually makes an awful scene when she is arrested, flashes her card upon the store manager and threatens the dire vengeance which her wealthy and influential husband will visit upon everyone connected with her detention, but she usually ends by pleading for mercy and begging upon her knees to be spared from publicity of arraignment in court.

In such cases the store managers act as they think the circumstances warrant. Nothing is gained by the prosecution of a genuine kleptomaniac. With professional shoplifters it is different, They can be hounded out of the business and made to feel that Chicago is an unsafe place for them. A few of the more persistent have been actually forbidden by the police to appear on State Street and their very presence on the great shopping street is sufficient to cause their arrest. With kleptomaniacs it is different. It is a disease with them, like the use of morphine, and some stores have adopted the plan of keeping account of the articles stolen by wealthy kleptomaniacs and sending a monthly bill for the amount to their husbands, which is promptly settled.

ANOTHER MARRIAGE "FOR FUN."

Miss Mary B. Carroll and Mr. Joseph R. Hoffman, who move in the best society circles of St. Louis, were recently married "for fun." They have just been aroused to a realization of the fact that in the matter of marriage the common law takes no cognizance of practical jokes. The ceremony was performed by Judge Henderson of the Probate court, in the presence of numerous witnesses. It was not regarded by either the principals or the spectators at the time as a serious affair, but the couple nevertheless are just as much married as if the knot had been tied with all the legal formalities. The courts hold that it can be untied only by a divorce suit.

There ought to be no misunderstanding of this case. The marriage ceremony was not made any more binding by the mere fact that it was performed by a Judge. Any other person might have taken the Judge's place. It was the declaration by the two before witnesses that they desired to become man and wife and the public announcement by the person conducting the mock ceremony of the fact that they had mutually consented to the marriage, and that it had been performed, that made the contract binding. The law, wisely anticipating the evil consequences that would arise from any trifling with the marriage contract, has placed this safeguard around the weaker partythat a woman publicly acknowledged by a man to be his wife is his wife. There are legal remedies for those to whom the operation of the law works palpable injustice, but until these legal remedies are resorted to the contract remains in force. The contracting parties may be punished for violating the statutory law relating to licenses, etc., but the imposition of the punishment does not affect the marriage. Nothing can set that aside save divorce or death.

The law provides a severe penalty for married persons who indulge in mock marriages. It postively refuses to see the humorous side of mock marriages between unmarried persons. The tie cannot be severed by mutual consent. A marriage subsequently entered into by either party to a marriage "for fun," such as that performed in St. Louis without first going through the formality of securing a divorce would be bigamous. The intent would have much to do with the determination of the criminality in the offense, but, at the very best the inquiry would result in serious embarrassment to the persons involved.

These facts ought to be known to everybody, and particularly to people of intelligence enough to move in the best society circles anywhere. They have been published in substance often enough. A man qualified for the position of Probate Judge should certainly have known them, yet we shall probably continue to hear of marriages "for fun" in spite of all warning. It seems to be as difficult to reach the intelligence of people who indulge in this form of amusement as it is to prevent a certain class of people from blowing out the gas, kindling fires with gasoline, looking down the barrels of shotguns, or buying gold bricks.

HOW SHOT ARE MADE.

In order to make shot for the trade an expensive tower is required. It might be compared to a tall chimney with a winding stairway on the inside. A the top is an arrangement for melting the lead, and there is a number of pans, resembling large bread pans, and in the bottom of these are holes of the size of the shot it is expected to make. The melted lead is poured into these pans, and it runs out of the holes in the shape of larger or smaller drops, and in the fall of the whole height of the tower as sumes a spherical form, and hardens as it falls to the bottom. It will be seen that different-sized holes will make different-sized shot. If the an rangement is such that the globule of lead falls into water chilled shot is the result Chilled shot is better for some purposes than the soft lead, but they are also harder on the gun, and are not universally used.

It is interesting to watch the separation of the perfect and the imperfect specimens out of the batch made. To tell how it is done is not a very easy matter, but if the reader will imagine the leaf of a breakfast table set at an angle, and another below it, with a gap of some inches between, the ida will be before him. It will be clear that if a single pellet is started to roll down the upper table leaf it will gather momentum as it goes, and at the edge make a leap that lands it on the lower incline. But an imperfect one, lop-sided or undersized, will not attain enough force to make the jump, and so falls down between the tables. Only the perfect specimens can clear the distance while the imperfect ones drop down and are melted over.

HOW MAPS ORIGINATE.

THE other day the writer saw a company of so diers en route to a distant part of the world when there is war. In the course of a longer or shorter time there will be occasion for a new map of section of country. To one who has studied the geographies of the last generation the present change is remarkable, and it will be continuously changing in the future. In truth a map of the world is hardly before the public till changes and necessary to keep up with the facts. It would seem that if there is anything stable it ought to be the governments of the earth and their holdings of ter ritory, but on the contrary there is a continua struggle for supremacy, a warring for more of the earth than now belongs to them, and the political lines are continually changing. New maps are to quired, and all Europe is continually on the ves of war that may be precipitated any day, with it resultant shifting of alleged ownership. But at it bottom of the query as to how maps are made the answer, as far as may be seen, is an army of sediers and the seen. diers, and back of that the ambition and frailty human potentates.

There is something wrong when a lawyer advisory you to avoid litigation or a doctor drinks your good health.

What They Say!

Chicago Says:

The INGLEMON IS par excellence. It has The INGLEMION Companion in our in our church publications.—John E. Mohler, Each number seems better than the receding one. THE INGLENOOR

"The Inglenook" will be Sent to any Address the Rest of this Year for Twenty=five Cents, or it will be Sent the Rest of this Year and all of next Year for One Dollar.

The Best Way is to send the Dollar and be Done with it. After You Have Read it for a Week; or two, You'll be Sorn that You Didn't Save Money by Subscribing for the Whole Year at Once. It's a Paper that Grows on One. Once Read, Always Read!

We Want Agents, == Real Live Agents

In Every Part of the Country. Anybody can solicit Subscribers at the Twenty-five Cent Rate, and Whoever Sends in Club of Ten of These, Can have his Choice of ONE of the following books:

Dictionary of the Bible, Beside the Bonnie Brier Bush, Natural History of Birds and Quadrupeds,

Drummond's Addresses,

Ten Nights in a Bar-Room, Adventures of a Brownie, Imitation of Christ, Etc. Intellectual Life,

If he gets twenty subscribers he can have two books; for thirty subscribers three books, and so on. And they could Whoever shows himself an efficient agent will be put in line for the Fall work be had in an hour's work in many a place. connected with the Inglenook. There is a library of Fifty bound books waiting for somebody.

The Agent who sends in the largest list of dollar subscribers between this and the first week in January, 1901, will have sent him a Library of FIFTY BOOKS. Here is the list:

Adventures of a Brownie, Æsop's Fables, Auld Licht Idylls, Autobiography of Franklin, Autocrat of the Breakfast Table, Bacon's Essays, Beside the Bonnie Brier Bush, Black Beauty, Burns' Poems, Child's History of England,

Confessions of an Opium Eater, Dictionary of the Bible, Dream Life. Drummond's Addresses. Emerson's Essays, Ethics of the Dust, Fairy Land of Science, Fifteen Decisive Battles. House of Seven Gables, Imitation of Christ.

Intellectual Life. Lays of Aucient Rome, Longfellow's Poems, Lorna Doone, Mosses from an Old Manse, Nat. History Birds and Quadrupeds, Poe's Poetical Works, Prue and 1, Rab and His Friends, Reveries of a Bachelor,

Samantha at Saratoga, Sesame and Lilies. Sketch Book, Sticket Minister, Stories from the History of Greece, Stories from the History of Rome, Story of an African Farm, Ten Nights in a Bar-Room. Thirty Years' War, Twice-Told Tales,

Window in Thrums, Education, In His Steps, Minister's Woonig, Professor at Breakfast Table, Lamb's Tales from Shakespeare, Lallah Rookh, On Liberty, Tanglewood Tales, Sign of the Four.

The Agent sending in the next largest list will have the choice of TWENTY-FIVE books out of the above list. The third largest list will entitle the Agent to FIFTEEN of the books, his choice; and the fourth largest list will win TEN of these cloth bound books. There is also a cash commission going to the Agent. We prefer the services of the Messenger Agent i he will write at once for the place, but we will put the first live applicant into line, as the INGLENOOK is not going to be thelas If agents desire to enter for the Library they should say so in order that we may keep tab on subscriptions re ceived at the office. Elgin city is barred in the competition for prizes.

The announcement of the successful Agent will be made in January, 1901.

A Live Paper for Live People.

The Inglenook is no longer an experiment. It is regarded as phenomenally successful by experienced newspaper men who know what they are talking about. The reason is not hard to find. It is a FIRST-CLASS PAPER, with nothing old and commonplace about it. It is up to date, and always will be. It will have something new in each issue, it always has and it never will fall below its self-set standard,—being the best paper of its kind in the world. You can't read it without The INGLENOOF being interested and instructed. The whole wide-spread world is ransacked in the interest of its readers. isn't made with a dull pen and a pair of shears. It is a live paper for live people.

The like of it wa Some of the best known men and women in the church will write for the INGLENOOK next year. never undertaken in the church before. Look at the names, note the subjects! Every man and woman in the list knows what they are talking about.

CAUSES OF THE PRESENT UPRISING IN CHINA.

BY 1. J. ROSENBERGER.

The present uprising of the Chinese in their efbits to drive the foreigners from their land is
ithout its parallel. The query arises as to the
use of this sudden, wide-spread effort in opposiion to the civilized nations of the world. We
now not how history may answer this question,
ut the information we have gathered from differact sources, has led us to conclude that the Chinese
use a number of well-founded grievances, that
hey, at different times, have been compelled to enure injuries from different political powers as well
s from various missionary societies.

In 1840, when the Chinese refused the British ats to unload opium in their ports the result was, the opium war," in which the helpless Chinese ffered seriously at the hand of the merciless titish fleet, and were compelled to yield to Britdemands. In the settlement, the British deanded that the Chinese pay the expense of the ar, cede to them their valued seaport city, Hong ong, and allow British merchants free shipment lopium into Chinese ports. To this latter the then ling emperor sternly objected, and with true paotism he said, "I will die in the last trench raththan allow the importation of a drug that will be in to my people." But his protest was of no ail. The pitiful tale of the ruin to men, women dchildren on Chinese soil by this fatal drug, the issionaries can all tell.

One of the Chinese missionaries relates the folwing brutal, tyrannical, bloody deed in which the hinese were again the aggravated sufferers. Afttheir seaport town, Kyanchow, was taken by the etmans, a party of German engineers were sent of the interior of that district to survey a railroad. was to be a bee line. Neither house nor church ald stand in their way. As they passed through village they came to a graveyard. Courtesy and mmon civilization would have said, "pass ound," but the party drove their stakes on the ty graves of their dead. The Chinese regard the unal places of their dead as sacred, and that they I be doomed if any harm befalls their dead te villagers gathered and withstood the engineers party, by which eight of the villagers were shot. Aupon the matter being reported to the German mmander at Kyanchow, he sent out an armed (se which killed several hundred of the Chinese, d burned their town. For the last twenty-five Is the different European powers have by one lessive deed after another taken their seaport ies, until it is said that full fifty or more of their des are under the control of foreign powers. heir rulers have continually been browbeaten and dered defeat on every hand, until the Boxers, the constitute the more progressive and enlightold class, have risen up in behalf of their coun-

took refuge in the American mission. A mob followed, but on finding the mission so well guarded, they made no effort for revenge but marked the house, and it was the first to be burned in the late uprising.

Some of the missionaries openly advocate, "the partition of China," and have articles in its defense published in their mission columns read by the Chinese. The effect and results of such efforts are very easily foreseen.

Some of the missionaries are now declaring that they will pursue even a more aggressive policy in China as soon as the present troubles are over. They seem to regard the Boxer movement as a providential event. A Southern Methodist bishop the other day went so far as to publicly "thank God that the Methodist missionaries had stirred up all this trouble in China, and he hoped that they would continue to do so in the future." So says the New York Tribune. Such efforts with such a spirit are not to be commended. It is not surprising that such aggressive, political ruling and a religion of the spirit indicated in the foregoing is offensive to the Chinese.

THE COMING OF AUTUMN.

Soon the Autumn will be on us in full force. The trees that blossomed out in the Springtime will have shed their leaves that heap in the hollows or rustle adown the road. All the little flowers of the May days have long been hidden in the brown mould. Only the rough yellow and purples of the floral kingdom will be seen along the dusty wayside. In the air is that far mistiness and the streams are clearer and the little folk in fur are busy anent the day when the wild wind whistles across the sheeted fields. The youth of the year passed in promise, the Summer came and passed royally, and now the Autumn is on us. All nature recognizes it. The birds, obeying an uncontrollable impulse meet, discuss the matter, and when all are ready they pass in the night Nearly all birds migrate in the night. They swing on the tall weed in the daytime, chirp and call, and when the sun sinks they start for the South. The corn is in the rustling shock, the late apple hangs alone, the yellow pumpkin takes on its bloom, and the bob-white whistles his call to his mate. It is the death of the year, the sere and yellow leaf time, and it impresses us all more than we know

And we are all passing into the Autumn of life, That is the lesson Nature teaches, and as we grow older we recognize it without a teacher. We are nearer the end than ever we have been before. As the years come again the same recurring miracle will be repeated on a thousand hillsides, the greenery of Summer, the flaunting flowers, and the long, quiet afternoons will come, and the Autumn again and again and again. But somewhere in the procession of the seasons we will stop in our journey. Some day the Angel of Death will enter with us, all unseen, through the open door, and we will be carried out when we go again, with quiet, upturned face and we will take our place where the dead rest in peace.

It is inevitable. There is no escape. There is no fright to it. It is simply following the flowers and the birds. As they will come again so will we. We are not sure how or where, but the same good Lord that rules and overrules the children of fur and feather will not neglect us in that hour. It will be somewhere, somehow, and when the time comes and the dear Lord calls we should lay aside our work and follow out into the seeming dark. Those who have gone are on the other side all right enough, but that other side may simply be next to us. Think of passing from a wrecked tenement in which we have dwelt, to these many years, and as we think we are falling into nothingness we stand in the smiling company of those who have passed before. They will all be there, and the Redeemer

What is then in store who may forecast? But it will be well. Up to that point the eye of faith may see, but beyond it passes human knowledge and human speech. But it will be well, thank God!

A WOMAN'S FACE.

A WELL-KNOWN Northern advertising agent who was in the city recently told a whimsical story at his own expense to some friends in the St. Charles lobby. "When I was still pretty green in the business," he said, "I was sent for one day by the president of a big concern that did a great deal of general advertising in the magazines and so on. I found him a man of thirty-five or thereabouts, and very affable. He said he wanted to consult me as an expert in regard to getting up an effective design that could be used as a sort of trademark in all classes of 'ads.'

"The design the house was using at the time included a vignette picture of a woman's face, which had never struck my fancy, and I was a little surprised when he said he wanted to retain it as a feature. 'The public has learned to know that picture and to identify it with our goods,' he remarked, 'so I think you had best work it into whatever you get up.' 'Is it an ideal head or a portrait?' said I. 'Oh, an ideal,' said he. 'Why do you ask?' 'Because in that case,' I replied, 'I would certainly have it redrawn by some competent artist.' He looked surprised. 'Why so?' he inquired. 'Because it's unattractive,' I answered frankly, 'and has a sullen expression. Now, a pretty face,' said I, warming up to my subject, 'is always a good thing in an ad; it arrests the eye, just as it does on the street, but this sour-looking sister is a Jonah to your business.' 'Possibly,' he said coldly, 'but I still insist that the public has learned to know the face, and I intend to retain it in the ad.'

"Well, I did my best with the job, and the design greatly pleased the house, but to my disappointment I never got any more work. I couldn't understand what the trouble was until one day fully a year afterward, when I met my former client walking along Fifth Avenue with a lady whom I instantly recognized as the original of the picture. She was an heiress, and the pair were reported to be engaged. Since then I have learned to keep a bridle on my tongue. But it was his own fault, He had no business fibbing about the head being an ideal."

This month Iceland is celebrating the ninth century of the introduction of Christianity in the far north island. It was Olaf, king of Norway, who sent over the first priests. Longfellow gives a somewhat humorous account of the reception of Olaf's emissary, "Drunken Thangbrand," who came away quite as disgusted with the Icelanders as they were with him. Chicago has a little colony of emigrants from Iceland, but in North Dakota and Manitoba there are many thousand. They are thrifty farmers, well cultured and great disputers on theological subjects. There is hardly an Icelander anywhere, no matter how humble, who is not only well versed in the literature of his own land, but who also knows considerable of other countries' books. It is no uncommon thing to find in farmhouses on the bleak Dakota prairies small libraries in several languages.

Ar a village school a precocious boy being asked to parse the sentence, "Mary, milk the cow," went on accurately till he came to the last word, when he said: "Cow is a pronoun, feminine gender, third person singular, and stands for Mary." "Stands for Mary?" asked the master in astonishment. "Yes, sir," responded the urchin with a grin, "for if the cow didn't stand for Mary, how could Mary milk the cow?"

"Tex thousand of the greatest faults in our neighbors are of less consequence to us than one of the smallest in ourselves."

SHORTAGE IN MONKEYS.

The United States is experiencing a monkey famine. Simians are so scarce that prices have tripled within the last month, and even Italian organ grinders have been led into disposing of their pets to showmen who could not make purchases of the regular animal dealers.

The unprecedented demand for monkeys for use in vaudeville performances and the innumerable monkey circuses traveling through the country has taken the dealers by surprise, and they are just beginning to realize that the monkey will be one of the imports showing an enormous gain before the year has ended. The apes, ring-tailed balboons, and all other species of monkeys are in great demand, and it is predicted that the famine of simians is likely to be long drawn out. Fully one-half of the monkeys bought for exhibition and training purposes are short-lived. Consumption rapidly carries them off, and the show people find that they must replace them if they want to keep popular with amusement patrons.

Two years ago an Italian trained three monkeys to do a stage act. Vaudeville managers at first turned a deaf ear to his offers of putting on his act at a low price. After some persuasion he induced one manager to give him a trial. The act made a tremendous hit, and dozens of old-time circus men began to train monkeys. Previous to this success they had looked upon monkeys as useful only in amusing children and increasing the sale of peanuts and popcorn.

Last spring ten monkey circuses began to travel about the country, and showmen purchased monkeys by the dozen, paying all sorts of fancy prices for them. About the same number of vaudeville actors having monkeys as leading features sought and found engagements. The circuses made money quickly, and the vaudeville "turns" drew higher salaries than ever before heard of for an animal act. Then monkeys began to go up in price. Two months ago they became very scarce. Two weeks ago they could not be purchased of the animal dealers, who had sold out their supplies, and the showmen began to scour the country for pet monkeys.

Chicago animal dealers, who usually have from ten to fifty monkeys in stock, report that they have none in their stores, and that they are receiving calls for them every day. One dealer said yesterday that he had horrowed a monkey from a showman to display in his show window.

An animal dealer said yesterday that he had no monkeys in stock, and that his customers were anxiously waiting until he could receive a supply from the coast cities.

"A cargo of monkeys is expected from Brazil within a few days and I will have a large consignment," said he. "I expect several varieties. Prices will be far above those of last season. The cheapest monkeys will sell at \$180 per dozen, and from that price to \$5,000 per dozen for the large baboons. Showmen have found that monkeys are easily trained, and that their acts please the people so well that they are all shouting for more monkeys. I only wish that I had a few dozen in my store to-day."

W. W. Gentry, one of a firm of brothers, which owns three pony, dog and monkey circuses, said that he had failed in all his efforts to buy monkeys.

"We need a number of monkeys, and will pay

good prices for them," said Mr. Gentry.

"I have written to all the animal dealers I know of, and they have sent me word that they have no monkeys for sale. Monkeys are bringing good prices, but just now it is impossible to buy any. A cargo is expected from Brazil soon, but I understand that it has been sold in advance. The scarcity of monkeys is caused by the great demand. Every old showman is carrying trained monkeys—they're all the go just now."

Professor Charles Woodford, an experienced animal trainer and owner of monkeys making balloon ascensions, said: "I have five monkeys which I wouldn't sell for \$200 each, although I paid less than one-sixth of that sum for them. It is simply impossible to find monkeys in this country to-day. I've had a man out drumming through the Italian settlement for monkeys, and he has suc-

ceeded in buying one. This demand is caused by the popularity of trained monkeys with amusement patrons. People are just finding out that monkeys are easy to train and are great comedians."

WHAT WE CALL OUR WEIGHT.

You step upon a weighing machine, drop a penny in the slot, the hand goes around the figured dial, and, stopping at a certain point, tells you that your weight is so many pounds. You know by this, in a sort of comparative way, that there is a certain amount of the matter which composes the universe confined under your skin. You have appropriated a certain portion of it in the construction of your flesh and bones. There is a definite amount of the elements combined together which produces an effect upon the machine, and that effect is translated into pounds. You do not know exactly what a pound is, but it is some sort of an arbitrary measure of the force of gravitation, and, after reading the figures on the scale, you know how much there is of you by comparison with other objects that have weight and density.

When you stand outside of yourself there seems to be no reason why you should have any weight. The mind, which is the most important part of you, does not appear to have weight, is a matter entirely outside of yourself; you cannot increase or diminish it by any act of will, though sometimes in dreams you seem to have divested your body of the downward pull, which you call weight, and find yourself floating as easily as a mote in a sunbeam. It may be that this is a sort of recollection on the part of the matter which enters into our composition of a time when it was really not subject to this tugging called gravitation, and floated free. In our present environment, however, this law of matter has us in full control, and we cannot escape it for the smallest fraction of a second. It operates steadily all the time, and we are obliged always to take it into account.

But does the scale actually tell us how much we weigh? It simply calculates the balance between two forces that are working against each other, the one tending to drag us down to the center of the earth and the other to send us spinning out into space. The pull of gravitation has the advantage by so many pounds; otherwise we should leave our happy homes in a hurry and start on a journey from which we should never return—going out into space to hobnob with comets and asteroids and other cefestial wanderers. This old earth is a whirler and a twirler. It has more curves than a baseball in the hands of an expert pitcher. You have seen the experiment of swinging a pail of water over the head without spilling the water. The earth is giving us the same sort of a swing.

It is as if some giant were stationed at the point of space where the center of the earth is, with a string upward of 3,000 miles in length attached to us, and were swinging us around at the end of it. This rate of circular motion is approximately 1.000 miles an hour. It is a pretty rapid swing, and the fact that on account of this rapidity we have a considerable tendency to take a long jump several thousand miles into space, must make a considerable difference in the pressure when we step on the weighing machine. If the earth were to stop its whirling some day for a short time we should all suddenly become heavy weights, and it is a question whether the ordinary weighing machine would be adequate to measure the tendency which our bodies would have to press toward the center of the earth. It is plain, therefore, that we should weigh a good deal more if it wasn't for the giant swing given us by the planet upon which we are involuntary residents.

In order to tell our real weight it would seem, therefore, that it is necessary to calculate how much of the force of gravitation is counteracted by this circular motion and the constant tendency to fly off at a tangent. But, after all, this would not really indicate our weight. There is a law of physics which tells us that matter attracts according to its mass. Now, suppose that you were to take a journey off to some world that had only one one-hundredth of the mass of this one; then, when you stepped upon the weighing machine and dropped in your penny, according to that law, you would weigh but one one-hundredth of the amount indicated by the machines around the cities. If you

weigh 150 pounds here you would weigh but a pound and a half there. You would be decidedly in the feather-weight class, could repose comforts bly on the hardest board, and with the same strength of limb that you now possess could leap over a ten-story building or skip across a wide river.

WHEN TURKEYS COST THIRTY OOLLARS APIECE,

MRS. W. A. HAIGHT, of San Francisco tells many interesting things of the early days of California as seen from a pioneer housewife's standpoint. Said she: "My husband left me, a very young bride, in the East with my family, while he went ahead in '49 to make his fortune. In three years from that time I started on my way to California, where larrived in February, 1852.

"My husband met me at the steamer landing, on Montgomery Street, and asked me if I would walk to my new home, or take a carriage at \$10 an hour, Just coming from the East, where money was scarce, such an amount for a carriage paralyzed me, and I said emphatically that we would walk. Our house was on Bush Street, near Montgomery, and was only a very plain little cabin of five 100ms, without shelf or a closet, for which we paid \$1,800 a year rent.

"What I noticed most after I reached my newly adopted State was the lack of flowers or plants—all was sand, barren sand.

"Fruits were exceedingly scarce. All the fresh fruit that we could get were the little Mission grapes, pears and olives, which were grown at the missions. Butter was \$2 a pound and eggs \$2 a dozen, and once, when my husband wanted to give a dinner to fifteen young clerks of his bankinghouse, we had to pay \$30 apiece for the turkeys and \$15 per pair for chickens.

"A friend of ours at one time had a barrel of apples sent him from Connecticut, and we were presented with a dozen of them, which we considered the greatest of luxuries"

ARE VERY RARE TORTOISES.

Two crates containing live tortoises passed through the New York offices of Wells, Fargo and Company within a few days. They were of the rarest species known and were consigned to a Boston firm who will forward them to the London 200.

This species of tortoise can be found in but two localities, the Aldabara islands in the Indian ocean and among the islands of the Galapagos group seven hundred miles west of the coast of Ecuador. The specimens which passed through New York are from the latter group. The islands are of volcant origin, little less than corrugated strips of lava, and owing to the fissurelike formation, it is difficult to capture the tortoise. It is stated that with the exception of two other tortoises of this species, one in the London gardens and the other a pet about the gardens of ex-Queen Liliuokalani in Honolulu these are the only specimens in captivity.

The tortoises weigh over five hundred pounds and measure ten feet in girth behind the fore flippen. According to James Kneissen, who accompanies the tortoises, the shell plates indicate an age of three hundred and fifty years for each. When these reptiles reach the London gardens the collection of the species of the Testudinata order will be complete and the only one of its sort in the world walter Rothschild, director of the London gardens has instructed his agents, the Blake Company of Boston, to use every means possible to secure the one in Honolulu.

Because of the difficulty in keeping the tortoise alive in this climate they were shipped by fast of press. The tortoises are valued at ten thousand dollars.

Norwegian legislators propose that girls who do not know how to knit, sew, wash, and cook should be refused permission to marry. Daughters of wealthy men are not to be excepted.

THE British government is the owner of over to ooo camels. Several thousands are used in India carry stores and equipment when regiments at changing quarters by line of march.

An unsigned will is a deed without a name.

Nature & Study -

"BOZZIE" WAS "ONLY A DOQ."

Many have read of the recent death of a shepbeld dog in Chicago named "Bozzie," The animal held up animal and, at the same time, a wonder. She was fast becoming an institution, for the intelshe was the had been a welcome guest in many dubs, social circles, even at social meetings in thurs, and in many a newspaper office, where her accomplishments were much admired. If asked to count and announce the number of persons present she did so accurately, even when someone challenged the accuracy of the rapid count. The dog availed herself of the combination of numbers, barking, for instance, thrice and four times to signify thirty-four. If asked how many gore glasses, she replied correctly, though one person once demurred at a result, his eyes not detecting the fact, as the dog's did, that one lady wore a pair in so delicate a frame that even an error by Bozzie might have been pardoned. If asked a man's age, Bozzie correctly barked the facts. There surely is a mystery in the matter. We reject the theory of secret signals to the clog, for the double reason that the master disavowed the trick and the dog would perform for the company when the master was in another room. The accomplished animal would add, subtract, multiply and divide in a way that never failed to "bring down

But Bozzie is now dead. Some people who conspired against the dog, or left poisoned meat in nailing for some other dog, caused the death of the animal whose accomplishments seem to be hereditary, since her father, whose name was Boz, in his day was a wonder and an exceeding attraction. When Bozzie died the grieving owner buried her in the rear of the lot, near to his door. Neighbors heard of the burial and came in groups, each sorrowing very much as if Bozzie had been more human than the world in general esteemed her. Just before the grave was filled in half a hundred school thildren came, laden with flowers and pleading that they might enter and be present. The owner invited no one; but the hint had gone out in some wayprobably through juvenile messengers-and the yard was full. The good sense and delicacy of all was perfect, for scarcely a word was spoken, though it is said that not an eye was dry when all was over. No laws on our books are more valuable and wise than those that condemn and penalize cruelty to animals. The Bible declares that the merciful man is kind to his beast, and that saying has its roots in the principle and fact that he who is unkind to his beast is sure to grow less and less merciful. Human beings, as well as beasts, have deep investments in the great treasury of mercy wherewith God has endowed the world. Societies to prevent truelty to animals aid to conserve the sum total of love and gentleness which makes the path of man less thorny. Brutality towards brutes brutalizes human beings. We wish that that charming story, "The Dog of Flanders," could be read by every thild. Who has failed to be touched and made more noble and more tender by "Rab and His Friends?" The least tendency towards cruelty to dumb brutes should be checked as promptly as if a boy were to curse and swear or steal.

HOW SOME ANIMALS SWITL

Anoxo what are generally considered purely land atimals there is no finer swimmer than the polar bear. This grand creature, with which everybody is nowadays familiar, spends more than half his time in the water, performing immense journeys across the polar wastes from continent to continent. The distance he travels from the pack ice to the main coasts over open water are at times astounding considering that the body is all the time imhersed in freezing water, known to human beings the greatest deterrent to all long swims.

The most interesting family of swimmers is perhaps the rodents. It may be taken as a general he that if one member of a family is a good swimmerall the rest are, but not so with regard to the the nerfor question, for it embraces not only such the performers as beavers, rats, mice and their alles, but such regular land lubbers as squirrels, hares and rabbits.

All the good swimmers among the rodents are also expert divers and are able, moreover, to raise or depress the body in the water at will. When swimming at ease and unsuspicious of danger the water line passes across the mouth, the middle of the cheek and the shoulder, disclosing on the surface rather more than one-third of the whole body, and, though the root of the tail is seen, the tail itself is generally under the water, excepting when the animal is quite stationary. About rats I need hardly speak, so familiar to everybody are their habits. The common house rat, when he takes to living on river banks, is almost as much at home in the water as his cousin, the water vole, and the same thing may be said of mice, notably the water

Among the indifferent swimmers of this family the squirrel claims attention. Many observers are of the opinion that the squirrel does not swim at all, but that by hopping on to a floating piece of bark and using his tail as a sail he crosses the widest rivers. This is a very pretty story and one with a certain amount of truth in it (I have myself seen squirrels floating down stream in this way), but that he often attains his object thus I very much doubt.

Twice, fishing in the Tay, I saw squirrels actually swimming across the river, and their movements struck me as so peculiar that I afterward experimented with them in the water. They were evidently alarmed at the thought of trusting themselves to so treacherous an element, and, at starting, some of them sprang into the air, as if inclined rather to fly than to swim, but once well afloat they paddled away with such extreme rapidity as to exhaust themselves within a few minutes at most. In this action the head and shoulders are carried very high out of the water, while the rest of the body sinks deep beneath the surface —in direct contrast to the pose of hares and rabbits, which, in swimming, are, like an ill-ballasted ship, " down by the head."

Like the squirrels, these two animals show great timidity in the water, and naturally so, for their heads are so low and rear so high that the slightest ripple on the surface would send their noses under water and so drown them, unless they at once returned to land. In perfectly still water, however, they can both swim considerable distances.

Nearly all the ruminants are excellent swimmers, and all take freely to the water, except perhaps the wild sheep and the camels. Of pigs it is commonly reported that so queerly fashioned are they that if they attempt to swim they cut their throats with their fore feet, but this is only an old wife's fable. Whether wild or tame, they are all good swimmers, though owing to the shortness of their legs they just touch their throats with their fore feet, and beat the water very high. Many of the islands of the southern seas are now inhabited by wild pigs, which are the descendants of those which have swum ashore, sometimes great distances, from wrecked vessels.

Camels cannot swim. They are very buoyant, but ill balanced, and their heads go under water. They can, however, be taught to swim rivers with the aid of goatskins or jars fastened under their necks. During the Beluchistan expedition of 1898 the camels were lowered into the sea from the ships, and their drivers, plunging overboard, clambered into the rump of their charges, causing the animal's heads to come up, and thus assisted they were successfully piloted ashore.

Several animals, such as hegdehogs and bats, who would at first glance be considered incapable of natation, are in reality quite respectable perform-

TORCH FISHES OF THE DEEP SEA.

MR. LANGLEY, Secretary of the Smithsonian Institution, says that the ideal light, from an economical point of view, is furnished by the firefly and other animals which exhibit the phenomenon called phosphorescence. This kind of illumination is produced by the oxidation of animal fat, and has apparently no waste, being actually light without heat. In the case of the so-called lantern fly of South America, it renders luminous the large hollow head of the insect the head being made of a

thin and paper-like tissue, through which shines the light from within. The really interesting examples of phosphorescent light producers, however, are to be found in

the ocean, many of whose inhabitants utilize their own means of illumination. At times, the surface of the sea is fairly aglow, every breaking wave having actually the aspect of a flame. This appearance is due to the presence in the water of inconceivable multitudes of extremely small animals, each of which holds up its tiny torch, so to speak, to contribute to the general brightness. The minute pelagic crustaceans are mostly light makers, and some of the jellyfishes at night look like veritable balls of fire.

Recent investigators have expressed the opinion that in the depths of the sea, to which no ray of sunlight reaches, there is, a considerable illumination by various animals inhabiting those abyssal regions. If this were not so, why should the large crabs and other crustaceans raked up from the nether deep be found to wear such brilliant scarlet and yellow colors? Why, too, should many of the fishes of the depths possess such enormous eyes? Of the fact that many of the fishes themselves are light producers there is no doubt, the equipment for this purpose possessed by some of them being quite elaborate, while one well-known species is believed to have power to turn its light on or off at

Some of the deep sea crustaceans are brilliantly phosphorescent, and it is probable that they often use their light to illuminate their surroundings and to reveal their prey. Certain caphalopods related to the common cuttlefish have an apparatus to throw the light downward to the bottom over which they pass, as if they were provided with reflecting lanterns. Some of the abyssal fishes have luminous plates on their heads, while others have light-emitting spots along their sides, and still others are rendered luminous over the whole of their bodies by a phosphorescent slime. One fish carries on the end of its nose what looks like an electric bulb, and in all probability this serves as a bait for attracting finny victims.

WOLVES AUTOMATICALLY SCARED.

Examiners in the Patent Office have learned by experience that it is a mistake to jump at conclusions regarding the usefulness of inventions. A contrivance at which they were inclined to poke a good deal of fun, designed to frighten wolves on Western prairies, was patented less than three months ago, and already it has come into considerable use in the sheep-growing districts of that part of the country.

The device is an automatic gun, which goes off at regular intervals, scaring the wolves away from the flocks. It consists of a sort of box, which contains a clockwork arrangement, with a small-steel-barrel projecting from one end. A magazine, also within the box, is loaded with blank cartridges which are fired by the clockwork once in ten minutes or so. By the help of a simple mechanical attachment the intervals between discharges are made as long or as short as may be desired.

Wolves do not attack sheep in the daytime, and the gun needs to be in operation only from sunset to sunrise. It is at the period of lambing that the flocks are in danger, the fierce wolves raiding them and carrying off the lambkins, and hence the apparatus described is intended to be employed exclusively during that season. It may be that the wolf, which is a decidedly intelligent animal, may learn the deception after a while and realize that the automatic gun has not a man behind it.

Hitherto the protection of sheep during the lambing season on many ranches has been a serious problem, the flocks being constantly harassed. Men armed with shotguns make regular rounds at intervals during the night, discharging their weapons from time to time- a troublesome plan, whereas it is comparatively easy for a patrol to inspect, rewind and reload a number of automatic guns in various parts of a ranch once a day.

A visitor who returned from Brazil says that the whole country is perpetually intoxicated by coffee, It is brought to the bedside the moment one awakes and just before sleep, at meals, and between meals, on going out and coming in. Men, women and children drink it with the same liberality and it is fed to babies in arms. The effect is apparent in trembling hands, twitching eyelids, yellow, dry skin and a chronic excitability worse than that produced by whisky.

THE INGLENOOK.

PUBLISHED WEEKLY

At 22 and 24 South State Street, Elgin, Illinois. Price, \$1.00 a year. It is a high grade paper for high grade boys and girls who love good reading. INGLENOON wants contributions, bright, well written and of general interest. No love stories or any with killing or truetty in them will be considered. If you want your articles returned, it not available, send stamped and addressed envelope. Send subscriptions, articles and everything intended for The Inglenoon, to the following address

BRETHREN PUBLISHING HOUSE, Elgin, Illinois.

Entered at the Post Office at Elgin, Ill., as Second-class Matter.

TRUTH.

VISITING.

THERE is something pleasant about a visit from one friend to another. There is nothing so easy as to fall into the babit of keeping at home, within one's self, and no habit is so hard to break off, once it is formed. It begets selfishness, and hinders soul development. It is better to get out and around among neighbors and friends and make friends in the new and strengthen old associations. It is very often the case that friends get apart thinking each other cold and distant, when there is nothing the matter but a lack of personal association.

Young folks usually need no urging to get out and around, the trouble being generally to keep them at home. But with the heads of the family it is often the case that a stay-at-home habit is formed to the detriment of all interested. It is well to go off occasionally and renew our youth. If it is only to a neighbor's house it is better than eternally treading the home wheel. Not only do we thus lighten our own burdens, but we help others.

'It is not necessary that a visit be turned into a visitation. The stay need not be such as to involve trouble and worry in cooking and preparation for which things may not be ready, but an afternoon call, and home again, lightens many a load. And the time spent need not be taken in talking adversely of mutual acquaintances. It can be better spent. If on some such a country visit something especially nice in the fruit or vegetable line is taken along all the better. The evil days are coming when we cannot go, and then as we have visited others so will it be to us in our lonely afternoons.

TAKING STIMULANTS.

It should be recognized, says *Health-Culture*, that the universal drug-taking that pervades every class of society, from mineral waters to tea, coffee, alcohol, tobacco and patent medicines, is continually lowering the standard of health. Owing to the greater delicacy of the organization of women they are affected more seriously by alcohol than are men. In Normandy, France, the women drink more than the men and mortality among them is excessive in consequence.

A physician may give advice on tobacco and alcohol in a general way, but he will find few patrons who will tolerate him professionally if he advises them to drink less coffee, to smoke fewer cigars or take less whiskey. They think they know what is good for them better than the man who has made a life study of health and its laws. Nevertheless, nature's great law of the survival of the fittest is forever operative and other things heing equal, the best man wins.

Brain workers are of all classes the most tempted to make use of stimulants to enable them to obtain from their tired nerves a little more work. Alcohol, tobacco, tea, coffee and chocolate are used for this purpose and with apparent advantage, but the advantage is only temporary. These drugs are deceptive, for they make a person believe he is not tired when in reality he is exhausted, that he is strong when he is really weak and that he is warm when he is cold. Therefore they double the danger from overwork.

Sometimes the claim is made that the first effect on the nervous system of a narcotic, whether it be tea, coffce, alcohol or tobacco, is that of a stimulant, the second that of a depressant. Those making such claim continually mistake vital resistance, the roused up energy to throw off the poison, for renewed vitality. The too-apparent activity is simply reserved nervous energy exhausted in the protection of its own integrity.

OUR SHORT SERMON.

Text: About Animals.

The Christian looks up to God for help in time of need. It is all he can do. Some say that it does no good, some doubt, and the vast majority are agreed that he hears and heeds. The experience of the ages is that God deals kindly with his creatures. Now it is expressly stated in the Bible that in the final settlement of affairs between us and God the adjudication is to be based on the way we have related ourselves to those around us here. Whatever of kindness we show to the least of those about us we have shown Christ, and we get our reward accordingly.

Now it happens in the economy of nature that we are related to animals in such a way that we are the highest power they know. We are final and supreme with them. God made them as truly as he made us. We are responsible to him for our treatment of them. If our knowledge is vast and far reaching, if our intimacy with the texts of the Bible is such that we can quote at will, if we know all theological terms and make all sorts of public professions, and if the dog cowers, or the cat winces at our presence, there is something wrong in the make-up of our Christian character, something serious that is wanting. To have family worship and then kick the cringing dog out of the house, or strike the cat a cruel blow is not the act of a merciful man, for a merciful man is merciful to his beast. It is not Christian, and in the end it will bring disaster. We have not been faithful to those dependent on us. To kill a bird that is harmless, or to set foot on an innocent worm, is simply a form of murder that is condemned by God's law if not expressly forbidden in the statutes of man.

Here is the rule. We are to so relate ourselves to all living things about us that we may safely ask God to deal with us as we have dealt with others, and other things. It is perfectly logical, and wholly within our reach. Think of it, and begin your relations with helpless animals over again for the better.

W. H. LOVEJOV, the Illinois State game warden. has decided to free all the native birds held in captivity, on the ground that they are useless in cages, and would be very useful in destroying insects if they were free. "I shall not stop," he says, "until there is not a captive bird in Chicago or down State that my men can find. I shall go ahead with the seizures and condemn the birds. The old ones which are too old to care for themselves if turned free, having been so many years in captivity, will then be given to Lincoln or some other park, where they will have comparative freedom in the big cages, and will be well cared for. The young ones will be turned loose to shift for themselves, and to make their way back to the thickets and to find mates and nests in the wilderness. Too much praise in this regard cannot be given the Audubon Society, which has aided in our work, has endeavored successfully to stir up public sentiment, and to begin teaching the children the wrong of bird nesting,' and has found evidence for me of many violations of the law."

"Beauty is only skin deep," remarked the person who is fond of quotations.

"Yes," answered the young man who runs the complexion department in the drug store, "and sometimes it isn't even as deep as that."

RECENT studies, of the ocean bottom near the coast line of continents have shown that rivers of considerable size sometimes enter the sea beneath the surface.

QUESTIONS AND ANSWERS.

What are the causes of typhoid fever?

Typhoto is usually traced to an impure water supply. Purity of water and absolute cleanliness of personal surroundings are the best preventives.

Please settle this question for us. Can sugar be made out other than the sugar cane and maple sap?

Sugar can be made out of an endless number of vegetables, and in practice the world's largest supply of sugar is made out of beets. The birch tree gives a sap that makes a sugar with birch flavor. Sugar can be made out of almost any vegetable

I have heard that a grandfather's clock is worth \$500. In

It all depends. It is worth just what you can get for it. There are many kinds and makes of the old clocks, varying in finish, appliances, etc., and it would take a very desirable one to bring as much as \$50.

What is the best typewriter made?

We don't know. Each has points of excellence and superiority. Three makes are used in the office here, and all are good. If you buy do not get a one-hand toy.

How do pineapples grow?

In the ground like cabbages. A slender stalka foot or two high is sent up from the center of the plant, and on this the pineapple grows. There are a good many varieties.

Is the use of the cigarette as unhealthy as it is said to be?

There is no more deadly form of using tobacco than that of the cigarette. The user is absolutely certain to get the worst of it. A stinking pipe is healthier than a cigarette.

If I saved fancy flower seed could I sell it to dealers?

Yes, but you would be surprised at the difference between the price they paid for it, and the one they would sell it at. Seed growing is a business by uself and in no one place are all the different seeds grown.

Is the Bible to be taken literally?

Why not? If it does not mean just what it says, of what use is it as a guide?

Where does quining come from?

It is a chemical made out of the bark of a tree that grows in the tropics. It is a specific for chills and fever, but of little good where there is no penodicity in the way of a cold and a hot spell at the time of sickness.

Are the Belgian hares what they are advertised to be, and are they good to eat?

Belgian hares, as far as the writer's knowledge goes, are nothing but big, lubberly rabbits, and are the 'Nook supposes, as good to ent as any other rabbit.

If ginseng is so valuable why would it not payto cultivate it

It probably would, but it is of slow growth, and exacting in the conditions it requires, and it is not a sure thing that it would retain its supposed virtues when specially grown. It is not recognized in this country as having any special medicinal virtues.

* * *

Is a colored visiting card, or one in colored ink, mounted usage?

It is in decidedly bad form. Plain white and black without any flourishes or harbaric display of any kind is the correct thing.

* * *

Is there an opening in the literary field for a person where tastes run that way?

There are always openings everywhere in the world of letters, but as the result of our observation there is more money and greater chances of success there is more money and greater chances of success in raising potatoes. Still, if it is in you, it will in raising potatoes. Still, if it is in you, it will come out. As a business literary work is a poor field.

FUNERALS IN CHINA.

WHEN the armies of the world finish with China, Here will be many Chinamen to Chinese burial customs will demand their by change tike coffins, which, alter the corpse placed within, are tightly scaled, and, strange to entity lie out of doors often for months, awaitof the time when the families of the deceased can ford an elaborate burial.

Chinese funerals and burial customs are in many repects similar throughout the empire. The coffor can be seen lying about, just outside many of the houses. No odor escapes from them, for they re tightly sealed with mortar or some other subgance, and within the body lies in a preparation of wicklime. Some of the families keep the coffins and their occupants inside their homes for perhaps tris, however, not considered disrespectful many sections to allow them to remain outside. While all of these queer coffins are shaped like logs, there is a great difference in quality. One an be purchased for \$10, while another may cost 1,000. Some are beautifully carved and made of expensive wood. All are varnished.

A Chinaman often makes one of these queerly constructed coffins for himself during his lifetime, anticipating how nice it will look after he is gone. In some sections incense is burned over one of these coffins as long as it remains above ground. These rites are performed usually by the elder son of the family, especially if the deceased is the fabet. Sometimes this older son goes about raising lands with which to hold a notable funeral celebraion. The Chinese as a rule contribute liberally on such occasions. On the older son also devolves the duty of washing the corpse just prior to placing un the coffin. Then, assisted by his brother, if he has any, they place the finest apparel that they can ford to purchase upon the deceased. A fan is then placed in one hand, and the work of scaling the coffin begins.

The Chinese are shrewd in some ways, and in ase of the death of some one in the family of one sho owes them, they will take the opportunity to attach the coffin in which the corpse rests and hold it until the debt is paid. This scheme works lkeacharm, for never would a son allow his relaire's remains to be the property of the man he may

Throughout the Fokien province, in which foothow is situated, there is a custom of placing a piece of silver in the mouth of the deceased.

laws throughout China make it imperative that the greatest respect be paid to the dead. These aws govern not only the actions of the Chinese, at time when an official dies, but extend even to the tembers of one's own family. It is said, however, that there is less occasion to enforce the laws in this paticular than in any other misdemeanor prohibitadby the lawbooks of the Celestials. Reverence but ancestors, or that which is more properly called ancestor worship," is almost part of the China-

After the death of one of the family, the aim of hose who survive is to save sufficient money to we the deceased an elaborate burial. They deny benselves many things, often for a period of three tars. When the day of the funeral comes, it is a y notable one. There are processions, bands of busic, and the offering of sacrifices. The coffin, be ancestral tablet, and the sacrifices are all borne to the grave separately.

The performance is in many respects similar to he luneral services held in San Francisco to-day in hat section of the city known as "Chinatown." Especially is this true in the procession, when a eding Chinaman goes ahead with strips of papers bich contain many holes. These he scatters bev as. It is the belief of the Chinese that, if they can bury their dead before the evil spirit, bith is following, can catch up with the body, hen the deceased will have peace after death. It hrmse believed by them that this spirit must pass brough each hole in each one of the strips of parand as they scatter thousands of them there the Chinamen who are not saved, if the funeral conducted at all as it should be.

No matter if it is three years after the death of tone whom they are bearing to the grave, the tembers of the family are expected to mourn just

While the greater part of this is agonized form rather than sincere mourning, still, they succeed very well in making the show.

There are practically no Chinese graveyards in China. The only cemeteries are those of American missionaries. The Chinese of the southern provinces usually select a burying spot for the deceased off by itself, perhaps in the side of a mountain. Their graves resemble in shape somewhat a horseshoe, and are several times as large as the coffin. A dry place is selected, out of the reach of the white ants, and there a tomb is built. Sometimes these tombs are finely carved. The style of grave or tomb differs in various sections of China.

EARNS A GOOD LIVING.

About a year ago the manager of a large tobacco house in one of the southern cities died, leaving his affairs seriously involved. When his estate was settled his widow found she had little upon which she could rely for support. She had four small children and at once saw the need of earning something for their and her own support. She was a tiptop housekeeper, but she knew absolutely nothing else, and things were looking pretty desperate when she read in the paper that a fellow who had been running a lunchroom in the town had failed and skipped out. She hunted up the landlord immediately, talked him into trusting her for a month's rent of the place and fixtures and took charge before night. It was a small room and the former proprietor had conducted it in the cheapand-filthy lunch-room style, running chiefly to moldy pies and petrified doughnuts. She cleaned all that out and put up a sign announcing that she would serve nothing but chops, steaks and coffee. She had no money to lay in miscellaneous stock and, as there was a butcher shop right around the corner, she could send one of the children out of the back door for a piece of meat whenever she got an order. That was also a big saving on the refrigerator, and about all she had to keep on hand was coffee and bread and butter. What she depended on to make the thing go was her good cooking and the neatness and cleanliness of the service.

For a few days business was light, but then it took a sudden boom. One of her first customers was a traveling man. "I dropped in," he relates, "because it was handy, expecting to get the usual sole-leather sirloin with a cup of chicory on the side. To my astonishment they brought me a thick, delicious steak, blood rare under the crinkley brown surface and as tender as a squab; the coffee was the best I ever tasted outside of New Orleans; the bread and butter were capital, and cups, plates, knives, forks and napkin were all spotlessly clean. I was delighted, of course, and promptly became a walking advertisement for the place. Other chance patrons did the same, and that's the way the boom started. Within a couple of weeks it was impossible, half the time, to get a seat at any one of the five little tables, and everybody urged the widow to enlarge the establishment, which could easily have been done by annexing a small newsstand next door that the tenant wanted to vacate. But she firmly refused, and right there, in my humble opinion, she showed her sound sense. She said she had all the business as it was that she could take care of properly, and any increase would necessitate turning things over to possibly incompetent help. The revenue from the five tables was ample to support herself and the children, and she proposed to take no chances in lowering the quality of the service. So she stuck to the little cubby hole and is there yet, although she turns away enough people to fill a place five times that size. Moreover, she has never extended the bill of fare, and still serves nothing but steaks, chops and coffee. I got a steak there only a few days ago, and it was just as good as the first I sampled. She told me incidentally that she was making a nice income out of the establishment."

AN ORE FOR COLORING TEETH.

RUTILE is an ore of titanium, another of the rare metals. It is dark gray in color, and is found in small quantities in many minerals. Rutile occurs in very pretty crystals, varying in hue from yellow as if it were the next day after death. only one commercial use, as has been ascertained

recently by special Government inquiry, and that is in the manufacture of artificial teeth. It is utilized to color the porcelain of which such teeth are made, its differing tints giving the requisite variations of hue, such as occur in natural teeth. The cost of rutile is about five dollars a pound, and most of it is obtained from the neighborhood of Lancaster, Pennsylvania, and along the Susquehanna River.

About twenty million artificial teeth are made annually in the United States; and of this number nearly one-half are turned out by a single manufacturer in New York City. The porcelain of which they are composed is chiefly kaolin, and the process of putting on the enamel is extremely delicate, the coloring substance being rutile, as ahove stated. No two teeth are exactly alike in coloring, and after being finished thousands of them are taken together and matched in shade. There are fifty different shades, intended to correspond to variations in the tints of natural teeth.

At an earlier period in the development of the art imitation teeth were made as perfect as possible, in respect to both shape and whiteness, so that their very freedom from blemish often rendered their falsity more conspicuous. Nowadays the matter is better understood, and defects are purposely made in order to contribute to illusion.

UNUSED RAILROAD TICKETS.

Some men with unused railroad tickets on their hands will sell them to scalpers, while others go to the railroad company that issued them and obtain their value in money. Most persons, however, do neither and accept the loss when the ticket is worth less than a dollar. Indeed, many persons do not realize that the railroad companies stand ready to redeem unused tickets even of small value, so that the companies must be richer by many thousands of dollars a year through this ignorance.

Every railroad ticket bears the name of the general passenger agent and of the general manager of the road. It is a simple matter to inclose the ticket with a letter directed to the general passenger agent, asking him to refund the money paid, and explaining the reason why the ticket is left unused in the hands of the purchaser. It is courteous to inclose a stamped envelope in which the money may be returned.

When all these things have been done the company generally acknowledges the receipt of the ticket-holder's communication and promises to investigate the matter. The investigation consists in the proper identification of the ticket by the agent who sold it, and a little bookkeeping to set the accounts right. Then the purchaser receives a check for the amount due from the railroad company, along with a letter requesting acknowledgment.

FRUIT LOSING ITS TASTE.

"Whar has become of the fruit that used to taste?" asked the distracted man who had just taken a bite from a peach that glowed in delicate shades of pink and gold. "Where are the peaches that used to have the real taste and juice and flavor and were a delight to eat? I have just paid five cents for a large, delicious-looking peach that is as dry as sawdust and as little more to suggest that it is fruit and not cotton batting. Such beautiful colors I have never seen before, and so far as their merely spectacular features are concerned the peach of the day is a great improvement on its predecessors. But it is of no earthly use for any purpose. It is dry and flavorless and does not repay the trouble of eating it. I can remember, however, quite another peach which was common enough some years ago, although it seems to be rare enough now. The good pears are as difficult to find as the peaches, and the quality of the ordinary run just as poor. They are more beautiful than ever to look at, but are tasteless. Nobody seems able to tell just why fruit should have lost its quality so completely. But the fact is remarked by everybody. All I can say is that these two particular kinds of fruit would never have gained their present reputation if they had always tasted as they do now. As the fruit stands grow large and elaborate the quality of the fruit itself seems to become poorer and poorer."

Sturingry has no friends and wants none.

LOST PEOPLE.

More than 1,000 cases of "lost, strayed or stolen" people are reported to the police department of Chicago every year; fully ninety-five per cent of them are returned or return of their own accord to their homes almost immediately. A small percentage of the missing are women. In fact, when a woman deliberately abandons her home it is either for the purpose of committing suicide, going to the bad or to seek shelter among kinfolk from unbearable domestic conditions. Nowhere in social life is the devotion of women to men under the most exasperating and humiliating circumstances more clearly shown than in the families of men who make it a practice to get drunk and absent themselves from home until the police department is asked to "see if he hasn't committed suicide or been killed in an accident."

Such cases have become an old song at police stations. Almost always these delinquents will be found in a liquor house drunk and drinking more or sleeping themselves sober. It is the custom of officers in charge of stations to closely question the informant to ascertain the habits of the missing man before action is taken. If the man is in the habit of getting drunk or has before absented himself from home a record of the fact is made, but the stations are not notified until the next day, for experience has taught the department that practically every one of such cases will report at home drunk or sober within the next twelve or eighteen hours. If, however, the missing man's habits are good, his domestic relations harmonious and his business matters satisfactory a full description of him is at once sent to all stations and the entire force notified. The suspicion is at once aroused in the mind of the department that the man has been foully dealt with.

Occasionally the force is fooled into weaving theories concerning a missing man's habits, and sometimes an abrupt question put to the informant will reveal the very thread the police want. A few days ago a woman called at a station to solicit the aid of the department in locating her missing husband. He had left home that morning for his place of business as usual, but had not returned for his noonday meal as was his custom. It had not occurred to the wife that the proper place to inquire about her husband was where he was occupied during the day. She just knew he had been killed by accident or had committed suicide. She said their domestic relations were all right and that his business affairs were satisfactory, and that she could feel in her soul that something awful had happened. The desk sergeant said in a severe tone: " Madame, did you not have harsh words with your husband this morning and did he not leave the house in an angry mood?" She hesitated a moment, and then admitted that it was true. The sergeant advised her to hurry home so as to get there before her husband arrived. The department has many such, and even more ridiculous cases of "missing men" to deal with, but they make no official record of them. But when there is suspicion of foul play or suicide every police officer in the city is immediately furnished with as good a description of the person as is possible to get, and he keeps his eyes and ears open for a "pointer," a "tip" or a "thread," and that is really the only method the department has or could have to locate missing people, but if the missing person is in the city, dead or alive, his whereabouts is almost sure to be located in a few hours—or days at most.

what surprises the department most is the great number of missing children when "the greatest bargain sale of the century" is on. Mothers flock to such places, taking their tots that are too young to be left at home to care for themselves, and on such occasions the police expect to be busy looking up missing children. A good many mothers become so absorbed in the "bargains" that they seem to forget all about their children, and as it is quite natural for little folk to wander from counter to counter it is an easy matter for them to lose themselves, and hunting a lost child in one of Chicago's great department stores on a "bargain" day is very much like hunting a needle in a haystack. But it is not until the child cannot be found in the store that

the service of the police is requested, and experience has taught them to search sidewalks in the vicinity. When a child realizes that it may roam where it likes it is quick to wander to wherever its little eyes see pretty things. And somehow or some way the average child will work its way toward the door and out upon the sidewalk, and when once in the passing throng it is pretty sure to follow in the stronger current until a police officer rescues it. It is perfectly amazing how many such cases of "lost child" there are in the great stores, and but for the vigilance and untiring energy of the police many a mother would go home without her child or children.

Not two per cent of the missing "drop out forever." During the last twelve months only twelve of the suicides were buried without identification and presumably most of them came from outside of the city and purposely destroyed everything that would be likely to identify them. When asked how they managed to locate missing people so readily, a police officer said: "I do not know. We do it and that is all I know about it. But you must realize that when every police officer in Chicago is armed with a description of a person and under orders to make diligent search and inquiry for him the force is more or less in touch with the entire population and someone is pretty sure to be able to at least give us a thread to start with." The more than 1,000 "missings" every year are those of whom some sort of a record is made, but the unrecorded list is still larger. Children who stray away and are temporarily missing, especially in the department stores, are merely mentioned as "incidents of the day's duties." Requests from other cities as well as from country towns to locate missing people are always on file in the chief's office and when descriptions are furnished that are at all intelligible every police officer in the city is on the lookout. A very large percentage of out-of-town requests are for boys who have run away from home, and the records of the department show that such boys will have found jobs of work or applied to the chief for transportation to their homes before a week has passed. The police department of Chicago knows human nature thoroughly.

WOUNDS THAT DO NOT KILL.

DR. ERNEST F. ROBINSON, formerly head surgeon in the second reserve hospital, who has just left the army service, is now settled in Kansas City. Dr. Robinson during his service in the Philippines, it is said, operated on more gunshot wounds than any other surgeon. He gives an account of some of the most wonderful wounds as follows:

"There is something mysterious, almost weird, in the direction and course of a bullet. Certainly it often seems that the missile is directed by a strange and unseen force other than the man behind the gun, his eye and trigger.

"Probably there is no braver individual on the face of the earth than the American soldier. He is not a coward. He is more often a fatalist. He never believes he is going to be shot. It is always the other fellow who is going to be hit. In a crude sort of way he is a philosopher. He says to himself: 'If I and the bullet reach the same place at the same time I will suffer for it, but I am going to be there just a little ahead,' and he generally is. So he goes into battle conscious of his danger, yet with a faith born of courage in his own lucky star. And so his faith or that unseen power called luck protects him.

"The most remarkable gunshot wounds I have ever seen have been received by those very men who knew not fear. After the fight at Zapote River the hospital was crowded with victims of gunshot wounds, chiefly Mauser. One poor fellow, a corporal, was struck while in the act of firing. The bullet struck R left hand and went through the forearm. It then struck the gun barrel and ricocheted to the right, passing through his neck, pierced his shoulder, emerging at the back through the shoulder blade. It had thus produced four wounds of entrance and four of exit, and had passed through his hand, arm, neck and chest, and despite all this the plucky fellow had walked back to the dressing station, absolutely refusing to be carried. He recovered without incident.

"The wound of the Mauser is generally clean and generally antiseptic.

"There were quite a number of gunshot wounds of the head involving the brain substance that recovered. Peter Dunn of the Twentieth Kansas was perhaps the most startling example, yet his case was by no means unique. A poor fellow of the Montanas was shot directly through the head, destroying completely the sight in both eyes. No more pitiful condition could be imagined than he at the transport sailed through the golden gate into home and God's own land. To hear and feel and know that he was home at last, yet to know that his home he would never see—death almost seemed

"In a fit of despondency because he had not received a commission the sergeant major of the Thirty-sixth United States volunteer infantry on day placed a forty-five-caliber revolver at the thin interspace, just one inch to the left of the sternum and pulled the trigger. The ball passed directly through the left shoulder blade. How his heart es caped is a mystery. A knife, nor even a needle could have been passed through in this locality without producing instant death and yet the bo recovered. Medical men whom I had told of the case would not believe such a wound possible with out causing death until they had seen it. His on gans were all in their normal position, as was show by a careful examination, yet the bullet had passed through the chest. The most plausible explanation for this would seem to be that the boy's heart was in his mouth when he was shot.

"The true explanation was, that the ball had passed just above the heart, grazing it or the large blood vessels, and that the latter had escaped owing to their elasticity and well-known resistance to bullets, being pushed aside by the ball in passing.

"Speaking of remarkable wounds, General Funston probably has the most remarkable wound on record. During his campaign in Cuba a Mauser bullet passed directly through his chest from side to side, penetrating the lungs and passing through the tip, or apex, of his heart, yet it did not kill him. The explanation of this is that the ball grazed or passed through a portion of the muscle wall of the heart without penetrating it or causing shock sufficient to produce death. To-day the heart can be distinctly felt to pulsate beneath the scar.

"The stout and hearty bugler of light battery Fol the Fifth artillery is now serving with his battery in General Chaffee's division in China. At Pantan Bridge he was just sounding the advance when he fell to the ground. He had been struck in the right shoulder. The surgeon hastily tore open his shirt and found a huge black and blue mark, b nothing more serious. Within a few moments h was back at his post. Not an hour later he sudden ly placed his hand to the same shoulder, remarking to his captain, who stood near, 'I'm shot this time The captain leaned over and picked up a spen Remington ball that had just fallen to the ground But the bugler's troubles were not over, nor hi fated shoulder out of the range of fire. Below the morning was over he was shot through the same shoulder, not two inches from the spe where he had been struck twice before. This time the ball passed directly through his chest and he nearly lost his life.

"It is true, as the soldiers say, 'when you try' to stop 'em you wish you were home.'"

STRUGGLING authors who feel that their work waits long for appreciation may take some comform the history of A Message from Mars, a play which has been the one real success of the past year in London, a time when almost nothing has year in London, a time when almost nothing has succeeded, not even war dramas. This summer one of the most prominent and successful of American actors sat in a box and saw the performance and suddenly realized that fourteen years ago the play had been submitted to him.

And hard-driven editors may take almost male cious comfort from the reason why the play was not taken at that time.

It was not typewritten, and the author's liand writing was so illegible that the actor never man aged to get into the play.

THE strongest sentiment of the Turk is his reverence for his mother. He always stands in her presence until invited to sit down, a compliment pays to no one else.

WHY?

MR. HAROLD SPENDER, the Alpine climber, in his wok on the "High Pyrences," tells of an unexected climax to one of his feats.

With two companions he had scaled one of the with the descending, found refuge on the storm and night in the chalet of a goat-The three men, half frozen and exhausted with the long and terrible strain, but glowing with

trumph, crouched before the fire. The goatherd's wife, a dull old woman, stood ooking at them silently for a while, and then pronounced a single word:—" Pourquoi?" (Why?)

Spender declares that he and his companions looked at each other with an expression of surprise meach face. They had risked health and strength and life itself, "Why?" What had they gained? There was no answer. The one word struck like blank wall across their consciousness of useless struggle and suffering and danger.

The snow fell outside and the mist shut out the They did not talk to each other, each was asking himself, "Why?"

There are other heights in the world besides hose in the Alps, which men try to scale to as litle purpose, barren heights, at the top of which is peither profit nor honor. - Christian Endeavor World.

FORWARD WITH THE FLAG.

DURING the battle of Missionary Ridge one deachment of Union soldiers broke away from the main army, and pushed on and up, through a deadly hail of lead, until they reached the very summit of the mountain, and there, within a few yards of the memy's fortifications, planted the shining Stars and Stripes. The greater part of the Union force was still in the valley below, but when the soldiers saw the old flag flying there, on the top of the mountain, nothing could restrain them. With a mighty theer the whole army rushed up the mountain side like a resistless wave, and in an hour the victory

We need to get into a glow in order to win great victories. There are too many half-hearted soldiers of the cross still halting in the valley. Where are the liberators of enthusiasm who will plant the flag m the summit, and rouse the army of the Lord on ostill more grand, inspired advance? — Arthur Burmby.

"CHRISTIAN ACTIVITY."—Horace Mann said, he "had never read anything about the resolutions of the disciples, but a great deal about the acts of the *Postles." It is to those who are most active, thinking, feeling, working, caring for people and for things that God's showers of blessings fall upon. There is abundance of life, and fruit is not lacking in such a character. The fruitless fig tree withered away, no life, no vitality there. A passion for souls salasting incentive to Christian activity.

USELESS PEOPLE.—A man who is useless in the kingdom of God may console himself by thinking that at any rate he does no harm; but every dead reight holds back the wheels. Is there no progfess in your Circle? Are hooks less interesting, the meetings poorly attended? Look out for the dead weights!

Every stroke of sorrow that issues into light and by is God putting into your hand the key of that Sorrow, to unlock it for all the poor souls whom You may see approaching it through all your future le. It is a noble thing to take that key and use it.

Nor a prayer, not an act of faithfulness in your alling not a self-denying or kind word or deed, weariness of painfulness endured patiently, duty performed, not a temptation resisted, but it enlarges the whole soul for the endless capacty of the love of God.

IF you want knowledge you must toil for it. Ruskin.

FOLLOW EYERY DAY.

JUST to follow every day Where God leads: Just to scatter all the way Sunny deeds. Just to go, nor question why Shadows fall, Ever looking to the sky Through them all.

Just to live through every day, Pure and right; Keeping from the heart alway Cares that blight. Just to stand with purpose strong When I'm tried, Learning thus my very all To confide.

CHARACTER.

Rev. C. H. Parkhurst says: "My character today is, for the most part, simply the resultant of all the thoughts I have ever had, of all the feelings I have ever cherished and all the deeds I have ever performed. It is the entirety of my previous years packed and crystallized into the present moment. So that character is the quintessence of biography; so that everybody who knows my character-and there is no keeping character under cover-knows what for forty or more years I have been doing and thinking. Character is, for the most part, simply habit become fixed."

"Character is that kind of statuary which a man cuts out with himself as both tool and subject."

"Christian character is Christlikeness. standard, the pattern is before us. The exhortation is: 'Let this mind be in you which was also in Christ.' This can be accomplished only by being so much in the presence, fellowship, companionship of the living pattern that we 'put on Christ.'

THE BIBLE.

This book contains the mind of God, the state of man, the way of salvation, the doom of sinners, and the happiness of believers. Its doctrines are holy, its precepts are binding, its histories are true, and its decisions are immutable. Read it to be wise, believe it to be safe, and practice it to be holy. It contains light to direct you, food to support you, and comfort to cheer you. It is a traveler's map, the pilgrim's staff, the pilot's compass, the soldier's sword, and the Christian's charter. Here Paradise is restored, heaven opened, and the gates of hell disclosed. Christ is its grand subject, our good its design, and the glory of God its end. It should fill the memory, rule the heart, and guide the feet. Read it slowly, frequently, prayerfully. It is a mine of wealth, a Paradise of glory, and a river of pleasure. It is given you in life, will be remembered forever. It involves the highest responsibility, will reward the greatest labor, and condemn all who trifle with its sacred contents.—Selected.

THANKFUL FOR SMALL POTATOES.

BILLY BRAY, the Cornish miner, whose rugged piety has been a blessing to so many of God's children, says that one year his crop of potatoes turned out poorly, and as he was digging them in the fall, Satan was at his elbow and said: "There, Billy, isn't that poor pay for serving your Father the way you have all the year? Just see those small potatoes."

He stopped hoeing and replied: "Ah, Satan, at it again; talking against my Father, bless his name! Why, when I served you, I didn't get any potatoes at all. What are you talking against Father for?" And on he went, hoeing and praising the Lord for small potatoes—a valuable lesson for us all.

I no not expect that "time" and "past" are any more at all to them who dwell in the celestial sunrise than they are to us; I do not suppose the years we count so sadly have anything more to do with their dear relations to us. Our life is not slow detail and pain to linger in, as they see it. Neither can they forget; there are no forgetting spaces .- A. D. T. Whitney.

WE push time from us, and we wish him back.

For * the * Wee * Folk

GRANDMA KNITTING.

WHILE she sits beside the window With her honny, silver hair, As a child I watch her needles, How they clash and glisten there; Cool the maple swings its shadows, And the balsam branches croon Soft and low and sweet and tender, In the drowsy afternoon-And grandma knitting.

When the busy cares are over And the fret and tumult cease, And the lull that follows after Brings a little spell of peace; In the restful evening shadows Growing deeper more and more, In the quiet of the gloaming, Oft some sweet tune humming o'er, Sits grandma knitting.

Round the hearthstone in the winter While the frosty voices call, And the firelight's fickle dancing Weaves its shadows on the wall; With the old clock ticking ever To the flicker of the flame, There's the music of the needles. And the smile of love the same And grandma knitting.

This was in the years of childhood, Happy years of long ago: And the restless feet have wandered Swift and farther than we know; Ah! the visions that have vanished As the sunshine from the hill, Since I stood there in the twilight With the voices now so still-With grandma knitting!

Yet I see her still in vision, All the sweetness of her smile. Looking out across the shadows, Creeping eastward all the while; See her in the cushioned rocker, Sitting by the open door, While a band of sunshine slumbers In the silence on the floor-And grandma knitting.

NAMING THE BABY.

In some countries curious customs prevail in regard to selecting a name for the baby. A Hindoo baby is named when it is twelve days old and usually by the mother. Sometimes the father wishes for another name than that selected by the mother. In that case two lamps are placed over the two names and the name over which the lamp burns the brighter is the one given to the child.

In an Egyptian family the parents choose a name for their baby by lighting three wax candles; to each of these they give a name, one of the three belonging always to some dignified personage. The candle that burns the longest determines the name for the baby.

The Mohammedans sometimes write desirable names on five slips of paper and these they place in the Koran. The name upon the slip first drawn out is given to the child.

The children of the Ainos, a people living in northern Japan, do not receive their names until they are five years old. It is the father who then chooses the name by which the child is afterward called

The Chinese give their boy babies a name in addition to their surnames, and they must call themselves by these names until they are twenty years old. At that age the father gives his son a new

The Chinese care so little for their girl babies that they do not give them a baby name, but just call them No. 1, No. 2, No. 3, according to their

Boys are thought so much more of in China than girls that if you ask a Chinese father who has both a boy and a girl how many children he has he will always reply; "Only one child."

German parents sometimes change the name of their baby if he is ill and the Japanese are sure to change the name of a child four times.

"What is a queen, Willie?" asked the Sundayschool teacher of a small pupil.

"A queen," answered Willie, " is a woman that rules a man that rules a country."

A BARE in arms is worth two armed with toy pis-

BULLS FOR FIGHTING.

Mexico is one of the few countries in the socalled civilized world where bull fighting is still regarded as a legitimate pastime and where the successful bull fighter is esteemed a hero-worthy to sit by the side of the most lofty of men and the most beautiful of women. The arena is recognized by the government and by high officials as a proper place in which to educate the people, and when the wild bulls come to town accompanied by the matadors, the banderilleros and the picadores the entire populace turns out to greet them.

Sunday is the day usually selected for bull fights in Mexico. Then the entire population is at leisure and a large attendance is certain.

The advance agent of the fighting troupe usually places an order for bulls as much as a month or two before they will be needed. He knows the ranches where the fiercest are bred and he enters into negotiations with the haciendado of one of these for twenty-five of his bulls. Out of this number only six will be needed eventually for the fight. but the weeding out process is so thorough that twenty-five is none too many to start with.

It means much to the financial interests of the troupe what haciendado furnishes the bulls. The names of some of these are known throughout Mexico, and it adds to box office receipts to advertise "Bulls from Cusillos Haciendado," for instance. This is the most famous bull-raising ranch in all the republic. Its fame spreads throughout its own town of Guadalajara and state of Jalisco, and further yet, through all the other states, and penetrates even to "the city."

When the order is finally placed, after much competition, the fortunate ranch owner laughs in satisfaction and gives the children an extra pat apiece and pours himself an extra glass of the strong tequilla that makes men merry and drunk. For the price of a fighting bull is \$65, and the price of one of his competitors' bulls, which must now be sold for beef steers, is only \$10. The more he thinks of this the more tequilla he drinks.

The next day the master of the ranch sets matters going by starting his vaqueros out to bring in bulls from the range. They must be brought to a pasture, twenty-five of the fiercest, and kept for the fighters to try later on. 'It is a slow task to bring them in, for they are a rampageous lot, always "looking for trouble." In this they differ widely from the bulls of Spain, which have to be educated out of their mood of lazy tolerance before they are fit for the ring.

It often takes two lassos of the maguey fiber to bring a bull to terms. Rope him by the horn in order to lead him, and you have simply invited him to charge your horse. Your fate lies in the hands of the other man, who may ride up from behind and catch the bull by the foot. This leaves him in a most uncomfortable position, and he finds his easiest way is to go in the direction indicated by a third vaquero, who rides alongside with a third cactus rope in readiness.

Once the twenty-five are shut within the pasture their troubles begin. They have plenty to cat, they have room to wander, but the sorry time comes when they must be put through their paces.

For the fighting men are after fighting bulls, and hey would test their enemy's worth. They come, the whole band of them, to the hacienda and take up their abode there for several days at a time and the senora must prepare many chickens and frijoles. The matador is there, the big man, and he has as many as four picadors, most likely, and still more banderilleros. The senora clucks about the hacienda like a distracted hen at the sight of so much company and the senoritas take more pains than usual with their guitar practice and the draping of their mantillas. The bullfighters have come to try the bulls and the occasion is great.

Out on the ranch a round corral has been built with an opening into the pasture. When the time for trial comes a bull is driven into the corral, shut in there and joined by one or more of the fighters. He is teased with a bright-colored cape, which is part of every fighter's outfit, or with a barbed pole. If he has any fight in him it is not long before he begins to charge upon one of the horses.

The little California ranch horse is not in the habit of standing still to be charged upon, as he is wanted to do. He is sniffy and hurried and he is not trained to be otherwise in bull fights as are the

Spanish horses. That is why the blinding handkerchief is tied over his right eye and the chargings of the bull are all received on that side.

There is a vulnerable spot that the picador knows how to find on the bull's withers. This is the spot he strikes at when the bull charges. No injury is intended and no injury results, but there is one thing sure to happen if the right spot is struck. The bull halts and swings his head sideways in sudden pain and the attack is ended. If he is a good fighter he will charge again and at least once again. Three times is the test, both before and during the

One after another the chosen animals are driven into the corral and tried. This sifting process may last several days and at the end not more than half of the twenty-five are deemed worth keeping. The others are turned out upon the range again.

When the time comes to take the chosen animals to town for the eventful Sunday a great commotion goes on at the hacienda. Everybody must be up early to see the party off. Each bull is fastened by the horns to two cabestos. These cabestos are steers that have been broken to haul dead cattle, and for that purpose have holes for rope punched in their horns. The fighting bull has no holes in his horns-they would render him imperfect for the fight but the rope that is wound about his can be tied through theirs. He is a much handsomer and prouder fellow than the drudging steers that form his bodyguard, for their horns branch sideward, while his prod directly forward, rendering him bien *amada* or well armed.

For a few hundred yards there is much excitement, for none of the beasts take gently to their new mode of travel and the vaqueros who drive them are as excited as they. But hysterics grow tiresome even to bulls, and after a while they settle down to a quiet jog trot that may be continued for fifty or seventy-five miles before the secthing town of the fight is reached.

And then—the shouting of many people and the screeching of trumpets, and a confusion of dazzling colors and an angry fight. When the fight is over the meat of the six dead bulls is sent to the barracks for the soldiers.

BLOODHOUNDS.

· IT was recently reported that Governor Tyler, of Virginia, was entertained on a visit to a convict camp by a man hunt with bloodhounds, the man being given an hour's start and plenty of time to climb a tree. Such exhibitions are quite common on the South Carolina farms, where bloodhounds are kept. The same kind of animals are kept by the sheriffs of many counties in South Carolina, and they always do well on such show occasions, but have never been known to run down a criminal.

"I very much doubt," said an old slave owner, "whether there is a genuine bloodhound in the south or one with the 'nose' of the old runaway slave catcher in the country. Any breed of dogs that run by scent can be trained from puppies to run man and man alone. Ordinary deer or fox hounds take to this quite naturally and if crossed with a half or quarter fox terrier they become vicious and persistent in the chase. But these are not bloodhounds, nor should those now owned by the State or counties in South Carolina be so

"The bloodhound in his perfection of 'nose' and his ferocity was the product of the institution of slavery. The finest strains came from Cuba; large, powerful beasts, tawny or black with white points, and so fierce that when not in service they were chained and only their master could feed or touch them. If they escaped they chased the first person they saw and their desire was to eat his flesh.

"Many of the dogs were imported to the South by the men who made their living catching runaway slaves. They were crossed on the deer hound and the product was a good man hunter-fierce enough, but not so dangerous as the Cuban. Several packs of such dogs were owned in South Carolina and their presence in a county kept many a slave at home who would have otherwise sought the shelter of the forest, where he could live for years, paying weekly or monthly visits to the negro settlements.

"The alleged bloodhounds of this day can not from duty.

run a man if the trail is over three hours old, it goes in water or is crossed by other trails. slave catcher's hounds, bred for their cold nose in more than a century, could 'carry a trail' thirty-g hours old. The common definition that used to given for the name of this species of dog was the if a drop of blood fell on the track he would neve leave it. They were like wolves in that they bung ed for meat and were eager to devour a man run t a tree or cornered. There are many authenticate stories showing the remarkable qualities of see and sagacity. It was practically impossible baffle an old dog, and when his nose was once p by his master in the footprints of a man the partic lar scent of that person was the only one he would entertain in his nostrils, and that track he would pick out of a hundred. Ordinary hounds of cha are puzzled when the quarry takes to a running stream and goes up or down. The man hunter acute and wise as a man, would systematically hun the banks up and down for miles until the trail wa recovered.

"There is a case of particular note on record where the services of a professional slave catche were called in to catch a murderer. The crime ha been committed more than twenty-four hours whe the boss of the pack arrived with his dogs on the scene of the murder. One naked footprint w found, retreating from the spot, and into this th muzzle of the prize trailer of the pack was presse and she was given the word to go, the other dos being held in reserve. Miles through swamp across ponds of water and into the woods the do trailed, finally coming out on a cultivated plants tion, her nose close to the ground and occasional giving utterance to the fierce, yet musical, long drawn 'bay' that carried terror always to the hearts of the runaway. Into the street of the m gro village went the dog, carrying the trail where had been crossed by dozens of men, women an children, and then into a house. Here she made circle of the room, came out of the same doo trailed to another house, scratched at the barre door and when it was opened caught the murdere under the bed. He belonged to another plantation and had come there for shelter and protection at had used every device to throw off pursuit.

"It was, of course, important and necessary that the owner of such a pack of dogs should be respon sible and vigilant. He had to be a fine horsema and ride horses that could go almost anywhere, to he must be up to the leading dog when the slav was brought to bay. If the fugitive was too hard pressed to climb a tree, or as they sometimes die attempted to shoot the dogs he would be torn to pieces if the master was not promptly on hand Laws governing the abuse of slaves were strict and enforced. The most noted case of their violation is one of the best-known criminal cases in our law books, although it occurred sixty years ago. A cap tured slave had incurred the enmity of the hunter and he was killed and his flesh fed to the dog The two whites implicated were tried, convicte and hanged at Walterboro, the militia of Charlesto being arched sixty miles to prevent their rescue b friends on the day of the execution.

"With the passing of slavery the necessity cold-nosed man-chasers no longer exists, and li breed, at least in this part of the country is no lon er preserved."

A very successful educator, a subscriber to the Inglenook, says in a letter: "The Inglenook is fa superior to any other young folks' paper leve read. Not only does it furnish pleasant and it structive reading for the young, but the old and middle-aged will be far more than repaid by perd ing its pages. By a little help on the part of the teacher I find that it can be used very profitably the primary and intermediate grades of our day schools."

TO SEND AWAY.

"WELL, that caps the climax."

"Cook says those folks in that little house on the corner came over while we were gone and had their photographs taken sitting on our veranda."

Good flannels and good soldiers never shrifts

INGLENOOK

"The Inglenook" will be Sent to any Address the Rest of this Year for Twenty=five Cents, or will be Sent the Rest of this Year and all of next Year for One Dollar.

The Best Way is to send the Dollar and be Done with it. After You Have Read it for a Week; or two, You'll be Some that You Didn't Save Money by Subscribing for the Whole Year at Once. It's a Paper that Grows on One. Once Read. Always Read!

We Want Agents, == Real Live Agents

In Every Part of the Country. Anybody can solicit Subscribers at the Twenty-five Cent Rate, and Whoever Sends Club of Ten of These, Can have his Choice of ONE of the following books:

Dictionary of the Bible, has do the Bonnie Brice Bush, Natural History of Birds and Quadrupeds, Dream Life. Plack Beauty,

Adventures of a Browne, Drummot d's A !dresses, Ten Nights in a Bar-Room, Imitation of Christ, Elc.

If he gets twenty subscribers he can have two books; for thirty subscribers three books, and so on. And they cou be had in an hour's work in many a place. Whoever shows himself an efficient agent will be put in line for the Fall w connected with the Inglenook. There is a library of Fifty bound books waiting for somebody.

The Agent who sends in the largest list of dollar subscribers between this and the first week in January, 1901, will be sent him a Library of FIFTY BOOKS. Here is the list:

Adventures of a Browne, Asop's Fab es. Auld Licht Idy Is. Yotobic raphy of Franklin, Autorat of the Breakfast Tob c. Bacon & Essays. Beside the Bornte Brier Bush, Black Be utv. Birns' l'ien's, Chi l' Hist rv of Frigla : 1

Confessiors of an Opium Eater, Dictionary of the Bible, Dream Life. Druggin and's Addresses, I merson's Essays, Ethics of the Dust, Farry Land of Science, Fifteen Decisive Battles, Imitate of Christ,

Intellectual Life. Lays of A icient Rome, Longfellow's Poems, Lorna Doone, Mosses from an Old Manse, Nat. History Birds and Quadrupeds, Poe's Poetical Works. Price and 1. Rab and His Erierds, Reveries of a Barh-lor.

Samautha at Saratoga, Sesame and Lilies, Sketch Book, Sticket Minister. Stories from the History of Greece, Stories from the History of Rome, Story of an African Farm, Ten Nights in a Bar-Room. Thrrty Years' War, Twice-Lold Tales,

Window in Thrums, Filucation, In His Steps, Minister's Woong, Professor at Breakfast Table, Lamb's Tales from Shakespeare Lallah Rookh, On Liberty, Tauglewood Tales. Sign of the Four.

The Agent sending in the next largest list will have the choice of TWENTY-FIVE books out of the above list. T third largest list will entitle the Agent to FIFTEEN of the books, his choice; and the fourth largest list will win TEN of the cloth bound books. There is also a cash commission going to the Agent. We prefer the services of the Messenger Agent he will write at once for the place, but we will put the first live applicant into line, as the INGLENOOK is not going to be the in anything. If agents desire to enter for the Library they should say so in order that we may keep tab on subscriptions? ceived at the office. Elgin city is barred in the competition for prizes.

The announcement of the successful Agent will be made in January, 1901.

A Live Paper for Live People.

The INGLENOOK is no longer an experiment. It is regarded as phenomenally successful by experienced newspaper me who know what they are talking about. The reason is not hard to find. It is a FIRST-CLASS PAPER, with nothing and commonplace about it. It is up to date, and always will be. It will have something new in each issue, it always ha and it never will fall below its self-set standard,—being the best paper of its kind in the world. You can't read it without being interested and instructed. The whole wide-spread world is ransacked in the interest of its readers. isn't made with a dull pen and a pair of shears. It is a live paper for live people.

Some of the best known men and women in the church will write for the Inglenook next year. The like of it was Look at the names, note the subjects! Every man and woman in the list knot never undertaken in the church before. what they are talking about.

WHERE HE FALLS SHORT.

When things insist on going wrong
And bravely tells me not to fret—
Who cheers me with his hopeful song.
Who says: "Go in and win and let
The world behold that you're a man
Who will not brook defeat!" And yet
I'd like him better far, I vow,
If, after telling me I "can,"
He'd go ahead and tell me "how."

HAVING ALL IN COMMON.

It has doubtless occurred to many a reader that if the world all worked, and put the result in a common fund, things would be better and times easier. Then the troubles of old age and lack of aming capacity would be shorn of their terrors, and poverty would practically disappear from the world. It is an ideal condition, and it has been med over and over again in different parts of the world, and at different times, and the result has always been the same—failure in the end.

One of the most successful efforts of the kind has its headquarters at the town of Economy, about eighteen miles west of Pittsburg, Pa. Here is a considerable town, and in it are nine persons, the remant of what was once a community of eleven hundred people. There are others living there, but it is said that but nine of the original membership, or rather of those holding to the tenets of the original members, are left. There is not enough space at the disposal of the 'Nook to give more than the merest sketch of the people who have come the mearest to realizing a perfect community.

The public called the community the Economites, probably because they lived at a town called Economy, but they, themselves, call the organization the Harmony Society. The founders were Germans, and took their start in a religious fervor. They decided to emigrate to America, the one country in the world where people can believe anything or nothing. They had a hard time of it in the beginning of their existence. With the usual aptitude of the public for persecution they were harassed continually, and as a result they grew in humbers and importance. Moving from place to place they finally settled in the town of Economy, and that is where the society will see its end.

The town is a picture of rural beauty. The streets are wide, the houses substantial brick structures, with the gable ends to the street, and mulberry trees line the walks. When the writer was there some years ago the atmosphere was that of a New England village on a Sunday afternoon. It has permeated by a graveyard quiet. The air of substantiality pervades everything. The men and somen dressed in a common garb, and it was not whike that of the Brethren in the country to-day. The German idea of everything was in evidence everywhere. The German language was spoken, and things had a German look, and a general German flavor.

The peculiarities of the town may well be noted. he people had not always held to communism, and in the earlier stages of their existence they We each for himself, as others are, but they decidd that having all things in common would be productive of a higher type of spiritual life and they dopted the plan. Funny things happened in the retice of this idea. Clearly those who were marthad things that those who were not were deed, so they settled that by doing away with marge and leading a celibate life. Married people ontinued living together, but the same as though bey were not married, and there were no marages in the community for half a century. It emed to work all right enough till some Dutch athing work all right enough tin some othing would answer but committing matrimony, ad these got married and left the fold. But the majority stood by celibacy. In order to justify Fractice they construed the creation of woman

as follows: At the time of creation of Adam everything was all right, and should have been left alone, but when the animals were passed in front of Adam, sexed, for naming, he got to fussing and complaining that there was only one of him. So the Lord threw him into a deep sleep and created Eve, who with her kind, has made all the trouble that ever existed. They did not attempt to say just how the world would have been peopled had Adam kept quiet, but some miraculous method would have ensured posterity. As it was they added to the fold from orphanages, and the like, and at different times a great many grown people came and went, some staying and becoming members, and others tiring and leaving the community. Being Germans there were a good many smokers and the question arose what the non-smokers should have in the way of an offset, and it was decided that tobacco should go, and it went. It was a community where no tobacco was ever after used.

The town is in the midst of a very large farm, and all worked, and all the profits went into the common fund. There were several trustees who did the managing and there was a large and wellfitted store where all the usual stock of a good town store could be found. The neighbors, those not members could buy, and did, though none but members lived in the town or on the property, unless it was some necessary outsider like a doctor or schoolmaster. Whenever any of the members wanted anything they went to the store and got it, and that is all there was to it. There was no incentive to take more than was needed, and there was no danger of trouble ahead as to where this or that thing was to come from. It was all provided for, and each one got all he needed by simply taking it or asking for it.

In the center of the town was a beautiful walled garden, with a grotto, and a band stand. There was a good band, and on Sunday afternoons, in the season, after preaching, they went to the garden and enjoyed themselves, German fashion. At one time they made whiskey, wine, and engaged in manufacturing ventures, all of which were successful, financially. There was a good hotel in town, but only for transient guests. People's staying there was not encouraged.

In matters of religion they were non-combatants, non litigants, opposed to fashion, non-swearers, and they bore a general resemblance externally to the Brethren. They were final restorationists, and looked for the coming of Christ any hour. A watchman made the rounds of the town at night and called the hours as they passed. They had a sort of confessional, one to the other. They were opposed to secretism.

As they grew wealthy their troubles began. Wolves in sheep's clothing entered, and divisions came. It was the age-old story of quarreling, going into court, having trouble right and left, and the final dying out of the community. It had a perfectly fair trial, but the elements of human weakness and ambition were too much for it. It would only be a repetition of the result to try it over again in any part of the country. The highest estate of society seems to be reached when every man sows and reaps for himself.

POTATO BUTTONS.

HERE is new evidence that this is an age of adulteration and artificiality.

It is not many years since that the threatened ivory famine produced that remarkable imitation we know as celluloid, which has been successfully employed for every possible use, from billiard balls to piano keys. To-day the imitation has itself been imitated, and that, too, by a curious preparation of—potato pulp.

The inventor is a Dutchman named Knipers. He treats the waste pulp, itself a residue from the manufacture of the artificial potato flour, with a solution of acid and glycerine.

The resulting compound takes the form of a species of stickphast, which is dried and ground to powder. This powder is moulded into blocks with the aid of water, very much as one uses plaster of Paris.

There is, however, this important difference. The new compound can be cut and turned and bored and used for every purpose, from buttons upward, in which it was formerly customary to use bone ivory.

Many a woman is wearing this season buttons which she fancies are ivory, but which are really only potato pulp.

From potato buttons to wooden silk dresses is only a step. Remarkable to relate, wood can be utilized for soft flowing gowns. Wood pulp silk has long been a staple industry in the St. Etienne district of France. By certain secret chemical processes the pulp is reduced to a syrupy condition.

It is then forced into tubes full of tiny holes through which it emerges in the form of fine, silk-like threads. These are speedily dried by being passed through a hot atmosphere and are forthwith wound on bobbins ready to be woven into silk. The appearance of this unique product is said to be so natural that even experts have mistaken it for the genuine article. It is, of course, infinitely cheaper.

With cotton at its present low price one would scarcely imagine that it could be imitated with any possibility of a lucrative return. Nevertheless the thing has been done.

HEAVIEST OF FLVING BIRDS.

The heaviest bird that flies is the great bustard. In size it exceeds the Norwegian blackcock. The old males weigh about thirty-five pounds but when food is plentiful the young males may weigh forty pounds. Great bustards were formerly as plentiful in western Europe as partridges. Now they are rarely found. They may occasionally be seen on the Dnieper and on the coast of the Caspian Sea.

ROCHESTER, N. Y., has a cat of unusual sagacity. When a train pulled into the depot the other day several railroad men who were looking out for members of the "hobo tribe" stealing rides noticed a cat perched on a truck under one of the ears. It was covered with dust, and showed the effects of a long, hard journey. As the train came to a standstill the animal alighted and was in the act of scampering off when the conductor, named Walker, recognized it as the family cat, which he vainly had tried to get rid of for the last month.

When train No. 18 left Rochester, Walker carried the cat with him, and when he reached Corning put it overboard, hoping to lose it. But the animal refused to be lost, and, boarding the truck of one of the cars, "beat" its passage back to the city.

- "WERF you the smartest boy in your school?" asked the very bright boy.
 - "Why-er-no; not exactly," answered his father.
- "Did you know as much as I do when you were my age?"
- "I don't believe I did."
- "Are you even at this ate day able to extract the cube root of a number without referring to a text book?"
 - " No-no. I don't believe I can."
- "That's all," said the very bright boy as he turned to his books. Then he heaved a sigh, and with a look of deepest reproach exclaimed: "Parents often turn out to be a terrible disappointment to their children nowadays."
- "The man without a purpose is like a ship without a rudder; a waif, a nothing, a no man. Have a purpose in life, and having it, throw such strength of mind and muscle into your work as God has given you."—Carlyle.

🛎 Correspondence 🛎

THE RELIGION OF CHINA.

Now that China occupies such a large share of the attention of the world, especially the religious element, it may not be amiss for our bright 1xca.s-NOOKERS to study more of the situation as it is in the remote country, half way around the world. When we talk about a system of religion our phrase is pretty well understood, but it does not apply to China. While there is a religion over there it is not strictly speaking a system. A long time ago a man by the name of Confucius wrote out a lot of wise sayings and maxims, and these are studied and constitute the religion of the country. It is about the same as though the people of the United States should pitch on the wise sayings of, say, Benjamin Franklin, and be governed by them in their daily life,

Kong-fu-tze, whose name was Latinized into Confucius by the Jesuit missionaries, was born in the ancient province of Lu-now Shang-tung in the year 551 B. C. About 200 years ago he was canonized as a saint by the Roman Catholics, who gained thereby many converts among the ignorant Confucianists.

His father was a magistrate of the mandarin class. Kong-fu-tze early exhibited a wonderful love for learning and for the society of wise men. He was already a philosopher of note when at the age of nineteen he married an estimable woman of the name of Ke-Kwan-she, by whom he had two sons. Many of his descendants still survive in the district where he was born.

In the year 500 B. C. he became the chief magistrate of Chung-tu, and proved himself to be as great a political reformer as he was a philosopher. His exalted moral teachings worked such a reform among the people that he was raised to a position second only to royalty itself. He died in the year 479 B. C., aged about seventy-three years. Around his tomb there was formed a nucleus of what afterward became a large town. There are now over 2,000 temples in China dedicated to the memory of the great Kong-fu-tze.

Among the studies said to have been undertaken by this sage were magic-that is, the conscious control of nature's hidden forces-history, poetry, philosophy and religion. The books associated with his name are the famous "five kings" (books). which are the canonical scriptures of the Chinese, and which they regard with as much reverence as the Christians regard their own Scriptures. These books are the "Yi-King" (Book of Changes), the "Shi-King" (Book of Poems), the "Li-King" (Rituals), the "Shu-King" (Book of Inscriptions), and "Tshun-Tsien" (Spring and Autumn).

These kings, or books, teach the unity of mankind and charity, and duty to one's neighbor. Kong-fu-tzc attached a great importance to obedience on the part of children to their parents. Veneration to the memory of ancestors-those who have made our present existence possible-was also a part of his teachings.

His system of thought was essentially of the nature of a utilitarian religion, capable of being successfully applied to political, social and moral questions, but it had little or no teaching concerning the nature, origin and destiny of man. These problems were illuminated by the transcendent genius of Kong-fu-tze's famous contemporary, Lao-tze. It was such stupendous problems as the exploitation of existence, cosmic and individual, that Lao-tze dealt with. Because of their intensely mystical and metaphysical aspect they were regarded as less practical than those of Kong-fu-tze, which were more easily comprehended by the majority.

The once mystical philosophy of the Tao-tze-Taoism-has now degenerated into a mere system of tiresome religious rites and ceremonics, and is not at present in repute among the more learned Chinese. Lao-tze is held in much reverence among theosophists as one of the great scriptural teachers of the world. The greatest contemporary exponents of these two systems of thought-Taoism and Confucianism - were Chuang-tze and Meng-tze (Menceus). That the philanthropic and mundane doctrines of Kong-fu-tze did not satisfy the more mystical thinkers of China is shown by the subsequent introduction and the wide-spread acceptance of the teachings of Buddha.

It is worthy of note that Kong-fu tze, in common with other great teachers and sages, does not claim originality for his teachings. He says: "I only hand on; I do not create anything new." Notice in John 7:15, 16, that Jesus says the same thing: " And the Jews marveled, saying, How knoweth this man letters, having never learned? Jesus answered them and said, My doctrine is not mine, but his

Kong-fu-tze represents the doctrine of justice, Lao-tze that of love. Kong-fu-tze says: "Recompense injury with justice, return good for good. What you do not want done to yourself do not do to others." Lao-tze says: "The good I will meet with goodness, the not good I will meet with goodness also. The faithful I will meet with faith, the not faithful I will meet with faith also. Overcome the greedy by liberality, the liar by truth."

The doctrine of Kong-fu-tze, like that of Moses, was justice, while Lao-tze, like Jesus, taught the doctrine of nonresistance. As China discarded the too exalted ethics of Lao-tze for the so-called more practical doctrines of Kong-fu-tze, so the western world, while nominally Christian, yet clings to the Musaic code, "an eye for an eye, a tooth for

KID GLOVES.

BAREFOOTED boys and hens form a curious partneiship in the making of a pair of fine gloves. Thousands of dozens of hens' eggs are used in curing the hides, and thousands of boys are employed to work the skins in clear water by treading on them for several hours.

When a woman buys a pair of gloves she speaks of her purchase as "kids." If the clerk who sold her the "kid" gloves knew the secrets of the glove-making business, he might surprise his fair customer by telling her that those beautiful, soft, smooth fitting "kid" gloves came from the shoulders and belly of a three-weeks-old colt, whose neck was slit on the plains of Russia, and whose tender hide was shipped with huge bundles of other colts' hides to France, where they were made up into "kid" gloves. Or he might, with equal regard to the truth, tell her that those gloves in the other compartment once darted from tree to tree in South America on the back of a ring-tailed monkey. And, if he made the rounds of the store and could distinguish one skin from another, he could point out "kid" gloves made from the skins of kangaroos from Australia, lambs or sheep from Ohio or Spain or England, calves from India, muskrats from anywhere, musk oxen from China and other parts of Asia, rats, cats, and Newfoundland puppies.

But the Russian colt, the four-footed baby from the plains where the Cossacks live, the colt from the steppes of Siberia, where horses are raised by the thousand, supplies the skins which are the favorites at present with the glove makers. Experts say that the colt skin makes a better, stronger, finer glove than real kid skin.

But, after all, the real kid, the lively infant of the goats which live in France, Switzerland, Spain, and Italy, furnishes the choicest and most expensive gloves, and nearly 10,000,000 kids are sacrificed every year that women and men may cramp their hands in smooth, delicate-hued gloves.—Chicago

THE CHINESE FARMER.

As China is now undoubtedly foremost in the public eye a glimpse of her "Boxer" farmer will no doubt prove interesting.

A Chinese farmer is about as unlike his American compeer as can be imagined.

He does not live as they do in comparatively isolated districts, but in a village which is walled around and very densely peopled.

In China two hundred acres of land is a huge

The man who owns ten is considered wealthy, while a single acre will yield its owner a decided competence.

Rice, sugar cane, potatoes, indigo, ginger, tobacco and wheat-these are the things he grows.

Rice, of course, is the Chinese staff of life. As the Chinese farmer uses no milk, butter or cheese, the only four-legged beast on a Chinese farm is the zebu, a species of ox, that is used for

drawing the plough.

"I wondered at this, but was still more surprised later on to see the same thing repeated when we were obliged to stop on account of a threatened hor box. Upon inquiry I found that this was the custom on fast trains. 'Sometimes, if we have lots o time,' said the conductor, 'we whistle for the men to come in, but in most cases we leave them to b

Perhaps the most curious phase of Chinese farm. ing is the fact of the Chinese farmer training hi hens to follow the harvesters to pick up the law grains left among the stubble and also the noxion

If at the close of the present turbulent times in China any enterprising American should care to emigrate there to start a farm, the cost of such a project will no doubt prove of much interest.

Of course, as to the price of land no authentic figures can be given at this time, as the result of the present conflict will have a great deal to do with

A complete outfit will cost about \$50, consisting of a plough with two shares, a harrow, a funning mill, a pump worked by a treadle for irriga ing the fields, a zebu, hoes, sickles and numerous sundries. If the farmer should care to hire a laborer he will have to pay him about \$25 a year, and clusive of tood, clothing, tobacco and head shaving

Twelve cents a day is a very fair allowance for many Chinamen, and the fortunate recipient of so much wealth will often share his good fortune with one or more dependent relatives.

HOW EXPRESSES DROP MEN.

"While coming from Chicago last week," said a prominent business man of this city, "I noticed a peculiar railroad custom which interested me con siderably. I happened to be in the last car of the limited when the train stopped in a desolate spoi between stations. The rear brakeman, of course dropped off and went down the track with a flag to warn any train that might be following us. Is a moment or two we started up again, but minus the brakeman.

est station.' "But isn't that rather hard on the men?" asked. 'Oh, it's part of the business,' he replied 'I have known of cases, where men dropped off in this way were frozen to death or waylaid by trampa but the railroads have to make the time, and that why it's done. I have seen trains running with on ly a conductor aboard them, at times, because I rest of the crew had been left behind in just this way.'

picked up by the next train, or to walk to the near-

THE WORD "WIFE."

What do you think the beautiful word "wile" comes from? It is the great word in which the English and Saxon languages conquer the French and Greek. I hope the French will some day get word for it instead of their femme. But what d you think it comes from? The great value of the Saxon words is that they mean something. "Wike means weaver. You must be either housenives of house moths; remember that. In the deep sen you must either weave men's fortunes and embroit er them, or feed upon them and bring them to de cay. Wherever a true wife comes, home is alwa arround her. The stars may be overhead, the glow worn: in the night's cold grass may be the fire a her feet; but home is where she is, and for a no woman it stretches far around ber better that houses ceiled with cedar or painted with vern ion; shedding its quiet light for those who a homeless. This, I believe, is the woman's total place and power.—Ruskin.

MAKING FLINTS STILL A GOOD TRADE.

THE oldest manufacturing industry in Great Britain is that of flints and flint locks, which have been carried on since the beginning of the fifteen century, if not farther back still, at the Linghea mines, Brandon, on the borders of Norfolk and

The flints are all made by hand, being placed of Suffolk. the operator's knee and clipped with a hammer

A number of these flints are used for fire making the proper shape. being principally used in countries like Spain and was Italy, where the duties on ordinary matches and matches are matches are so high as to convert them into luxure

Nature & Study -

JOHN JAMES AUDUBON.

THE subject of this sketch died in New York Jan. 1851, after a long life devoted chiefly to studyng and picturing the birds and quadrupeds of America. Mr. Audubon was the first great Amerian naturalist and was one of the most famous and nature of his time. Born on a plantanousiana in May, 1780, he seemed to have come into the world in a locality and at a season of the year when the birds that he afterward so dearly loved could give him a most joyous welcome. from earliest childhood Audubon showed an ideal deration to his feathered friends and was always uying to draw pictures of his favorites So his fathe sent him to Paris to study under the celebrated minter, David. For two years the lad, who was of French ancestry, lived happily and learned much about painting in the capital of France. But he longed for the deep-green woods of his native country, and returned home at the age of seven-

Within a few years Audubon was presented with afor estate on the banks of the Schuykill River, in Pennsylvania, by his father, and he married and fixed there. From that time on for ten years he studied and painted the birds that came to the wilderness about him, often going miles away to sit under the trees and paint the portrait of a special bid in its favorite haunts. Frequently also he took long journeys and stayed away from home months atatime while in search of new specimens to add whis bird collection. Then he moved to Henderion, Ky., and continued his out-of-door studies. Finally in 1824 he went to Philadelphia with over 200 large folio sheets covered with colored drawings representing about 1,000 American birds. Being suddenly called away he left his drawings in the warehouse of a friend, and returned to find that rats had completely destroyed them.

Thus was the work of years lost forever, and the shock and disappointment threw Audubon into a fever that lasted several weeks and nearly resulted nhis death Not daunted, however, the naturalist left for the woods as soon as he was able and began the work all over again. In about three years he had completed another set of drawings, better than the first. With these he went to Europe, where he was received with delight by all bird lovers. His wonderful pictures were reproduced, together with book on American birds, which gave him high rank among the scientists of his time. He was retrived with every mark of honor and esteem at home and abroad and several famous scientific and an societies gave him special honors. In addition basis books on birds, which are very rare and valuble, he published a book called "A Biography of American Quadrupeds," and nearly completed a book entitled, "The Quadrupeds of America."

The story of the life and adventures of this amous American is very interesting, particularly because it tells of a time when the United States has new and its primeval woods were alive with numerous varietics of birds and other animals which have since either been destroyed or driven to more remote parts of the world.

BEAUTY OF THE TROPICS.

THE large number of aquatic flowers and plants the White House conservatories and grounds this lear attests the growing popularity of this species. Throughout the country the demand for the aquatic plants has increased, and no garden, park, cemetery public ground is considered thoroughly com-Pete without a basin or pond well filled with beauulul aquatics, of which there are many novelties

In all the basins of the white house fountains are hater lilies of the rarest kind, night and day bloomhon it the foundation in the foundation it n on the east side of the grounds near the enhance to the treasury department, there are nearly Incomp five varieties, and they do not fail to attract by the varieties, and they do not rain to the buch attention from visitors and even residents of the city. The rich foliage, the many kinds of caves and the still more beautiful variety of flowers burnish study and delight the attention. In this the filled also with the rare and beautiful Japagold fish, are to be found the water lilies of

China, Japan, Africa, Egypt, Mexico and nearly all other climes. Naturally they produce a variety of foliage and flowers.

The water lilies from strictly tropical climes are known to seed and flower growers as tender, inasmuch as they must be placed in hot houses or conservatories in winter. Among these are the nymphæa Zanzibarensis, a native of Zanzibar; nymphæa Mexicana, a native of Mexico; nymphæa scutifona, a native of Cape of Good Hope; nymphæa rubra, from East India; nymphæa dentata, from Sierra Leone, and the nymphaea lotus, a plant that grows in vast quantities in the plains of lower Egypt during the time the land is under water. Among the tender lilies also is the nymphæa devoiniensis, one of the choicest in cultivation. No modern collection is complete without it. The flowers are a brilliant rosy red. They are a most pleasing color when seen by artificial light. It is a night-blooming plant, and the leaves are a deep green, with a reddish shade. The Egyptian lotus is also a night plant, and produces a white flower, sepals red at the margins, cup-shaped, with broad petals. Most of the other lilies mentioned are day bloomers. The flowers of the night plants look beautiful in the early morning, and if the sun is not too hot they remain open for several bours. A hot sun, however, soon closes them, and they reopen after nightfall,

Only one of the water lilies from a tropical country is anyways hardy. That is the Egyptian lotus, scientifically known as the speciosum. It is a wellknown and far-famed species. Its superb flowers and magnificent foliage produce a splendid subtropical effect. The flowers are about a foot across when fully opened, are of a deep rose color, with a soft, creamy white at the base of the petals. It differs from some of the other lilies in that it is exquisitely fragrant.

The benefit of the hardy lilies is that they can remain in a pond or basin all winter if they get the same water supply as in summer. The names of these are numerous, among them being the odorata Caroliniana, the marliacea rosea and the pygmica. The latter is the smallest of the flowering series in cultivation. It is a native of China. The flowers are either pure white or pink and very fragrant. They are no larger than a half dollar. The leaves are green and two to three inches in diameter. The Caroliniana is a native of South Carolina, and is one of the grandest of its type. The flower is large and of a rosy pink.

The Zanzibar lily of the tender variety is considered a royal flower among the lilies. The flowers are very large, of a deep purple color, sepals deep green on the outside and purple within, with a red margin. It is exquisitely fragrant and is free-

The lilies are planted in boxes filled with rich earth and the boxes are set in the basin, below the water, of course. They are not given much attention except to be kept free of the aquatic bugs that would quickly kill them if not looked after. gold fish helps to eradicate the water bugs, but once a week at least a White House gardener, with the lower part of his body incased in rubber, wades in the basins and ponds, carefully going over the plants. He knows exactly where to look for the dangerous bugs and often kills many of them.

ALLIGATORS AND CROCODILES.

From time immemorial there has been much confusion in the popular mind between alligators and crocodiles. And in spite of the fact that until recently the North American alligator was the only known representative of that group, yet the name was and is persistently applied to the broad-nosed crocodiles of India. Currously enough, just twenty years ago naturalists became acquainted with a secdisproving the assertion that alligators were exclusively an American product, like turkeys.

the difference between alligators and crocodiles. There is, indeed, no real reason why the name alligator should be restricted to one of these ungainly saurians rather than another, as it is merely a corruntion of the Spanish term "una lagata," for any lizard. Since, however, this term was applied by the Spanish conquerors to the great saurian of the Mississippi that term has ever since been taken as the special title of that particular reptile as distinct; from the crocodile.

In common with their South American relatives, the caimans, alligators are best distinguished from crocodiles by the circumstance that both the first and the fourth lower teeth are generally received into complete pits instead of notches-in the upper jaw, and are, therefore, concealed when the mouth is shut. Again, there are as many as from seventeen to twenty upper and from seventeen to twenty-two lower teeth in the mouth of an alligator or a caiman, whereas in a crocodile there are never more than nineteen pairs of upper teeth, while the number in the lower jaw is limited to fifteen.

An essential distinction between an alligator and a caiman is that the latter has a thick, bony armor on both the upper and the lower surface of the body. In crocodiles and the North American alligator the under surface is indeed totally unprotected by such a bony armor, but in the Chinese alligator thin remnants of such body plates remain, the species thus being in this respect intermediate between its cousin of the Mississippi and the caimans of South America.

Besides differences in regard to the number of the teeth and the arrangement of the scales on the hack, the alligator of the Yangtsekiang also differs from the Mississippi species by its inferior dimensions. Although little is known of the habits and mode of life of the former species, they are probably similar to those of its American relative.

Fish form the main staple of the diet of the American reptile, but it is evident that the terrible teeth with which its jaws are armed were intended also to hold larger prey. And, as a matter of fact, many an unfortunate dog, sheep, goat, deer, or even horse, that comes to drink at an alligator-infested pool is seized by the vise-like jaws and dragged headlong beneath the water. During floodtimes the Mississippi alligators leave the main stream to take up their abode in the flooded lands, where they live almost exclusively on fish until the subsidence of the floods.

PHILADELPHIA'S GURICOOLA.

In donating a guricoola to the zoo a missionary in Borneo has furnished a riddle which students of natural history are vainly trying to solve, says a writer in the Philadelphia Record. The little creature is one of the queerest creations in the animal kingdom, and just how to classify it is the problem. At first glance it greatly resembles a monkey, but many radical differences are soon apparent. The guricoola lives largely in trees, and it feeds on small birds. In this respect it differs from the monkey tribe, while another, and very apparent difference is its snakelike tail, which is fully eight feet long. This remarkable appendage, when not used in assisting its owner to travel, is carried in a neat, nautical-like coil. When the animal wants to climb a tree it shoots the coil out, lariat fashion, catches the nearest limb and shins up its own tail with amazing rapidity. Once among the branches another cast is made, and up goes the guricoola like a spider climbing his thread. So deft is the creature at lassning that the tallest trees are ascended in a jiffy, and the absence of noise in the operation makes it easy to take the feathered tribe unawares. Ancient scientific writers have casually mentioned he creature in their works, but owing to the inaccessibility of the region whence they come and the rapidity of the animal's movements, a study of the species has not much enriched natural history. The animal that has been brought here is the first known specimen in captivity

THE dragonfly possesses the unique faculty among winged creatures, birds or insects, of flying backwards and forwards and sideways without turnond species of alligator in the Yangtsekiang, thus ingits body. There are very few insects that the swallow, with its marvelous speed and dexterity, cannot catch, but the dragonfly is one of them. Comparatively few persons could state off-hand. The dragonfly without any apparent trouble, will keep a few feet ahead of a swallow for halt an hour at a stretch, and no matter how swiftly the swallow flies, the dragontly is never just there when it makes its swoop. This is because the swallow has to turn its body, while the dragontly only reverses

> For the last ten years there has been an increase of 2,000 annually in the number of Great Britain's insauc.

THE INGLENOOK.

PUBLISHED WEEKLY

At 22 and 24 South State Street, Elgin, Illinois. Price, \$1.00 a year—It is a high grade paper for high grade boys and girls who love good reading. INGLENOON wants contributions, bright, well written and of general interest No love stories or any with killing or cruelty in them will be considered. If you want your articles returned, it not available, send stamped and addressed envelope. Send subscriptions, articles and everything intended for The Inglenoon, to the following address.

BRETHREN PUBLISHING HOUSE, Elgin, Illinois

Entered at the Post Office at Elgin, Ill., as Second-class Matter

THE INGLENOOK OUTLOOK.

THERE are thousands of INGLENOOK readers and friends everywhere and they sometimes ask the circulation and inquire how we are getting along. If the circulation were anything like a fixed quantity we could answer intelligently with justice to ourselves. But it is continually creeping up in numbers, and it would be misleading to quote figures now that would need revision to-morrow. It must suffice to say that the increase in circulation has been continuous and steadily upward. There is no predicting the limit. It goes to all the States where there are Brethren, and it widens out wherever it finds a permanent reader. Naturally we are gratified at all this. The winter evenings are coming on, and there is a great deal more reading done at that season than when the days are longer.

The Inglenook expects to improve in character and quantity as fast as facts and figures justify. It is a welcome guest in thousands of homes now, and wherever it is known it has made friends. We have in mind certain most interesting things for the winter evenings, and we can promise our readers a most interesting publication for their homes. We will take it as a great favor if those who are acquainted with it will speak a word for it to those who are not so well acquainted with it. Its readers know that it is not exclusively a youth's paper by any means. The old read it as well as the young, and it is hard to say which of them is the better pleased. There is something new and interesting in each number, and it will be continued on those lines throughout its publication.

ABOUT GETTING MARRIED.

Young folks! the 'Nook wants to give you some good advice. It knows what it is talking about, for the writer has seen a great deal of trouble right along these lines, not personally, but trouble others got into through the very thing the INGLENOOK is going to caution you against. It is this, When you get married, give the fact the widest publicity consistent with good form, and whatever you do never consent to any clandestine marriage, not under any circumstances. It is almost certain to make trouble for both parties, and it is so easy of avoidance that a fool, or a pair of them, need not err therein, It seems to be a part of human nature to do its courting on the quiet, and to keep an engagement a secret. The Inglenook does not object to this. Half the fun of the business of getting ready to be married consists in its privacy. But if it is suggested to carry the matter a step further and get married " on the sly," saying nothing to anyone about it till you get ready, then stop right there, and stay stopped till all concerned are willing and ready to make it as public as newspapers can do it. There are reasons. The 'Nook will give an instance.

Mary and John are two young people bitten with the romantic idea of getting married "and saying nothing about it." They slip off to some place where secrecy is the leading feature, and an obscure preacher or magistrate performs the ceremony. Three months afterward John comes into his share of a good farm. In another three months John dies. Mary proclaims herself his widow. Prove it, the other heirs and the public say. The party performing the ceremony has left and nobody can tell where he is. The woman is discredited, her dowry is lost, the innocent child suffers, and the public laughs at what seems to be a very clumsily set up job to cover a crime and get a dead man's money. And all because of the idiocy of a clandestine

marriage. The right thing to do is to tell everybody when you are married, put it in the papers, and on no account trifle with such an important matter. Remember this advice and a lifetime of trouble may be saved you.

OUR SHORT SERMON.

Text: Drudgery.

ONE of the things that come to us often is the sense of drudgery that the duties of daily life entail on all of us. There is no escape from it in every well-ordered life, because where things are well ordered there is Duty, and Duty repeated is drudgery. Blessed be drudgery! It is the way that we take these things that determines our moral value. He who repines, to the extent of getting rid of his work, is failing in the comprehension of what is due his or her place in life. Everyday life is pretty much like a wheel; it goes round and round. It is the common lot of household duty, and many a girl gets tired unto tears over the endless repetition. It should be remembered that in whatever lot our lines are east it is expected of us that we do our duty without repining. The outlook may be simply a perspective of dirty dishes and unmade beds, but it is a condition that must be met, and those meet it best who take up the burden of their work with no spoken note of complaint. Nothing is bettered by fault finding.

One good way to reconcile ourselves to our lot is to go to other places temporarily and see the lives of those less favored. Often we return better satisfied in the knowledge that there are dishes to wash, and beds to sleep in. Others there are who have neither, and there is never a billet so hard but that there is a harder one dealt out to others if we only knew where to look for it. It is not in the fact that moral merit or dement lies, but in how we take the issue as it is presented to us.

There is no position in life that is without its routine, and an exchange would often leave us worse off than we think could it be accomplished. It is not what we have to do, but the uncomplaining way that we meet our duty that will affect our standing through all eternity when the hands are finally folded and the tired feet are at rest.

NO ENCORE.

THIRTY years ago one of the famous elephants that traveled in this country was old Columbus. During one of his summer trips through Virginia he stopped at the town of D—. In the neighboring town of H——a boy familiarly called "Dave" and notorious for leadership in all kinds of mischievous tricks determined to show off before the other boys at old Columbus' expense, and invited several of his companions to go with him.

Having come to the elephant's stable, Dave gave him first candy, then cake and finally cried, "Now, boy," and slipped a piece of tobacco into his proboscis, intending to get out of danger and enjoy old Columbus' disgust and anger.

But before he could move Columbus seized him and whirled him upward through the opening overhead against the roof of the stable.

Unhurt by this unexpected "rise," Dave dropped on the haymow. The other boys below, supposing this to be the "trick" promised them, cried out in admiration:

"Dave, Dave, do that again!"

Dave, comfortably seated out of harm's way, earnestly answered:

"No, boys! I only do that trick once a day!"

BLISSFUL IGNORANCE.

A CERTAIN German professor of music, to be met with in English drawing rooms, is an entertaining old gentleman.

To him, recently, a lady said, when one of his compositions had just been rendered by one of the guests:

"How do you like the rendering of your song, professor?"

"Vos dot my song?" replied the professor. "I

OUR QUERY BOX.

Is prayer a cure for stammering?

More things are wrought by prayer than are dreamed of. It is the prayer of him who believes that does the work. In other words it is the faith of the one praying, not the one benefited, that brings the blessing.

Can I learn Spanish out of a book myself?

No, you can't, and you'll be wasting your time to

Was the story Leah and Levi written by a member of the church, and was it a man or woman who wrote it?

A brother wrote it. He does not care to have his name to it for reasons of his own satisfactory to himself and the Editor,

Can I get a complete file of the Inglenoor, and what well toost?

You could not get a complete file of the paper here, for "love or money." The only way would be for you to piece out the file by getting a paper here and there from others.

What is chocolate made out of?

It is made out of the seed of a tree treated mechanically and chemically.

I read of a ship trading in copra in the Pacific, What is copra?

Copra is dried cocoanut meats, and it sells mainly among the Chinese and that sort of people.

If a perfectly sound man made no mistakes in living would be not live forever?

No. The machine would wear out in time, and it is appointed to all to die. His time would come, and as you state the case, his end would probably be painless, a flickering out of life. There have been just such cases.

If China is partitioned what part will the United States gel?

China will not be partitioned. The European powers can not agree about it, and nothing will be done.

If I go into the raising of pet stock will it likely provere munerative?

There is no limit to any specialty if pushed, It depends more on the man than the work. All such things require judicious advertising.

What is the reason my articles are refused when others and so good are printed?

The only reason we know is that of the rank gnorance of the Editor in charge.

Why can I not acquire an education by staying at home and reading systematically?

Reading judiciously will give you a fund of m formation, but not an education. Education is a disciplinary process, a getting things right as a matter of habit and not by trial and guessing.

I have beard it said that there is a point on the earth where all clocks and watches have the right time, no matter has they vary. Is this correct?

Yes, at the North pole all of them would be right, that is, one would be as correct as another.

Could I grow bulbs for the market and make moneyedox ering bulbs are meant?

INGLENOOK thinks not unless under exceptionally favorable circumstances. The bulb-growing business is a European industry, and they are regiment at wholesale.

How shall I go about getting a cut of a lavorite horseld mine?

Have a good-sized photograph taken, and send it to a photo-engraver. It will cost you, delivered, about twenty cents a square inch.

A FULL-BLOODED Indian lunatic has never existed. Lunacy among the Indians was never known until they began to mix with the whites.

AT LAST.

BY B. H. BAKER.

What though our skies be dark and drear, With storm-clouds overcast ther the harbor bar the light shines far, We'll auchor safe - at last.

Then through the darkness of the night Why grieve the trials past? the harbor light is shining bright, We'll anchor safe - at last.

At last, at last-with tattered sail Though broken be the mast. Aht the Harbor gleams, the love-light streams, We've anchored Home-at last! MiPheron College, Kansas.

EDUCATED CANARIES.

BY EDITH M. MORRISON.

WE are all well acquainted with educated elephants, horses, dogs, pigs and cats, but canaries, hemost flippaint, joyous, light-hearted little creautes imaginable, have nearly succeeded in escaping the professional trainer's attention. Yet they ne bright, intelligent little things, and amply repay the work of training them, as the seven I saw recently fully restified.

They were all named, and each knew his name and answered to it by a chirp or by doing that which he was told to do. The table on which they performed their tricks was about five feet long, having at one end a perch to which each flew when

It was in the evening when I saw this remarkable exhibition. The birds were all asleep when they were brought into the room, but their mistress' voice and the bright light soon awoke them and they were as lively as ever. When all were resting on the perch, a miniature teeter board was placed midway of the table, and two bright vellow fellows. sith little chirps of delight, took their places one steach end, while a third stood in the center for a balance; and when their mistress started it going all seemed to enjoy it hugely.

The next trick was an imitation of the Rough Riders.. The little wooden horses were fastened to acontrivance something after the pattern of a mery-go-round, and each bird had a horse. Faster and faster went the horses, but not one little bird bithis balance, and the curious part of it was that ach one leaned toward the center the same as a person would in riding in a circle.

Then they ran a race over a double stepladder, ited with tiny rounds instead of steps. The first one over and back was rewarded with an extra supper. Poor yellow Ned, being the lazy one, of tourse was the last going over, but coming back, the a glance of despair at the others already neary half way back, he darted through under the 64mds, and with a chirp of triumph flew to the ich ahead of them all.

Alter this performance all took a rest except rank, who rolled a small barrel the length of the ble, making his tiny feet fly as the barrel gathered

The crowning feat of all was when Dewey fired he cannon. A genuine toy cannon was loaded and luse lastened to a wire contrivance, then lighted, and Dewey, who had been watching the preparaons with interest, flew to his post. But the canhad not been properly loaded and did not go, d Dewey refused to leave, thinking he had not one his duty until he had shot the cannon. Eviandy he was puzzled and wondered why it did not hoot, for he pecked the cannon and hopped about trying to find the cause of failure. At last it was perly loaded and this time it went off, but Rey never flinched at the loud report although at of the ladies did.

For a grand finale they all climbed the golden is, and arranged themselves on a perch at the pand kissed each other good night. Then they pped onto a stick their mistress held, and bowed the audience, each one bending his head several nes before they were carried away.

After the performance the lady who owned the ds was plied with questions about how she had naged to train them. She replied it was a matof infinite patience, and try, try again, several and try, try again, She beand claimed that not one of the little performers was yet a year old!-In Pets and Animals.

ARTISTS' MODELS.

THE work of a professional model is something very much misunderstood by the majority of people. What is imagined is that some person of either sex is paid to stand unclothed before the artist for the purposes of art. This may, at very rare times, be the case, but it is comparatively rare. No one person combines in himself or herself all the requisites of art. One may have the hand, another the arm, and so on, and thus it is that a famous picture, supposed to represent the highest development of the human form is a composite, dependent specially on no one person particularly. The business is a profession, and models are known and hired for their special purposes as any other representative would be. As to their character it is said by those who know that it is as high as in any other of the walks of life.

Child models are the prettiest and rarest of all. Almost every child possesses beauty, if no more than the mere beauty of childhood-that strange, winning sweetness that cannot be painted. But it isn't every child that can be trained to sit still. And of all things, a model that cannot keep a pose is the most exasperating. The child models of New York are famous, and deservedly so. There is not an art store in the country which does not hold some picture of little Emily Schaffer, or Edna Lawson, or Daisy de Lacy, or one of the other few of these beautiful children.

The best-liked model, aside from her qualifications in figure and coloring, is she who has learned to be silent and still. Of course the latter-the power of holding a pose without a movement, yet with no appearance of rigidity and strain-is something that the professional models are trained to. One of them will retain for ten or fifteen minutes, at a time an attitude that no strong man untrained to the business could hold a minute at a time without showing effort. It is not only the holding of the pose that is desired, you can see, but the holding. thereof naturally, gracefully, and as if one liked it.

A model's compensation depends somewhat upon the model herself and the character of the pose she assumes; but the variation from the established rate of fifty cents an hour is seldom great. That may be taken as an average; it is almost a schedule price. The hours also depend upon the work done, for some poses will wear out a model-very fast; but as a general thing she is supposed to work six hours a day. That makes her usual income about eighteen dollars a week, if she is continuously employed by different studios.

DOG vs. CAT.

It is time that the controversy concerning the superiority of cat or dog should be discussed on some more general ground than that of human egotism.

The case is prejudiced, if we are to weigh the cat's merits on practical grounds, for the cat is essentially dramatic; or if we are to estimate her character from the western point of view, for the cat is an oriental, or, finally, if we are to consider the moral qualities of the cat solely in relation to the desires of the human being.

In all such cases the vulgar estimate of the cat would be the true one, and, according to this vulgar estimate the cat is a domestic, comfortable animal, usually found curled up like an ammonite, essentially selfish, substantially cruel and, apart from these two drawbacks, essentially feminine.

"The cat is selfish and the dog is faithful." This sums up a judgment founded on willful denseness and gross egotism. In respect to what is the dog faithful and the cat selfish? The judgment rests on this-that the human being is a very little portion of the cat's world, but it is the all-absorbing object of the dog.

It is commonly said that cats are devoted to places and not to persons. We have never found this true, but if it is the case it not improbably results from the fact that many people are devoted to kittens, but not to cats. Then the cat's devotion is transferred to the scene of her romances, the corsh with very young birds, not yet a half year old, she has secretly viewed the movements of her foe from the water in Australia.

or of her prey, the place where she has experienced the surprising and absorbing joy of her kittens.

The truth is that the scope of a cat's emotion and experiences too nearly resembles our own.

The dog's conscience takes a somewhat higher rank than the cat's, for the chief part of his moral code he accepts as a law given by a higher being. He shows a desire for moral approbation when he has behaved well; he is depressed by moral disapprobation quite apart from the fear of the whip. But the cat defies the external code if it dare and covets admiration rather than moral approbation.

Esthetic sensitiveness scenis more developed in the cat than in the dog. The keenness of a dog's intelligence, combined with the inferiority of nature that lies behind it makes the employment of the senses almost entirely utilitarian.

Among esthetic sensibilities the enjoyment of music is the keenest and most common. It is common to find dogs who "sing," following, to some rough extent, high or low notes of music; but one doubts if such imitation is conscious, or based at all

on enjoyment.

With regard to color, both cats and dogs appear to have little esthetic perception. Cats, however, seem to show a definite esthetic perception of texture-esthetic, for it is not ordinary bodily comfort which rules. They may like to sleep on velvet, but they revel, waking, in the feeling of crackling paper or texture of stiff silks.

And there is a well-authenticated story of a cat which goes into the garden to lick the under sides of foxglove leaves and cannot be kept from trying with his tongue the texture of flannelette.

But the keenest esthetic pleasure for a cat lies in the region of smell. The dog uses smell merely as a medium of information, but the cat revels in it. She will linger near a tree, smelling each separate aromatic leaf for the pure pleasure of it; not, like a dog, to trace friend, foe or prey. If the window of a close room is opened the cat leans out, smelling the air. New dresses are smelt, partly, perhaps, for future recognition, but also apparently for pleasure.

This apparent power of esthetic enjoyment in the cat is counterbalanced in the dog by a quality we are wont to rank highly, yet not without a haunting misgiving. The dog has a rudimentary sense of humor. It is the commonest thing in the world to see a petted dog try to laugh out a scolding. If he is encouraged, if his fooling is successful, he will repeat it again and again, with growing exaggeration, will roll with wide mouth and absurd contortions or fly at one's face to lick it

Now, the cat is solemnity incarnate. To punish it is to cause instant offense, to tease it is to outrage its dignity. The better bred a cat is the more easily it is offended.

But the "sense of the ridiculous" is, after all, a gross quality, and the humor of one age seems vulgarity to the next. A cut is never vulgar.

The old Egyptians said that a cat reasoned like a man, and the root of the matter is there. In the dog there is a quicker intelligence, a greater adaptability and more facility in planning. But a dog cannot, as a cat can, determine its own end and purpose and live its own life. He is, after all, the kinsman of Br'er Fox, but the cat is a scion of roy-

A LADY had in her employ an excellent girl who had one fault. Her face was always in a smudge. Mrs. - - - tried to tell her to wash her face without offending, and at last resorted to strategy. "Do you know, Bridget," she remarked in a confidential manner, "it is said that if you wash the face every day in hot soarcy water it will make you beautiful?" "Will it?" said Bridget. "Sure it's a wonder venivir tried it, ma'um."

EMPLOYER According to your credentials, you are a man of unimpeachable honesty. How much wages do you ask?

Honest Applicant - That depends. If you have a eash register in the shop I should have to ask \$25 a week. If there is no register I might be satisfied with \$15. Boston Pranscript.

THERE are in Great Britain 3,000 theaters and music halls, giving employment to 850,000 persons

Good Reading

ABOUT BOOKS.

No 1.-Take Care of the Boys and Girls.

[The following article is from the pen of one who has been a teacher for over forty years, and who knows what he is talking about. It will pay careful reading, and in the article to follow there will be given a list of books, the publishers, and the prices. The writer signing himself "Uncle," has had a great iteal to do with young folks, and his advice is worth much along the lines and on the subject he deals with.]

NEARLY all parents would like to train their children right, but so many miss their aim because they have not had instruction in the right manner of doing it. Then the children vary so much in their disposition that no iron-clad rules can be laid down by which to train all alike. You might as well have all their shoes made over the same last or all their clothes cut over the same pattern—little and big and expect all to fit, as to train all the children alike and make a success. As you measure the foot or the body for a pair of shoes or a suit of clothes, so you should study or measure the child's nature or disposition and suit the training to it.

There is, bowever, one general direction that would be safe to give at all times and for all classes of children, that is, give only wholesome food and plenty of it. Well, you agree to that, but perhaps it means more than you" think. The mind needs food just as much as the body. Good literature is just as necessary to make a well-developed man or woman as bread, meat and potatoes.

Does not the Scripture say, "If any provide not for his own, and especially for those of his own house, he has denied the faith and is worse than an infidel"? Every child has a physical, a mental, and a moral nature and it will never comply with the above Scripture, or answer God's purpose, to stuff the body and starve the mind or dwarf it.

Children need good books as well as food and clothing. It is one of the best ways to build their character by furnishing them the right kind of books as they grow up. It is much cheaper than furnishing bicycles, horses, and buggies, or such uscless things as jewelry. Horses, buggies, bicycles, jewelry, and fancy clothing, all are temptations to lead young people away from home and parental influence, into company not always approved by parents or suitable for the young. Wellselected books have a tendency to keep young people contented at home, and in the best company the world has ever afforded, for good books are such company. When we see the lack of good books in so many homes, we do not wonder that young people wish to go into company that often leads them to neglect their Sunday-school lessons, and drift away into the path of the prodigal son. Take care of the boys and girls by furnishing them good literature.

Next week we intend to give a list of books for children from which parents may select, for many would like to buy more books if they just knew what to choose. After that we wish to give a list for older children, then one for young people. Watch the INGLENOOK each week.—Uncle.

A QUEER SECT.

It takes all kinds of people to make up a world, says the proverb, and the saying is verified in the religious world by the Firebrands in Kansas, and perhaps other sections. They took their rise from among the River Brethren, an unusually staid class of people. Some of our own people are concerned in the movement, but not many. There is much difficulty in getting at their real belief, as they are only of yesterday and have no crystallized creed. It is, however, a sort of religious revelry, a spasm that will pass as readily as it came. A writer in the Chicago Record commenting on the sect has the following:

"Fire! Fire! Fire! Bless you, brother!" was a cry that startled the townspeople one afternoon a few months ago. A soberly-dressed farmer, wearing the plain suit and long hair of the Quaker-like sect of River Brethren, met another of the same appearance and this was their greeting. Afterward came other experiences when a young woman in River Brethren garb came to town and going from store to store declared in a despairing voice:

"Beware! Abilene will be destroyed in ninety days."

One day a young man, having had his abundant locks trimmed in a barber shop, arose from the chair and stepping to the middle of the floor announced to the crowd in waiting: "I feel called on to say that I have been haptized by fire and ain saved." Then he put on his coat and went out.

These were but manifestations of a new movement that have caused the staid River Brethren more uneasiness than anything that has occurred in all their religious life, even from the early part of the century, when they settled on the banks of the Susquehanna in Pennsylvania and began to worship in their own way without restraint. And, by the way, that was how they acquired their title, for they were "River" Brethren, as distinguished from other members of their sect, Brethren in Christ, who lived among the hills.

This new form of religious zeal is the product of somewhat sensational preaching by leaders of the so-called Fire-Baptized association, or, as they are familiarly known, the "Firebrands," and it is the first schism that has occurred in the River Brethren denomination. It has worried the elders. Said one grave-faced brother, shaking his abundant beard and locks: "We hardly know what to make of it, but we abide in faith and think it will come out all right,"

The "Firebrands" began with the coming to central Kansas of an evangelist, B. H. Irwin, from lowa, two years ago. He was taken in by the River Brethren and they accepted his doctrines, which were of the utmost perfection through faith. Finally he undertook to change their form of dress and they objected. Then he started meetings of his own and preached the fire doctrine. He held that the fire of inspiration came to the believers and his meetings abounded in trances, screaming and other exhibitions of the "power." Long after midnight, night after night, the little band prayed and testified, all the time growing in numbers. Finally Irwin advised all the members to sell their hogs, as they were unclean beasts, and he was obeyed. A score of farmers took their swine to market at a great loss. He also attempted to cure by laying on of hands and found some patients who thought they were helped. One man declared he was cured of a sort of palsy, but he was as bad as ever the next day. One farmer "believed" and was pronounced cured of consumption, but he died in a few months.

Irwin returned last fall with a big tent and two assistant preachers and opened meetings with greater zeal than before. The excitement drew people from a score of miles distant and on Sunday thousands gathered. The service consisted of sermons, shouting and exhibitions of the "power." Communicants jumped up and down for a half hour at a time screaming praises to God. Some went into trances. These Irwin allowed none to touch. In his address he abused the River Brethren, their form of dress and customs, pointing them out in the congregation and calling them by name.

It is a peculiarity of the sect that its members believe that they are incapable of any sin and hence are absolutely removed from all the temptations of the world. Many wear scripture texts on their hat bands and they make pretense of following the established rules of the old River Brethren sect as to dress.

One of the notable converts is Mrs. Annie Brechfill, a wealthy woman, who has given of her property and strength to the cause. She believes in the new faith implicitly and claims that she has been cured of consumption by means of faith and laying on of hands. She is prosperous as a farmer and gives liberally to spreading the new Gospel.

Some of the River Brethren are alarmed at the growth of the "Firebrands," as they think the more sensational doctrine will win the young people and will weaken the church. They look on the radical element with much disfavor and have formally renounced all connection therewith as a matter of church policy. The persecution, however, does not dishearten the local enthusiasts and they hold their meetings in the private residences—the comfortable River Brethren houses built when the adherents were firm in the old faith—and will doubtless continue to do so. Their outdoor meetings are sometimes held on the streets and on Saturday afternoons on the streets in this city a little group of

praying and singing men and women attempts to hold the attention of the busy farmers who are no shopping expeditions. They get small and diences then, however, but are not discouraged and keep up their efforts regardless of the unfavor, able surroundings.

CALIFORNIA'S BIG TREES ARE THE OLDEST OF LIVING THINGS.

The Department of Agriculture has issued a report concerning the big trees of California that brings out some interesting and new conclusions. The trees are described in the report as "the grandest, largest, oldest, and most majestically graceful of trees," and "the scarcest of known species, with the extreme scientific value of being the best living representatives of a former geologic age."

The bark of the big trees often is two feet thick and almost non-combustible. "The oldest specimens felled," the report says, "are still sound at the heart, and fungus is an enemy unknown to at Yet, the big trees, apparently, have not increased their range since the glacial epoch. They have only just managed to hold their own on the little strip of country where the climate is locally favorable.

"The only grove now thoroughly safe from destruction is the Mariposa, and this is far from being the most interesting. Most of the other groves are either in process of or in danger, of being logged. The very finest of all, the Calaveras Grove, with the biggest and tallest trees, the most uncontaminated surroundings and practically all the literary and scientific associations of the species connected with it, has been purchased recently by a lumberman, who came into full possession on April I.

"The Sequoia and General Grant national parks, which are supposed to embrace and give security to a large part of the remaining big trees, are eaten into by a sawmill each, and the private timber claims amount to a total of 1,173 acres. The rest of the scanty patches of big trees are in a fair way to disappear, and in Calaveras, Tuolumne, and Toulare Counties they are now disappearing by the ax. In brief, the majority of big trees of California, certainly the best of them, are owned by people who have every right, and in many cases every intention, to cut them into lumber."

The most recent investigations confirm the estimates that these giant trees probably live 5,000 years or more, though few of even the larger trees are more than half as old. The average rate of growth is estimated at one inch of diameter for every twelve years.

The report corroborates the statements of one authority, who says that one tree, on which he counted 4,000 rings, was undoubtedly in its printe. "swaying in the Sierra winds, when Christ walked the earth."

"The only place in the world where the big treexists," the report says, "is in ten isolated grown on the west slope of the Sierra Nevada Mountains. The species, however, represents a surviving prehistoric genus of trees once growing widely overthe globe. The Southern groves show some reproduction, through which there is hope of perpetuating these groves. In the Northern groves the species hardly holds its own."

A DISCHARGED soldier, lately returned from the Philippines, tells a tale of a shut which is ton good to be lost. His company was returning from a long and tiresome scouting trip, in which most of the men had parted with the greater part of their wearing apparel, when he saw on a clothesline in the grounds of a residence adjoining a big stone the grounds of a residence adjoining a big stone the grounds of a residence adjoining a big stone the grounds of a residence adjoining a big stone the grounds of a residence adjoining a big stone the grounds of a residence adjoining a big stone the grounds of a residence adjoining a big stone the proceeded to help himself to a whole one. Where proceeded to help himself to a whole one. Where upon a woman came out of the house and said to him, in passable English: "You will pay for that of the judgment day." "Madam," he replied, "if you give such long credit, I will take both shirts which he proceeded to do.

TOGETHERNESS.

Is many of our churches we have observed, that ge is a feeling of alootness, not as much sociaalters there should be. At one church meeting there a young brother was being examined for some that had been charged against him, he angreed. I never had any company here, the other ong members did not seem to want me with them." and he spoke the truth. He had been slighted, the and sisters for some reason or othadid not find it worth their while to look after him welcome him. He was never included in any of e few gatherings at the homes of the young peote he stood alone. Is it any wonder that he endthis talk by saying, " I do not want to remain in

The Circle aims to remedy this state of affairs. The united efforts of its members to do some pracal good, the reading of the same books, the exhange of views at Circle meetings all tend toward inging about a togetherness of the young people your church. The meetings themselves tend to omote sociability. Be sure to urge the ones who me timid, inclined to remain away from church erices, to attend Circle meetings, join the Circle and read the books.

FELLOW-WORKERS WITH GOD. - The Apostle Paul caught the idea not only of being God's workmen, doing a work which is certainly worth while because a work at which God has set us, but of doing that work not alone or unaided, but with God's to-operation. God can work without any assistme of any sort-such was his work of original meation-but his ordinary method is to do his book in the midst of forces which he has before set nmotion, and this is the unexplainable wonder of is working, that he does not overshadow or overstelm these forces, while at the same time he ooks upon them and through them. We are all tonscious of physical freedom to come and go and move our hands and feet and tongues at our own ill, while we know that our power and freedom reentirely by his supporting. And this is quite strue as to our inner consciousness, and in our deper nature, and to our more vital sensibilities nd sacred aspirations. The thing that we are first fall bidden do is to repent of sin and right our wes before God: "This is the work of God" (i. e., hework God bids us do), and this is the thing in bich God works with us, and in which we can be klow-workers with him. Then, having righted wiselves as far as we may, and God having washed nd re-created us, according to the thought of the dy-first Psalm, we can go on, in the spirit of that me Psalm in the larger work that God gives his cople to do, and in which he gives them the joy of s larger co-operation toward the blessing of all

onewhat singular in his life and habits." telife paths of men are reduced to two,—the the wrong way. It was years ago that a dy who was ill sent for a minister. She was very althy, a member of a distinguished family. The mister told her in simple words the terms of salthat they are the same for high and low,—a Whole acknowledgment of sin and unworthiness. What!" she exclaimed, "do you mean to say that the is no difference in this matter between me of my coachman?" "None whatever, madam," the answer, "Then, she said in anger, "I do of wish to be saved," and she dismissed him.

EVIL SPEAKING.

WE cordially commend the following pledge, which originally appeared in The Presbyterian Review. Its careful consideration and daily practice will help remove manifold hindrances to the success of God's work:

- 1. I will speak no unkind word of any one.
- 2. I will repeat no unkind remarks I hear of any one, and will discourage others, as much as possible, from saying unkind things.
- 3. I will judge others' faults leniently, remembering that my own faults are probably greater.
- 4. I will never say one thing to others, and yet think quite differently; this is hypocrisy. "Deceive not with thy lips."
- 5. I will make no injurious remarks on the failings of others, remembering these words: "Considering thyself, lest thou also be tempted."
- 6. I will put the best construction on the motives and actions of all my neighbors.
- 7. I will act unselfishly, peaceably and forgivingly, obeying the Master's command-"Love one an-

I saw once, lying side by side in a great workshop two heads made of metal. The one was perfect; all the features of a noble, manly face came out clear and distinct in their lines of strength and beauty; in the other, scarcely a single feature could be recognized; it was all marred and spoiled. "The metal had been let grow a little too cool, sir," said the man who was showing it to me. I could not help thinking how true that was of many a form more precious than metal. Many a young soul that might be stamped with the image and superscription of the King, while it is warm with the love and glow of early youth, is allowed to grow too cold, and the writing is blurred and the image is marred. - Canon Teignmouth Shore.

WE cannot make the world quiet about us; its noise cannot be hushed; we must always hear its clatter and strife. We cannot find anywhere in the world a quiet place to live in, where we shall be undisturbed ourselves. We cannot make people around us so loving and gentle that we shall never have anything harsh, uncongenial, or unkindly to offend us. The quietness must be in us, in our own hearts. Nothing else will give it but the peace of God. We can have this peace, too, if we will. God will give it to us if we will simply take it.

Suffering is as God's letter. Open it and read it. Many of you will find that you are titled, or that there is an inheritance laid up for you. O my soul, sit thou down as a disciple of Christ, and say, O Lord, what wilt Thou? What shall it do to me? What secret is now to be disclosed? What better way is to be walked? What new strength is to be developed? What higher hope is to be awakened? What disinterested love is to be called into action? What has this suffering brought to me?

THE BROAD WAY.—"The multitude still goes Higher motives than mere hope of success must though way. He who would be a Christian must still be our inspiration to work for its coming. the hope of it is not a faded and colorless thing. The air is full of talk about it, and the wicked and barbarous wars now going on have only served to bring it into clearer vision and to make an increasing number of the wisest and best in all civilized lands determined that its realization shall not fail.

> So long as doctrines are kept only as pressed flowers between the leaves of the Bible, or some other book, they are merely theoretical. They must be changed into living experience and made the substance of the inner being by which we live and win our victories, as our food supplies our life —not when it is in the cupboard or the refrigerator, but when it is changed into blood and bone and muscle through digestion and assimilation.

> Giving money to the Lord is just as much an act of sacred service as offering a prayer, or singing a hymn of sacred praise, or teaching in a mission school, or coming to a sacramental table. In the Bible the consecration of our substance is not made a mere incidental, it is put in the forefront of our religious duties.

For * the * Wee * Folk

TWO LITTLE GIRLS.

I know a little girl (You? Oh, no!) Who, when she's asked to go to bed Does just so: She brings a dozen wrinkles out, And takes her dimples in; She puckers up her pretty lips, And then she will begin: "Ob, dear me! I don't see why! All the others sit up late, And why can't 1? "

Another little girl I know, With curly pare Who says: "When I'm a great big girl, I'll sit up late: But mamma says 'twill make me grow To be an early bird." So she and dolly trot away Without another word. Oh, sunny smiles and eyes so blue, And-yes, now I think of it, She looks like you!

THE RESCUE OF PIT-A-PAT AND PETERKIN.

PIT-A-PAT opened one round blue eye and yawned a round pink yawn. Then she opened the other eye and yawned again. Then she blinked vigorously with both of them and stretched out one dainty forepaw, then the other. Then she arose, performed several Delsartean exercises, gave her little gray jacket a few settling touches with her pink tongue and administered to Brother Peterkin a gentle and gingerly cuff.

Whereupon Peterkin went through precisely the same motions. But the paws he stretched out were as black as Mistress Mary's shoes; and so were his other paws and his whole suit, in fact.

Then they glanced toward the window.

What they had been longing for ever since Mistress Mary adopted them was a chance to get on that window-sill and see what they could see But wise Mistress Mary had perceived their thoughts, or else she had great wisdom concerning kittens in general. (I forgot to tell you that Pit-a-pat and Peterkin are kittens. Did you gness?) So she kept the curtains tucked up beyond their reach and they were too wee to climb up the wall or spring to

But now! One curtain had been loosened by the brisk breeze and was sweeping the carpet; while the other fluttered gayly forth from the window.

" Mip!" quoth the two little kits in unison and started toward the window (also in unison). Which reached it first I cannot say. Neither can I tell you which proposed swinging on the curtain outside.

I only know that Mistress Mary, hieing her homeward with a bottle of cream (to make them purr and purr and PURR), glanced upward to her window and saw a little coal black kit clinging desperately to the end of the curtain; while a little Quaker-gray kit was clasping her little white arms tightly around the little black kit's waist (if kits have waists), while her little gray tail waved wildly and her fuzzy little "back legs" (as Polly calls them) dangled forlornly in space - all from a third-story window!

"Meooww!" "Meooowww!" quoth they. At least, it sounded so to me. But Mistress Mary states that Peter was saying, "Hold on tight to big brother, Patty!" while Patty gasped back, "Yes, Brother Peter, I will."

Mistress Mary flew up the stairs and in a twinkling those frightened little explorers were safe on her shoulder, where they clung trembling and poking their cold little noses into the soft folds of her newest and most fetching necktic, while she poured out a brimming saucer of cream by way of discipline. But whether they promised never to do so any more or whether they ever will do so any more I cannot say, for Mistress Mary has not yet given them another chance.-Minnie L. Upton, in the Christian Register.

Two large wooden shoes were sent through the mail to Frank E. Decring, of Holland, Michigan, Twenty 1-cent stamps were on each sole, arranged along the outer edge and over the instep so as to form an ornamentation.

GATHERING BAD FRUIT IN THE CITY.

At most any afternoon at the closing hour of the fruit stores on South Water Street, Chicago, from fifty to seventy children may be seen with baskets and buckets overhauling cast-out fruits and berries. Most of the scavengers are girls, and while nearly every nation is represented in the scramble, a larger percentage are Italians. They come in squads of from three to ten, as though representing different localities, but when once engaged in clawing over boxes and barrels of decayed fruit, it is "every fellow for himself." An apple, an orange, a peach or any other kind of fruit that is not more than four-fifths decayed is enough to fight over if discovered by two persons at the same moment. In fact, until every barrel and every box has been pawed over it is a continuous war of words and often of fists. And when the street has been "cleaned up," as they put it, the children present a grotesque appearance. Their clothing and their faces and their hands are covered with the rotten pulp of as many kinds and as many colors of fruit as they have scrambled in. They come a motley crew and they go a bedaubed motley crew, and those having secured the richest prizes are hated by all the others. Often this leads to a fight, but never does the one having the most and best let go of his or her basket to fight. The prize is held on to in any event.

Time and again the policemen on duty on Water Street have "run in" squads of these rotten fruit pickers, but the parents invariably come forward and protest that their children were on the street without their knowledge or consent, and that they had never done so before. There never has been a conviction, although the law forbids the very thing that a half a hundred or more children do every day in the week. Nor need it be supposed that all these children are burdened with exacting conscientious scruples. One eye is always out looking for a chance to purloin a banana, an orange or other fruit from wagon or box or barrel, and unless pretty close attention were paid to them their hour's work would be represented by a basket or bucket full of the soundest and best kind of fruit, only that there would be a layer of half-rotten stuff over the top to conceal the theft. And not only sound fruit catches their eyes, but it is their delight to chase a chicken that has escaped from its coop. Usually the chicken is caught by one of them, but the history of the street has no record of a chicken so caught being returned to the coop.

The chief business of these children is to pick over rejected fruit and put the best of it into their baskets and buckets to take home for family use, only that much of it is not taken home at all, but if one of them is by nature or education inclined to steal the temptation to do so is there every second, and not many of them would resist it if they could.

On being questioned as to what was done with the half-rotten fruit they gathered, one little Italian said it was sold to jelly-makers, but her folks reduced it to jelly and prepared it for market themselves, but a little investigation showed that nearly all of it is for family consumption, though in most cases it is first put through some sort of a cooking process. It is estimated that some days as high as twenty-five bushels of decayed fruits are carried away by these children. In fact, if the amount cast out is unusually large many of the children will run home for another basket or bucket, for it pains their little hearts to know that anything worth saving has been left behind. It is easy enough to see by their enthusiasm and industry that they are desperately in earnest and that their life almost depends upon returning home with the largest possible quantity. That they are there by the positive command of their parents is well known to the police, and it is well known that their little hands will glide like snakes from boxes and barrels of refuse to boxes and barrels of sound fruit if they are not watched. Efforts have been made to rescue these children from "that school of petty stealing," as one police officer put it, but without avail, for as long as their parents oblige them to go or even consent to their going they will go.

It is not often that attention is given to vegetables, except such sound varieties as roll into the gutter, though an open barrel or box is always a temptation; besides, sound vegetables never come amiss, and they help fill the basket if the rotten fruit supply is light. But it is in the orange season

that these little Arabs are in their glory; picturesque glory too. It is a study in the reverse of still life to see a half hundred or more of them bedaubed from head to foot and carrying baskets loaded down with oranges in all stages of decomposition. It is their great harvest time of the year, because there is more sound fruit in a rejected orange than in any other, excepting apples, possibly; besides, they seem to value the skins of oranges highly, but why would be hard to say. Presumably they dry them, and there may be a market for them when dried. One little girl said her folks extracted the juice and bottled it, but she did not know for what purpose nor why they dried and ground the rinds. It was ascertained that nearly all the rotten-fruit children go to school and that gathering stuff on Water Street is all the duties they have to perform away from home. For a while a few little squads of girls from fourteen to sixteen years of age came to the street with baskets to pick over decayed fruit, but the police were quick to see that the basket was an excuse and they were promptly driven away. But, however impossible it may seem, there is enough profit in the business of picking over rejected fruit in Water Street to induce dozens of girls and boys to engage in it every business day of the week.

VIOLETS FOR ABANDONED FARMS.

"The worn-out farms of Virginia, principally in Albemarle and adjacent counties, of late have been turned to good account by their owners, who have directed their attention to violet-growing. The violet industry is spreading rapidly in that section and the growers, the most successful of whom are women, employ small negro boys to carry on the work, which, while not laborious, is tedious, for the violets require constant attention. The greater part of the yield is taken by Philadelphia dealers. Although they are not 'making wealthy,' the growers are receiving substantial returns and find this new industry more profitable than ordinary farming.

"The great violet-growing center is Poughkeepsie, N. Y., says Dr. B. F. Galloway of the Department of Agriculture, who has had the violet hobby for years. He is the author of several books on the subject of profit in violet-raising. All violets from this district find a ready market in New York City, and as the demand for them is increasing yearly a promising field is opened for the young, energetic and intelligent men and women of to-day.

"Answering a question as to why the violet has always been a popular flower, Dr. Galloway said that for four or five months in the year the public has no violets at all. It is only from the middle of October to the end of Easter time that violets are in season, and when they do arrive they are in great demand. On the contrary, roses abound all the year round. There is also a certain delicacy, a modesty, about the violet that makes it always wanted, while its perfume is another important point in its favor.

"Only two of the double varieties of violets are grown-the Maria Louise and the Lady Hume Campbell. There are many kinds of single flowers, which, while beautiful and fragrant, are not popular. This is a matter of taste, however. In Europe, especially in Paris, the single violets are in great demand. There is a growing demand for the single violet in this country, however. The oldfashioned way of growing violets, borrowed from the English twenty-five and thirty years ago, was in 'cold frames.' These were cheap, boxlike arrangements put up and covered over in winter with a glass sash. As the demand increased it was seen that this method of culture was not practical. Dealers in the cities were unable to secure the flowers at times, as the frames would be covered with two or three feet of snow, and it would be impossible for the growers to get at them.

"American ingenuity took a hand at this point and cellars were constructed adjacent to the beds, and this difficulty was obviated. From this evolved the regular violet houses of the present time, properly heated and ventilated and so constructed that they can be reached at all times. Still a great number of violets are grown in frames, and for the beginners it is the best plan to adopt on account of its cheapness, as valuable experience can thus be won at slight expense.

"Violets to be successful must be grown entirel from cuttings. Young offshoots taken early in the spring give the most satisfactory results. In some cases the old plants are allowed to remain year after year, but this is unsatisfactory, as each year crop shows a decrease in the number and the size of the flowers. The best results are obtained by to planting every year. A start should be made even spring with your offshoots-baby plants-planted in small boxes. As soon as they make good roots they should be planted directly to where they an to stand all summer. It is at this time that there should be carefully watched. Dead leaves and run ners should be taken off and the plant made to con tract, each forming a bushy crown. By the middle of September, if properly treated, these plans should cover the entire ground. By Oct. 1 they be gin to blossom. At first the flowers are small, and consequently, of little or no value and are throw away. By the middle of October they are suffi ciently large, however, to send to market, and im mediately bring a good price.

"Violets generally sell for not less than a cent apiece, and when the average of a single plant is fitty flowers a season, and, with good care, a hundred the profit can be readily seen. In the vicinity of every city violet raising could be made profitable. Any land that will grow potatoes, made rich by the addition of fertilizer, proves excellent breeding ground for violets. In starting a violet house care must be taken to see that there are proper facilities for shipping, although a person from four to six hours from the city can ship to good advantage.

"In the Virginia violet farms, after the youn offshoots have been transplanted into open frames rolling wooden screens are used on the top of the frames to regulate the amount of sunshine which shall be admitted to the plants."

PROVIDENT BOER FATHERS.

We hear a lot about the uncultivated habits, the ignorance, etc., of the Boers, but at least there one very good example they set us, and that it their forethought and providence for their children's future.

English parents are apt to leave their childrent future to take care of itself to a large extent, or, a any rate, postpone making any provision until the last possible moment. Not so the Boer parent As soon as a child is born to him he sets asides certain part of his stock as the property of the child, and has it specially branded. This stock is allowed to accumulate and increase until the child is of sufficiently advanced age to start life on his own account, and, as none of his stock is ever killed or sold during his minority, it is more than likely that it will have become larger than his father's.

A Boer youth generally marries very soon after the comes into his portion, and starts saving for how own children as his father did for him.—Londs Leader.

A NUMBER of boys went out on an excursion the river, and stopping off at a certain play walked around a while to see the country, what they spied a beautiful large apple tree, the bough of which were so laden with the luscious fruit they almost touched the ground.

The boys did not hesitate to help themselve and went at it with a determination to get all the apples they could carry.

They had not been there many minutes, however when the owner went after them with a great by whip, causing them to run away as fast as the could, but not before they had stolen between the and three dozen apples.

After they had gotten away to a safe distant they proceeded to divide them, and found that they proceeded to divide them, and found that counting four apples at a time there were three a ples left over, but by counting five apples at a time there were three apples left over, but by counting five apples at a time there were three apples at a time three apples at

Wall paper does not hang, and yet the person whose business it is to paste it up is called a paper to hanger. The reason is simple. Long before to introduction of wall papers, Arras, a town introduction of wall papers, called France, was famous for its tapestries, called ras." These were used as wall coverings and the men who were employed to put them up are called hangers.

THE INGLENOOR

"The Inglenook" will be Sent to any Address the Rest of this Year for Twenty-five Cents, or it will be Sent the Rest of this Year and all of next Year for One Dollar.

The Best Way is to send the Dollar and be Done with it. After You Have Read it for a Week; or two, You'll be Sorry that You Didn't Save Money by Subscribing for the Whole Year at Once. It's a Paper that Grows on One. Once Read, Always Read!

We Want Agents, == Real Live Agents

In Every Part of the Country. Anybody can solicit Subscribers at the Twenty-five Cent Rate, and Whoever Sends in Club of Ten of These, Can have his Choice of ONE of the following books:

Dictionary of the Bible, Beside the Bonnie Brier Bush, Natural History of Birds and Quadrupeds, Dream Life, Black Beauty,

Drummond's Addresses,

Ten Nights in a Bar-Room, Adventures of a Brownie, Imitation of Christ, Etc.

If he gets twenty subscribers he can have two books; for thirty subscribers three books, and so on. And they could be had in an hour's work in many a place. Whoever shows himself an efficient agent will be put in line for the Fall work connected with the Inglenook. There is a library of Fifty bound books waiting for somebody.

The Agent who sends in the largest list of dollar subscribers between this and the first week in January, 1901, will have sent him a Library of FIFTY BOOKS. Here is the list:

Adventures of a Brownie, Æsop's Fables, Auld Licht Idylls, Autobiography of Franklin, Autocrat of the Breakfast Table, Bacon's Essays, Beside the Bonnie Brier Bush, Black Beauty, Burns' Poems, Child's History of England,

Confessions of an Opium Eater, Dictionary of the Bible, Dream Life, Drummond's Addresses, Emerson's Essays, Ethics of the Dust. Fairy Land of Science, Fifteen Decisive Battles. House of Seven Gables, Imitation of Christ,

Intellectual Life, Lays of Ancient Rome, Longfellow's Poems, Lorna Doone, Mosses from an Old Manse. Nat. History Birds and Quadrupeds, Stories from the History of Rome, Poe's Poetical Works, Prue and I. Rab and His Friends. Reveries of a Bachelor,

Samantha at Saratoga, Sesame and Lilies, Sketch Book, Sticket Minister, Stories from the History of Greece, Story of an African Farm, Ten Nights in a Bar-Room. Thirty Years' War, Twice-Told Tales,

Window in Thrums, Education. In His Steps, Minister's Wooing, Professor at Breakfast Table, Lamb's Tales from Shakespeare, Lallah Rookh, On Liberty, Tanglewood Tales. Sign of the Four.

The Agent sending in the next largest list will have the choice of TWENTY-FIVE books out of the above list. The third largest list will entitle the Agent to FIFTEEN of the books, his choice; and the fourth largest list will win TEN of these There is also a cash commission going to the Agent. We prefer the services of the Messenger Agent if he will write at once for the place, but we will put the first live applicant into line, as the INGLENOOK is not going to be the last in anything. If agents desire to enter for the Library they should say so in order that we may keep tab on subscriptions received at the office. Elgin city is barred in the competition for prizes.

The announcement of the successful Agent will be made in January, 1901.

A Live Paper for Live People.

The Inglenook is no longer an experiment. It is regarded as phenomenally successful by experienced newspaper and who know what they are talking about. The reason is not hard to find. It is a FIRST-CLASS PAPER, with nothing old and commonplace about it. It is up to date, and always will be. It will have something new in each issue, it always has and it never will fall below its self-set standard,—being the best paper of its kind in the world. You can't read it without being interested and instructed. The whole wide-spread world is ransacked in the interest of its readers. The Inglenoon isn't made with a dull pen and a pair of shears. It is a live paper for live people.

Some of the best known men and women in the church will write for the Inglenook next year. The like of it was never undertaken in the church before. Look at the names, note the subjects! Every man and woman in the list knows what they are talking about.

THE INGLENOOK.

Vol. II.

ELGIN, ILL., OCT. 27, 1900.

No. 43.

THE WEED AND THE FLOWER.

Found a wild weed growing in a marsh, Foundored, noxious, freckle-leaved and harsh; Whose poison chalices the hungry bee Refused to sip, and like the upas tree Whose shadow slays, the bubbling ooze below Bore no green blade, no smallest brook-side blow; No peering creature of the slimy deep There reared its timorous head to bask and sleep.

I took the weed and in my garden bed, Among my favorite blossoms white and red, I nursed and nourished it with anxious care, And saw how, day by day, it grew more fair. Shedding its blistered leaves and baneful flowers, It bore such stately foliage as dowers The rarest garden queens, and blooms as bright.

So many a human life in gloom and blight
Dwells weed-like in the slough of sin and want,
Which, if transplanted to some happier haunt,
Would ere long grow to gracious leaf and bloom,
And shed on other lives its rich perfume.

-Charles L. Hildreth,

BELGIAN HARES.

THE INGLENOOK has been appealed to that it may something authoritative about the Belgian hare, and the business of raising them. The first the writer saw of the business was in a magazine article that seemed to set the world mad on the subset. Now that it is settling down to a legitimate business it is not out of order to say something about the animal, and its raising. What is said in his article is not from the INGLENOOK proper, but on the say of one who has been and now is in the business and knows what he is talking about.

The States of Kansas, Minnesota, Iowa, Indiana, Illinois, Colorado and Texas have turned attention of this new breeding industry, and Belgian hare slubs are being formed for the purpose of extending and fostering the business. The finest bucks and does are imported from England, where Belgian hares are bred for pets and for the market. In the West the demand for blooded stock is so great that dealers find it impossible to fill orders. One abbitry in Kansas City, in response to an adversisement, received in two days checks and drafts mounting to more than \$600.

As in the breeding of all kinds of food and fancy locks, there is in the Belgian hare industry a temier class, which to obtain dealers are compelled exercise careful selection and keen attention. In California, where this class of breeding has been ong established, the inferior classes of the breed, hose that do not reach perfection in color, markngs and conformation, are sold to the markets at a holesale rate of about ten cents per pound. The leat is white and said to be superior to spring thicken. Breeding for the market, while not so politable as raising stock for fanciers, is less exensive, and does not require the care necessary to Production of prize animals. It is, however, a ure method of income, and, by reports from places here the Belgian hare has become established as a ood animal, it is a lasting one.

Sometime early in the present century there distincted in Belgium a variety of tame rabbit thick later in England became known as the Belsian hare. They somewhat resembled the wild lare, and an enterprising Belgian breeder, taking is the from the resemblance, announced that he lad succeeded in crossing the wild hare with the labbit, and the "leporines," as the new variety was alled, was the result. Scientific breeders in England shattered this fiction, and close observers in that such a cross is impossible.

The present Belgian hare was developed from pecimens brought to England from Belgium about bety-five years ago. For some considerable time that two objects, one for size and the other to dellop an animal of the form, color, and fur of the onians," and the smaller "Belgian hares." Im-

provement in the type and color and fur of the hare continued until the early eighties, when the breeders of England adopted a standard. The color bred for now is rufous red, uniform ticking of chocolate black, conformity of body, shape and length of ears, size and condition.

The Belgian hare of to-day looks not unlike our New England rabbit in summer coat. He is, however, larger; has longer ears and longer hind legs. His eye is hazel, large and round—bolder than the rabbit's. For prize showing he should weigh about eight pounds. The larger ones, called "Flemish giants," descended from the early "Patagonians," weigh several pounds more, and are prized as market stock. When in full garb a true Belgian has a coat of rich red, with a sunset dash of golden tan.

According to Western breeders the culture of Belgian hares is a durable and lucrative business. Any intelligent person—man or woman—who is willing to invest a few dollars in Belgian stock may, with half the attention and a quarter the expense necessary in the poultry business, double and triple the amount invested in a very short time. As the hares are a staple article it is impossible to buy good stock very cheap. One of the prime essentials, however, is a good foundation stock, and the better the buck and doe as a basis of business the brighter the outlook for success. Once started in business the breeder should advertise, and the best medium of the Western men who are making money in the business is the daily press. The following extracts from an article by Dr. Robert Davidson, one of the most successful breeders in the Middle West is taken from the Belgian Hare Breeder, Minneapolis:

"During the past year I have written hundreds of articles on the Belgian hare, and yet hundreds of letters come to me asking practically the same questions, viz., What is the best way to begin raising hares? What do they cost? How can I dispose of them? In the first place let me say Belgian hares are the most profitable stock in the world; they pay better than a gold mine, but even a gold mine is not profitable unless it is worked in the proper manner.

"I have been raising and experimenting with hares for some time; I can take a doe that costs say \$10 to \$15 and at the lowest estimate I will make her produce from \$30 to \$40 worth of young every year, and at that I am not figuring on high-priced stock. I figure that all it costs to raise a hare until it is three months old is nine cents. I have sold hundreds of the six weeks of age at \$3 each, and they increase in value each month at the rate of at least \$2, until they are six months old, when they readily bring \$10 to \$15, and in many cases much more; for in every litter there are sure to be some extra fine ones that fanciers will pay big prices for. I do not advocate selling hares until they are six months old, unless you are in the business on a large scale and have lots of stock. If you start with a few, keep all the young until they are old enough to breed. A conservative estimate of the rapidity of their breeding would be six litters a year, averaging eight at a time.

"This makes forty-eight, but you must remember that the first litters of the doe will or should have young themselves at the end of a year, so you can readily see that my estimate of \$30 to \$40 yearly is very low, leaving a big margin for accidents and only figuring the young when born at \$1 each. But some people may say at this point, 'But suppose we only raise them for meat, and not keep them for breeding purposes?' Well, suppose you do-kill them off at four or five months; they will be worth at the lowest calculation S1 each, and they will have cost you only nine to fifteen cents to raise them, and I am sure 1,000 per cent profit is more than you can make at raising anything else. But for the next few years at least you won't have to sell any at \$1 apiece, for the demand for breeders is so great that you cannot afford to sell them for meat.

"This Belgian hare business is not started yet, al-

though thousands of people are raising lots of hares; yet there are millions of people to be supplied, and all going into hare raising in the proper manner will make lots of money. Some will get rich, but they will be the ones who attend to it properly.

"First, buy your hares. Go to or send to some reliable breeder, tell him how much you want to invest, let him make a choice for you. The best hares to buy are those already bred. In this way, within thirty days you will have a litter of young; if you have several does, you will soon have a great number of young, which in a few months will give you enough breeding stock for a big rabbitry.

"I am not writing this article for advanced fanciers who have gone heavily into high-priced stock. My advice always is to buy low-priced stock at first; by this I do not mean cheap, common stock. You can buy hares for almost any price, but a \$10 hare is cheaper than one you might buy for a very low price. In regard to selling your stock—how do other people sell theirs? How do you sell anything? Advertise it, of course. It costs but a little to insert a card. You will find that the trouble will be, not to sell it, but to get enough of it to sell; and when your neighbors find out you have Belgian hares, they will want stock.

"Now, in conclusion, I will just mention a few words about feeding. They will eat anything a sheep will—hay, oats, weeds, and even table scraps that are not greasy. Of course in an article of this kind I cannot go fully into the subject of their care. A careful reading of the books published on the subject will give you all the information necessary and if at the end of a few months you do not find yourself on the way to a competency I shall be very much mistaken. The fault will be your own. Many of our most successful breeders are women, who seem peculiarly adapted to the work, and many a hard-working wife has blessed the day she learned of Belgian hares.

"Not a few men and women in New England are inquiring into the Belgian hare industry with a view to making a venture in business. A rabbitry was opened at Dorchester not long ago. When a reporter asked if there was any money in breeding hares for the market he was told:

"'I don't know. All the hares I have been able to breed have been taken by other breeders and by people who either wanted them for pets or for foundation stock for a business of their own.'

"When the Belgian hare was first introduced into this country there was a vigorous outcry from farmers and others, who thought they saw disaster in overproduction. There would some time be a Belgian hare pest, and farm lands would be overrun by hungry rabbits. This fallacy was entirely exploded by sportsmen in several States, who attempted to stock shooting preserves with the Belgian hare. The attempt was a failure as the animals are essentially domestic and cannot take care of themselves when forced to run at large."

From the above it will be seen that the Belgian hare is not a hare, and it is not even Belgian. It is nothing hut a big, high-hred rabbit, and if it can be sold for ten cents a pound there is much money in the business. If the INGLENOOK was going in the business for breeding for money it would buy high-class stock. If it wanted rabbits to eat, and to sell, some of the kind that finds its way to the market would do just as well.

MERELY THE LOGICAL RESULT.

"This is not war; it is brutal murder!" General Chaffee says. But, as a matter of fact, it is war, for war unchains the brutal passions of man and makes of him a mad barbarian. The revolting spectacle in China is the logical, the harmonious accompaniment of that "strenuous life" of fighting which the imperialists on both sides of the ocean are so given to glorifying. New York World.

THE SCUPPERNONG.

BY N. R. BAKER.

It is quite probable that only a small percentage of the Inglexook readers know anything about the scuppernong as it is a variety of grape growing chiefly south of the northern boundary of Tennes-

Its color, when ripe is about the same as that of the well-known russet apple of the North. In shape it is perfectly round. It is very large and the skin is very thick, perhaps three times as thick as that of the Concord grape. So distinctive is it in variety that many persons never think of it as being a grape at all, but simply call it "scuppernong."

If our Northern readers wish to see it they must come South as it is never shipped to Northern markets. This is probably because it rarely grows in clusters or "bunches" and hence in pulling from the stems the individual grapes are broken, allowing the juice to escape and the pulp to decay.

The wine is said to contain twenty per cent less alcohol than that made from other varieties of grape.

The flavor is as we heard one express it, " Neither sweet nor sour but perfectly delicious." The taste is decidedly "more-ish" and it seems they may be eaten in any quantity many times a day without any ill effects or even a feeling of "full-

. The vine grows profusely, needs little pruning or cultivation and hence is admirably adapted for arbors. A simple vine has been known to live more than a hundred years and cover an acre of ground.

Its origin is unknown—to the writer at least—but it has no doubt been developed from the Bullace, a wild grape of the South In North Carolina there is a small river and also a township bearing the same Indian name, and it is claimed scuppernongs were first cultivated in that vicinity.

Neither the vine nor its fruit seem to have an enemy. They are proof against mildew, fungoid growths, phylloxera, insects, and weather, alike. Hence a crop failure is unknown.

They do not ripen evenly but from August to October in the extreme South and from September to December farther North. This is a decided advantage, inasmuch as they are used locally. It gives more time to enjoy and handle the crop,

Should you be in the South during their ripening season and receive an invitation to "come and eat scuppernongs," do not expect to be served in the parlor or dining room. You will be invited to the arbor and there requested to "help yourself" or in the dialect of the uneducated "hope yose'f". To pull them from the vine where they grow, selecting only the ripest, is to thoroughly enjoy this most delicious fruit.

Longfellow must have known something of this remarkable grape, for in singing the praises of Catawba wine, something we are really surprised to find Longfellow doing, he employs this stanza:

It is not a song Of the Scuppernong, From warm Carolinian Valleys, Nor the Isabel And the Muscadel That bask in our garden alleys. Citronelle, Ala.

APPLE BUTTER.

BY ANNA M. MITCHEL.

ONE of the many toothsome products of the Keystone State is apple butter. Though made in various other States, in none has it become such a popular article of diet as in Pennsylvania. The INGLE-NOOKER who has not got outside a piece of good bread and butter, thickly plastered over with fresh, new apple butter has certainly missed one of the pleasures of life.

It is not all pleasure, however, to get it manufactured. There is plenty of hard work connected with it.

As you can't make apple butter without cider, neither can you make cider without apples; so it will be necessary some hazy autumn afternoon to pick the apples. The youngsters of the household

the procession starts to the orchard. Billy, the big boy, goes along to climb the trees and shake the apples down. This same Billy watches his chance, and when you are all fairly under the tree, then will he give a tremendous shake and send the apples bouncing over you in no gentle style. And then the mean fellow sits up there and laughs to see you scampering from under that tree. By and by Billy goes home for the horses and wagon, and leaves you and the youngsters to finish picking.

Their interest in the work, however, has dwindled down pretty low. The small boy prefers throwing apples at a chipmunk scated on a fence post. The small girl is deeply engrossed in the fascinating occupation of making a grasshopper hop by tickling its hind legs with a straw.

You conclude to eat a particularly fine apple and rest your weary spine awhile.

In an absent-minded manner you seat yourself right at the front entrance to a flourishing summer resort of ants. The old proprietor of the establishment, not relishing your company, sends out a few hundred of his most valiant followers to give you a gentle hint to get out of that

That they succeed in an admirable manner is shown by the surprising agility you display in getting hence. The performance you go through during the next few minutes suggests anything but weariness.

Beginning again to pick apples, the third apple you grab happens to have a hornet concealed in its under side, who quietly disputes possession with you. His argument has but one point, but that one is so deep and touching that you yield immediately, in fact so suddenly as to surprise the hornet himself. Being in an amiable frame of mind, by this time, you assert your authority over those youngsters and the remainder of the apples are picked in a jiffy. Billy loads up the apples and cider barrels and wends his way to the cider press.

The best apples have been kept to thicken the butter, and these the women folks now begin to "snits" for dear life. The old-fashioned "paring bee" has about disappeared, but often a few neighbors still assist in heaping up a couple big tubs with apples peeled and quartered ready for the kettle. Boiling the butter usually begins early in the morning. The big copper kettle holding from thirty to forty gallons is lugged forth from its hiding place and bright and shining is put over the fire and the cider put in. Not much attention is required except keeping up a good fire, until it is ready for the apples to be put in. When the apples begin to melt then it is that the great longhandled stirrer gets in its work. Whew, but it takes elbow grease to keep that stirrer on the steady move around and through that seething, bubbling cauldron. Woe to the unlucky one who pauses during his or her manipulation of the stirrer and lets the butter burn to the bottom of the ket-

When sufficiently boiled it is ladled out into crocks, and when cool is tied up and set away to use when needed. Apple butter will keep for years if properly made and no one uses it in its youthful prime.

Newburg, Pa.

PEACHES.

BY TRA E. FOUTZ.

Possibly all Inglenookers have at sometime in their lives caten peaches, but perhaps few of them have ever seen an orchard, or seen them packed and made ready to be shipped to the large cities. As Waynesboro lies in the great peach belt of the Cumberland Valley, there are from three to five carloads of them shipped from here daily, in the peach season. There are also a great many shipped from the small stations. The season opens rightly about September first, and closes the second week in October.

A short time ago, with camera in hand, I started for a stroll out to an orchard. I did not have to walk far from my home to reach one. After passing the borough limits I walked along a road for about one hundred yards when I came to the orchard. While passing through it I saw a merry crowd of pickers. There were six or seven men in the crowd. As the trees are not very high, some of the pickers were standing on the ground, some on hustle around and hunt up baskets and sacks and small movable platforms, and the others on short

ladders. It did not take them long to strip a tre-

After following the road for about three-quarters of a mile I came to the packing house for which had started. A description of this one will give the reader a good idea of what the packing houses are like, as they are nearly all built in the same way It was entirely surrounded by peach trees and they stretched out as far as one could see. It was on top of what we might term a small plateau an commanded a fine view of the mountains three miles distant with their fine hotels and parks.

The building was twenty-five by thirty feet and at the north side there was a roof extension furth teams to drive under when they came in from the orchard. It was not put up for architectural hean ty, merely being boarded up with rough boards of foot in width, with an inch space between each one It was not plastered, and paint had not found way up through the myriads of peach trees The half story under the roof is used to keep basket and lids in. Each end has a large sliding doc and through these doorways the peaches are lo ed upon wagons to be hauled to the railroad

When the peaches are brought in from t orchard they are unloaded at the one side. In are first sorted into the different grades by a pead sizer. The one end of the sizer consists of a shall low trough into which the peaches are first poured At the lower end of the trough they are separated into two rows of single file. Each row is camer along by two chains which are farther apart along the remainder of the sizer, the smallest droppin out first and the largest last. As the baskets h come full they are poured upon tables to packed into baskets. The packers, who are mostly girls, stand around the tables.

They are packed in four different grades, is grades of fancy, one grade of choice, and one gra of culls. The best grade of fancy are packed carriers, a box arrangement which holds twell small baskets, with two layers of six each. carriers hold about three-fourths of a bushel. I other grade of fancy are packed in twenty-pow baskets. The choice are also packed in twen pound baskets. The culls are put in crates which hold about one bushel.

One of the bardest things to be learnt in packing peaches is to have the basket filled to the rig height when it is finished being packed, so t when the lid is put on it does not mash them there is no space between the lid and peach After they are packed the fuzz is brushed off top and the lid fastened on. The grade of them also stencilled on the handle. As they are load upon the wagon the name of the commission a they are to go to, and the name of the man they from, are stencilled upon the lid. If they are cl peaches a "c" is put on with a lead pencil. Il are then ready to be taken to the railroad shipped to the different markets over the country

The best varieties of early peaches are the Cras ford, Mountain Rose and Variegated Reds. 1 late ones are the Heath Cling, Smack, Salwall Cheers Choice, Globe and Stump of the Wor There is another very late peach called the Allbrig which often does not ripen before frosts come.

In the packing of peaches the soft ones and that are very ripe, are not used and are settle side. Many people go to the orchard and ha these peaches. Some of them not and are threat away.

When the peach season opens many men 58316 into the peach belt to buy peaches for the differ commission merchants. They sometimes buy man's whole crop, estimating the number of bush in it before they are ripe and paying him so much bushel.

Waynesboro, Pa.

GERMANS make flannel underelothing of the fibe of the pine needles, as well as sucks for men at stockings for the women, while knee warmers, ting and darning yarns, cork soles, quilts, widdles for in deafening paper for walls, june needle soap, need and even cigars made from the Liw material har been exported from Germany for years and resorts by resorts have also been established at points the river the pine needles are crushed, and these resorts in long been popular with people affected with the matism and other ills.

Nature & Study -

WAYS OF THE LARGE FISHHAWKS.

The genius displayed by fishhawks in nest-build-The second monderful, leading persons to suset that the mechanical calculations of the bird ed that to those of the average human being. n comment forests and groves fringing the alers of Narragansett Bay to obtain material for allding new nests and repairing old ones. Rotten into of trees high over one's head are heard snap-This snapping of sticks is aused by fishhawks. Mechanically they examine ad break off the limbs by sheer force, something hatis unsque in the character of birds. A bawk who about wheels short on its wings, having elected a decayed stick that is suitable, on some sk tree Something after the fashion of tent-peging the hawk charges past and just above the ough. Just as he is passing the limb, with great extenty he hooks his claws upon it, and without topping in his flight, and with wings flapping furiusly enough, hang goes the report of the breaking theretten limb, and triumphantly the feathered onder carries to the nest the stick, sometimes four aches in diameter and four and one-half feet long. Ubough as a rule the birds break off the limbs at he first attempt, they have been seen to try the peration on the same stick two and three times store being successful. In case the stick is not roken off the first time, they do not lose their old, but unceasingly flap their broad wings in the a exhausting every measure toward accomplishng their purpose

Ordinarily then bodies are not so heavy as to ause one to suspect that they could break off such tout pieces of houghs, but the momentum carried their flight as they hook on to the limb without copping almost invariably causes their efforts to be cowned with success. The loud snapping noise of behreaking of tree branches by the hawks would ad a person not accustomed to their habits to oppose that an elephant was running amuck through the forest.

Ofabout four leet in width and of a very comact structure, the nests can withstand the fury of erere storms. The fabric is so woven and bound fisscross fashion that cases have been known of be nests remaining intact even after the wind tled the tree or pole and threw the nest violently otheground. A severe storm blew down a fishwk's nest at Warren a year ago, leaving the nest ottom up. It was discovered several days later, ith three young dead birds inside. Being imasoned, they had died of hunger. The inner ages of the nests are woven with light sticks, omstalks, pieces of cloth and dried seaweed

The fishhawk lives to a good age. On one of the astern Rhode Island headlands a Mr. Anthony tils of an incident that happened twenty years ago tar his home. A male fishhawk was brought to be ground by a gun in the hands of a boy. anthony eared for the wounded bird in his barn, kking out grains of shot and stopping the flow of All the time the hawk fought him with its pinjured wing. In a month's time the wound had ompletely healed and the bird had become quite he. It would not eat anything but fish, however the wounded wing was stiff when the bird was givhis freedom, and the peculiarity of this stiff wing noted every season by Mr. Anthony on a bird hat located near his home. He is confident that it the bird that was wounded near his home twenty

nong the other sticks of which its own nest is onstructed. Like vassals to a chief, these smaller olds lay eggs and hatch them in perfect security, ad in mutual harmony with the larger feathered teatures. Often there are from twenty to thirty be find. Often there are from twenty the finds of small birds in the rounded outer sides of he fishhawk's nest. From long acquaintance with he fishhawk the sparrows and crow-blackbirds ate no fear of them, and they have learned that as fishhawk during incubation constantly is on uning incubation constancy, their nests are doubly secure from feathered and from the invoads of the common house every morning with packs of alfalfa (the

crow, the bird that they most fear when their nests | tropical clover), to sell him some at his gate, but contain eggs.

When the young fishhawks come forth from the shell the constant guard of the nest by male and female is gradually relaxed. The female leaves the nest at intervals in quest of food, soon flying back with a fish caught in harbor or bay. A noticeable feature about the mother hawk is her mode of feeding the young. Returning with a shad or porgie when the young are only a few days old, the mother bird tears the fish in pieces with her claws and bill, giving a strip to each young bird. When the birds become a week old, or about that age, and thereafter during the season, a whole fish is given to each young fishbawk by its mother. It is interesting to watch the young hawks when they are fed. They will cry for food when hungry, but, unlike the progeny of all other feathered tribes and land animals, they will not fight for food. The mother bird selects the young one to which she will give a fish. The rest of them remain sitting beside their more fortunate companion in the nest, but beyond uttering plaintive crics make no effort to get part of the fish for themselves, simply waiting in patience until their turn comes, which circumstance may prolong for quite a length of time. The young birds catch no fish the first year of their lives. Their food is procured by their parents. As soon as the young brood become a few weeks old the mother throws off quite a piece of the top of the nest to the ground. This enables the young to see their surroundings, and less obstacles are in the way when they first make attempt to fly.

The young birds do not take readily to flight. They are fully feathered, and yet make no attempt to leave the nest. Generally their initial attempts. to rise on wing are begun about July 10. Flying I up from the nest they fall back upon it again from a height of about five feet. They make attempts in turn, with like results. The young hawks are very timid about flying away from the nests, and it devolves upon the parents to drive the young forcibly off in order that they can fly. Great is the screeching and loud are the cries of the birds on such occasions. At last one of the young hawks will make an attempt to reach an object fifty yards away from the nest. These efforts are generally awkward, and it is not uncommon to see the fledgling tumble in somersaults earthward. The mother hawk, ever on the alert, rushes to its rescue, and shooting under the young bird catches it on its back and wings before it tumbles to the ground.

A SUSPICIOUS LOT.

One of the most conservative people on earth is the native American Indian as he is found from south of the Rio Grande all through South Ameriea, wherever he has anything to do with the man with the white tace. Nothing can change him. He has had an experience in the last three centuries with the Spaniard, and it has not improved his confidence in human nature

It is a peculiarity of the Indian that he will sell nothing at wholesale, nor will be trade anywhere but in the market-place, in the spot where he and his forelathers have sold "garden-truck" for three centuries. Although travelers on the highways meet armies of Indians bearing heavy burdens of vegetables and other supplies upon their backs, they can purchase nothing from them, as the native will not sell his goods until he gets to the place where he is in the habit of selling them. He will carry them ten miles, and dispose of them for less than he was offered at home. We met one day and than he was offered at home. We met one day and than he was offered at home. We met one day and than he was offered at home. We met one day and than he was offered at home. We met one day and than he was offered at home. The was offered a firm, and declined to sell anything until she got to town, although there was a weary, dusty journey of two leagues ahead of her. The guide explained that she was suspicious of the high price we offered, and inferred that pincapples must be very scarce in market, or we would not be willing to pay so much on the road; but it is a common rule for them to refuse to sell except at their regular stands. A gentleman who lives some distance from Quite told me that for the last four years he had been trying to get the Indians, who passed his

they invariably refused to do so; consequently he was compelled to go into town to buy what was carried past his door. Nor will the natives sell at wholesale. They will give you a gourdful of potatoes for a penny as often as you like, but will not sell their stock in a lump. They will let you have a dozen eggs for a real (ten cents), but will not sell you five dozen for a dollar. This dogged adherence to custom cannot be accounted for, except on the supposition that their suspicions are excited.

CATS THAT SAIL THE SEAS.

Every large ocean liner carrying passengers has on board from six to ten cats, these being apportioned to various parts of the ship, as well as appearing on the vessel's books for rations.

And even, beyond this, on most of the great lines particular employes are instructed to feed daily, as a part of their duties, certain cats in their part of the ship. And there is promotion for pussy as well, for any cat that is particularly amiable, clever and interesting is permitted to enjoy the run of the first or second or third-class salouns, according to the popular vote. In this way certain of the firstclass saloon pussies have become quite celebrated, especially on the long-voyage boats that go to India and Australia, and the stewards of the various classes are quite commonly eager to push their own favorite cat into first place. "Of course," says Tit-Bits, "there are amazing favorites with the staff of the ship that are fine hunters and do not seek 'society.''

When the ship is in port a certain man has the duty of feeding the cats at regular hours and of entering the rations in a book; but every cat on the ship that has been long there seems to wait with eagerness for and to recognize at once the professional rat-catcher, who always goes to work in the hold of every passenger liner when it comes to dock, and who lives by ridding ships of rats. The "staff cats," as the stewards call them, never leave the rat man until he has finished his duties.

SOME OLD CITIES.

THE settlement of America, or at least that part of it in which we live, is as yesterday. We know to the day when the Pilgrims landed, where, and what happened during their stay in the New England States as a distinct body. But at the time they landed on the stern and rock bound coast of the poet there were other cities South of the United States, and they were pretty old at the time. Take the City of Mexico. It was a city of very considerable size when Cortez conquered it, just one hundred years before the Pilgrims landed. It was known as Tenochtitlan, and it has a record of at the least a thousand years of age. When the Aztecs appeared on the scene at what is now Mexico City there was the remnant of a tribe of people that had gone before them, and these people they called Toltecs. The word Toltec is the Aztec word for builder or architect, and the Toltecs were preceded by a class of people who built the now ruined cities of Yucatan and Central America. Old and all as the Toltees were they had not a myth or a legend as to the name of the people who dwell in these ruined cities, who had come and gone before they the Toltees, had a hold on the country. It is easy to see that the dwellers of the cities in all probability had a civic and national existence long prior to the advent of Christ on the earth.

Now who were these people, and, what is more interesting, what became of them? There is not the breath of a record of what happened them. Their cities were large and populous, and the surrounding agricultural conditions were such that an immense population must have existed in the immediate vicinity of the cities. But they disappeared off the face of the earth and not a whisper of who they were or what became of them was left behind. There are the ruins of their cities, immense in area, massive in structure, and all as silent as the grave as to who or what they were, or what became of them as a people. There is no answer to the question. Silence is over all.

THE oldest banknote in the possession of the Bank of England is dated Dec. to, 1000, and is for

INGLENOOK.

PUBLISHED WEEKLY

At 22 and 24 South State Street, Elgin, Illinois. Price, \$1.00 a year. It is a high grade paper for high grade boys and girls who love good reading. INGLENDOK wants contributions, bright, well written and of general interest No love stories or any with killing or crucity in them will be considered. If you want your articles returned, if not available, send atamped and addressed envelope. Send subscriptions, articles and everything intended for THE INCLENOOR, to the following address:

BRETHREN PUBLISHING HOUSE, Elgin, Illinola.

Entered at the Post Office at Elgin, Ill., as Second-class Matter

ONE HUNDRED MAKERS OF HISTORY.

THE INGLENOOR has in contemplation the preparation of a series of historical articles, short and interesting, about one hundred men who have done more or less in the various phases of human endeavor to improve the interests of mankind Those who read these brief sketches will be amply repaid those who study them will be incalculably benefited. The list of one hundred is printed below, and is the result of much thought on the part of the compilers, and their story in the 'Nook will be of intense interest, and will be worth all that the paper costs to those who will carefully and conscientiously follow the sketch of these great men of the world:

Homer, Confucius, Buddha. Pericles, Phidias, Sucrates, Plato, Demosthenes, Aristotle, Alexander, Hanmbal, Cicero, Julius Cassar, Virgil, Augustus Carsai, Plutarch, Marcus Aucelius, Constantine, Augustine, Justinian, Mohammed, Charles Mariel, Charlemagne, Alfred the Great, Hildebrand. William the Conqueror, Dante. Gutenburg, Columbus, Copernicus, Angelo, Raphael, Luther, Loyola, Calvin. Lord Effingham, Cervantes, Henry of Navarre, Lord Bacon, Shakespeare, Galileo. Kepler, Harvey, Grotius, Richelieu, Descartes, Milton, Bunyan, Louis XIV.

Newton, Marlhorough, Peter the Great. Alexander Pope, Swedenborg, Voltaire, Wesley, Franklin, Frederick the Great, Blackstone. Adam Smith, Immanuel Kant, Robert Clive, John Howard, Edmund Barke, Richard Arkwright, Washington. James Watt, Jefferson, Dr. Jenner, Goethe, John Marshall, Hamilton, Lord Nelson, William Pitt, Robert Fulton, Eli Whitney, Napoleon, Wellington, Beethoven, Sir Walter Scott, Metternich. Stephenson, Webster, Вутоп, Faraday. Morse, Macaulay, Von Molike, Lincoln. Dacwin, Tennyson, Gladstone, Dickens, Bismarck, Alexander II.

Cyrus W. Field,

U. S. Grant,

T. A. Edison,

William of Orange,

In the INGLENOOK account of these great men, there will appear briefly when and where they were born, and what they did to make them great. Ten thousand volumes might be consulted about these people and the field not be exhausted. Those who follow with care, omitting nothing, and not allowing their interest to wane, will be wonderfully helped in an historical way, even though nothing but a bird's-eye view of the achievements of each will be given, owing to a lack of space. We suggest that in each family, where there is a number of readers, after the study of the historical column, views be exchanged and questions asked, if it is so desired. This will be, by a long way, the most important and valuable addition to the INGLE-NOOK, that has as yet appeared in its columns. Next week we will begin. Study carefully the series and you will be in possession of much infor-

OUR SHORT SERMON.

Text: Speaking Evil.

Ir is an unfortunate habit with many people to regard it as their seeming duty to adversely criticise those in authority. The evil that is spoken of dignituries, present or prospective, is expressly forbidden in the Book. It is not a pleasant sight to see a man in a church pew on a Sabbath listening to and approving a sermon on charity and then hear him the same day, or the next, belittling some candidate for office, or some incumbent, and the higher the office and the official the viler the criticism. It is a fact that the so-called "yellow journals' sell better than the more reputable papers, the undoubted reason being that there are more yellow people than there are of the other kind. This evil speaking extends to all public positions, and not even the church is exempt. A man may be ever so exemplary and praiseworthy in private life, but let him come out for office, or he appointed to any position of responsibility or preferment, and immediately the pack behind is in full cry. But there is this one thing for the 'Nook reader to remember, and that is, Christians never do it. Christ was a gentle man, a gentleman, and those who are like him in reality are also gentlemen, and they are not to be sought for habitually in the midst of the detractors of official supervision.

It is not asserted that all officials deserve respect, or that their acts are beyond criticism, but it is undoubtedly beyond the province of the Christian to engage in detraction and defamation, and especially so when the subject of criticism occupies a place so exacting in its requirements they could by no possibility fill it themselves. It is easy grough to settle matters of state and polity in the potato patch, and it is another thing to be actual president in Washington. Learn to think more and talk less about people in high places.

SUCCESS IN LIFE.

NATURALLY and justifiably all persons want to succeed in life. But have you ever stopped to consider what real success is, and how it is obtained? If a poor boy starts out with nothing and in the course of a lifetime accumulates a hundred thousand dollars, or half of it, we say he has succeeded in life. The girl he marries is said to have succeeded also, to have done well. Now not everybody who dies owning much money has obtained it at too great a cost, but a great many people do pay too much for their success. It is entirely within the reach of anybody and everybody to become rich. Those who work continuously, save all they get, loan it out to others, keep doubling up their receipts, giving nothing away, working while others sleep, being not over nice morally in dealing with others cannot fail to accumulate wealth. But it costs too much. The price is too high to spend a whole lifetime in petty thrift and doubtful methods that one may die owning much money to leave to others to squander. Yet how many seek it only to fail in the undertaking!

On the other hand there are those who pass through life attracting no attention, saving no monev, and judged by what they have left behind they have failed in life. But have they really failed? It is not within the province of this article to go into details, but it is often the case that there are those who die penniless who leave behind them an honored name that is worth more than money, a precious memory that lives in all hearts in a way that no money can buy in any mart of the world. Money can do much but it cannot buy love and respect. Many men and women have done their duty to those around them, and they died with no property worth the name. But the world has been made better by their having lived in it, and after all that is the measure of true success. If the world has been bettered, if the cause of truth, justice and mercy, has been advanced by our lives then are we successful, and without it we are failnres, money or no money. The price of this suc-

cess is an unselfishness that is not common to are too apt to think only of ourselves and we forge that we live for others as well as for ourse When we have sunk self, and put the moral spiritual welfare of others beyond our own interest we are on the road to real success. It may be show in a bank account, in notes for money on of us, but in the hearts of those who survive us, and the Book of Life we reap the reward not measure ble by money alone.

QUERIES AND ANSWERS.

How does the Weather Bureau forecast storms and the

THERE is a large number of observers everywhere in the country, and these telegraph into the central office daily the weather conditions, and from these reports forecasts are made. About eighty percent of them come true.

Do the leaves on an evergreen tree never fall?

They are falling all the time, and coming on the same way. Look under a pine and you will se that they do fall. The leaves of other trees beside evergreens shed at a given season.

Can persummons be preserved the same as other front?

Yes. And it seems to the editor that where they are plenty a good city trade might be worked up it canned and preserved persimmons.

Could I buy an Elgin watch at the factory cheaper that

Unless you were in the trade they would not sell it to you at all. They sell only to wholesalers an jobbers. So we are informed.

Is there anything in the witch hazel wands offered for sile for the purpose of detecting minerals, etc.?

Yes, there is for the man who sells, and for no body else. The whole business is a fraud.

Would it be right to ask a visiting friend, not a member, I go along to a council meeting?

Find out what is coming up, and see the Elde and get his consent. We have often seen strangen at a well-conducted council with apparent good to sults.

Is it an evidence of a lack of familiarity with hown wass? stare in at show windows at stores?

If there is anything in the window you want to see it is a lack of common sense not to stop an look at it. That is what it is there for. It is the INGLENOOK practice to go inside and askifith sired to have detailed information, and never the information been refused.

I know where there is a large deposit of what is called? clay. Is it of any special value?

For making firebrick, yes. But the question transportation facilities is to be considered takes a considerable sum of money to establish plant, even if the clay is all right

How long will it take to get fruit from a seeding all planted from the seed?

It will take years if you wait on the tree to great After the first year of your seedling's growth gra it on a bearing tree. Then it will come into best ing soon.

What color is the true Belgian have

There is no such thing as a true Belgian has They are simply big rabbits and are all co though red and bluish are regarded as most de ble. In practice off colored ones are extented for food.

How is incense made?

Incense is a compound of any kind of quantities ground fine and mixed. It is set on fire and fragrant, smouldering smoke, is the thing? Anybody can make and use it, and it is a thing to have about the house Avery hills fired and burning gives off a widespread and ing fragrance.

SALTION FISHING.

Out to Oregon is where fishing is done on a large Valentine Brown in Young People tells some-

If at sunset you would stand on the banks of the Columbia river a few miles from where it enters the ecan, and look across the expanse of tide-swept nater, you would see a thousand boats like as many hirds gliding on its surface. These are fishing bulls, staunch and graceful, about twenty-eight ict long, and propelled by one sail. If the wind blowing against the tide quite a sea is running, and the boats toss like corks, but scarcely ever a drop of water dashes over their sides. The mouth of the river is formed of a series of bars, low sand islands, and deep channels through which the great mass of water sweeps rapidly to and fro with the ebb and flood of the tide until the bar proper is reached, over which the waves of the ocean ceaselessly beat in great white billows, except where the ship channel gives free pass way to the sea. Swiftly on though seemingly flitting in every direction, glide the boats until twilight darkens the liver, then fishing begins.

Each net has a cork line which floats on the surface and a lead line which drags on the bar, and when drifting extends crosswise with the river for about a mile, so a thousand nets weave a network through which it seems no salmon could escape. nor could the fishermen keep their nets from getung mixed together, but the Columbia is a great nver, and there is room for all.

The reason that fishing is done at night, is that the salmon entering the river in their mad race to the spawning grounds, can not see the net at night and work their way around it, but plunge into it and become "gilled" that is the mesh of the net gets behind their gills and fastens them, the mesh being too small to permit them to pass through, Thus the fishermen drift until they take up the net and sail back to drift again.

As the fishermen nearest the ocean have the first chance at the fish entering the river, they strive to be the closest to the breakers, and there the danger lies. Often, drifting on an ebb tide, they know it will flood at a certain time and bear them back up the river, but miscalculate distance or time, and beforethey are aware they are in the breakers, and must cast away the net and struggle for shelter. Sometimes a gale rises in an hour, and sweeps down the over; then their only chance is to anchor, feeling the surges dragging them nearer unto death, hoping the life-saving station near may know of their danger and come to their rescue. Fishing on the bar is a hard life but every fisherman is venturesome, reckless, and cares not for danger to body or soul.

Further up the river are the seining grounds. These are sand bars, usually covered at flood tide, where the water is shallow for a mile or more out in the river. The seines are of great length, usually over a mile long, and are deeper than the drift nels, also having finer meshes; they have the lead line and the cork line, and require about eight men and fourteen horses to handle them, while the drift nets require only two men. One end of the seine is fastened to the bank, and the boatmen pull out in the river half a mile, circle around and row back to the shore, enclosing as much space as possible with the seine, and the horses then drag it on shore, and Ath it the fish which are imprisoned. • This work is of less danger but more toilsome than drift net fishing, and the time of fishing depends on the state of the tides, that is, when the water is of a proper depth on the bar over which the seine is hauled.

These are the two great means of individual salhigh fishing, but capital has put in fish traps and

Point is a small trap. The piles hold in place a heavy network which the fish strike on coming up A salmon never turns back, but continually endeave was eagerly worshiped by the credulous. ots to Push its way up stream, and is easily caught anen the trap is raised.

The fish wheels are operated up the river where the water is very swift, and are placed just above which is a large wheel with four arms. Each arm has a paddle on it like one sees on the wheel of a steamer, and the current running against it turns the wheel continually as one of the four paddles is in the water, each in turn. On these arms is a wire network arranged to hold the fish, but let the water pass through, leaving as little resistance as possible to the turning of the wheel. The salmon swimming up the eddies pass into the wheel, are scooped up and thrown over on the scow. This is the simplest, and also most destructive way of salmon fishing, because it catches all sizes and every kind, while the drift net fishermen are required by law to have the meshes of a certain size, so that the small salmon can pass through in safety.

HORRIBLE CHINESE EXPERTS.

THE Chinese authorities from time to time, by official proclamation, warn the people of the country against child thieves. Monsters are often made of stolen children, and so profitable is the trade that vigilance has to be used to thwart those engaged in it

To transform a man into a beast would at first seem to be impossible. It is accomplished, however, by the Chinese, to whom nothing seems to be unknown. The skin is removed in small particles from the entire surface of the body, and to the bleeding parts bits of the hide of living animals, bears and dogs, are usually applied. The operation requires years for its full accomplishment. After the person has had his skin completely changed and becomes a man-bear or a man-dog, he is made mute to complete the illusion, and also to deprive him of the means of informing the public he is intended to amuse of his long torture.

A Chinese journal, the Hupao, prints a description of one of these human animals exhibited in the Kiangsi. His entire body was covered with dogskin. He stood erect, although sometimes the feet are so mutilated that the beast is forced to walk on all fours, could utter articulate sounds, rise and sit down; in short, make the gestures of any human be-

A mandarin who heard of this monstrosity had him brought to his palace, where his hairy skin and bestial. appearance caused quite as much terror as surprise. Upon being asked if he was a man the creature replied with an affirmative nod. He also signified in the same manner that he could write. A pencil was given to him, but he could not use it, his hands were so deformed. Ashes were then placed on the ground in front of him, when the man-dog leaning over, traced in them five characters indicating his name and country.

Investigation showed that he had been stolen, imprisoned for years and subjected to long tortures. His master, who was condemned to death, testified during the trial that barely one in five failed to endure the process of skin changing. He practiced, that he was sitting on the smaller seat, so in order it according to a traditional and, doubtless, old for-

method of monster making. They know how to graft a child on an adult in imitation of natural teratology. The operation is on the same principle as that of skin grafting. The circulatory systems are brought into close contact by means of deep fair time a lat man, who on the morrow was to wounds. According to a note of Consul Cinatti, lead to the altar the daughter of one of the leading the Chinese are skillful in performing such experi- townsmen, says a writer in the New York Press. ments on animals. They delight in giving chickens the feet of ducks and in putting cocks' combs on the heads of ducks

Darkness alone, it seems, is sufficient to make a curious specimen of a child, especially if a certain, summoned the landlord, and a thorough search was kind of food is given to it, and its vocal cords are made. All in vain. The clothes were not forthmade useless. A living Buddha was made in this way and exhibited by the bonzes to their congrega-The fish traps are placed near the mouth of the tions. sult has been obtained by placing the victim, when a child, in a jar, from which the head alone protruded. This grew abnormally large, while the body remained stationary in its narrow prison

FUNNY FAT MEN.

Nor long ago a bus belonging to a hotel in a north of England town was on the point of starting for the station when an enormously stout man appeared and, with the aid of the waiter and Boniface, was squeezed in. At the station he tried to alight. In vain; his giant bulk would not pass through the door, but stuck halfway, effectively preventing the exit of the other passengers. With vigorous push and vehement language -for the train was due -they tried to remove the panting obstacle. At length extraneous help arrived. A frantic haul, a desperate shove, and the massive, fat man was ejected into the road just as the train steamed into the station.

Six years ago in Courcelles-Levallois, a station near Paris, a massive butcher, who had taken a ticket for Auteuil, tried to enter a railway carriage. Unable by himself to accomplish this, he called to his help a couple of porters who succeeded in jamming him in the doorway, so that his body was half in and half out of the carriage. He struggled hard to release himself, aided by a small crowd of officials, who at length managed to pull him back again onto the platform. He subsequently was conveyed to his destination by a treight train, seated on the top of some empty casks

Three years later a man weighing over 420 pounds presented himself at the booking office of a small town in Normandy and asked for a ticket, The official, who evidently was conscientious, refused to issue one, on the ground that, as the would-be traveler could not possibly enter any carriage, he would be taking his money under false pretenses. This decision, however, was met with strong protest, and the matter finally was compromised by the colossus agreeing to travel in the baggage car van at freight rates.

One would imagine that of all "callings" that of burglar was least fitted for one of gross habit of body, yet a certain Viennese householder, when last year his premises were entered by thieves, surprised a tub of a fellow tutilely struggling to pass through a window, by which his slimmer comrades had departed. Vain were his efforts, he was firmly fixed, and not until the arrival of the police was he ex-

Signor Lablache, the celebrated singer, who was a man of avoirdupois, when leaving Her Majesty's Theater after rehearsal sent his servant for a cab. The cabman, on seeing his prospective fare, cried promptly, "He'll never get in," and indeed, only for the aid of the bystanders he probably would have been right. Once within, the singer found to change he stood up. Crash! beneath his hige weight the floor gave way, and he found himself The Chinese have another still more horrible standing in the road. Rescue was at hand, but not until the door had been wrenched from its hinges and the cab otherwise damaged was Lablache released.

There arrived once at a certain Southern town in That night he put up at the chief hotel, which was filled with a party of convivial souls, one of whom contrived while he slept to steal his clothes. On awaking next morning and discovering his loss he coming, and the minutes sped apace.

What was to be done? A suit must be borrowed, and that at once. But of whom? The landford knew of no one whose waistcoat would meet around his guest's aldermanic proportions. He scratched fair booths. Perhaps he would oblige. He did, and the bridegroom duly appeared in church dressed in a suit which, if anything, cried on the

Good Reading

THE WAYS OF THIEVES.

THE breed of petty thieves who infest the streets and public conveyances of every large city known collectively as pickpockets has not changed much since the days of Oliver Twist. Each succeeding generation has its quota of clever, bright young thieves, instructed in the art by older heads, who have grown too well known to ply their calling in safety and who have been arrested so often that they fear the habitual criminal act. The streets of Chicago, of course, have not escaped and not a day or a night passes in which half a dozen or more purses and watches are not taken. Many who read babitually the "Lost and Found" columns of the newspapers marvel that so very many persons have the misfortune to lose their watches and their purses every day. They cannot conceive it possible that so many citizens would loosen their grasp on their valuables and let them drop in the street. They don't. A watch will never climb out of a man's pocket. It is taken out by slim and numble fingers. The purses "containing valuable papers" which are daily advertised are removed from then hiding places by the same clever hands while the owners of the valuables were in a crowded street car or crushing then way out of a crowded theater lobby.

That is where the pickpocket plies his vocation with the least danger of detection where people are of necessity jammed close together and a sudden push or jolt will go unnoticed. There are scores of them who habitually "work" the street cars, and the extent to which this practice is carried is shown by the fact that six of the eleverest detectives at the central station are detailed every day on that work and on no other to watch the corners where the cars take on their heaviest loads, to keep an eye out for known pickpockets" in the crowd and for strangers who appear to be crowding passengers unnecessarily.

Many an arrest is made about which the bystanders know nothing. Many an arrest is made which comes to naught in the police courts because the detective seized the prisoner on sight, on general principles and for the salety of the public and without any specific charge against him, except the old one that he is "a well-known thicf." The detective knows that it is better for the safety of all concerned that these lads be kept behind the bars. While they are there they can pick no pockets, and while they are on the streets they are certain to get a watch or a pocketbook sooner or later.

A remarkable feature about these petty thieves is the youth and small size of some of them. A few of the eleverest and best-known pickpockets in Chicago are tiny lads who do not seem to be more than seven or eight years old, barefooted and sometimes pretending to sell newspapers. Their arrest on the street is always sure to cause a chorus of sympathy from the crowd and condemnation for the detective.

"I suppose that's the best that big brute can do, arresting that poor little newsboy," a woman will say.

say.
"What's he done, robbed a bank?" asks the amateur comedian in the crowd.

But these same people would be the first to denounce the incompetence of the police if that "poor little newsboy" had taken a diamond stud or a purse from one of them. Most of these lads have been arrested so often that they know the ropes thoroughly and they know it is of no avail to weep and protest their innocence after reaching the station. That does well enough on the street corner, but once within the squadroom at the city hall, where half a dozen detectives greet them with "Hello, Benny," or "What, again, kid?" they drop their childish airs and become supremely indifferent to their fate, knowing it is ten to one they will be released in the police court on the plea that they are under nine years old.

Many of the little lads who try to sell newspapers late at night, with piteous tales to move theatergoers, are pickpockets. In the fall and winter, when most of the pedestrians wear overshoes, these little lads walk close beside a man, falling in with his step and follow him for half a block, whining out a tale about being "stuck" on their papers and repeating, "Mister, please buy a paper." All the

time they have a newspaper spread out as if for inspection held close to the pedestrian's side, covering the little change pocket of his overcoat, and while they are walking along the hand closest to the man is exploring the pocket for whatever change may be in it under cover of the newspaper. Success in this line of thievery leads them to bolder attempts. Eventually they abandon selling newspapers, get arrested a few times and develop into professional pickpockets.

The scheme of picking an overcoat pocket under the shelter of a newspaper is but a modification of that used by their older brethren in crime to steal diamond studs. A "nipper" gets on the rear platform of a street car close to a man with a "spark" in his shirt front. He may have followed him for blocks, waiting for him to take a car. Taking a newspaper from his pocket, he stands opposite the victim and spreads the paper out fully, pretending to be intensely interested. He manages to raise the paper to such a height that it covers the diamond stud and just touches the breast of its owner. Then under the newspaper a deft and clever hand holding a pair of steel nippers is extended, the thin gold spiral is supped into and the diamond falls into the hand of the thicf. Suddenly glancing at a street lamp sign, he makes a fuss as if he had passed his corner and jumps off, and another diamond is advertised for.

Of course the ordinary method of the pickpockets on a street car requires the services of two or three men, the "stall" and the "tool" or "dip"the latter being the slang name for pickpockets generally. The two selected to "stall," or distract the attention of the intended victim, either get into a pretended quarrel and attempt to strike each other, during which time the "dip" fleeces the pockets of the victim who crowds forward to watch the fight and forgets to guard his watch and purse, or they pick a quarrel with the victim himself, tread on his toes or jostle him, and after some rough words one seizes his arms as if to shove him from the car and at the same instant the "dip" gets the pocketbook, which has been located by "fanning" or passing the hands over the body of the victim to see whether the bulky pocketbook is in his inside coat pocket or in his hip pocket. The quarrel is brief. When the "dip" softly says, "It's off," the confederates know the trick has been turned and they all spring from the car and disappear. The victim can fume with rage all he pleases. He does not get his pocketbook

ABOUT BOOKS.

No. 2. Take Care of the Boys and Girls.

As promised last week, we present this week a list of books for children beginning with the first grade in school. We can assure you this has not been an easy task. Not because there were not books enough from which to select, but the trouble was, "What shall we leave out?"

The plan adopted is based on that of Froebel, the best critic of children's education that ever lived. You will notice that the plan is not only to develop the different faculties of the mind, but to suit the various ages, with classified literature.

We suppose that the children have had "Chatter-box," published by Estes, and know all about "Bi-ble Pictures and Stories," by Lathrop, price, \$1, or only 60 cents if you know how to buy. If your children are six years old or under and have not had this last-named book, then save your butter and eggs and buy it. You cannot afford to miss giving your child a right start in the Bible study.

BOOKS FOR PRIMARY GRADE.

"Æsop's Fables" has been a book of marvels and the delight of children for three thousand years. Price, 30 cents.

To instill a taste for history, and lay the foundation for further study, get "American History Stories," by Mara L. Pratt. Four volumes, 35 cents per volume. Get as many of these as you like but begin with Volume 1.

For Natural Science get "Stories Mother Nature Told Her Children." It tells how corn grows, about coral, star fish, coal mines, etc. Ginn is the publisher. Price, 50 cents.

"In the Bird World" is a delightful companion book. Illustrated, written in a masterly style, (Ginu). Price 65 cents

To lay the foundation for general history at for "Ten Boys Who Lived on the Road from L. Ago to Now." It gives an idea of the Aryan, Per sian, Greek, Roman, Saxon, English, Puritan, and Yankee boy. It is delightful reading and costs at cents.

As a foundation for literature, buy "American Authors for Young Folks" (Lathrop), for 75 cents simple and interesting.

"Child Life in Poetry," by J. G. Whittier, Is one of the best of its kind ever written. Every pared can trust his children in company with Whittier who has embodied in this little hook the cream of his larger works. Price, 46 cents.

Supplementary to the above we would suggest "Classic Stories for the Little Ones," 35 cents "First Year Nature Reader," 37 cents, "Seven Little Sisters," 50 cents, "Stories from English History," 40 cents, "Grandfather's Chair," cents, "Rollo at Work" and "Rollo at Play," by Jacob Abbot, 40 cents each, should be in every library. "Jungle Book," "Black Beauty," "Little Women," "Tom Brown at Rugby," "Gulliver's Travels," "Swiss Family Robinson," all are children's classics and only a few of what might be named.—Uncle.

LUCKY DIPLOMATS.

Among the many pleasant features of the life of an ambassador in Washington is his immunity from all law and all taxation while residing at the capital in his official capacity. The secretary of the treasury, in a decision just issued, has further exitended the privileges of these gentlemen by excusing them from paying the customary two-cent stamp on checks drawn by them.

This generosity on the part of the government toward the representatives of foreign powers in Washington was quite generally abused several years ago. The representatives of some of the pelty South American republics were particularly obnoxious because of their flagrant violation of or dinary police regulations. It frequently happened that these young gentlemen, after big dinners, came in violent contact with the police, who, not knowing them, treated them as plain drunks. At the station-houses they would present their cards. whereupon they were dismissed with apologies The next day they would complain to the secretary of State of the gross discourtesy shown them, and the secretary was also compelled to apologize of behalf of his government to the minister of the le gation to which the young roisterers were attached This grew to be such a nuisance that the police de termined to remedy the matter by drastic measure-One or two of the more notorious offenders, falling into the hands of the police, received a thorough and well-deserved clubbing before the obtuse p liceman could be made to understand upon whose sacred body his club was falling. There ensued the usual round of apologies from the policeman the chief of police, and the secretary of State, hi the young attaches soon learned a lesson and be haved themselves.

The London Times says: We are justified in leasing more sanguine about the fate of the European in China than the disparity of the apposing force would warrant, because the country represents are mass of contradictions, which talsify habitual sequences, a country where the women have no petitioned and the magistrates no honor, where old not give the sand puzzled people scratch their backing stead of their heads; where the seat of honor where the left and the abode of intellect is in the stomach where to take off your hat is insolent and to wear white is to wear mourning; where, finally, there is white is to wear mourning; where, finally, there is the same and a language with our a grammar.

The ill-repute of Friday as an unlucky day shown by some current statistics to be unabsen. A careful investigation, largely through office channels, has been made of the matter in tiermal and as a result it is found that of 10,048 weekly cidents and disasters, such as are commonly reidents and disasters, such as are commonly tributed to bad luck, 1,074 occurred on Mon in tributed to bad luck, 1,074 occurred on Mon in the tributed to bad luck, 1,074 occurred on Mon in the tributed to bad luck, 1,031 on Wednesday, 1,638 on Friday, 1,038 on Saturday 250 on Sunday.

VISITING CIRCLES.

IN JOHN R. SNYDER.

I WILL send you a short report of my work mong some of the churches of Southern Ohio, in the interests of Our Missionary Reading Circle,

My first stop was at Lower Stillwater church, on Monday, Oct. 1. Susie F. Bookwalter is Local

Secretary On Tuesday evening we met at the Salem church, shere a goodly number were congregated. Here are a number of members. Lara Rinehart is local Secretary. The interest here seems good and I think we can expect a good Circle.

On Wednesday we went to Pitsburg, to the home of Eld. Jesse Stutsman, and in the evening to their church where quite a number had assembled. We had good interest and much inquiry concerning the Circle. Lucinda Stauffer is Local Secretary, and at her request, John Eikenberry was selected to help her, he to work among the people of Painter Creek.

On Thursday evening we were at New Carlisle, where we had more people out than at any previous meeting. Good interest. Sister Funderburg is Local Secretary. There are a good many young people here and I think a good Circle will be or-

On Friday evening we met with the people at West Charleston. Here the house was well-filled with an attentive people. Many questions were asked about the Circle and methods of work. I believe a good Circle will be organized here. Benj. Mudebaker is Local Secretary, and a young man

Un Saturday we were at Harris Creek. Owing to bad weather we did not get to see as many as we would have liked. We talked with quite a number and left the work in charge of Bro. Hartle and Bro.

On Sunday we went to Sidney, but owing to rain and so few coming out but little could be done. Prospects are good for a Circle there.

Taking everything into consideration we think much good was done. In every place the elders and ministers were in favor of the idea. At severplaces they urged their younger members to take up the work. We urged all the Local Sectelaries to keep the work moving while there is merest manifested.

MANEKELEA OF MELANESIA.

"THE llistory of the Melanesian Mission" is as ull of adventures as a romance. One of these, which befell Manekelea, a native teacher who had become totally blind from ophthalmia, shows on what a slender thread a man's life may hang.

Manekelca rebuked a great head-hunting chief, ho had threatened to attack the missionaries. learing of these threats, Manekelea said: "Be it oll will go and see him. If he kills me, never mind; it is for you all.'

to he went, fully expecting death, as did his tew, who said: "Let us go and die with him."

The chief received them with his men armed, but thad given directions that only Manekelea was to killed. Manekelea walked up to him, and said: "Why are you angry?"

You have insulted me," was the reply.

Thave not insulted you, but I have told you and lell you still, that this head-hunting is wrong."

He knew as he spoke that one of the men was ady waiting for the chief's signal to strike him To this very man he turned, pipe in hand, and quietly said:

"Have you got a light?"

The man in sheer amazement let his tomahawk some talk ensued, and the whole thing passed Manekelea's presence of mind had saved his

THE curfew bell does not cause the average ther as much concern as the 11 o'clock belle, who etslists in sitting on the front porch with her hand sized in that of some young man with a yellow and a cackle for a laugh.

GOD'S ORGAN.

THE day had been very sultry and hardly a breath of wind stirred the hot air. But in the afternoon thick masses of cloud gathered abruptly and the low rumbling of the distant thunder gave token of the coming storm.

Soon the splashing of many raindrops told us that the "windows of heaven were opened," and quick flashes of lightning came and went as though through the open window the eye of Jehovali was glancing out. Nearer and nearer came the storm, more vivid grew the lightning and deeper and louder the thunder.

Suddenly the room seemed filled with the flame. So thick and lurid was it that I could not see the affrighted scholars, whose heads were pillowed in my lap. Then succeeded a terrific peal of thunder. A barn near the schoolhouse had been struck, and as the boards, riven from their places by the lightning, flew through the air, scream after scream burst from the trembling children.

But little Hattic, whose brow only four summers had kissed, said, in a clear voice that rose above the noise of the tempest: "Don't be frightened, Sister Mary, it is only God playing on his organ, and he won't let it hurt us." Hattie had just come from California and it was the first thunderstorm she had ever witnessed.

THE POWER OF LOVE.

THERE is no power like love. I loved my little boy long before he loved me. One night 1 heard him say to his mamma, when he thought me asleep, "I love papa," What a thrill of joy that gave me! I had loved him from infancy, but now he was beginning to love me. A few weeks before, he might have seen me carried out of the house in a coffin and, perhaps, not knowing better, have thoughtlessly laughed about it. But now my love for him had found a response. Something like this is the feeling God has when a sinner melts under his love. Love produces love. What a power it might become in our pulpits and Sunday-school classes and meetings! The reason we have so little love for Jesus Christ is that we are so little acquainted with The more intimately we get acquainted with the Son of God, the more shall we love him, and we may get acquainted with him by reading about him in the Word.

JESUS THE JUDGE.

A LADY engaged in litigation was advised to consult a certain lawyer and engage him to defend her cause. She delayed for one reason and another until the last moment. At length, going to him, she began to explain her case; but she was stopped by his saying: "You are too late, I cannot now be your advocate, for I have been appointed a judge."

Let sinners beware. Just now, if they come to Christ, they will find in him a Savior, an Advocate. Let none delay, but put away those frivolous pretexts for procrastination and come to Christ at once, lest delay be followed by a summons to meet him; not as the Savior and Advocate, but as the righteous Judge.

It is said that a young preacher, once desiring to get the opinion of Prof. Jewett as to a sermon he had preached, asked him what he thought of it. The professor looked at him a moment, and then slowly added. " Edward, if you would pluck a few of the feathers from the wings of your imagination, and stick them in the tail of your judgment, you would make better sermons." That is a criticism not likely to be easily forgotten.

A realm which cultivates the spirit of gratitude is a psalm which we ought often to read. If we were more grateful, both our joy and our strength would be increased. Gratitude is born in hearts which take the time to count up past mercies.

LOVE is the solution of most human problems. That is why Christ said, "Love your enemies." It may be a hard saying, but it will work out the solution unerring, if we are willing to try it.

For * the * Wee * Folk

THE MOTHERLESS BIRDIES.

BY J. S. MOILLER,

A SEST full of birdies were chirping for mother, Who was gathering food for sisters and brothers, And returning with dainties for her children at home Was pierced by a bullet, and sank with a grean.

" Teta-tete," " Teta-tete," the children all cry For mother, as she dropped from her home on high, And heard her death-wail at the rifle's sharp knell When she, dead, at the feet of her murderer fell.

The poor little birdies without mother, or food, And no garments to shelter the tender young broad From the storms, and the rains, and the chill of the night, Were left in a suffering, and pittful plight,

Their cries for their mother, for food, every day Grew fainter, and fainter, and helpless they lay Till the once happy home, with its soft cozy bed Was desolate, silent, -the children were dead.

And the cruel murderer of sisters and brothers. When he'd stain the sweet life of their diligent mother, Her beautiful wings from her body tore away, To be worn on the heads of the proud and the gay.

Oh Father of mercies! Who dwellest on high, And hearest young ravens in their pitiful cry, Some Guardian Spirit do thou send us below To protect the mother, and her birdies from woe. Pleasant Grove, Kans.

DOG ROVER.

ONCE I went nearly fifty rods from the house after potatoes and peas for dinner, taking Rover with me. We had to go through high timothy grass all the way. I dog my peck market basket heaping full of potatoes and set it down. When ready to go back to the house, I could not find my potatoes; and Rover, too, was missing. When I reached home, however, there was the basket of potatoes on the doorstep and Rover keeping watch beside it 1 could not see that he had dropped one potato as he came through the long, thick grass. One day the master forgot his mittens in the woods where he had been at work; but about the time he arrived at home. Rover came, bringing the mittens. Lonce gave him a basket of apples to take to the men who were working in the field. They were working so busily that they did not see him set, the basket down. Three or four days after, needing the basket, Lasked the master for it, but he had seen nothing of it. "Rover," said he, "where is the basket your mistress gave you the other day with the apples in it? Can't you go and get it?" He did not even point to the field, but Rover started out immediately and soon returned, bringing the basket of apples. He never touched anything that did not belong to him. It seemed to us he knew everything we said. . Idvance.

. . A TRUE FAIRY TALE.

Do you know of the house Where guiger-shaps grow Where tarts for as chaldren March out in a row? Where wishing is having, Where - isn't it grand' Just up in the garret Is real Fairy Land? Where voungsters can caper And rouge and hallow, For they always do right. Whatever they do? You don't know the house? Then oh deary me, L'ai sorry for you! Why, it's Grandina's, you see

A CHILD'S PHILOSOPHY.

It is one of the prime secrets of bappiness to recognize and accept one's natural limitations, but philosophy of this kind is perhaps hardly to be expected of children.

A little girl had sent back her plate for turkey two or three times, and had been helped bountifully to all the good things that go to make a grand Christmas dinner. Finally she was observed looking rather disconsolately at her unfinished plate of turkey.

"What's the matter, Ethel?" asked Uncle John. "You look mournful."

"That's just the matter," said Ethel, "I am mor'n full."

And then she wondered why everybody laughed.

HOW A MULE WON OUT.

THE following story from the American Magazine tells of the heroic deed of a mule and a driver who was not afraid of anything.

Sometimes the mule is called upon for special service, requiring qualities for which he does not generally receive credit. During the Civil war lines were tightening about the birthplace of secession when Admiral Dahlgren's fleet began operation in the harbor, and rendered it practicable for the troops on shore to advance with some hope of being able to hold points previously untenable. During the night a detachment of the Tenth Corps dislodged a picket post on the eastern end of Morris Island, and when day light came had thrown up quite a formidable beginning for a field-work. But the place was within easy range of Fort Sumter and Battery Wagner, and every rebel gun that could be brought to bear began to drop shell in the little earth-work. It was thought that an attempt was about to be made to carry the place by assault, and, while there were men enough to hold it, they were a little short of aminunition. The only practicable road was a mile and a half of hard, smooth sandbeach, commanded from end to end by the rebel batteries.

But there was a combination in the Federal camp that was equal to the emergency; namely, a flect mule and a plucky driver. The mule is mentioned first, only because he has long since kicked his last kick, but the driver, if he still survives, will acknowledge that without the mule he could not have done what he did. It may be assumed that the mule had a good feed of oats before he was called upon to run the gauntlet, and possibly the driver, too, may then have felt justified in fortifying the inner man. Be that as it may, just before noon a few boxes of ammunition were thrown into the lightest available wagon, and, after looking the harness over carefully, the driver took his seat in the shelter of the sand hills. The mule stood with his extensive cars raking aft and a wicked gleam in his eye, as if the oats were beginning to rise into his

"Good-live, boys! G'up, mule!" and the equipage started down through the dry sand to the hard level of the beach. The mule shook his head and executed a demi-volt when he felt the damp sand under his feet, but the driver soothed him with endearing words. It had not yet dawned upon the rebels that the expedition was intended for the relief of the garrison. But presently the gleam of intelligence was indicated with a rush in the shape of a shell from the southeast angle of Sumter, It struck the water fairly in line, ricocheted, and burst over in the marsh; but it was the signal for action. Up went the whip, and the mule gathered his mighty hind legs under him. For a moment it was uncertain whether he was going to kick or run, but a few remarks of the driver convinced him that there was demand for forward movement, so he "lit out for all he was worth." At least thirty guns commanded that stretch of beach, and they pounded away as fast as they could be fired. Now and then a shell would burst rather too near the mule's ears for comfort, and he would sheer violently and try to make for home. But the gallant driver plied the lash, and held him to his work.

At length a ten-inch shell tore up the beach and exploded so near that the mule was entirely demoralized; but not so his driver. Leaping down from his scat he caught the mule by the head, backed him rapidly round once or twice, and was off again on the keen jump before the gunner could get his range as a fixed object. On he went, and at last dashed into the redoubt; but there was no shelter in it for the mule. His ear's waved conspicuously above the low-lying parapet.

The ammunition boxes were tumbled out unceremoniously, and the mule's nose pointed for home! With the lightened load and the prospects of unlimited fodder, he beat the previous record. But the rebel artillerists were on their mettle now. They had failed to stop the supplies, but their hearts burned for revenge. Their shots now came more from the rear, and bets were freely offered with no takers, on what the result would be should the mule have a fair chance to kick a ten-inch shell, as it were, "on the fly." The crescendo scream of shell chasing him up the beach, lent wings to his

covered, when some careful gunner made a close calculation as to the lengthening range, and pulled his lanyard almost in the nick of time. The huge mass of iron struck the beach, as it seemed to the anxious spectators, exactly behind the wagon, and the next instant nothing was to be seen there but a cloud of white smoke and brown sand. In an instant, however, this floated away, and the mule was seen vigorously reducing to kindling wood what was left of the quartermaster's wagon.

And the driver, where is he? Well, he was apparently knocked over by the explosion, but he got on his fect in a moment, and, having out the traces, was on the mule's back in another, waving his hat in response to the cheers that rolled across the water from Yankee blue-jackets, from Confederate garrisons, and from the dark blue masses that crowned the distant sand dunes.

It is a pity that the driver's name has not been preserved, for his daring act certainly deserved recognition and reward. Perhaps he received both, but the writer has been unable to find mention of

WHY JOHN WEARS A CUE.

"Wity do you wear a cue?"

Sam Sing, of Lewiston, paused and wiped his

He did not know.

Let us tell you.

This cue was a mark of bondage and later an acknowledgment of superiority on the part of the weak to the strong who needed not the cue. Such was the practice in central Asia, west of the Chinese empire. In China itself up to the year 1644 the hair was worn in varying fashions, but never in the cue fashion. The Tartars, whom the Chinese feared, marked all their subjects with cues, but the pigtail was unknown to the Chinaman until 1644. Why after that he was compelled to wear it is another story, in which there is a bit of religion, some superstition and much tyranny.

While for 3,700 years China was seething and boiling within herself there was forming on her northern borders a race of people destined to change the entire course of development of her people. This race came from certain Tungusic tribes whose original home was in Manchuria and Mongolia. They bore the name of Tartars or Manchurians and as early as 907 had conquered a part of China and made much trouble within the empire. In 1644 they again entered China and after much bloodshed conquered it. They set Sun-che upon the throne and inaugurated the Manchu, or Tatsing, dynasty, which still prevails in China

They were horsemen of great prowess, whereas the native Chinaman was not a horseman. They shaved their heads entirely or wore tufts quite similar to that displayed by some tribes of North American Indians. They were prodigious fighters, sayage lovers, iconoclastic in every respect. When their soldiery were in possession of the empire they collected all the Chinese women needed, placed each in a bag, tied the open end of the bag and then made their soldiers take a bag and settle down with it. The soldier could not see what was inside. All that he knew was that it was a woman, and that she was to be his future wife, whether she was old or young, pretty or ugly, blind or halt. The Chinaman did not like this. He rebelled, but so far his rebellions have been futile. But what thus in China became part of a law and a religion, strangely enough in England in the eighteenth century was merely a hair-dressing custom, borrowed from the French, who in turn copied it from the Chinese. English beaux just wore wigs with cues and later shaved their heads just as did the Chinamen, and wore the pigtail.

When the Tartars came upon him he wore his hair in quite ornamental fashion. The Tartars put an end to this They said+

"You are servants of our dynasty. Von must not only acknowledge the Mancho, but show outwardly a sign of submission. Shave your head close to the scalp at all spots but the center. Then permit it to grow long and twist it into a long coil. When thus vou wear your hair you will be known as a faithful subject of the dynasty. Otherwise you are liable to be mistaken for a traitor and be tortured."

The Chinaman obeyed, and by 1651 the shaved heels, and he fairly flew toward the sheltering sand head and the pigtail—the sign of Tartar sovereign- rest of his equipment.

hills. There were only a few yards more to be ty-was almost universally adopted. The native priests of China, like all other priests, were anxion to curry favor with the ruling powers. So to make the shaved head and cue still more permanent the began to preach that no Chinaman could cole heaven if he did not have his cue with him when he died That was the symbol to the gods that he was of the elect. Without it he must dwell forever with the genii of the lower world

So between priests and Manchu emperors it has come about that the Chinaman and his cue are separable. Should the Manchu ever be banished he may cease the cue. The Christian Chinaman often does, but it will be ages before the pigtail will cease to be the token of Chinese bondage to Tattar conquerors and Chinese evidence of certainty of heavenly reward.

THE SIN HE COULD DENOUNCE.

IT was in a Western church. The new minister had just delivered a strong sermon against the evils of stock gambling. Several of the elders took him aside and whispered that he had better avoid that subject in the future, as some of the wealthy and liberal members of the congregation were stock brokers.

The next Sunday he spoke against the evils of drink. Again the elders took him and explained that Brothers So-and-So, who contributed largely occasionally liked the cup that cheers and it would not do to offend them.

The third Sunday horse racing was the theme, and again the minister was warned.

He was in despair. "Are there," he said, "any sins against which I may preach without offending some member of this flock?"

There was silence for a moment. Then a grayhaired elder blurted out: "Yes, preach against Mormonism, and give it to 'em strong."

A SEVERE CRITIC.

"CAN you draw pictures, auntie?"

"Why, of course," said auntie, and pad and pencil were soon in hand.

"What shall I draw first?"

" Draw a cow."

The cow was received with bursts of laughter, and when that was followed by a chicken, which received the same doubtful compliment, the aunt

"If you make fun of my pictures, I will not draw any more."

Sobered at once, the young critic begged for

" Draw a pig, auntie, please?"

When the attempt at a pig appeared, all was quiet for a moment, then the boy, with serious mouth and laughing eyes, looked first at the plo ture and then at his aont and shouted:

"Did you ever see a pig?"

A KATHER amusing story is told in connection with a certain learned professor. He had been asked to deliver a lecture—which he readily consented to do-in the village schoolroom, and on the important night the place was packed with an ev pectant audience.

The front seats were occupied by a few of the shining lights of the neighborhood, and apparent the lecturer was addressing the select few for he talked completely over the heads of the rest of the

At length, at the expiration of a couple of hours audience. the professor dropped his lofty style and bland remarked:

"And now, friends, in conclusion allow me to st that if anyone has a question to ask I will do a best to answer him."

It was a very old villager in the back seat which slowly rose to his feet and asked the first and on

"Aw'd be vurry mich obleeged, messter, be he question: marked, "if ye'd jest tell us wet on airth it is the ye've been praiching aboot."

Cars are greatly venerated in Persia. The (distance) friends of the shah number fifty, each having own attendant and a special room for meals.

"The Inglenook" will be Sent to any Address the Rest of this Year for Twenty=five Cents, or it will be Sent the Rest of this Year and all of next Year for One Dollar.

The Best Way is to send the Dollar and be Done with it. After You Have Read it for a Week or two, You'll be Sorty that You Didn't Save Money by Subscribing for the Whole Year at Once. It's a Paper that Grows on One. Once Read, Always Read!

We Want Agents, == Real Live Agents

In Every Part of the Country. Anybody can solicit Subscribers at the Twenty-five Cent Rate, and Whoever Sends in Club of Ten of These, Can have his Choice of ONE of the following books:

Dictionary of the Bible, Beside the Bonnie Brier Bush, Natural History of Birds and Quadrupeds, Dream Life,

Drummond's Addresses,

Ten Nights in a Bar-Room,

Imitation of Adventures of a Brownie, lmitation of Christ, Etc.

If he gets twenty subscribers he can have two books; for thirty subscribers three books, and so on. And they could be had in an hour's work in many a place. Whoever shows himself an efficient agent will be put in line for the Fall work connected with the Inglenook. There is a library of Fifty bound books waiting for somebody.

The Agent who sends in the largest list of dollar subscribers between this and the first week in January, 1901, will have sent him a Library of FIFTY BOOKS. Here is the list:

Adventures of a Brownie, Æsop's Fahles, Auld Licht Idylls, Autobiography of Franklin, Autocrat of the Breakfast Table, Bacon's Essays, Beside the Bonnie Brier Bush, Black Beauty, Burns' Poems, Child's History of England,

Confessions of an Opium Eater, Dictionary of the Bible, Dream Life, Drummond's Addresses, Emerson's Essays, Ethics of the Dust, Fairy Land of Science, Fifteen Decisive Battles, House of Seven Gables, Imitation of Christ,

Intellectual Life, Lays of Ancient Rome, Longfellow's Poems, Lorna Doone, Mosses from an Old Manse, Nat. History Birds and Quadrupeds, Poe's Poetical Works, Prue and I. Rab and His Friends, Reveries of a Bachelor,

Samantha at Saratoga, Sesame and Lilies, Sketch Book, Sticket Minister, Stories from the History of Greece, Stories from the History of Rome, Story of an African Farm, Ten Nights in a Bar-Room. Thirty Years' War, Twice-Told Tales,

Window in Thrums, Education, In His Steps, Minister's Wooing, Professor at Breakfast Table, Lamb's Tales from Shakespeare, Lallah Rookh, On Liberty, Tanglewood Tales, Sign of the Four.

The Agent sending in the next largest list will have the choice of TWENTY-FIVE books out of the above list. The third largest list will entitle the Agent to FIFTEEN of the books, his choice; and the fourth largest list will win TEN of these There is also a cash commission going to the Agent. We prefer the services of the Messenger Agent if he will write at once for the place, but we will put the first live applicant into line, as the INGLENOOK is not going to be the last in anything. If agents desire to enter for the Library they should say so in order that we may keep tab on subscriptions received at the office. Elgin city is barred in the competition for prizes.

The announcement of the successful Agent will be made in January, 1901.

A Live Paper for Live People.

The Inglenook is no longer an experiment. It is regarded as phenomenally successful by experienced newspaper men who know what they are talking about. The reason is not hard to find. It is a FIRST-CLASS PAPER, with nothing old and commonplace about it. It is up to date, and always will be. It will have something new in each issue, it always has and it never will fall below its self-set standard,—being the best paper of its kind in the world. You can't read it without The Inglenoor being interested and instructed. The whole wide-spread world is ransacked in the interest of its readers. isn't made with a dull pen and a pair of shears. It is a live paper for live people.

The like of it was Some of the best known men and women in the church will write for the INGLENOOK next year. never undertaken in the church before. Look at the names, note the subjects! Every man and woman in the list knows what they are talking about.

PUBLISHERS. Elgin, Illinois, U.S.A. Vol. II.

ELGIN, ILL., Nov. 3, 1900.

No. 44.

IT MUST BE SETTLED RIGHT.

However the battle is ended,
Though proudly the victor comes
With fluttering flags and prancing mags
And echoing roll of drums,
Still truth proclaims this motto
In letters of living light—
No question is ever settled
Until it is settled right.

Though the heef of the strong oppressor
May grind the weak in the dust,
And the voices of fame with one acclaim
May call him great and just,
Let those who applaud take warning
And keep this motto in sight —
No question is ever settled
Until it is settled right.

Let those who have failed take courage,
Though the enemy seemed to have won,
Though his ranks are strong, if he be in the wrong,
The battle is not yet done.
For sure as the morning follows
The darkest hour of the night

For sure as the morning follows

The darkest hour of the night
No question is ever settled

Until it is settled right.

O man bowed down with labor,
O woman young, yet old,
O heart oppressed in the toiler's breast
And crushed by the power of gold,
Keep on with your weary battle
Against triumphant might,
No question is ever settled
Until it is settled right.

-Ella Wheeler Wilcox.

WHEN WE WERE YOUNGER.

It's all been a good while ago, but each Autumn he same old instinct overtakes us, as it did back in he days when we taught the village Academy and had Saturdays to ourselves—that is, the dog and the writer. I place the dog first, because without im little would have happened. He was a rry, smooth-coated dog of the terrier kind, and his strong point was squirrels. It was a squirrel tountry, and that means forests of tall trees with bere and there a nut tree. At the place we boardtd there was an old-fashioned rifle. It had cost a mint of money, and had been made by a celebrated ocal gun artist. It was a muzzle loader, and the ball required a greased patch. The ramrod was a slender piece of seasoned hickory, and once propery loaded, the hair trigger set, and a convenient tree to steady against, the gun would send a ball Just where it was held within a hundred yards'

Bright and early on a Saturday morning in October, or later, the usual thing was to start for the moods with dog and gun. It would have broken the dog's heart to have stayed at home under the dicumstances. Away we went, the crisp, brown leaves rustling under foot, the sun just over the hill, he gurgle of the brook in the air, and that indeatibable buoyancy of youth that goes so quickly. I stems, once it has really left us. All the world has before us in those days, and it was rose-colored. On nearer view and later acquaintance—But never mind, let all that go. It is the past we are talking bout. Presently there is a wild "Yap-yap-yap" not the dog, and off we go to overtike him. There he is at the root of a tall hickory, down in te meadow where the stream ripples. He has eyes of fire fixed in the tree top, and tries to climb the Dugh bark. The squirrel is there, but where?

We circle slowly around and around the tree, taking in every limb and fork of each twig. The dog whines and prances around below, but all he knows that the frisky shadowtail went up its bark like a systreak, dropping a hickory nut on the way, as your arm, is something flattened out close to the lite. All that is clearly seen are two pointed ears, way, but showing distinctly against the blue sky. The craft of the squirrel is wonderful but he has ead, and perhaps he cannot do it. Now for a con-

venient tree for a rest, still of course, keeping the squirrel's head in sight. Up comes the long rifle, the hair trigger is set, the dog dances, and then the steady sight-there is a vicious snap, a spurt of fire, and up in the tree a bluish gray ball of fur is writhing. It lets go, all but one paw, then that loosens, and down comes the poor beastic, bouncing from a limb, and striking the ground with a thump at the moment the dog snaps it for a shake. It was successful hunting, but the writer wouldn't do it these days, for he looks on it as murder. There lies the little animal, shot to death, and never more to swing in the tree tops on a pendulous limb. Thirty or more years have wrought a wonderful change. What was eagerly sought in those days is as sedulously avoided now. Murder is murder and it is not right.

Repeated half a dozen times in the forenoon in varying ways and we find ourselves where the spring boils out at the foot of a maple, and here, lying down, we drink of the pure water coming through the bubbling yellow sand at the bottom. And with the gun against a tree, the dog lying near, we dreamed of things that have never come to pass, but we were happy and healthy. The dog has gone, who knows where, the gun with its crescents and half moons of inlaid silver is probably done for, the forest has disappeared, most of the students are dead, the squirrels are perhaps as lively as ever, but there is something wanting in the hunter. What is it, think you? It seems to me that it is Youth, lightly held and little valued, that has gone, and other things fill the mind of the writer. But sometimes, when the red and gold of the Autumn is in the land there comes a feeling to whistle out the dog, get the old gun and do it all over again. Then we remember and try to forget that we are going down the other side of the hill.

LAND OF THE HUMMING BIRD.

Few people who travel over the asphalted streets of New York are aware of the origin of the black, pitchy mass that goes to make up the basis of the smooth roadway under their feet. Eighteen hundred miles almost due south from New York lies the little tropical island of Trinidad—a British possession off the coast of Northern South America. At the southwestern extremity of this colony the famous Pitch Lake is located on the summit of a small hill, less than 200 feet above the level of the sea. In appearance there is nothing phenomenal about this wonder of the tropics, but a visit to the lake, as it is familiarly called, reveals one of the most unaccountable oddities of nature in the annals of travel.

The tourist may take passage to the "land of the humming bird," as Trinidad people like their community to be called, and after securing accommodation at the only decent hotel in the colony, proceed to the lake by one of the small government steamers, plying coastwise three times weekly, disembark at the Brighton pier, and proceed to the scene of the "digging." Of all the crude, rough, and ready means of extracting wealth from mother earth, the Trinidad Lake asphalt operations are the most striking. The visitor arrives on a fairly level plateau, spotted here and there with tiny pools of water, beneath which the soft shiny surface known as asphalt glitters in the reflections of a herce tropical sun. Scattered over the surface of the lake dozens of swarthy negroes are plying pick and hoe, extracting the tar-coaly looking stuff from the earth.

One may sit in the shade of a near-by shrub, or under the protecting shelter of an umbrella, and watch the negroes pile heap after heap of the asphalt into the endless chain of tubs that hurry along to the pier, from which one has but recently landed, until a yawning excavation of twenty or more feet suggests to the supervising darky that the time has come to move a bit further on. In the course of a few hours the excavation resulting from the morning's digging begins to look less deep,

and by eventide the spot from which more than five or ten tons have been dug is again level with the surrounding earth, and ready to be dug over by the gang of noisy blacks. From the point of digging to the pier is but a mile or less of endless-chain descent; moored to the pier are big sailing vessels, and sometimes steamers, into whose capacious holds the tubs discharge the pitch at the rate of two or three hundred tons per day.

COMING DOWN WITH A PARACHUTE.

"Coming down from the clouds in a parachute is like a dream," said a circus balloon artist, "Ever dream of falling from a high place? You come down, alight quietly, and awake, and you're not hurt. Well, that's the parachute drop over again. No, there is no danger. A parachute can be guided readily on the down trip, but you can't steer a balloon. To guide a parachute out of harm's way, a practiced hand can tilt it one way or the other, spill out air, and thus work it to where you want to land, or to avoid water, trees, chimneys or church spires. Circus ascensions are generally made in the evening. When the sun goes down the wind goes down. The balloon then shoots into the air and the parachute drops back on the circus lot, or not far away, A balloon is made of four-cent muslin and weighs about 500 pounds. A parachute is made of eightcent muslin. The rope that secures the parachute is cut with a knife. The aeronaut drops fully 100 feet before the parachute begins to fill. It must fill, if you are up high enough. There are several hundred parachute men in the business and the accidents are less in ratio than railroad casualties. Our business is new at that. After awhile the ratio will be less. A man can't shake out a parachute if it doesn't open. A man in the air is simply powerless. Invariably the fall is head first. When the parachute begins to fill the descent is less rapid, and finally, when the parachute has filled, it bulges out with a pop. Then the aeronaut climbs on to his trapeze and guides the parachute to a safe landing. In seven cases out of ten you can land back on the lot where you started from."

JUST A HINT.

"FATHER," said Tommy the other day, "why is it that the boy is said to be the father of the man?"

Mr. Tompkins had never given this subject any thought, and was hardly prepared to answer off-hand.

"Why, why," said he, stumblingly, "it's so because it is, I suppose."

"Well," said Tommy, "since I'm your father I'm going to give you a ticket to a theater and a dollar besides. I always said that if I was father I wouldn't be so stingy as the rest of them are. Go in and have a good time while you're young. I never had a chance myself!"

Mr. Tompkins gazed in blank amazement at Tommy. Slowly the significance of the hint dawned upon him. Producing the silver coin, he said:

"Take it, Thomas. When you really do become a father, I hope it won't be your misfortune to have a son who is smarter than yourself."

POPE LEO'S IDEA OF DRESS.

The following story comes from Rome. Some ladies made their appearance at a Papal reception, to the grave displeasure of the Pope, in ball-room dress. A well-known Cardinal was instructed to apprise these offenders of their breach of etiquette. The Cardinal thus fulfilled his somewhat delicate mission; "The Pope," he said, "is old fashioned and does not like décollete dresses; but I am quite accustomed to them, for I have been so much among savages when a missionary that I do not mind them."

Correspondence

AT A CLAMBAKE.

PROBABLY few Inglenook readers have ever been at a seaside clambake. It is out of the ordinary for the average man, and unless he has been along the coast at the right time and season of the year he has missed a big sight and a good time. People who do not like oysters would probably not care for clams, but at a regular and well-ordered clambake there are other delicacies that keep the inland man or woman with the inborn dislike for shellfish from going away hungry. In the first place a real, orthodox clambake can only take place along the shore, or beach of the ocean. Strictly speaking it is not a bake at all, for the food is steamed rather than baked. A writer in Pearson's tells how it is

Having received his orders as to time and place and the number of persons to be fed, the clambaker makes his preparations. He arranges for the supplies, and over night gathers the necessary amount of seaweed. This is kept in the water until it is almost time to use it, so that it shall be thoroughly moist. Then he gathers a supply of smooth, hard boulders, varying in size from that of a man's fist to two or three times that of a man's head, the number depending on the size of the intended bake. These he gathers in a circular pile on the spot of ground close to where the bake is to be served. On top of the pile of stones he heaps up his fuel-driftwood or ordinary firewood, as the case may be. It takes several hours to bring the stones to the proper heat, so the fire is lighted well in advance, and the clambaker and his assistants go about their other preparations. The things to go into the bake, including the bushels and bushels of clams which form its foundation, are near at hand. In a pail of water are a number of squares of clean, white cheese cloth. A table is improvised from a board and two empty barrels, and on this a very important part of the operations is carried on, This consists in tying up the food in big bundles in the cheese cloth, each kind in a parcel by itself. One of the squares is filled with chicken, plucked and drawn; another with fish, properly cleaned; another with potatoes with their "jackets on;" another with the frogs' legs with the skin off, and so on. The cheese cloth separates the different foods from one another in the bake, and prevents their coming in contact with the seaweed.

Now, the fire having burned down to glowing embers covered by a coating of blackened ashes, in the judgment of the clambaker the stones are hot enough to do their work. He and his assistants go at the remains of the pyre with rakes and brooms until shortly nothing is left of it but the cleanlyswept stones. Some of these have been cracked in pieces by the intense heat and all show beneath the blackened gray of their exterior a pinkish glow evidencing the fire left in their hearts. They are pushed close together in a neatly-rounded pile, and we are now ready for the first step in preparing the bake proper.

On to the stones is quickly pitchforked a layer of seaweed about two feet thick. As it strikes their hot surfaces a cloud of white steam arises and the surrounding air is filled with a pungent aroma as indescribable as it is delightful to the nostrils of the experienced epicure because he recognizes it as the harbinger of many good things to come. It will be present as a scarcely to be detected underflavor in all the food cooked in the weed and it is this aroma that gives a clambake its unique distinction among lovers of good eating. On these again is poured another layer of clams, which settle down into the interstices between the bundles and form an interior roof for the mixture that is soon to be so delicious. Now another layer of seaweed is put on so that the heap looks like nothing so much as a smouldering bonfire of dark green brush except for the whiteness of the smoke and the smell of the sea chemicals. Over the whole structure is pulled a double thickness of sail canvas, which is fastened securely at the edges with heavy stones so the least possible amount of the precious heat and vapor shall escape. So your clambake is properly constructed—is already cooking.

Depending on its size, it will take it an hour or

increase your appetite to its largest possible outside limit.

At last the delightful music of the clambaker's fish-horn is heard announcing that the bake is ready to be opened. The tables are ready under the trees, or in the pavilion, and if you are an oldtimer at clambakes you will make a rush for a seat as near the bake as possible, so there shall be no danger that the food shall not reach you piping hot.

HOME OF THE PLAGUE.

ONE who has seen any of the towns and cities in China wonders little why disease and plague are prevalent. A correspondent lately in China writes that he recently went to Foo-Chow, a town near the East coast, which is approached by way of the river Myn, one of the most picturesque waterways in the whole of the Celestial empire.

Ships have to anchor at the customs pagoda, from which persons are conveyed to Foo-Chow by sampan, or steam launch, the distance being about ten miles.

Poo-Chow is considered one of the most filthy and overcrowded towns in China, and a person landing there cannot fail to notice the fact immediately he sets foot on shore. Everywhere there are teeming masses of dirty, ragged, and half-starved looking celestials. The streets-alleyways would be a better term-are only about eight feet wide, and all metaled or paved with irregular lumps of stone and rock. On each side there are stagnant gutterways, which emit most obnoxious perfumes, causing one to hold a handkerchief to his nostrils the whole time he has to traverse the roads.

In the terribly hot weather the Chinaman places a plank of wood from his doorway on to the street, across the gutter, and takes his night's sleep, perhaps without a covering, perhaps in the clothes he has not had off for weeks.

Nearly every building is a shop, and outside every three or four are placed buckets of garbage-in some places holes full of it—which add to the sickening stench of the gutters. Every now and again one hears loud shouting in front or behind him, which is an indication that all on foot must clear the way for some chair carriers, who are carrying upon their shoulders some important personage.

The sight on the main bridge spanning the river cannot be accurately described. Each side was crowded with stalls with goods of every description -dirty-looking, tumble-down affairs. Cripples and beggars were numerous, and there were also lepers; there were men with terrible sores, and two Chinamen lay half-naked on the roadway, dying. There is a law in vogue in Foo-Chow that the first person who shall touch a man who has died in such a manner shall bury him. Very few, however, receive burial if they die on the bridge. The person who is unfortunate enough to touch the dead one waits until dark, and then, as the Americans say, "dumps" the departed into the river. Bodies are found nearly every day floating among the shipping, or half buried in the mud when the water is low.

BATTERED OR PLUGGED COINS.

FOUR different legal tribunals, among them the United States supreme court, have decided that "slick," or smooth, dimes and plugged, battered and even slightly mutilated nickels are legal tender when offered to common carriers. Most people have had such coins passed back to them at one time or another and have never questioned the right of the person to whom they were tendered to reject them. But no one has any legal right to reject such coins. The law of the land strictly defines what coins are to be rejected and the reason for the rejection, and the nickel and the dime are not included. So long as the coin-whether it is a dime, a quarter, half dollar, dollar or a nickel or cent-is distinguishable as a genuine United States coin and its denomination can be ascertained the fact of its being slick or worn smooth doesn't count; it is good, lawful money, is a legal tender and no good citizen who respects the law should refuse it.

Are "slick "silver coins good money? Yes. Is the objection that they are worn smooth a legal objection to accepting them? No. Do shopkeepers who refuse them offend the law? Yes, for ignortwo to cook, and it is your duty in the meantime to ance of the law is no excuse, is a well-known legal

maxim. The idea of these shopkeepers that the dime or quarter worn smooth is no good is just con trary to the decision of four courts - the jury court the supreme court and the court of errors and a peals of the State of New Jersey and later the preme court of the United States

THE SMELL OF THE ONION.

Ir is interesting to make inquiry into the cause of this unfortunate quality of the onion. It is sim ply due to the presence in some quantity of another mineral matter in the bulb-sulphur. It is the sulphur that gives the onion its germ-killing prop erty and makes the bulb so very useful a medicin agent at all times, but especially in the spring which used to be—and still is in many places-th season for taking brimstone and treacle in oldfash ioned houses before sulphur tablets came in

Now, sulphur, when united to hydrogen, one of the gases of water, forms sulphuretted hydrogen and then becomes a foul-smelling, well-nigh a felid compound. The onion, being juicy, has a ven large percentage of water in its tissues, and this combining with the sulphur, forms the strongh scented and offensive substance called sulphere of allyle, which is found in all the alliums. This sulphuret of allyle mingles more especially with the volatile or aromatic oil of the onion; it is iden tical with the malodorant principle found in asafet ida, which is almost the symbol of all smells that are nasty. The horse-radish, so much liked wit roast beef for its keen and biting property, and a ordinary mustard of our tables both owe the strongly stimulative properties to this same si phuret of allyle, which gives them heat and acrid ity, but not an offensive smell, owing to the differ ent arrangement of the atoms in their volatile oils.

THE WHITE DEATH.

"Or all the natural phenomena peculiar to the Rocky Mountain region none is more strange of terrible than the mysterious storm known to the Indians as 'the white death,' " says a scientist who recently visited that region. "Scientific men have never yet had an opportunity of investigating it, be cause it comes at the most unexpected times and may keep away from a certain locality for years Well-read men who have been through it say that it is really a frozen fog. But where the fog come from is more than anyone can say. This phenom non occurs most frequently in the northern part of Colorado, in Wyoming and occasionally in Mon-

" About two years ago a party of three world and two men were crossing North park in a wage in the month of February. The air was bitter) cold, but dry as a bone and motionless. The shone with almost startling brilliancy. As the fi people drove along over the crisp snow they d not experience the least cold, but really felt mo comfortable and rather enjoyed the trip. Mout tain peaks fifty miles away could be seen as d tinctly as the pine trees by the roadside

"Suddenly one of the women put her hand up t her face and remarked that something had stuff her. The other members of the party did the thing, although not a sign of an insect could be seen. All marveled greatly at this. A monitor later they noticed that the distant mountains well disappearing behind a cloud of mist. Mistingle orado in January! Surely there was no mistake because within ten minutes a gentle wind began blow and the air became filled with fine particles something that scintillated like dramond dust int sunshine. Still the people drave on until the came to a cabin where a man signaled to then stop. With his head tied up in a hundle of mul lers, he rushed out and handed the driver a piece paper, on which was written, Come into the bo quick or the storm will kill all of you. Don't to outside here.'

"Of course no time was last in getting un cover and putting the horses in the stables. they were a little late, for in less than an hour whole party were sick with violent coughs fever. Before the next morning one of the will died with all the symptoms of pneumonia. others were violently ill of it, but managed top through after long sickness."

Nature & Study -

CARNATIONS.

DMNTV and sweet as carnations are they thrive in the smoky city and for that reason people lucky the smoky city and for that reason people lucky greenhouses always raise them. Then spiciness and strength make them great favorites with nearly every one. In England they have carnation shows, just as we have displays of have carnation shows, just as we have displays of have carnation shows, and the fact that they use the favorite blossom of Queen Victoria adds not a little to their fame abroad.

Yellow carnations are rarest and most valuable, Yellow carnations are rarest and most valuable, The blooms easily hold their own with the famous Malmaisons. A lovely new carnation that appeared of its own accord is a salmon-pink and is noted for

Apricot carnations are decidedly beautiful and Apricot carnations are decidedly beautiful and extra large. A queer new tint is called chocolate, but it will never be as popular as the pearly white ones, or the great rose-colored blossoms. There is another carnation which is a perfect mauve in tint and still another is slaty-violet. There is a rich red-brown, buff and a yellow marked with red and maroon among the novelties. Indeed, the novelties include some remarkable combinations, the flowers tooking as though they had been splashed with colored inks in riotous profusion.

In growing carnations they should never be overwatered and should have lots of air, with a dry atmosphere. It is easy to kill carnation plants with too much kindness. They do not stand being lossed over.

A HORSE THAT UNDERSTANDS.

BY HENRY E. KORNHANS.

The following is taken from the Ohio Farmer:

A Missouri correspondent of Colman's Rural World gets off the following "tough" story. A little incident showing the intelligence of the highbed horse is this. My youngest daughter, a few evenings since, went out to milk. Jersey was some hundred yards distant and did not seem disposed to tome for calling. Joel Miller, our three-year-old Kahoka Boy pacer, came ambling up and my daughter said:

"Joego and bring Jersey up." He wheeled and went pacing across the meadow and drove up a neighbor's Jersey we were pasturing. "Not that one Joe, bring our Jersey." Away he paced and "tounding up" the yearling, "Blossom," drove her to where her mother was standing in the corner of the mendow and came back looking very demure and acting as though he wanted to know how she liked that, "Now, Joe, you know better than that, go and bring Jersey here to me." Without further ado he went sailing after the cows and brought them up in a jiffy, taking his stand about twenty ket away till the milking was done, when he meandered off, picking grass as though he had not just done something wonderful. My wife, daughter and a little niece were witnesses to this marvelous

If this be true it seems as though animals could understand our speech.

Orreille, Ohio,

THE FLYING SQUIRREL.

Among the small animals which are quite a rare sight to city folks, although familiar enough in the country, is the cunning little flying squirrel. This is really a wonderful creature, and seems to be a soft of compromise between a bird and an animal. It is about five inches long as to its body, which is black and gray and white beneath, and carries a culiar construction, which assists in its flight from or, in reality, leaping—18 a loose membrane constructed.

or, in reality, leaping—is a loose membrane conacted to the front and hind legs on each side, which the squirrel has the power to expand at will, air,

When they desire to go from one tree to another they first ascend to the topmost branch and boldly appendages make themselves useful. They spread takes a downward, circular flight toward another

tree. When it arrives within six or eight feet of its intended landing-place it changes its position so as to light upon its feet against the tree, when the membranes become greatly reduced and are not at all in the way.

They live in decayed trees, where, if not disturbed, they become quite numerous. They are difficult to catch, and bite viciously when captured; but they are easily domesticated and make admirable pets, and soon become an unfailing source of amusement to the children. They live upon nuts, acorns, and insects.

THE DOO LAUGHED.

The proprietor of a Third Avenue store owns a little black kitten that cultivates a habit of squatting on its haunches, like a bear or kangaroo, and then sparring with its forepaws as if it had taken lessons from a pugilist.

A gentleman took into the store the other evening an enormous black dog, half Newfoundland, half collie, fat, good-natured, and intelligent. The tiny black kitten, instead of bolting at once for shelter, retreated a few paces, sat erect on its hind legs, and "put its fists" in an attitude of defiance. The contrast in size between the two was intensely amusing. It reminded one of Jack the Giant Killer preparing to demolish a giant.

Slowly and without a sign of excitability the huge dog walked as far as his chain would allow him, and gazed intently at the kitten and its odd posture. Then, as the comicality of the situation struck him, he turned his head and shoulders around to the spectators, and if animal ever laughed in the world that dog assuredly did so then and there. He neither barked nor growled, but indulged in a low chuckle, while eyes and mouth beamed with merriment.

ANIMALS THAT SWIM.

NEARLY all the ruminants are excellent swimmers, and all take freely to the water, except, perhaps, the wild sheep and the camels. Of pigs it is commonly reported that so queerly fashioned are they that if they attempt to swim they cut their throats with their forefeet; but this is only an old fable. Whether wild or tame, they are all good swimmers, though, owing to the shortness of their legs, they just touch their throats with their forefeet and beat the water high.

Many of the islands of the southern seas are now inhabited by wild pigs, which are the descendants of those which have swum ashore, sometimes great distances, from wrecked vessels, says *Pearson's*.

Camels cannot swim. They are buoyant, but ill-balanced, and their heads go under water. They can, however, be taught to swim rivers with the aid of goatskins or jars fastened under their necks.

During the Beluchistan expedition of 1898 the camels were lowered into the sea from the slups, and their drivers, plunging overboard, clambered on to the rear part of their charges causing the animals' heads to come up; and thus assisted they were successfully piloted ashore. Several animals, such as hedgehogs and bats, which would, at first glance, he considered incapable of swimming, are in reality respectable performers.

A PHONOGRAPH GOOD FOR TEN MILES.

A PHONOGRAPH that shouts so loudly that every word can be heard at a distance of ten miles has been tested at Brighton, England.

You can whisper a sentence into the machine's small funnel-shaped mouthpiece and it will repeat it in tones that are more deafening than the shricks of a liner's steam siren. Yet every word is perfectly articulated, and a shorthand writer ten miles away can take down the message as easily as if you were dictating to him in a small room.

In appearance it—the machine—is merely an ordinary phonograph, with a large trumpet measuring four feet in length. Inside this trumpet there is a small and delicate piece of mechanism that looks is something like a whistle. This is the tongue of the machine.

Instead of the "records" being taken on wax in the usual manner, a sapphire needle is made to cut the dots representing the sound vibrations on a silver cylinder, and when the needle travels over the metal a second time, the vibrations cause the whistony to the control of the "records" being taken on wax in the puzzled to know whether I should be true or Senator Frye. "Welt," representing the sound vibrations on a silver cylinder, and when the needle travels over the metal a second time, the vibrations cause the whistory of the control of the puzzled to know whether I should be true or Senator Frye. "Welt," representing the sound vibrations on a silver cylinder, and when the needle travels over the metal a second time, the vibrations cause the whistory of the control of the c

tle to produce a series of air-waves, and the machine thus becomes a talking siren which transforms the human voice into a deafening roar.

The experiments were made near the Devil's Dyke, Brighton, where the inventor has his workshops.

QUEST FOR OSTRICH EGGS.

Although the skin of an ostrich is worth from \$40 to \$100 on the spot, the hunter of the desert usually prefers to search for the eggs when he has discovered an ostrich in flight. An English traveler in the Sahara, H. B. Tristram, describes this search:

"Once, and once only, I had the good fortune to take an ostrich's nest, although fresh eggs were not infrequently brought in by the Arabs. We observed with our telescopes two birds standing for some time in the same spot and were induced to ride toward them. They rapidly scudded off, but on intersecting their track we turned back and retraced it instead of continuing a vain pursuit. An ostrich's track is by no means easy either to follow or to retrace, for his stride measures, when he is at full speed, from twenty-two to twenty-eight feet, and the oblong impression of two toes at so wide intervals affords no very evident track to any eyes less expert than those of a Bedouin huntsman.

"We retraced the impression to the spot where we had seen the birds standing together and where the sand was well trodden down. Two Arabs at once dismounted and began to dig with their hands, and presently they brought up four fresh eggs from a depth of about a foot under the warm sand.

"Ostrich egg omelet we always found a most welcome addition to our desert bill of fare, and a convenient and portable provision, for from the thickness of the shell the eggs keep perfectly sweet and fresh for a fortnight or three weeks."

Two instances showing how tenacious of life lobster and cod are, is related in a bulletin of the United States fish commission. In the fall of 1899 about twenty lobsters were left in a car in the "basin" at a fish commission wharf. Near the end of March, 1900, when the car was opened, all seemed to be in a perfectly healthy condition.

On the conclusion of the fishing for broad cod in the fall of 1899 fourteen cod weighing from four to six pounds, taken with hand lines off Nomans Land or Nantucket, were inadvertently left in the well of the Grampus and not discovered until April, 1900. These fish were placed in the well not later than Nov 18, possibly some days before. During this time they had not been fed and had only such food as came through the holes in the well. When released in Gloucester harbor on April 16 they were found to be lively, although somewhat emaciated.

FANCY a baby petting a rattlesnake. Yet this was the perilous position in which F. E. Pierce, who lives near Coyote Creek, Cal., found his little one the other day.

Mr Pierce has a daughter still younger than fiveyear-old Mabel. When the little toddler came hurrying into the house saying: "Oh, papa, tum an', see what Mabel is playing with!" Mr. Pierce at first paid no attention to her. But she prattled so insistently that finally, to please her, the father did "tum an' see."

What he beheld norrified him.

Mabel was cuddled up close to a snake and stroking its back with both dimpled hands. His snakeship appeared to be enjoying the attention, and lay perfectly quiet, but on the approach of Mr. Pierce to rescue his child the reptile made a sudden angry spring at him, and had he not that instant jumped back the fangs would have entered his flesh. Mr. Pierce, however, sprang forward and seized Mabel before the snake could strike again. He then secured a club and despatched the enemy. Eleven rattles and a button are souvenirs of the fray.

WHEN Senator Frye was at Rangeley Lake a native approached him and said: "Mr. Frye, 1 am puzzled to know whether 1 should call you Mr. Frye or Senator Frye, " "Welf," replied Mr. Frye, "if I was in Washington to-day my friends would say, 'Good morning, senator,' but anything goes up here. Bill's as good as anything."

THE INGLENOOK.

PUBLISHED WEEKLY

At 22 and 24 South State Street, Elgin, Illinois. Price, \$1.00 a year. It is a bigh grade paper for high grade boys and girls who love good reading. INGLENOOK wants contributions, bright, well written and of general interest. No love stories or any with killing or cruelty in them will be considered. It you want your articles returned, if not available, send stamped and addressed envelope. Send subscriptions, articles and everything intended for THE INGLENOOK, to the following address:

BRETHREN PUBLISHING House, Elgin, Illinois.

Entered at the Post Office at Elgin, III., as Second-class Matter.

MAKERS OF HISTORY.

It must be clear to all that in the history of the world there have been those who have stood well to the front in the changes that have been wrought. As the world grows older these men stand out prominently, and what they did, is clearly seen. Every great movement that changed the current of human affairs was originally a thought in one man's mind. Who this man was, when and where he lived, and what he did, is of absorbing interest to all who care for mental improvement. Read the list carefully from week to week. Make a study of it. Go back over your 'Nooks and review them till you can answer the questions: Who was he, when did he live, what did he do? If you get this so that you can tell off-hand what will be set forth here you will be in possession of a mine of information. Many a weary page has been studied that the simple presentation of facts might be made, and any man or woman who will thoroughly study and fully remember the Who, When and What of the individuals composing the list, so that they can repeat it at will, will be in possession of more knowledge of general history than lies at the tongue's end of nine college graduates out of ten, the country over. Every reader who lets this chance go by is making a mistake beyond all doubt.

The list is arranged according to the time at which these people lived, not according to what they did. A good idea is to form a quiz class in the family and review from week to week. The knowledge is yours for the taking. See that it does not fail to find its way into your head.

* * * HOMER: The place of his birth is in dispute, seven cities having claimed the honor, and the place and date of his death is also a matter of legendary lore. But that he was, by all odds, the greatest poet of antiquity is agreed to by all critics. He probably lived about 850 B. C., and he was a Greek. His greatest poems are the *Iliad* and the Odyssey. At this time, and prior thereto, the world was full of legends and myths, and it is the telling of these in masterly style that gives him his place as the greatest of poets. He takes a grand, heroic idea, or legend, and treats it in an heroic style. For ages he has been read, studied, and admired, both in colleges and by the scholar in his library, and his impress, in a literary way, covers a large part of the world's known history. It is as the world's greatest poet, of all ages, that his fame is built upon. No other poet has been so world-wide in his influence.

CONFUCIUS: Born in China, 551 B. C., died, 479 B. C. His name in Chinese is Cong-fu-tze, and if impressing one's individuality on people constitutes greatness, then Confucius is one of the world's greatest men. He was a philosopher, according to the Chinese ideas, and he was not the head of a great system of religion,-what he taught not being a system at all-but rather the formulating of certain principles of morality and equity, as applicable to society and to politics as they are to religion. A great deal of what he inculcated has the stamp of high morality, and he was accepted as authority by millions. There are at least two thousand temples erected in China to his memory, and his impress is on uncounted millions of people, dead and living. Obedience to parents and reverence for ancesturs are two of Confucius' great features, and this is a distinguishing characteristic of the Chinese to this day. Truly, if influencing the world constitutes greatness, Confucius is entitled to a first place in the history of the eminent.

BUDDHA: The founder of the world's strongest sect, numerically speaking, was born 550 years before Christ, and died 470 years before Christ. He taught that a great religious reformer came at intervals, his doctrine flourishing for a time, and then after dying out, a successor came. Such he professed to be. Of immaterial existence, such as Christians believe in Buddhism knows nothing. The morality of Buddhism is, for the most part, of high order; self-conquest and universal charity being the foundation facts. At first the new religion rooted in India, but became corrupt and was expelled. At present it is far removed from the teachings of its founder. It is doubted among scholars whether Buddha intended to establish a new religion, but it certainly so happened in the course of events that it was adopted by the people, and today, in one or another of its forms, more adherents are to be found to the direct or indirect teachings of this reformer than to any other cult in the world. His personal life was pure, but his philosophy has been much vitiated. He taught different stages of after existence too extensive to be considered here.

Pericies: An Athenian statesman, born 479 B. C., died, 429 B. C. His fame in the world's list of great men is based on the services he rendered his country both as a statesman and a great general. He was a finished orator, and a far-seeing statesman. He kept a fleet of sixty ships at sea eight months out of the year, so that the young Athenians might become better acquainted with naval affairs. He introduced the idea of paying the soldiers out of the public treasury. At the time of his political ascendancy Athens was ostensibly a democracy, but Pericles was the one man, and his ideas and methods prevailed. What makes him great is the fact that his methods were so wise that at the time of his rule his country was at the greatest and happiest stages of her history, and it was one of the greatest ages of the world. Most of this was due to the wisdom of Pericles, and this is why he holds the place he does in the world's history.

Phidias: Born about 500 years before Christ, time of death uncertain. His fame is based on the fact that he was one of the greatest of Greek sculptors. Prior to his undertaking the work of a sculptor he had studied painting with one of the Greek masters of the art, and when he took up the work of a sculptor he combined the effects of the colorist with his efforts on the ivory, wood, and marble on which he wrought. In some of the colossal figures he executed, the nude parts, such as the hands and feet, were of ivory, while the drapery was of gold, enriched with enameled coloring, and the result was a great splendor of effect, not attained by any other sculptor prior to or cotemporary with him. Some of his work is preserved in the British Museum. But it is as one of the world's greatest sculptors combining the inimitable skill of both color effect and form that gives him his place among

Socrates: Born in Athens about 469 B. C. He was a man who acquired a remarkable tact in dealing with practical morality. He was remarkably pious according to his times and had a steadfast belief in the existence of a Supreme Being and Creator of the universe. It is this exposition of his views, his high morality and his general teachings that give him a place among the leaders of men. He claimed for himself much that could not be established, such as saying that he was in communication with the gods, and that he acted under their guidance. He maintained the immortality of the soul and from what he taught and the nature of his teaching and its influence on his surroundings, is entitled to fame.

OUR SHORT SERMON.

Text: Taking Care.

THERE is one thing that we should be careful about, and that is in our relations with our fellow creatures in the matter of what we say and do. We

are apt to say and do ugly and cruel things, lorgetting that they can never be unsaid or undone. It we take a handsome vase and either intentionally or unintentionally crack it, it will always be a broken vase. It may be so infinitesimal a break that those who do not know may not notice it, but it is a cracked and broken vase all its days. It is so in our personal friendships. Once they are cracked they are never again as they were, and they are all ways broken vases.

Now the moral of all this is that the break should never be made in the first place. Our vanity may be touched, our ideas of what is right may be wrenched and then we say and do things that we may have occasion to regret in after-life, and all utterly without avail. If you have ever said or done a wrong thing to one who has passed you can never fix it up in this or any other world, for there is no going backward hereafter to right a wrong. The direct method of prevention in the first place is the one to follow. This implies thought, and being very sure of our grounds. All through the Bible judgment and punishment are forbidden us. The reason seems to be our fallibility and our consequent inability to do justice.

Friends grow not on every limb, and once we have one we should be very careful, exceedingly so, how we crack the vasc. It is a coarse nature that imagines because a friend is a friend we are entitled to say and do mean things. The opposite is a much better plan. Therefore, remember to take care.

QUERIES AND ANSWERS.

Is there any chance for a young man from the country to secure a position in the city?

Very little indeed, unless he has good recommendations, and some special knowledge and, better than all, friends to talk for him.

How soon after the winning of the subscribers' prize will the library of filty books be sent?

Right away. As soon as it is settled the winner gets his books.

Are such games as checkers and dominoes morally wrong?

There are so many better ways of spending one's time that the question answers itself largely.

Can wild flowering plants be transplanted in gardens?

Very readily, and properly combined they make very effective ornamental plants. All flowers are wild in some part of the world.

I have heard that the common crawfish of the streams is enable. Is that correct?

Yes, there are people who cat them.

Is there any truth in spiritualism?

The grain of truth that may be hidden in the mass of fraud and general rubbish has never been separated from its surroundings, if it exists at all.

Are the marriage associations advertised in the papers is

They seem to the INGLENOOK to be cunningly devised schemes to separate the fool and his money. If you can't get married where everyhody know you better let it alone.

1 am peculiarly liable to my poison. What is a god

There are many remedies. Sweet oil put on the affected spots and taken internally will kill the inflammation. It can be taken internally in but flammation. It can be taken internally in but cases to the amount of a quart a day without harm cases to the amount of a quart a day without harm cases to the amount of a quart a day without harm cases to the amount of a quart a day without harm cases to the amount of a quart a day without harm cases to the amount of a quart a day without harm cases to the amount of a quart a day without harm cases to the amount of a quart a day without harm cases to the amount of a quart a day without harm cases to the amount of a quart a day without harm cases to the amount of a quart a day without harm cases to the amount of a quart a day without harm cases to the amount of a quart a day without harm.

If a church divides which side is entitled to the property.

The side that remains true to the original purpose of the church. If there is only one person remaining that one can hold the buildings. It is not a matter of numbers, but of loyalty to the original methods and the traditions of the elders. The party that goes off forfeits its rights.

LAYING AN OCEAN CABLE,

In land telegraphy a wire is run between the terminal points and connected with suitable instrutermina Pointing and receiving signals. The wire monts for and is supported by poles high enough above the earth to save it from accidental The poles are fitted with glass insulathe at the points where the wire touches so that there may be no "leakage" of the current, and the for is natched closely to guard it from molestation and to repair it if it be injured. If experience shows that the route first selected is unsuitable, another can be taken with little extra trouble or expense. It is not so with a cable. Its wires must be overed with a stout envelope through which the sed water cannot penetrate, for the electricity gould be lost if the conductors had a bare spot. The cable must lie on the bottom and risk the dangers that threaten it. If it be injured the precise spot can be found only by difficult calculations, and when found the cable must be sought and brought to the surface from a depth perhaps of miles. Besides these difficulties there is a great one that is based on a property of electricity itself. Every one knows that if a strong current meets resistance, hatis developed as in the common incandescent dectric light. Now, nothing that is yet known is a perfect conductor, and if a strong current is passed through the best ones we have the conductor will get warm and some electricity is lost. On land this does not amount to anything, for the lines are not continuous for very great distances, but have "rehis" at intervals where the weakened current is geinforced. This cannot be done on a cable, and electricians were puzzled to find some means by which a current could be caused to traverse several thousand miles of copper wire without being so powerful as to destroy the cable. It was found that the current was so weak when its journey was ended that it could not move an ordinary Morse instrument, so a system was devised that employs apparaus of another sort and of exquisite sensitiveness. In order to understand why a route for a proposed cable is sought with such care, the structure of the cable itself should be known-for on its safety depends the success of the enterprise. A cable consists of a "core" of wire that is really the important part of the whole, and a covering of some insulating and protecting material. The core is made of strands, of copper woven into a rope-like cord, and weighs from 70 to 400 pounds per milefor the shore ends that have to stand the surf are much stronger and heavier than the deep sea portions. The stranded form is more flexible than a solid rod, and is not so apt to be broken in laying. The core is coated with a mixture of resin, tar and

the insulation firmly to the wires. The insulating material must comply with many requirements. It must not conduct electricity and must prevent "leakage" as much as possible; it must be thoroughly waterproof, for the sea water will soon corrode the copper if it reaches it, and will steal the current if there be the smallest hole through which it may reach the wires. It must resist the chemical action of the water on itself, and it must be flexible and tough, so that the cable may be coiled into a small space on board ship and run over the pulleys when being laid without cracking or tearing. Finally it must be something that does not decay readily and does not dissolve in water. So far but one material has been discovered that fulfills all the conditions. That is gutta percha, a gum that is easily worked and whose only drawback is its scarcity.

gutta percha, that is to act as a cement and hold

When the pure gum is heated to about 150 de-Reces Fahrenheit it becomes very soft and plastic, it total it can be rolled or pressed into shapes that makes when cold. Advantage is taken of this in through cables, for the heated gum is forced through a cylinder surrounding the core, and as the core is drawn through a diepiece a thin layer of gutta percha is left on it. This is repeated as often sit is required and the core is thus covered with a break of gutta percha jackets that extend without break or seam from end to end, and, from the electhe standpoint, the cable is done. In this condition it would be exposed to many mishaps that might injure the envelope and destroy the working of the cable, so a sheathing is put around to protect Some curious accidents have befallen cables. Sharks have bitten them in two, swordfish have

been known to cut them, and once a whale got entangled in one and broke it in his struggles. Other marine animals do damage at times, among them the "ship worm," that devastates vessels and wooden piers in some seas. These pests bore into the insulation and admit the water by millions of holes, of course ruining the cable. The only defense lies in making the cable strong enough to resist them by sheathing it with wire, but best of all is to choose a route as free from such enemies as is practicable.

Finding the best route is the most difficult thing connected with submarine telegraphy, though few outside of scientific circles ever think of it. The surface of the earth beneath the ocean is as irregular as it is elsewhere, and a cable can no more be laid at random on the sea floor than can a line of rails be laid haphazard on land. In either case a suitable bed is necessary, but it is obtainable in very different manner. The bed of a railway is made. If mountains lie in the way they are tunneled or cut through; streams are bridged and valleys crossed by embankments, but cable engineers can do nothing of the sort, for human skill is useless in the deep waters. A bed must be found ready made, and the only means of finding it is the sounding rod.

The rod in use in the United States was invented by Capt. C. D. Sigsbee, of the ill-fated Maine, and is an improved form of the one contrived by Prof. J. M. Brooke, now of the Virginia military institute. Omitting details, it consists of a cylinder arranged to sink into the mud and retain a specimen of the bottom. It is weighted by a shot that is automatically released when the bottom is reached, thus relieving the line, and lessening the danger of losing the rod. The line is of piano wire, and is coiled on a reel that registers the revolutions made in paying out, and so gives the depth. Besides the rod, the line carries a "cup," also an invention of Capt. Sigsbee, that collects a sample of the water near the bottom, and a peculiar form of thermometer that is not affected by the pressure of the water. With this equipment, each sounding gives the depth of the water, the temperature and composition of its lower strata and the character of the bottom, and from these data the cable surveyor deduces the knowledge he requires.

When a new cable is projected a surveying ship is fitted with sounding appliances and sails slowly over the proposed route. Soundings are made as often as is demanded by the character of the sea floor, and if this be fairly level and uniform the intervals are made longer than if it be rough and uneven. The depths are recorded and compared, and from them a profile is prepared that shows the different levels of the bottom and its hills and valleys. A steep slope is dangerous, as the tendency to slip down puts a severe strain on the cable that may break it. For the same reason a narrow ravine is to be avoided, as its edges may chafe and destroy the insulation, even if the whole cable is not cut through-and there is no means of overcoming these obstacles except by avoiding them. Very deep water is objectionable because it is difficult to lay the cable in it and still more so to grapple and raise it if it should need repairs.

The material brought up from the bottom is of great value as indicating the state of the water sea floor. Over a large part of the ocean the bottom is covered with a light powdery mass called

It is made of the shells or tests of little animals that can hardly be seen without a microscope, that have died and settled to the bottom as snowflakes settle through the atmosphere to the earthis the sort of deposit that made our beds of limestone ages ago, and it is the best kind of resting place for a cable, for it sinks into the soft, fluffy mass, and is protected from harm. Ooze shows still water, for a current would wash it away as a wind blows snowflakes, and if the floor sloped steeply the ooze would slip down like sand on a roof, so when the rod shows ooze it indicates calm, still water, and a nearly level floor. A hard bottom of gravel, rock or clay shows a current that should be avoided if possible. Near shore the refuse from the land may heap up into piles of rotting matters that may be injurious, and some kinds of seaweeds are said to have done damage, perhaps by the iodine they contain.

Submarine volcanoes would destroy a cable very we gain, but what we do. Thomas Carlyle.

promptly, and they should be detected in advance if possible. The thermometer aids in this search, as a sudden rise in temperature is suggested, but the rod is apt to bring up bits of volcanic ash or lava that will be conclusive.

If any great obstacle is found another route must be tried, and these trials must be continued till a practicable one be found-a task that may take years, but when it is finally discovered a great step in the advancement of the world is made.

WHAT THE SENATE COSTS.

THE United States Senate has been popularly dubbed "the Millionaires' Club."

It is the cheapest club in the world for the poor man to join. Its perquisites, daily increasing, are too enormous for reckoning. The newly-prepared report of the secretary of this dignified body reyeals some amusing facts. It shows, for instance, that a local drug firm received in the last fiscal year more than \$1,700 for medicines and toilet articles. These were supplied to the senators for their individual use and paid for out of the generous pocket of Uncle Sam. No small item of this expenditure was 1,000 doses of bromo seltzer and bromo caffeine. Three dozens of caffeine powders, four cases of lithia water, two bottles of bromo lithia and \$2.70 worth of lithia tablets further contributed to keep the senatorial system in good repair. Twelve pounds of soda mint tablets were purchased for the alleviation of "that dark brown taste," and the extravagant sum of eighty cents was exchanged for tabules for indigestion.

To each senator there are four employes, in various capacities. The smaller body of congress has come to cost Uncle Sam twice as much per member, per annum, as the house. Almost all of the sixty messengers receive \$1 440 a year each, whereas the old blind chaplain is considered to be worth only \$900. Yet he is dependent upon some one to lead him daily to and from the capitol. Laborers in the folding-room get \$1,000, and those who run the elevators enjoy still more, \$1,200. The man in charge of the stationery-room draws \$2,102.40 anaually; his assistants, \$1,800 and \$1,200 respectively. The little pages who wait upon senators get \$75 a month, the postmaster of the senate \$2,250 annually, firemen \$1,095 and the upholsterer and locksmith S1,440.

By far the greatest proportion of expense incurred each year for toilet articles is demanded by the senate barber-shops and bathrooms. It is not generally known that each member of this distinguished body is barberized gratis as many times a day as he wishes. In conjunction are all the appurtenances to Turkish and Russian baths. Skilled masseurs are always in readiness to hasten the course of slothful blood

During one hot week in June the senate paid \$136. for lemons for lemonade, and shortly afterward returned no less than 3,700 empty bottles which had contained lithia water. But the taxpayer should not grow long-faced at such a modest rate of revelry as this, considering the fact that fifteen years ago nearly every committee-room at the senate end of the capitol had its provision of liquors purchased by the chairman or by a member with a reputation as a connoisseur.

The senator's salary of \$5,000 a year is perhaps nothing to brag of. Yet it is just \$5,000 a year more than given to members of the British house of lords for their parliamentary duties. To this add \$125 allowed each year for newspapers and stationery, only about 850 of which need be spent. Further add an allowance for failroad mileage given at the beginning and end of each session, and which need not be expended by those who hold passes.

While scated at his desk a schator need only claphis hands to summon as many pages as necessary to order his lunch, deliver his notes or fetch him books, stationery or a glass of water. If a chairman of a committee he has at his personal disposal the clerkship of that committee, insuring a handsome salary of \$2,000 or \$3,000, not to mention an assistant clerkship or messengership at from \$1,440 up. If without a chairmanship he is insured the personal appointment of a clerk at \$1,500 a year.

EVERYWHERE in life the true question is not what

Good Reading

THE SIGNS.

BY ANNA M. MITCHEL.

WHITE we hear a great deal nowadays about the habits and superstitions of the people in foreign lands, there are equally remarkable customs in our own land, seldom heard of outside their own locality. For instance, there are the "sign" believers, those people who have great faith in doing their work in accordance with some particular sign—either of the moon, stars or certain days of the month.

Numerous specimens of this class of people are still in existence among the hills and hollows of Pennsylvania.

As a general rule the sign man doesn't concern himself much about the social and political problem of the day. It takes all his surplus energy and intellect to keep on the right track of the various signs that are his especial hobby.

For the benefit of those who have never been introduced to the science of signs, it will be necessary to explain that it is a sort of forty-second cousin to that of "spooks," witches and the like.

The sign class don't all believe in and practice the same signs however.

Some rely entirely upon the different phases of the moon, such as the light and dark of the moon, the fulness thereof, and the moon's ascension and descension. The last two are usually referred to, in brief but significant terms, as the "up" and the "down" signs. Other signologers include all the constellations in the zodiac along with the moon.

Anyone desiring information along these lines is respectfully referred to the almanac, as from that volume the greater part of the signs are extracted.

The devout believer in signs will not begin any important work until his particular sign for that work comes along. Under the benign influence of the sign he feels confident of success.

No matter in how favorable a condition everything may be for planting, he would think it folly to plant his corn or potatoes except during full moon thus insuring a full crop.

It is a fact, however, that the man who plants in the sign usually has to go to his neighbor (who plants in the ground) for his seed potatoes, corn and so forth. The aforesaid neighbor also frequentby assists in filling up a chronic state of vacancy in the larder of the sign man. While this may indicate a hitch in the growth of the crops, I do not wish to insinuate a want of capability on the part of the sign. No indeed!

It is probably due-to this hitch however that the cows of the sign man are so apt to take those peculiar diseases known as "hollow horn" and "wolf in the tail,"

A generous application of spirits of turpentine to these extremities is supposed to have a very stimulating effect upon the debilitated organization of the animal.

In old times, that is from fifty to one hundred or more years ago, it was commonly attributed to witcheraft when horses and cattle failed to thrive, and when their bones made such an emphatic appearance as to threaten to pierce the cuticle. While this opinion is not so prevalent any more, the cure given by a famous witch exterminator, to a man whose cattle were thus afflicted, might be just as effective in these days. His prescription was to "always keep a good supply of hay in the barn and never let the cornerib get quite empty of corn."

The woman who believes in signs is even more lavish in the use of them than the man. One house-keeper blames her poor success in baking light bread on the fact that her bakeoven was built in the "down" sign. Another one is careful to sow her cabbage seed in the sign of the Head to insure a good crop of sourcrout.

When a new supply of yeast is to be made, it must be done during full moon and the "up" sign. Did you ever fry ham or bacon that the slices curled up in the pan and you had trouble to get it properly browned? Just set it down that the porker those slices came from departed this life in the "up sign."

Any fair reader who contemplates "bileing soap" should heed the instructions of a sagacious old lady whose reputation as a soapmaker has been exceedingly great. Her plan is to set the ashes in the sign

of the Lion, so that the lye will be good and strong, and boils the soap in the "down" sign so it will not overflow the kettle. The recipe for making sour vinegar doesn't come from the almanac. It looks as if it had been invented by some cynical old bachelor. It is very simple. Just put your mouth to the bunghole of the vinegar barrel and repeat the names of the seven worst-tempered women you are acquainted with. But whatever you do, be careful and not undertake, in the sign of the Crab, any work you wish to see prosper. It is supposed to have a tendency to advance backwards.

Newburg, Pa.

BIG TELESCOPES.

Speaking of large telescopes and their possibilities, Garrett Serviss writes as follows in the San Francisco Examiner:

The gigantic horizontal telescope at the Paris Exposition excites the wonder of the crowd by the size and length of its huge metal tube, but it shows no celestial marvels because the completion of its object glass has been delayed by accident. The great instrument is sufficiently complete, however, to demonstrate that the limit of size has not yet been reached in the making of telescopes.

We shall have telescopes 200, and, perhaps, 300 feet long, extended horizontally like this one, and furnished, as it is, with enormous mirrors to reflect the images of stars and planets into the system of refracting and magnifying lenses, which constitute the telescope proper. We shall see object glasses five or six feet in diameter, and attempts will be made to use them up to the extreme theoretical limit of their magnifying powers-say 5,000 or 6,000 times linear measurement. A magnification of 6,000 times would bring the moon within an apparent distance of only forty miles from the observer's eye. Enthusiasts talk of a magnification of 10,000 times as within the possibilities. would mean an apprarent distance of only twentyfour miles for the moon and 2,500 miles for Venus. when she is nearest.

These figures are imposing to the imagination. The moon within twenty-four miles would be almost within reach of shot from one of the tremendous rifled cannon that several nations are now bastening to make, without any idea, at present, of undertaking extra terrestrial conquests. Venus within 2,500 miles would be no farther than San Francisco is in a direct line from New York. That is close neighborhood for two worlds. Put them actually so near one another and their gravitation would bring them together with a continent-smashing crash.

I repeat, then, it imposes upon the imagination to think of a telescope capable of making these two bodies, the moon and Venus, appear to the eye as if, respectively, only twenty-four miles and 2,500 miles away. But a little reflection shows that this is not enough. Unfortunately, the atmosphere, without which astronomical, like military, operations cannot be conducted by human beings, does not permit the successful employment of telescopic magnifying powers of 5,000 or 6,000 diameters.

I have seen some of the mountainous landscapes of the moon with a power of more than 2,000 diameters applied to the great Lick telescope. These landscapes were brought within an apparent distance of 100 miles, and, what was the result? A curious blur of light and shadow, in which only general features were recognizable and the detail was lost. The fault was in the atmosphere, whose ceaseless undulations are magnified by the telescope until, with high powers, they practically intercept clear vision. With our present form of telescopes we must emigrate to the moon and acclimate ourselves in a world without air before we can usefully employ magnifying powers exceeding 1,000 or 2,000 times. Even a magnification of 10,-000, which some French astronomers talk of, would not suffice to solve the mysteries of the moon and the planets. We must have a power of 250,000 to bring the moon inside of a mile's distance. With such a power, supposing the vision clear and distinct, we could see such things as trees, rocks and animals of a large size, if they existed. To study the features of two lunar lovers sentimentally contemplating the shining earth from a peach garden in the moon we should require a power of 250,000,-000. Seriously, then, it must be evident that the

immediate precursor of coming instruments capable of opening up the intimate scenes of other worlds to human eyes. Yet there is no reason to be discouraged. We must find a substitute for the telescope—we, who have made for ourselves an electrical eye which sees things hidden and myistile. We shall not give up the conquest of the celestial regions. Let us discover some new punciple in optics, and as the first Galileo carried us a thousand degrees into space, let his successor, who ought to be a twentieth century man, carry us a million.

ZINC IN ARKANSAS.

Perhaps the most interesting phase of the rapid evolution of zinc production into one of the great industries of the country is the addition of the Arkansas district to the southwestern field. Five counties of northwestern Arkansas are coming rapidly into prominence because of the zinc deposite they contain. The counties are in the roughest portion of the Ozarks. Their topography consists of narrow but exceedingly fertile valleys, lofty rudges and tortuous watercourses, bounded by canyon-like cliffs, affording the finest scenery to be found between the Alleghanies and the Rockies. The broken character of the region has deterred railroad building. The zinc deposits lie fifty to seventy-five miles from rail transportation.

A full day of mountain staging must be done to reach the edge of the zinc district of Arkansas, The existence of ore in this almost terra incognita was made known by wantlering geologists a number of years ago, says Harper's Weekly. The first really impressive information the country had of this mineral wealth was when a nugget of pure zinc ore weighing 12,700 pounds, over six tons, was exhibited at the Columbian Exposition in 1893 with the explanation that it was a specimen chunk from a mountain of the same "down in Arkansas." This sounded large, but it was really not much of an exaggeration. The owners of the cliff out of which the zinc "Jumbo" was gouged subsequently tore away overlying dirt and rock and exposed a face of ore which has been the marvel of visiting scientists and miners ever since. They erected a mill and built a trainway. Selecting the richest of the ore, they have been crushing and separating and shipping for several years.

This product is hauled over the mountain roadsa day's journey-to the head of navigation on White River. Thence it is boated 100 miles to a railroad connection and so finds its way to the sea for exportation to Belgium. Presumably there some margin of profit with all of these drawbacks in transportation. The same men have been con ducting the business for years and are still with it They have shipped by this expensive route over 1,200 tons of cleaned ore. They operated their mine when ore was worth about one-half of what is pail for it now. At this the pioneer of the producing mile of the Arkansas district no rock bearing less than twelve per cent of its weight in ore is crushed. In the Joplin district four and five per cent rock is pul through the crusher and separator with profit.

At the Morning Star—for that is the appropriate name of the mine which has led in the development of the Arkansas district—thousands of tons of or of a grade which would be considered profitable in Missouri and Kansas are heaped in great dumps. In fact, it is not improbable that the whole mountain side may some time be worked over for the ore which seems to permeate not only all of the rock which seems to permeate not only all of the rock formations but even the dirt. The former State geologist of Arkansas, Prof. Branner, now of the geologist of California, visited this mine in its early development and carried away for laboratory by development and carried away for laboratory tests some of the soil as well as fragments of the rock. Soon after he reached Little Rock he write back to the superintendent:

"Don't throw away any more of that dirtal god thirteen per cent metallic zinc."

bring the moon inside of a mile's distance. With such a power, supposing the vision clear and distinct, we could see such things as trees, rocks and animals of a large size, if they existed. To study the features of two lunar lovers sentimentally contemplating the shining earth from a peach garden in the moon we should require a power of 250,000,000. Seriously, then, it must be evident that the Paris telescope, wonderful as it is, cannot be the

ooo The o Circle ooo

W B Stover, Bulsar, India, President, John R. Snyder, Bellegriffs W B Stover, Bulsar, India, President, John R. Snyder, Bellecapted Mrs. Lizze D. Rosenberger, Covington, Ohio, Secretary and capted address all communications to Our Missionary Reading testing Compiled, Ohio.

YOUNG MEN AND THE CHURCH. To show the con-1000 to the drawing power of vile shows comand to the church, note the following facts: In of the most progressive cities of Texas, while a votest nation revival " was going on, backed by all inc evangelical churches in the city, while under bl headway, on Friday night with two thousand months present, only eighty-seven of them were ming men. That same night there entered one of the saloon theatricals six hundred and seventeen oung men. On the Sunday night following, the anon revival had one hundred and eighty young no present, but the theatrical had 1,248 men and hars entered its doors between the hours of eight and half past eleven o'clock. It is an appalling fact that in those parts of our cities where we need most of the we have the fewest. The average in all out cities is not less than ten saloons to every charch. - Danger Signals for New Century Manhood.

POWER OF LITTLE THINGS. - You may think that its insignificant, the work we ask of each member: and to read a few books is all that the Circle actually requires, though we hope that the reading will lead much service. Each reader should be moved to to something for Jesus. Much depends on little hings. The battle of Dunbar was decided against the Scotch because their matches had given out. When an army or a regiment comes to a bridge they are always commanded to break ranks, for heir simultaneous tread will destroy the strongest bridge. A bridge at Angiers, France, and a bridge a Boughton, England, went down because the regiment kept step while crossing. Little causes and geat results. Christianity was introduced into Japan by the falling overboard of a pocket Bible homaship in the harbor of Tokio. Nearly fourteen hundred Circle members ready to do good in ratious ways, ready to work in his vineyard, at home or almoad, should accomplish much for

Too Late.—A minister told of one young man who came to his study after serving his third sentence in prison; he was only twenty-seven years old, but his life had been bad, he was old in sin. The minister pleaded with him to live a better life, and this was the young man's reply: "My friend, this is all good advice that you are giving me, but I have well-nigh passed the stopping place. I am bound by a thousand and one bands, and each of them, it seems to me, is as strong as iron. I have tred, yes tried in vain to break these bands that hold me fast, but it is useless. If my mother or my tather had given me this advice twelve years ago, all might have been different. Then I might have been saved. Now I fear it is too late."

Christ, seek those things which are above. There is a kind of life that burrows in the dark, like that of the mole or the worm, another life which crawls like that of the reptile. The life in the eagle makes it soar up to gaze at the sun. Put the eagle-life into the mole, and it would quit burrowing in the earth, and avoiding darkness, it would seek to seek to burrow. It is not a pleasing thought that burrows in the dark or crawls on the earth's surface. Sheh looks up, and its very nature leads us to seek the things above."

The lath that saves men is an implicit trust, an anywavering confidence in the Lord Jesus himself, which manifests itself by a hearty obedience to the tests entirely on the power and truthfulness of him the commands. How useless, then, is all submisternal redemption. How foolish to depend on the power and truthfulness of him the human authority in matters that pertain to the power for that which God alone can supply. Yet this that multitudes do. They lean upon the arm of the sh, and when this fails them they fall.

= Sunday A School =

INTROSPECTION—a looking inward is indispensable to a good life. We need to be honest with ourselves as well as with our neighbors in order to have a conscience void of offense. A scrutiny not only of our deeds but of the motives that lead to them must be a daily exercise if we would grow in grace and develop spiritual strength. The fear of the Lord is the beginning of wisdom, but the end of the Gospel, which is the fulness of wisdom, is love out of a pure heart and a good conscience and faith unfeigned. If this end or purpose is kept in mind, we shall not turn aside into vain jangling, and become teachers of new things and worshipers of modern deities.

The Gospel of Jesus never grows old. It has always to the unsophisticated heart the freshness and beauty of eternal youth. He who could truthfully say, "Before Abraham was I am," could also declare, "Heaven and earth shall pass away, but my words shall not pass away." But the words of men are transient, and soon lose their power and fade out of the world's memory. Babylon in the height of its glory was thronged with orators and poets, philosophers and soothsayers, but who now knows even their names? Yet Daniel, the mouthpiece of Jehovah, is a household word in all civilized lands, and his story and prophecy are the delight of all pious hearts.

Pwil represents preachers of the Gospel as builders, and warns them against carelessness in the selection of their material. Wood, hay, and stubble are not fit to be laid upon the apostolic foundation, and he who works them in, as many do at the present time, will in the end suffer loss. They who are seeking salvation should be carefully instructed as to the right way of finding it. They should be led to read the Scriptures for themselves, that their confidence may be in God not in man. They should view each item of the Gospel in the full light of divine truth, and be made sure of every step they take as they come into the kingdom of heaven.

THE Savior rebuked the Pharisees for appearing religious before men while their minds were alienated from God and their desires were controlled by worldly ambition. The Psalmist's prayer was, Cleanse Thou me from secret faults. The hidden or interior man rules the outer. Hence the command, "Keep thy heart with all diligence, for out of it are the issues of life." Out of the abundance of the heart the mouth speaks. The good man out of the good treasure therein sends forth good things, and the evil man out of the evil treasure sends forth evil things.

Facts, without persuasion, are far better than persuasion without facts, in winning souls for Christ. If we could only present Christ as he really is, how surely men would be drawn to him without the pressure of our clumsy urging! Says Mr. Sankey, out of his lifelong experience: "People come to Christ, I find, in a very simple way." Not through argument or persuasion, so much as through simple presentation of Christ as he is, do men accept him. This is a truth for preacher and teacher alike to have in mind.

Apprentice few people know that they have control over their likings and dislikes. Yet this control is implied in many of the injunctions of the New Testament. For example, Paul tells the saints at Colosse to set their affections on things above, not on things on the earth. This he would not have done had they not had power over their affections to place them where they wished. The will is, or should be, under God, the ruler of the mind, bringing all into subjection to the Lord Jesus Christ.

Masy if not all of the ills which have afflicted the churches of Christ have sprung from the conduct of men that fancy they know more about the will of God than the apostles knew. Just as the Pharisees thought they could devise a better worship than Moses taught them, so our modern pastors think their own wisdom a safer guide than the word of faith which Paul preached.

BOOK NOTICES.

In this corner of the 'Nook will be published, from week to week, reviews and notices of new books, such as seem, in our judgment, best fitted for the improvement and interest of our readers. Readers are often puzzled to know what to get when they want a book. In this column they will find notices of new hooks, what they are about, and how they treat their subjects. Publishers who send books for review may omit the usual accompanying notices, as the Inglenook has ideas of its own. Simply address The Inglenook, Elgin, Illinois. The Editor will get them, if sent by either mail or express.

OUR PRESIDENTS, AND HOW WE MAKE THEM. By Col. A. K. McClure. 498 pages, price \$2.00. Published by Harper & Bros., New York, N. Y.

This is a most valuable addition to our historical literature, dealing, as it does with every president from Washington down to McKinley. Ordinarily books about our presidents are more or less biographical in their character, or deal with statistics, and while this class of books is all well enough for reference, or interesting to the critical student of politics, the volume under consideration is a different sort of production entirely. It is a live book by a live man. The author is a veteran newspaper man, given to politics from his birth, and while he has had to refer to written history for his facts prior to his coming on the scene of action, it is astonishing how great a part he has played personally in the political history of our country. He tells the inside of things, as one who was on the ground and took a part in the performance of them. This constitutes the charm of the book, and at the same time is its element of weakness. It is interesting because it is told in a lively way, and it "strings out" like a romance. It is a difficult thing to invest political details with anything like graceful movement, but the author does it. This is the newspaper man of it, and a skilled one he is. The element of weakness in the book is the strong personality of the writer. He has notions of his own, and he gets them into the book. But, however personal he is usually correct, and the reader of the volume will find himself in possession of a vast number of inside facts and details of our presidential characters that will be a revelation to the average man or

GEORGE WASHINGTON, by Woodrow Wilson. 333 pages, cloth, price \$1.50, Harper & Bros., New York.

In the years gone by a Life of Washington would have suggested a stilted, ponderous, book with published correspondence, in fine print, the whole prefaced with a picture of the general's crossing the Delaware. Nowadays things are done differently, and the book before us is a case in point. While this book is historically accurate it is as interesting as a romance. It is a good book for a present to some boy, or even to a father from his son, and it has all the elements of permanency of value about it

The story starts with an account of the conditions in colonial Virginia, and follows him through the Revolutionary war and up to the date of his death at Mt. Vernon. The chief charm of the book lies in its pleasant telling and there is much of the personality of the great man that has found its way into the account that will be new to most readers, as it deals with the man and neighbor as well as the military genius. We extract a paragraph from page 110:

"Washington loved horses and dogs with the heartiest sportsman of them all. He had a great gusto for stalking deer with George Mason on the broad forested tracks round Gunston Hall, and liked often to take gun or rod after lesser game when the days fell dull; but best of all he loved a horse's back, and the hard ride for hours together after the dogs and a crafty quarry -a horse it put a man to his points to ride, a country where the running was only for those who dared. His own mounts could nowhere be bettered in Virginia. There was full blood of Araby in his noble Magnoha, and as good bunting blood as was to be found in the colony in his Blueskin and Ajax, Valiant and Chinckling. His hounds he bred 'so flew'd, so sanded,' so matched in speed and habit, that they kept always tune and pace together in the field. 'A cry more tuneable was never holla'd to, nor cheered with horn,' than theirs when they were let 'spend their months' till echo replied 'as if another chase were in the skies'. Twas first to the stables for him always in the morning, and then to the kennels.'

THE CHICAGO DOG HOSPITAL.

The north side has a dog hospital, where afflicted canines are treated for all kinds of ailments, from flea bites to St. Vitus' dance. Horses are also treated, but doctoring dogs is the principal feature of the institution. The dogs are located one above the other, on either side of a wide space in cages or boxes, covered in front by heavy screens. In the boxes were dogs with various queer complaints, in addition to many common ones.

At one end two cages contained two cats, and it was noticed for the first time that it was possible for cats to remain unmoved by the bark of a dog. The felines had probably discovered that they were safe from intrusion. One of the cats, a Persian, was suffering from consumption, which she had acquired at a cat boarding-house while the owner was away at the seaside. The doctor considered the consumptive beyond the hope of medical assistance. The other cat had been through a recent fire and had remained in the burning building so long that she had a pair of badly smoked lungs. Vapor inhalations were rapidly restoring the lungs to their normal condition.

As might be expected, most of the dogs were troubled with skin diseases, but there were a number of them with complaints not nearly so common. One canine, in a box with a curtain hanging over the front of his bars to keep out the light, was afflicted with ophthalmia. The doctor was treating his eyes constantly and announced that within a reasonable time he would effect a complete cure. In another cage were two dogs, brothers, who had been brought to the hospital suffering from St. Vitus' dance. They had been under the care of the physician for some time and were nearing recovery. Each was still slightly affected, occasionally, with a twitching of the legs, but it was said that the improvement in each case had been marked. The doctor was giving the dogs a strychnine and arsente

A dog with a somewhat enlarged neck was on the high road to recovery. The remedies which were being applied were resulting in the absorption of the enlargement. Another dog was suffering from a mild attack of asthma, but it had shown much improvement since arriving at the hospital. One of the most remarkable cases under treatment was that of a smooth-coated St. Bernard suffering from a bad attack of rickets. The effects of the disease were most plainly discernible in the dog's forefeet. The ankles dropped inward and the feet turned outward in as pronounced a way as could be found in the most severe case in a human being.

This St. Bernard, as well as all the large dogs at the hospital, was not confined in a box, but was kept in a stall, which was originally constructed for the accommodation of a horse. In another stall was a big dog with a broken foreleg. The animal had been struck by a cable train and knocked under a wagon, which had run over the leg. The injured limb was bandaged to await the reduction of the swelling, when the broken bones would be set and the leg placed in a plaster cast.

The aristocratic occupant of a boxed stall was a large white bulldog, which had been in the hospital before. The dog was there this time to receive a little attention in regard to the condition of his skin. On a previous visit he came for dental attention. In an endeavor to bite a brickbat or masticate a rock he had broken off both tusks, or eanine teeth, of the upper jaw. These missing tusks were replaced with solid gold teeth built up on the roots of the broken ones.

One day recently a man hurried to the hospital with a dog that was badly distressed. Dog catchers had made, an attack on the animal and in the onslaught they had in some way torn out the poor beast's eye, which was hanging by the optic nerve and one of the muscles. The doctor replaced the eye in the socket and took a few stitches in the corners of the lids to hold the ball tightly in place until the muscles could have time to become reattached.

A few days ago one of the queerest cases ever at the hospital was discharged. The patient was a Yorkshire terrier belonging to the wife of a chewing gum manufacturer. Of course there was always plenty of gum in the house and the family had naturally taught the dog the art of chewing the stuff. Beppo finally became quite fond of the deli-

cacy, but some way the family was unable to educate the pet-up to sticking the gum on the back of his chair or under the table after he had chewed it long enough.

Beppo swallowed it, probably considering that the unckest way to get rid of it.

As the head of the family made the gum it would not do to think that the goods would hurt anybody or anything. So when Beppo was exhibiting his talent for chewing to visitors and suddenly swallowed his gum the folks said nothing but simply gave him more. But unknown to the family Beppo's appetite grew beyond his control. When no one was around to give him gum he chewed and swallowed rubber bands, sections of overshoes, etc. Finally the terrier gave evidences of indigestion and he was bundled off in the dog ambulance which the hospital keeps for emergency cases and landed in the dog doctor's office.

The physician succeeded in extracting from Beppo's stomach about half a pound of gum or enough to make sixty-seven sticks, twenty-three rubber bands and seventeen pieces of old overshoes. Beppo was then returned home with orders to discontinue his chewing gum and rubber diet.

"Yes, we have some great experiences in this business," said Dr. Young. "Some people think as much of their dogs as if they were children and they sometimes bring them in here as often as parents would take sick children to a doctor. Often they demand that something be done for a dog when nothing is the matter with it. Then we have to do about like the doctor who gives bread pills.

"Once I was in a restaurant close by eating my luncheon Suddenly I heard a great commotion in front and just as I was about to get up and see what was the matter a woman rushed back and laid a badly-injured dog on the table where I was eating and asked me to do something for it immediately. She was half crazy and hardly knew what she was doing. I told her we would go to the hospital, as nothing could be done there in the restaurant, and so we started for my office. The dog had been run over by the cable train. It was an extremely great pet of the woman, as could readily be seen by her actions. Arrived at the hospital the woman laid the dog down and I told her at once that it was dead. She gave a piercing shrick and fell in a faint on the floor. Then I had to devote my attention to reviving her, which I accomplished in a short time. She was inconsolable over the loss of the little animal."

CHINESE LAWLESSNESS.

JOHN LIDDELE, of San Francisco, was speaking vesterday of some characteristics of the Chinese. "I have noticed in the papers recently," he said, "a story of how one Wung Kai Kee, a Chinese artist, had furnished a paper here with the Chinese symbol for 'Kill all the foreigners.' On account of this Wung Kai Kee had incurred the displeasure of his compatriots, and had fled, fearing for his life. Fortunately, Wung seems to have found means of squaring matters, for he has apparently returned home, relieved of dread. This is a typical case, and will serve to point out to you in the East what we in the West are all too familiar with. The Chinaman has a thorough and progressive contempt for all laws but his own. He obeys the law of the country he is in if he has to, but he seldom appeals to it, and is prone, when he thinks wrong has been done him, to take the law in his own hands. Oriental justice is not Christian justice. yet wherever Chinamen are to be found there will be found as well innumerable instances of Oriental justice having been administered by them. A Chinaman offends or transgresses some Chinese law in America. The offense may also break an American law, and the remedy in an American court may lie at hand. But do the aggrieved Chinese try it? They straightway meet in one of their secret conclaves and proceed to prescribe the punishment to be meted out to that particular Chinaman-death as often as not. Then they deal out that law of the land wherein they live, and in ninety-nine cases out of a hundred they escape scot free. This usually is the work of the highbinders, or some kindred secret society, and wherever their devilish work is done heavy punishment should be dealt out to the offenders. If they can't be caught, take a leaf out

and capture the transgressor's relatives. I'll war, rant you'd get the real offender in this way, and put a stop to their work.

"The most famous, and possibly the richest Chinaman we ever had in San Francisco was Little Pete. He was an exceedingly clever Mongolian skilled in American as well as in the Chinese methods. 'Little Pete' got into trouble with the high. binders and they decreed his death. Although the police, he knew, couldn't help him much, 'Pele' advised them of his danger, and they kept such watch and ward as they could over him. Pete personally employed two Chinamen as guards, and was never without one or the other of them, In this way he preserved his life for weeks. But one evening he went into a Chinese barber shop to get shaved. 'Little Pete' wanted to see an evening paper, so he sent his guard across the street for a copy, as no suspicious characters seemed about The guard was gone less than a minute, but that was sufficient, and when he got back, Little Pete" had been gathered to his fathers. His murderer was never apprehended.

"One evening in a crowded street in Chinatown," continued Mr. Liddele, "a Chinese woman was shot and instantly killed. At one cross-street corner at the time were a lieutenant of police and three patrolmen. At the other cross-street corner were two more policemen, while directly across the street another policeman was slowly pacing his beat. At the shot the three forces converged rapidly to the point where the murder had occurred. and arrested all the 'Chinks' they could lay their hands on. There lay the murdered woman on the sidewalk, deliberately killed on a crowded and brilliantly lighted street, within eyesight and carshot of seven guardians of the law. For all that, however, her murderer got away scot free. It was found afterward that the Chinaman who had done the deed never made a move to escape, but, having shot his victim down, thrust the weapon up his sleeve and calmly watched her die. The police arrested him along with a score of others, but as they could prove nothing and no witnesses were forthcoming they had to let him go Yet the smoke of that pistol shot was still in the air when the first policeman got to the scene.

"I give you these instances to show you the deadly and fiendish ingenuity of the Chinanian, when he sets out to kill or punish. He defies your law, and in utter contempt of it takes the law into his own hands. He should be punished for whather does. But alas! our law and our method of administering it seem helpless to reach him or to protect those whom the Chinamen, in secret conclave, have decreed must die. Some drastic method of proceeding with Chinese cases should be invented to inspire Chinamen with a respect for American law, which they now hold in contempt."

SALTING BABIES.

One of the most curious of the practices which have come down to us from Biblical times is that of salting newly-born infants. This quaint rite is generally practiced among the Armenians of Erwan, who carefully cover the child's hody with very fint salt. The duration of the rite is three hours, after which the child is bathed and considered as being free from all evil influences which may have attended its birth.

The Greeks believe that the children will grow up puny and weak—never coming to a good end, if they are not salted. From this cause there is great, mortality—the babes dying in convulsions.

In many parts of Germany the custom still obtains, but happily the infants are not exposed to ruthless suffering, a pinch of salt being rubbed be hind the child's ears, or put on the tongue, or carried in a packet among the garments in order to ward off evil spirits and wishes.

In the United States navy the daily full diet is as follows (the number following each arnels shows the number of ounces): Breaktast Coffee shows the number of ounces): Breaktast Coffee to the property of t

THE GOSPEL MESSENGER,

A Religious Weekly, at \$1.50 per Anoum.

The Gospel Messenger, published in the interests of the Brethren, or Dunker, Church, is an uncompromis-

ing advocate of primitive Christianity.

And most earnestly pleads for a return to the apostolic order of worship and practice.

It holds that the Bible is a divinely inspired book, and recognizes the New Testament as the only infallible rule of faith and practice for the people of God.

It also holds to the doctrine of the Triaity; teaches luture rewards and punishment, and emphasizes the importance of a pure, holy and upright life before God and

It maintains that only those who remain faithful until death have the promise of eternal life;

That Faith, Repentance and Baptism are conditions of pardon, and hence for the remission of sins; That Trine Immersion or dipping the candidate three times lace-lorward is Christian Baptism;

That Feet-washing, as taught in John 13, is a divine command to be observed in the church.

command to be observed in the church.

That the Lord's Supper is a meal, and, in connection with the Communion, should be taken in the evening, or after the close of the day;

That the Salutation of the Holy Kiss, or Kiss of Charity, is binding upon the followers of Christ;

That War and Retaliation are contrary to the spirit and self-denying principles of the religion of Jesus Christ:

That a Non-Conformity to the world in daily walk, dress, customs and conversation is essential to true holiness and Christian piety.

It maintains that in public worship, or religious exer-

It maintains that in public worship, or religious exercises, Christians should appear as directed in 1 Cor. 11:

It also advocates the Scriptural duty of Anointing the sick with oil in the name of the Lord.

In short, it is a vindicator of all that Christ and the Apostles have enjoined upon us, and aims, amid the condicting theories and discords of modern Christendom, to point out ground that all must concede to be infallibly saie. Address:

THE INGLENOOK

"The Inglenook" will be Sent to any Address the Rest of this Year for Twenty-five Cents, or it will be Sent the Rest of this Year and all of next Year for One Dollar.

The Best Way is to send the Dollar and he Done with it. After You Have Read it for a Week or two, You'll be Sorry that You Didn't Save Money by Subscribing for the Whole Year at Once. It's a Paper that Grows on One. Once Read, Always Read!

We Want Agents, == Real Live Agents

In Every Part of the Country. Anybody can solicit Subscribers at the Twenty-five Cent Rate, and Whoever Sends in a Club of Ten of These, Can have his Choice of ONE of the following books:

Beside the Bonnie Brier Bush, Dictionary of the Bible, Natural History of Birds and Quadrupeds. Dream Life, Black Beauty,

Drummond's Asidresses,

Ten Nights in a Bar-Room,

Imitation of Adventures of a Brownie, Imitation of Christ, Etc.

If he gets twenty subscribers he can have two books; for thirty subscribers three books, and so on. be had in an hour's work in many a place. Whoever shows himself an efficient agent will be put in line for the Fall work There is a library of Fifty bound books waiting for somebody. connected with the INGLENOOK.

The Agent who sends in the largest list of dollar subscribers between this and the first week in January, 1901, will have sent him a Library of FIFTY BOOKS. Here is the list:

Adventures of a Brownie, Æsop's Fables, Auld Licht Idylls, Autobiography of Franklin, Autocrat of the Breakfast Table, Bacon's Essays. Beside the Bonnie Brier Bush, Black Beauty, Burns' Poems, Child's History of England,

Confessions of an Opium Eater, Dictionary of the Bible, Dream Life. Drummond's Addresses, Emerson's Essays, Ethics of the Dust, Fairy Land of Science, Fifteen Decisive Battles, House of Seven Gables, Imitation of Christ.

Intellectual Life. Lays of Ancient Rome, Longfellow's Poems, Lorna Doone, Mosses from an Old Manse, Nat. History Birds and Quadrupeds, Poe's Poetical Works, Prue and I. Rab and His Friends, Reveries of a Bachelor.

Samantha at Saratoga, Sesame and Lilies, Sketch Book, Sticket Minister, Stories from the History of Greece, Stories from the History of Rome, Story of an African Farm, Ten Nights in a Bar-Room, Thirty Years' War, Twice-Told Tales,

Window in Thrums, Education, In His Steps, Minister's Wooing, Professor at Breakfast Table, Lamb's Tales from Shakespeare, Lallah Rookh, On Liberty, Tanglewood Tales, Sign of the Four.

The Agent sending in the next largest list will have the choice of TWENTY-FIVE books out of the above list. The third largest list will entitle the Agent to FIFTEEN of the books, his choice; and the fourth largest list will win TEN of these There is also a cash commission going to the Agent. We prefer the services of the Messenger Agent if cloth bound books. he will write at ouce for the place, but we will put the first live applicant into line, as the Inglenook is not going to be the last If agents desire to enter for the Library they should say so in order that we may keep tab on subscriptions re-Elgin city is barred in the competition for prizes.

The announcement of the successful Agent will be made in January, 1901.

A Live Paper for Live People.

The Inglenook is no longer an experiment. It is regarded as phenomenally successful by experienced newspaper men who know what they are talking about. The reason is not hard to find. It is a FIRST-CLASS PAPER, with nothing old It is up to date, and always will be. It will have something new in each issue, it always has and commonplace about it. and it never will fall below its self-set standard,—being the best paper of its kind in the world. You can't read it without The INGLENOOR being interested and instructed. The whole wide-spread world is ransacked in the interest of its readers. isn't made with a dull pen and a pair of shears. It is a live paper for live people.

The like of it was Some of the best known men and women in the church will write for the Inglenook next year. Look at the names, note the subjects! Every man and woman in the list knows never undertaken in the church before. what they are talking about.

THE CONFLICT OF LIFE.

By the thorn-road and no other Is the mount of vision won: fread it without shrinking, brother! lesus troil it, -- press thou on!

By thy trustful, calm endeavor, Guiding, cheering, like the sun, Earth-hound hearts thou shall deliver,-Oh, for their sake, press thou on!

Be this world the wiser, stronger, For thy life of pain and peace; While it needs thee, oh, no longer Pray thou for thy quick release;

Pray thou, undisheartened, rather, That thou be a faithful son; By thy prayer of Jesus,-" Father, Not my will, but thine, be done! Samuel Johnson.

SLAYERY DAYS.

EVERY reader knows on general principles what a colored man is, and what slavery was. But few how the facts of the slave trade, and at this remote day its story reads like an evil page of hismy. It cost the people of this country thousands oget the African here, and it cost thousands of millions to break his chains. And we still have hm, and are likely to till the end of time. About a dozen years after the discovery of America the Portuguese engaged in the slave trade. It was taken up by the English, as a matter of profit, and in 1620 to Dutch landed a lot of twenty at Jamestown, Valand this was the start of the traffic in the Unitd States. It was a very profitable piece of busiuss. The average cost of five hundred men, wommand children was about \$18, and the average elling price on this side was, for men, \$260, for nomen, \$205, and the boys brought \$155 each. On heother hand it should be remembered that it has ken calculated that for every one delivered and oldhere seven others perished, one way and another, which will be shown later.

During the days of the legitimacy of the slave tade nothing was easier than to fit out a ship, take ma cargo of rum, and gewgaws, such as would deof the soul of an African chief, and set sail for the wast of the dark continent. In the earlier stage of hebusiness there were several ways of securing a ago. The African chief had taken a lot of prisonb, and these he sold, or the slavers themselves all ashore, surrounded a village, set fire to the ls, killed all who resisted and the old and the my young, and drove the rest to the coast and here loaded them for the long voyage, with the flerence between carrying cattle at the present ay and the methods in vogue in slavery days that accattle are much better housed and better treatdon the way. No end of them sickened and died othe voyage. They were crowded together very whas cattle are huddled on a train, food was not oplenty, and as for fresh air and the like, there the none of such things. When there were dead by were brought out and shot over the side of the and it was not an uncomon thing for a live man to be shackled to a dead at and remain so for some days before it was no-They were peculiarly liable to smallpox and diseases, and it is said that a slave ship pde its presence known for miles around, wherter she happened to be, on account of the peculiar ad dreadful odor arising from the cargo. In the best of ships built for slavers, the place set

And for the human cargo was five feet, eight inchhigh, in others only three feet, and some of the the avaricious slavers packed their human cargo such a way that the feet of one was in the lap of nother, and thus shingled with humans the boat and thus shingled with numeric than and the don its long, wearisome journey to Havana, t slave mart of the new world. It is recorded ad were no boat fifty of them died in one night were pitched overboard, food for the sharks. is not said that this mortality was regarded other

confinement, and the bad conditions generally, rendered thirty of the cargo blind. Not much fuss was made over the unfortunates. They were now useless as slaves and were promptly pitched overboard. It was often the case that the captives voluntarily plunged overboard and escaped by suicide. Others attempted to starve themselves, and there was a provision for such cases in an instrument forced into the mouths of the slaves and by means of a screw it was made to open and food thrust in, thus compelling them to live.

From 1680 to 1786 there were brought to our country 2,130,000 slaves, and those in the trade said that of every thousand slaves captured in the interior of Africa five hundred died on the terrible march to the coast, and of the remaining five hundred one hundred and twenty-five died on the voyage. To this dreadful mortality must be added the number killed in the capture of the original thousand that started on the march to the sea.

After a while the horror of the thing dawned on the several governments and the business was outlawed, and men of war set about capturing and destroying those engaged in the trade.

Then began a series of evasions and escapes on the part of those engaged in the nefarious traffic. It is said that when a slaver loaded with his human freight was sure to be overhauled and punishedhanging, it was-he watched his chance and if he had night at his command, the whole cargo walked the plank into the sea. After that when they caught him he was only an innocent mariner. But the business was finally wiped out as far as Africa was concerned.

But a hundred or more years afterward the country ran red with blood shed over the slave and his freedom, and the end is not yet over the colored man. But the incomprehensible part of it was that all people consented originally to the traffic, and only here and there was there a man with a head clear enough to see the enormity of the thing. Preachers advocated the system, and wherever there was a man who opposed the business his life was made a burden to him. The worst of it is over now, but what a nightmare it is to think about at the present day.

"UP THE SPOUT" IN CHINA.

What the public house or hotel is to an English town the pawnshop is to a Chinese community.

Its lofty solid building rears itself above the houses and forms the most prominent feature of the bird's-eye view of any city or town. They are now national institutions, and were known to exist in the days of Confucius, over 2,500 years ago.

In those days usurers charged exorbitant interest for money lent, and very frequently the borrower disappeared with his booty for good. To one ingenious lender there came an idea. As hostages were given in war as a guarantee of good faith, why should not borrowers deposit pledges for the money lent them? Thus originated pawnbroking in China. The pawnshop is a square building, towering to some seventy or eighty feet above the ground. The first twenty feet are built of solid granite, the remainder of best brick. As precautions against fire and thieves, they are most solidly built. No woodwork is allowed on the outside, and the walls are raised several feet above the roof. The windows are very small and tightly laced with thick iron bars, and inside are iron shutters to repel flames.

The eight or ten-storied building stands several feet back from the street line. There is a small doorway, and behind it stands a wooden screen bearing the name of the pawnshop. Instead of the English "three balls" the Chinese pawning sign consists of two. This represents the bottle gourd, used in China as a natural life buoy, and thus proclaims, the pawnshop as "The Life Preserver."

shop is fenced off with iron bars, like a lion's cage, six feet above the ground. The Chinese coming to pawn his winter clothes hands up the bundle to the broker behind the bars.

The Chinese "uncle" fixes the price, gives the "nephew" a ticket, and the money; the pledge is ticketed and packed away, just as in England.

The rates of interest are high. On advances of less than ten shillings thirty-six per cent per annum is charged; from ten shillings to £1, twentyfour per cent, and on larger sums slightly less,

But during the winter months articles can be redeemed at a deduction of one-third in the interest, as a concession to the needs of the poor,

A pledge may hold good for three years. After that time it cannot be redeemed.

Periodically the pawnshops sell off their unredeemed pledges to second-hand shops, sales direct to the public being forbidden.

On migrating to Australia, America, or elsewhere, the Chinaman pawns his implements of worshipcenser, urn, tripod, etc., thus leaving them in security till his return. Pawnshops are also used as banks.

A man having saved some money consigns it to the pawnbroker for safe custody, paying a small fee for the privilege. From time to time he is admitted to see that his treasure is still intact or to add

There are three classes of pawnshops in China. The largest are, of course, the more respectable, while the smaller houses are more grasping in their business. Both are duly licensed by the government, and pay an annual fee. There are also small secret pawnshops existing outside the law, and only by connivance with the officials, whose complacency is purchased. In China the business of pawnbroking is honorable, and followed by the highest men in the kingdom. Much of Li Hung Chang's vast wealth has come and still comes from his five large pawnshops. He is pawnbroker as well as

The Chinese "uncle's" great enemies are fire and thieves. If fire originates in the shop the proprietor must pay the full value of all pledges destroyed. If the building is wrecked by a fire starting outside the owner is exempt save for a small percentage. As to robbers, cartloads of stones are stored to repel an attack, prompted by the rich booty of the pawnshop. The attendants are also armed. but not infrequently the places are wrecked by gangs of robbers.

WHEN MINDS ARE BRIGHTEST.

Swift was fifty-nine when his brain gave birth to "Gulliver's Travels."

Thomas Hood's "The Song of the Shirt" and 'The Bridge of Sighs" were written when he was forty-six.

George Eliot was near her fiftieth year when she wrote "Middlemarch," and this was succeeded by "Daniel Deronda."

Bacon's greatest work took fifty-nine years to mature and Grote's "History of Greece" some years longer.

Longfellow wrote "Hiawatha" at forty-eight, and Oliver Wendell Holmes gave us "Songs in Many Keys" when he had passed his fifty-fifth birthday.

Cowper had turned the half century when he wrote "The Task" and "John Gilpin," and De Foe was within two years of sixty when he published "Robinson Crusoe."

Milton's mind rose to its highest capacity when the blind poet was between fifty-four and fifty-nine. It was at this period of his existence when he offered to the world "Paradise Lost."

Sir Walter Scott was forty-four when his "Waverley" made its appearance, and nearly all those Behind this signboard is a small courtyard, stories where all business is transacted. The front of the were composed after the age of forty-six. stories which have conferred lasting fame upon him

Correspondence

THE VOSEMITE VALLEY.

BY JUSTUS H. CLINE.

Among the natural wonders of the world the Yosemite Valley is not surpassed. It is a granite walled chasm located in the heart of the Sierra Nevada mountains, Mariposa County, California, about one hundred and fifty miles east of San Francisco "as the crow flies." It is seven miles long. The width varies from one-half mile to one mile. It is bounded on every side by frowning cliffs three thousand to six thousand feet high. Over these cliffs leap numerous waterfalls of greater or less volume. Their height varies from three hundred and fifty feet to two thousand at a single bound. In making these terrific leaps they present forms of inexpressible grandeur and loveliness. Merced river, clear as crystal and cold as ice, runs through it. So clear is the water that numerous trout may be seen at any depth. The banks of the stream present many forms of beauty. Its entire course through the valley is through sylvan glades and grassy meadows bordered by fragrant shrubbery and many varieties of wild flowers. Surely nature has wonderfully endowed this isolated spot. I say isolated, because the nearest approach to the valley by rail is eighty miles. At present the tourist must make the journey by means of stages. During the summer season these stages make trips daily.

Not many years ago this marvelous gorge was the hiding place of a band of annoying and hostile Indians, who boasted that they had a place where "white man no catch 'um." In 1851 a body of soldiers in pursuit of the Indians were the first white men to look upon the Yosemite. Strange to say, they returned without making any mention of the unspeakable grandeur of the place. Only an incidental allusion was made to a waterfall, they "guessed was a thousand feet high." A few years later the valley was more thoroughly explored by some parties who returned with graphic accounts of the marvelous sublimity and beauty of the place, also with sketches of some of the most striking features. Thus the valley was made known to the world and since then its far spread fame has attracted to it thousands of tourists annually.

Early in June, 1900, the writer accompanied by three friends started from Fresno, California, en route for the Yosemite. Our outfit consisted of a covered wagon drawn by two horses, a large tent and bedding, food sufficient for several weeks and cooking utensils. The distance from Fresno is about one hundred and thirty miles. The greater part of this is through the Sierra Nevada mountains. The first twenty miles of the journey lay through the almost unbroken wheat region of the San Joaquin Valley. Here it was hot and dusty, and there was little water. At six o'clock we were well into the foot-hills. Water was yet scarce, but fate favored us and we came to a schoolhouse by the road where there was a well of very good wa-Here we made our camp. The horses were fed, the tent pitched, and supper was prepared. After supper we arranged our bed, which was composed of a canvas and a number of blankets and comforters. These we placed on the ground. I found the bed a little too hard for sleep that night, but in the successive nights it was amply comfortable. I never slept better anywhere than flat on the ground, high up in the Sierras.

On the following evening we found ourselves far into the mountains. It was cooler and more pleasant. There was water everywhere. Babbling brooks came leaping down the mountain's side almost at every turn of the road. There was lots of timber-the finest I ever saw. For many miles we drove through primeval forests of pine, cedar, spruce and fir. To one who lived in an arid, treeless country, the scenery was grand. Not a tree had been cut. The woods were fresh from the hands of the Creator. Never had the axe of the woodman marred their original beauty; but a far more wonderful sight in the shape of trees was yet in store for us. We had not yet reached the spot where nature had been most lavish in her forests. We had not seen California's big trees, -her gigantic Sequoias.

About three o'clock in the afternoon of the third

day we stood in the midst of the Mariposa Big Tree grove. A wonderful sight met us. Almost before we were aware we were in the very presence of an enormous giant of the forest, a tree twenty or thirty feet in diameter. I will not dwell on the big trees now, but may speak of them at length subsequently.

On the following day, late in the afternoon, I had my first glimpse of the Vosemite Valley. We were driving down a tolerably steep incline about one mile above Glacial Point. As the road made a sudden turn we found ourselves on the very edge of a precipice more than three thousand feet in height. I was utterly unprepared for the suddenness of the change. To attempt to describe the impression would be presumptuous. It must be experienced to be understood. Before us was an awful gorge, terrible in its depth and wonderful in its sublimity. Just opposite, less than three-quarters of a mile away, arose the great Half Dome, whose perpendicular front measures five thousand feet—almost one mile. On its top lay a large snow drift. To the left the waters of the Nernalt Falls sparkled in the twilight as they rushed over a granite wall three hundred and fifty feet high. A little beyond the Nevada Falls were filling that part of the valley with the din of their monotonous roar as they made a leap of just twice so high. Guarding this wonder stands the Cap of Liberty, an enormous mass of granite, whose crest reaches thousands of feet heavenward.

We must not pause here, we are nearing Glacial Point. We stand on the very brink of the precipice looking down as though into the very bowels of the earth. Three thousand feet below the largest objects seem as children's toys. The Merced river as it winds gracefully through the centre of the valley may be traced by its likeness to a mere thread. A stage coach drawn by four large horses can only be seen by the keenest eye. The scene was very much like the one just described, only added to that is the crowning glory of the valley, the Yosemite Falls, which send a torrent from the crest of a cliff into the valley almost three thousand feet below. We spent the night near the Point. There was a beautiful moonlight. The semidarkness added strangeness to the scene. It was a late hour when I retired, being loath to tear myself from the grand sublimity of the spectacle. During the evening low fires were kindled on the very edge of the cliff for the benefit of the visitors in the valley below. The charred remains of sticks of wood, fire canes, were sent blazing into the abyss. They seemed as falling stars. Bombs, suspended by ropes were exploded near the surface of the cliff below. Quite a number of distinct explosions could be heard from different localities of the mountains. This was due to the echo. For several minutes rumblings could be heard as of distant thunder, growing less distinct as the distance from the hearer increased.

On the morrow we go down into the valley. It required a drive of about twenty-five miles to accomplish the feat. We found a convenient camping place through the guardian of the valley and for a week we lived among the most remarkable of natural wonders, never tiring, but continually admiring their increasing beauty and majestic splendor. To appreciate the Yosemite one must see it. Volumes might be written, yet the reader could not conceive the thing described.

Lordsburg, California.

THE WOMEN AND THE DOGS.

In Germany a dog may be said to live a "dog's life." And having made this observation about dogs one is tempted to ask: "What about the women of Germany?" For before he knows it the traveler in the fatherland has begun to associate the women and the dogs. Perhaps this is because he sees them so often toiling along together side by side in the market roads or in the streets of cities, dragging heavy carts. And perhaps it is because both are so uncomplainingly faithful and strong and silent.

At first the American looks upon all this with the disfavor of unfamiliarity, for he comes from a country where the dogs, at least, live lives of aristocratic leisure, but after a time he begins to feel that, after all, the women and the dogs are not so badly treated. They are up early and to bed

late and for long hours they wear the harness of work, and yet one is impressed with the unvarying kindness shown these faithful servants. Visit any German market place and one sees hundreds of dogcarts drawn up to the pavement edge, and the dog, with his barness loosened, lying on a clean soft mat which has been spread down for him. If it rains there is often a bit of canvas or an umbrella to stretch over him. At the market in Hamburg once I saw a dog under a little collapsible tent which had been raised over him while it rained And the dogs everywhere look sleek and well fed and they seem to take an interest in drawing the load, often looking up to the woman opposite with almost human companionship. On a rainy day in Vienna I saw a dog holding a woman's skirts out of the mud in his teeth while both toiled before a huge load of cabbages.

The women, too, look well kept. Their clothing is clean and carefully mended, though often coarse, and even these toiling burden-bearers are not without little touches of feminine finery. Invariable they look strong and well, the younger ones rosy of cheek, smooth and sunny of hair, stout of aim, and the older ones, though often bent, are still vigorous, At noon one sees them sitting by their dogs, cating their rye bread and sausage and occasionally offering a tidbit to the great faithful creature, who stands near with eager eyes. And as they eat one hears them chatter very much as their sisters do everywhere the world over-a pleasant bit of gossin about dress and husbands and dogs. Thus the women and the dogs bring most of the produce from the gardens to the city markets, thus travelall manner of peddlers, old-clothes buyers and so on

In one respect, however, the dogs are better att than the women. When they reach home they may rest; the women never rest. One sees them in the fields at 5 o'clock in the morning and at 9 o'clock in the evening, grubbing and hoeing and harvesting. In the cities they are up and down and everywhere, with baskets strapped to their shoulders, carrying laundry work, vegetables, meat, fruit, babies. The markets are run by women almost exclusively, and it is a common sight to see women sawing or splitting wood in the streets, as I saw them often, or mixing mortar for new buildings, loading and unloading brick and lumber, and doing all manner of other heavy work.

And yet, in spite of all this, the German woman, even of the lowest caste, manages to appear womanly, to attend to her household duties and to send her children out looking fairly clean and well dressed. For besides all this hard work the German woman brings many children into the world, and they, like the dogs, are trained to work as soon as they can toddle. A woman's wages are only a few cents a day, and yet, in the aggregate, over all of Germany, they mean an immense addition year ly to the wealth of the nation. The women are the burden-bearers, and if it were not for their productive toil Germany would soon go bankrupt. Itis the work of the women which enables Germany to support the finest army in the world, to withdiaw hundreds of thousands of young men every year from the ranks of productive labor, to enable the kaiser to bluster valiantly over the Chinese ques tion and growl at England or threaten France When one comes to think of it the heromaki business in Germany falls hard on the women. the next great war, although few will so look at it. the women will be the real winners of every victory. the quiet, hard-working, stay-at-home heroes who have watched and worked the farm and built the houses while their sons and husbands wore glitter ing uniforms—these heroes, the women and the

TROOPS ON THE MARCH.

A SINGLE battalion of infantry 1,000 strong, which is the strength of an English battalion, takes up a road length of 525 yards, including alout eight yards for stragglers. A battery of field antiller takes up 200 yards and a regiment of cavalry takes up, when marching four abreast, 650 yards, and army corps, with its staff, wagons, guns, hospitals etc., would extend over thirty-four miles.

Strany, patient, perserving thinking will generally surmount every obstacle in the search after truth.

Nature & Study

MALE AND FEMALE DIAMONDS.

A spoor time ago a certain jeweler's window in mede la Paix, Paris, exhibited a tray of diamonds whose extreme beauty and brilliance attracted throngs of admiring passers-by, and many times a day the obliging proprietor was called upon to explain the remarkable diversity of color,

As a matter of fact this tray is well known to the made, and is specially manufactured to display the wonderful prismatic hues of the large African mine diamonds. The fire and play of color regaled are exquisite and the jeweler's gossip, says lashe's Workle, as he picked up a sparkler here and there with his diamond tweezers was very interest-

"This is a black diamond," said he, "somewhat less than four carats, and worth 12,500 francs. It changes its color in different lights; in strong sunlight it is almost black; in gaslight a rich golden fown. After exposure to the rays of the sun it will remain luminous in the dark for a time, but a candle flame develops its luster more than any other light."

"Here is a grass-green diamond," went on the speaker. "Its builbance and here exceed any emerald's known. This is for an American amateur of precious stones.

"Look at this spray of colored diamonds. Isn't a charming piece of jewelry, with its yellow, black, gray, green, indigo and cinnamon colored jewels: A Tyrolese spent most of his life collecting these.

"This rich, deep red, like a ruby, only more beautiful, is extremely rare and costly. The Russian emperor has purchased this, and also the peachblow mited gem next to it.

"Here is a blue diamond from the old Indian mines," he added, "almost as choice a thing as the red one, and these are all yellow diamonds, mostly canary-colored. The West India trade prefers this line, and all of these others are white, nearly color-less and perfectly transparent, and resemble a drop of clear water.

"Do they break? The old theory about the hadness of the diamond is greatly modified. Some of these gems are so brittle that I could crack them by dropping them on the floor. I can pulverize them in a mortar or split them with a knife in the direction of their cleavage lines. These white diamonds make the microscopic lenses, their magnifying power is so superior to that of glass."

He bent over the gems a moment and, picking up a beautiful white stone of a couple of carats, turned again to his listeners,

"Did you ever know there was sex in jewels?" he asked, "Here is a curiosity," and under a strong magnifying glass he pointed out a group of five or ix tiny diamonds clustered about the edge of the store, but unperceivable without the lens.

"The male gem never gathers these little buds," the jeweler continued. "This is called the female, or multiplying diamond. And the female stone is not only more brilliant, but of greater size and less of the best of the control of the best of the control of the

"The largest and best-known diamonds in history and collections are all female jewels. Strange, isn't

GIANT TREES IN OREGON.

"I would like to draw attention to a bunch of mmense trees in the mountains lifteen or twenty mles from any place, near Latoureli, on the O. R. A N, says a correspondent. I used to make every Jest a trip to the mountains, lasting generally eight ten days, and it was on one of my last trips, hout four years ago, that I discovered on the anthrast side of the divide, between the waters of Run and the Hood River, this bunch of Bank trees. The like I never saw before or since. Before 1 saw these giants I had measured from time to time some trees at home which girdled twenly-nine to thirty feet around about three feet about the base, but these trees could not be compared at they be big trees I found in the mountains. they would appear as mere sticks against those glants, 1 honestly believe that those giants will findle sixty to eighty feet around near the base, and that they are 350 to 400 feet high. They stand on a kind of flat or bottom, and this flat is well protected from discovery, as far as I could perceive, by steep and high bluffs, not only from the Hood River side up, but from the main water divide down. These big trees are, in my mind, somewhere near the north line of the National Park, but it is doubtful if they are in it.

There are two species of the giant trees. One species has a yellowish and not very rough bark, is straight and round as a candle, has no limbs to an immense height, and has a wonderful crown. The father of this very aristocratic species in our mountains is surely the emperor of our forest. People must not think that this tree is the so-called "noble fir," because I know not only the "noble fir," but many other mountain trees very well. Nor must they think that this species is one of the common trees in the mountains. I cannot say how many such giants there are. There may be hundreds, there may be thousands. On our way home one of my companions was drowned in the Bull Run, and, therefore, I never went to the mountains again, but have always had a desire to go and investigate further about those big trees.

Cedar is the second species of the big trees. They rival in size and grandeur the first species. But the most wonderful thing about them seems to be that they are, in spite of their immense diameter and age, seemingly sound and hard through and through

ANT RAIDS SKILLFULLY PLANNED.

From a military standpoint, the methods employed by ants to provide food for an ant colony are almost perfect. Their foraging parties are faultless, both in planning and execution, and are almost uniformly successful. A resident of this city who is at present in business in South Africa, has sent home a description of a foray of an army of ants.

The army, which he estimates to have numbered about 15,000 ants, started from their home in the mud walls of a hut and marched in the direction of a small mound of fresh earth but a few yards distant. The head of the column halted on reaching the foot of the mound and waited for the rest of the force to arrive at the place of operations, which evidently was to be the mound of fresh earth. When the remainder had arrived and halted so that the entire army was assembled, a number of ants detached themselves from the main body and began to ascend to the top of the mound, while the others began moving so as to encircle the base of the mound.

Very soon a number from the detachment which had ascended the mound, evidently the attacking party, entered the loose earth and speedily returned, each bearing a cricket or a young grasshopper, dead, which he deposited upon the ground and then returned for a fresh load. Those who remained on the outside of the mound took up the crickets and grasshoppers as they were brought out and bore them down to the base of the hill, returning for a fresh load. Soon the contents of the mound seemed to be exhausted, and then the whole force returned home, each carrying his burden of food for the community.

Here, then, was a regular foray, planned and executed with military precision, the country surveyed, the depot of provisions known accurately before the march was made, and the most prudential division of labor and care taken that none of the victims should escape.

WHERE DEW COMES FROM.

Ground a little below the surface is always warmer than the air over it. So long as the surface of the ground is above the dew point vapor must rise and pass from the earth into the air.

The moist air so formed will mingle with the air

above it and its moisture will be condensed, forming dew wherever it comes in contact with a surface cooled below the dew point. In fact dew rises from the ground.

Place some metal trays over the grass, the soil and the road on dewy nights. You will generally find more moisture on the grass inside the trays than outside; you will always observe a deposit of dew inside the trays, even when there is none outside at all. This shows that far more vapor rises out of the ground during the night than condenses as dew on the grass and other objects.

Dew then rises from the ground. But how is the dew formed on bodies high up in the air?

Dew does not rise in particles, as it was once considered, to fall in particles like fine rain. It rises in vapor. Some is caught by what is on the surface of the earth, but the rest ascends in vapor form until it comes in contact with a much colder surface, to condense it into moisture.

The vapor does not flow upward in a uniform stream, but is mixed in the air by eddies and wind currents and carried to hodies far from where it rose. In fact, dew may be deposited, even though the country for many miles all around be dry and incapable of yielding any vapor. In such cases the supply of vapor to form that dew would depend on the evaporation of the dew and on what was wafted over by the winds.

MUSSELS ARE GOOD FOOD.

"THERE is one shellfish, the mussel, the use of which as an article of food seems to be totally neglected in the United States," observed an Englishman of several years' residence in this country. "In fact, it is so seldom employed that it may be said to be practically unknown on this side of the Atlantic. It is rarely seen in your markets, and near the salt water bays and estuaries in which it is taken it is used, I am told, as a manure for certain crops. This lack of recognition of mussels as an epicurean delicacy probably arises from the popular superstition among Americans that this shellfish possesses poisonous qualities. Such an impression is, however, rather absurd, for in England they are largely consumed by the poor and the middle class people, and if they contained any injurious properties their use would be promptly prohibited.

"It is well known that some persons are unable to eat of particular sorts of shellfish—to some oysters, clams or lobsters are more or less poisonous, but mussels are only 'noxious' to the greater number for the reason that they deteriorate more rapidly when removed from the water than any other species. There are mussel beds within a radius of ten miles of New York and other eastern cities of sufficient capacity to supply millions of people with a clean and nutritious article of food; one that would lessen to a large degree the exhaustive demands made upon the clam, oyster and lobster fisheries.

"To prepare mussels for the table they should be selected of medium size and care be observed to wash them carefully and place them in a vessel of salted water for several hours, so that they may clean themselves; that is discharge the dirt and grit found within their shells. When this process is completed the bivalves should be placed in water and boiled—or steaming is better in the vapor generated by their juice. When they are done they may be easily taken out of their shells and are ready to be used in one of the many forms of which they are susceptible."

HOW PLANTS GAIN WEIGHT.

As far as is known the first botanical experiment ever performed was conducted by a Dutchman. He placed in a pot 200 pounds of dried earth, and in it he planted a willow branch which weighed five pounds. He kept the whole covered up and daily watered the earth with rainwater. After five years' growth the willow was again weighed and was found to have gained 164 pounds. The earth in the pot was dried and weighed and had lost only two ounces.

The experimentalist, therefore, looked upon this experiment as supporting the theory that plants required no food but water. But he was wrong. Later it was discovered that much of the increase in weight of plants was derived from carbonic acid gas in the air.

Vegetable cells contain a liquid known as "cell sap," which is water holding in solution various materials which have been taken up from without by the roots and leaves. Thus it is in the living cells of the plant that those "digestive" processes are carried on which were once believed to occur in the soil.

Sorrows are often like clouds, which though black when they are passing over us, when they are past become as if they were the garments of God thrown off in purple and gold along the sky.

THE INGLENOOK.

PUBLISHED WEEKLY

At 22 and 24 South State Street, Elgin, Illinois. Price, \$1.00 a year. It is a high grade paper for high grade boys and girls who love good reading. INGLENOOK wants contributions, bright, well written and of general interest. No love stories or any with killing or cruelty in them will be considered. If you want your articles returned, if not available, send stamped and addressed envelope. Send subscriptions, articles and everything intended for The Inglenook, to the following address.

Brethren Publishing House, Elgin, Illinois.

Entered at the Post Office at Elgin, Ill., as Second-class Matter.

ABOUT OURSELVES.

A READER of the 'Nook writes that a feature of the paper is in the fact that he gets so much that is new and out of the way from it. Others have said the same thing, and it is precisely what we intended the paper should be. There are papers that give the current news, and there are publications in almost every field of human endeavor. Each has its constituency, and a special reason for living. The INGLENOOK does not compete with any of these nor does it specially appeal to the story reader and never to the love story class. We find no fault with those who care for that sort of thing, but it is not our ideal of a paper. What we started out to do was to make a paper that would be read by both old and young with unflagging interest, one that would contain real information, knowledge that would pay any reader to acquire. We know that we have succeeded. And what is more to the point, we are going to keep it up, and what is still better the paper is to be steadily improved.

When we began the search for the unusual and the little known we feared we would have difficulty in keeping it up. On searching our field, the world, we were appalled at the enormous number of things that are little known, and out of which intensely interesting matter can be made. Instead of finding a scarcity of material the question resolved itself into a choice of what was best. And none of us will live long enough to exhaust a tenth part of available material. To read the 'Nook will be to acquire a fund of information that will be most valuable. True it might be had in other fields, but we pride ourselves in the fact that there is something in the telling that helps to make it interesting.

Theoretically we are a youth's paper, but while we are that we are a great deal more. We are a family paper, one that is read alike by the grandfather and the youth, the mother as well as the daughter, and the bright-eyed boy and the man with spectacles alike want it. This is just what we intended. If anyone thinks it an easy task to strike an average and set a literary table that will satisfy brighteyes and graybeard alike let him try it. It is comparatively easy to write for the grownups, hard to hold children's attention, and hardest of all to get out that which pleases all. There is not another paper like it that we know, certainly none so well adapted to our own people as the 'Nook, and while we are not the people, and wisdom will not die with us, and there is an ever widening field for improvement, we are pleased to know that the Inglenook is appreciated and read in the farthest corners of the earth.

Of course present readers will continue getting their papers another year, as they would feel lost without it. But what is good for us is also good for others, and here is where we can do a good deal of missionary work. Your neighbors may not know the paper. Tell them about it, and urge them to take it. If you make out a list and send it to us we will send them samples and thus spread the news. See that your neighbors get to hear of it. There will be things in coming numbers that you will want to know about, and a good many of them you will never hear in any other way than reading the INGLENOOK. Tell your friends about the paper and urge them to take it.

THOSE WHO HAVE FAILED.

We meet them on all sides,—those who have failed in what they undertook to do. We are apt to criticise them and pass them on our way to an

uncertain success. A person may have failed in securing a material, visible reward, and still have succeeded morally. We see the hearse returning from the graveyard and we say one to the other, "He never succeeded in life. He had no business ability" Yet for forty years he may have kept his parents and cared for his brothers and sisters who, apparently, were ahead or at least equal, in the common race. This thing happens oftener than we think and is most frequently out of sight. Many a young man and woman walk the streets, and the comment of the public is that they are no good or they would get out and do something for themselves. Yet these same parties are often the ones who hold an entire family together and support those not seen by the public. They are heroes, but they wear no laurels. The world recognizes not their worth, but condemns what it thinks is an evidence of mental slowness.

Here and there is a boy or girl whose lot it is to keep things together at home. Sometimes they naturally rebel at the situation and wish to break loose and work for themselves. Yet it is their highest mission to keep right on with their shoulders to the wheel if there is no other help for those around them. The pitiable part of this situation is that sometimes the beneficiaries are ungrateful. They regard the sacrifice as their due. They never give credit to the bread winner of the lot. And it is often reversed. The father or the mother, or both, walk the street in poor clothes, and in self-denial, that children may go to school, or be well dressed in idleness. The difficulty is that we are not able to see through the environment. Our judgment of successes or failures should be very charily rendered. Often the failure is the uncrowned but kingly one and we never know it

OUR SHORT SERMON.

Text: Cheating Ourselves.

We all know what it is to cheat others, and most of us are above it. But there is such a thing as cheating ourselves. It may not have such a serious moral side to it as when we defraud others, but the effect on ourselves is disastrous. A person comes to love money to that extent that he denies himself the fittings and findings of the best side of life. He sees the magazine, the paper, or the delicacy that he knows they would like at home, but he holds on to the ten cents and lets the better part go. This man has only cheated himself. He has saved his money, but he has lost more than its worth.

One can see this going on in churches, A collection is to be taken up and the man feels around in his pocket for a cent so that he can go through the motions of giving, yet not really do anything worth the name. Such a person is only cheating himself, and the pity of it is that he doesn't know it half the time. He compromises with his conscience by saying that is about what others give, and he lets it rest at that. All he has is the Lord's but he has held on to the bulk of it, and he only went through the form of giving and deposited a cent. The only person really cheated in the proceeding is himself. When he comes down to die he will have a little more money to leave behind than his generous neighbor, but it is the result of cheating himself very often.

It is a great deal better when we come to die that the world should be indebted to us than that we should owe the world withheld dues. Life is so short and eternity so long that it does not pay to accumulate in time and let the ages go. The Book expressly cautions us to avoid too much thought about the cares of this life. It is well to be prudent, but it is not well to let that idea pass into our defrauding ourselves under its garb. Give the penny to a child and a piece of silver to the Lord. The result will be that in some mysterious way you will have more than ever you had. Lay not up your treasures on earth.

A small-minden man looks at the sky through a reed.

QUESTIONS AND ANSWERS

Do many Sunday schools use the INGLENOUS as a pan of

Yes, and they find it a very effective attraction.

Do you want poetry for the Inglenook?

A very little of it goes a long ways in the 'Nook office.

Why is not the Editor's name seen in the IngleNtnik)

Because he does not care a particle for any such

Is God glorified by instrumental music in our churches?

Some think so, others not. The 'Nook does not believe in instrumental music in churches.

What is liconice?

It is the boiled down juice of the root of the become plant, and is usually much adultrated as found in the stores.

Of what use to us is the Chicago Board of Trade?

If by "us" the INGLENOOK readers are meant the answer is that it is no good on earth to any of us. It is not intended to be.

What is meant by high or low barometer?

The movement of the column of mercury in the tube is influenced by the weight of the air. A high barometer indicates fair weather, a falling barometer portends bad weather.

What is a hammerless gun I see advertised?

It is a gun with the firing apparatus out of sight, Accidents are more apt to happen with them than the ordinary arrangement of guns. With the hammer in sight you will be better able to see the danger of a gun ready to "go off."

What is meant by union of church and state?

When there is a special form of worship, or a denomination, which amounts to the same thing adopted by the government, and its higher officials appointed by government authority, who in turn appoint subordinates, that is union of church and state. In countries where this is done dissenting denominations are tolerated, but the State church gets the favors. The system is a bad one.

What is an "Underground Rathoad" that I read about sometimes?

It may mean just what it says a railroad that is operated underground in some crowded city, or it may mean some prearranged route of escape from a place by having help and shelter at regular intervals. There was a good deal of this done prior to and during the civil war. Escaping slaves would be directed or piloted at night to some place where they were hid during the day and then forwarded again the next night. This is probably what you mean.

* * *

Is it right for us to store grain for higher paices while their are people in want in our cities?

As an abstract moral proposition it would not be right. In practice selling at a low figure would only be helping the buyer and not the poor, as he would at once put the price up to the highest notch independent of what he paid. It would not help the family in the alley a particle if you give your wheat crop to the elevator or the general huyer. A personal sacrifice that helps nobody is utterly use less. The holder of any article is morally entitled to the ruling price, but he can discount it to the poor, if he will, where he knows that the recipient is being helped and that he deserves such favors.

INFORMATION WANTED.

A BROTHER writes asking whether or not discribing to hold minor civil offices, or to even vote all. As this is a pretty wide and debatable matter the Editor asks for contributions on the subject generally. There is a good deal to say on either side of the question and we would be pleased to have a few short, pointed articles on the subject.

Good Reading

HOW CHOCOLATE IS MADE.

The chemist, who is always analyzing, testing and experimenting with cocoa beans, explains that the difference between the American and Dutch the difference between the American and Dutch the difference between the American and Dutch the ontion has in the fact that the patient Hollander two all the fiber and thus makes all the cocoa the out all the fiber and thus makes all the cocoa the out alkalication and other queer compounds which he says are the out of the fiber is not eliminated. But an appears when the fiber is not eliminated. But an appears that whether the alkali, fiber or half a dozen the out or not it did not make much difference, and or not it did not make much difference.

The cocoa bean, from which chocolate and cocoa and made, is the seed of a mushy pod, somewhat The a melon, which is the fruit of a cocoa tree. The pod is not edible. The cocoa tree is found in al tropical countries, and over a score of varieties ne known to the commercial world. Central America, Mexico, northern South America, the West and East Indies and Brazil send the cocoa beans to Europe and America. The best of all is he high-grade Caracas cocoa, but this grade does not come to America, for the American people are notyet educated up to cocoa at SI a pound. The World's Fair was a great educator in cocoa, for all the large makers of the world vied with one anothg in the introduction of their goods. Tired-out momen retain grateful memories of the quaint and mistic chocolate booths and pavilions where they and only found rest and peace but a good cup of shocolate and cocoa into the bargain. The French and Dutch chocolatemakers are spending vast nums of money in this country in missionary work, for Uncle Sam's children are the slaves of tea and offee and seem loath to take to the cup which holds the fragrant liquid food which comes from

The cocoa bean is about the size of a pecan nut and reddish chocolate in color. The shell is thin and brittle and easily breaks when pinched lightly. The kernel of the bean is called the nib, and it is from the nibs that chocolate and cocoa are made. The beans are brought to the Chicago works in the bags in which they were shipped, and are carried to the top floor and roasted. The roasting is done in cylindrical, machine which turns slowly around over a coal fire. The bean is roasted for the purpose of making the shells so brittle that they will ome off easily. As soon as the beans are placed hthe roaster the skill and care of the workmen ome into play, for the cocoa bean must have its hat and cold just so or something will go wrong. The heat in the roaster must be just right, and when the roasted beans are taken out and placed in large boxes they must be cooled properly or the cocoa

After the roasting process has been successfully amed out and the beans have cooled down properwthey are carried to a machine called a "cracker and fanner." The machine is well named, for it list cracks the bean, thus removing the shell, and then fans the shell out of the way, leaving the nibs bill into boxes placed below. It is a combinan circular nut-cracker and a winnowing machine such as is used for cleaning wheat. It prepares the obs for the next step in the process, which is a Rinding operation. For this purpose they are fed blo a hopper and sent through a spout to the ginding machines on the first floor. The cocoa can is half oil, and this becomes apparent when he nibs are fed into the grinding-mill. The first trolution of the stone sends out a thick chocolate Paste, for the bean has so much oil in it that nothng tise is needed to grind the nibs. As it comes the stones the chocolate looks just as it does the cook for making chocolate the start making chocolate the maker intends to make the ordinary chocolate of commerce only - or, as it is called by trade "premium" chocolate the process is found when the nibs are ground. The found chocolate is then simply placed in kettles the purpose of completing the stirring up it artied in and is next spooned into little tins and stried into a cooling-room to solidify into the akes which are afterwards wrapped in tinfoil and lancy paper. The grinding mills are heated by tam, for it is hest to keep the chocolate warm working it. In America the bulk of the take up less space.

chocolate consumed is unsweetened, but in Europe almost all the chocolate is sweetened in the making. The American chocolate-users seem to prefer to sweeten their chocolate themselves, so that when the chocolate is ground it is practically ready for use.

The difference between chocolate and cocoa is simply that cocoa is chocolate from which the oil has been extracted. As half of the cocoa bean is cocoa butter, the difference is considerable. Cocoabutter is used by confectioners, and the demand for it so far exceeds the supply in this country that over 2,000 tons of cocoa butter were imported last year. It is the cocoa butter which gives the gloss to the sweet chocolate cakes sold for eating, for sweet chocolate is nothing but a mixture of chocolate, cocoa butter and sugar, either with or without some flavoring extract such as vanilla. To make cocoa for drinking purposes the cocoa butter must be extracted. This is done in various ways, by pressure, filtration or some chemical process. In the Chicago works the chocolate is taken from the grinder and placed in little canvas bags and then put in a hydraulic press, where a pressure of seventy tons drives the oil out of the chocolate and leaves the cocoa in solid, dry, oilless lumps, which are broken with a mallet and taken away to be ground up for further operations. If the cocoa is wanted for drinking purposes it is ground into a flour-like substance and packed in tin boxes. If for eating or for confectioners, it is mixed with the flavoring compounds in a mixing-mill after the sugar and flavor have been first thoroughly incorporated with the cocoa by passing the whole mixture through rolls.

The secret in making chocolate and cocoa-for each maker has his well-guarded secret-is in the blending of several varieties of cocoa beans. Not less than three kinds and up to half a dozen varieties are mixed or blended at some stage of the prodess; and here again a trade secret is guarded, for some makers mix before and others after grinding, and still others at other places in the making. It is this blending which makes good or bad cocoa according to the taste of the man who is drinking it. In the blending the cocoamaker shows his art, and he keeps the formula locked in a secret drawer of his safe and looks very wise when anything is said about "blending," Some chocolates and cocoas require tempering in a hot room for a time, and others are run into a cold room, where the pipes of a refrigerating machine keep the mercury down to zero, as soon as the paste runs out of the grindingmills. The familiar chocolate packages made up like little bricks united by thin webs at the bottom are made in tins which hold just a quarter of a pound of chocolate. For confectioners the chocolate is made up into ten-pound loaves.

EVAPORATING PEACHES.

BY TRA E FOUTZ.

In the disposal of the peach crop not all of them are sent to the city markets. Through the peach belts the canneries and evaporating plants use up a great many.

The evaporating plants are controlled in two different ways. Some of them are owned by companies made up mostly of peach growers, while some of the largest growers have a plant of their own. If good prices prevail there are not near as many evaporated as when they are a glut on the market. Mostly the small ones are used to be evaporated unless there is a surplus crop, when all sizes are taken. They are generally very ripe and many of them soft, when prepared for the evaporator. Mostly women and girls are employed to do the work.

Some of them are peeled by a machine, but many are too ripe—the seeds turning in them—and have to be peeled by hand. Those peeled by the machine have to be gone over and dressed, as strips of peeling are sometimes left on. They are then cut into halves by hand and the seed taken out. The seeds are taken out of the chings by a machine called the peach spoon. They are then ready for the trays, which are made of galvanized cloth wire, bottom bounded on each side by strips of wood. One layer is put on each tray. They are laid flat side down, unless there are a great many peaches on hand, when they are set up on the edges so as to

The trays are first placed in a machine one above the other. Sulphur is burnt under them and the smoke pours up over the peaches which bleaches them and causes them to be of a very light color when evaporated. They are then placed in the evaporator. They are subjected to the greatest heat when first put into it. At intervals they are put into a lower temperature until ready to be taken out. They are dried by a system in which the dry hot air passes over, under and through the trays. They are ready to be taken out after heing in from eight to twelve hours, which depends largely upon the kind of peaches and the heat. In the drying process they stick to the wire and have to be pulled loose, causing many particles to remain.

Two heaters are used for the large evaporators, and wood, coal or coke can be used in them. The number and size of the heaters depends upon the evaporator. A large evaporator holds about one hundred trays and will turn out from seventy-five to one hundred bushels of evaporated peaches every twenty-four hours, which depends upon the length of time it takes to dry them. One bushel of peaches, second grade, will produce about seven pounds unpared and one bushel first grade about six pounds pared

Wayneshoro, Pa.

COSTLIEST SAUSAGES MADE.

"The costliest of all sausages," said a man familiar with the trade, "is Lyons sausages, imported from France. Lyons sausage sells in Paris at two francs and more a pound. Here it is sold at eighty cents to Sr a pound. Lyons sausage is also produced in this country. That made here is even finer than the imported, but sells here, however, for somewhat less.

"Lyons is rather a large sausage. It is put up in the largest size hog casings and it is made of beef and pork. The meats used in making it are of the very best, and they are prepared with the greatest care. From the beef all the sinews and veins are removed, and there is left only the selected parts of the meat. The beef is chopped very fine, so fine as to make of it practically a paste. The pork used is from the back fat of hogs. This is not chopped fine, as the beef is, but is cut into irregular shaped pieces which show in the sausage when it is cut. The spices used in the seasoning are, of course, of the choicest. The Lyons sausage is hard smoked.

"The art of sausage-making has so improved in this country that now, as you can say without reservation, the finest sausages produced in the world are made in the United States. This is true without exception. The American Lyons sausage, for example, is better than the imported. Some American Lyons is exported to France and sold there, and some of that thus exported is reimported and sold here as imported Lyons.

"Lyons sausage is served in the very finest of hotels and restaurants, and it may be found on bills of fare, before the soup, served as an appetizer. For that purpose it is very excellent. I fancy that its increasing use in this manner in New York in recent years is due in great measure to calls for it from Russian visitors. The Russians have always been fond of Lyons sausage, as they are also of caviare.

"In a Chicago sausage factory making fine sausages the owner, who was showing us over the establishment, said, when it came noon.

" Now we will have luncheon."

"What he gave us was Lyons sausage of his own make, pumpernickel, fresh butter and Burgundy, and an admirable luncheon it was."

A max in a small town in Kentucky had ordered a goat for his son. He went to the train to see if it had come. The goat was in the car all right, but no one made any motion to put it off.

"Where is that goat going?" he asked the negro

"Boss," was the reply, "I doan' know whah dat goat's gwine. He doan' know hisse'f whah he gwine. He done chawed up whah he gwine."

Investigation revealed the fact that the animal had eaten the tag which showed his destination

NEVER let a love of life spoil a life of love

ABOUT BOOKS.

No. 3. Books for Young Folks.

GET only the best books. Get a variety of subjects. Place religion at the head. Give prominence to history and biography. Commit to memory choice selections of poetry. Utilize your spare moments in reading.

RELIGION.

Get a good self-pronouncing Bible with all the latest Sunday-school helps. The Nelson, Holman, and Oxford are all good and may be had for \$1.50 per copy. If you do not already have a "Bunyan's Pilgrim's Progress," get a copy next after the Bible, It may be had for 40 cents. The "Life of Christ" and the "Life of St. Paul," by Stalker are among the best and may be had for 50 cents each. The "Life of Judson," price, 80 cents, gives an insight into mission work. "The Greatest Thing in the World," by Drummond is a useful book and costs only 18 cents.

DISTORY.

Those who have not read much history will find "History of our own Times," by Justin McCarthy, among the best for introduction, price, 80 cents. This may be followed by Montgomery's, Fiske's or Alex. Johnson's American History. Price from 70 cents to \$1.00. For General History, get Myers'. It will cost \$1.50. Do not fail to get "Macaulay's Historical Essays." It will stir the blood if there is any to stir. Price, 80 cents. History of the Bible and of Greece, Rome, France, Germany and England, each illustrated, and will cost 80 cents per volume.

BIOGRAPHY,

"Life of Washington," by Irving, 60 to 75 cents. "Life of Lincoln," by Leland, 75 cents. "Autobiography of Franklin," 50 cents. "Men of Invention and Industry," by Smiles, 80 cents. "Peter the Great," by Abbott, 50 cents. Abbott's biographies of thirty-two great men are all good. They include Alexander, Julius Cæsar, Cyrus, Darius, Hannibal, and Romulus, besides the most noted women in history. Price, 50 cents per volume.

VOYAGES.

"Life and Voyages of Columbus," by Irving, 50 cents. "Captain Cook around the World," 50 cents. "Gulliver's Travels," Swift, 50 cents. "Views Afoot,' B. Taylor, 60 cents. "Boys of other Countries," \$1.00, B. Taylor.

POETRY.

The poems of Longfellow, Whittier, Tennyson, Bryant, Robert Browning, Milton's "Paradise Lost," belong to the "Handy Volume Classics," are well bound in linen cloth and may be had for 18 cents each. They are gems. The beauties of Shakespeare, the poems of Goldsmith, Mrs. Hemans, Cowper, Dante, Goethe, Schiller, Spenser, Wordsworth, can be had from the "Astor Edition" and are among the most desirable inexpensive books.

ESSAYS.

"What a Boy Ought to Know," by Dr. Stall; "What a Girl Ought to Know," by Mary W. Allen, 75 cents each. "Self Help," "Duty," "Character," by Smiles, 50 cents per volume. "Emerson's Essays," First Series, "Irving's Sketch Book" "Tom Brown at Rugby," by Hughes, are all 40 cent books.

MISCELLANEOUS.

"House of Seven Gables," Hawthorne; "Fifteen Decisive Battles," Creasy; "Ivanhoe," Scott; "Last of the Mohicans," Cooper; "David Copperfield," Dickens; "Vicar of Wakefield," Goldsmith; "Robinson Ćrusoe," DeFoe; "Schænberg-Cotta Family," Mrs. Charles; "Les Miserables," Hugo. These are all 40 cent books and well worth the money.

In making out this list, it has been the aim of the writer to keep in view the best books with substantial binoing at the lowest price. If your book dealer will not treat you right, then buy your books from some large dealer in Chicago or New York. Begin your library at once. Do not buy too many books at a time and through the INGLENDOK tell your success to your - Uncle S.

"I LIKE the INGLENOOK very well, as I can get more information out of it than from any other paper I have seen. It is a very good paper for old as well as young." I. C. Johnson.

THE WORLD'S MOST FAMOUS MEN.

Playro: Born, 427 B. C., living to the age of eighty. He was an Athenian philosopher, the father of ideal philosophy. Little is known of his personal life. He was a student, and from the philosophy of Socrates he wrote his immortal works which consist mainly in an unfolding of the teachings of his preceptor. That which makes him take rank among the great in the world is his influence on speculative philosophy. What he wrote is not of much interest to one not a scholar, with ample time and thorough classical knowledge, and a bent toward the philosophy of the ancients. Suffice it to say that he influenced, not only his own people, but all idealistic philosophy since

DEMOSTRENES: Born 384 B. C., died 322 B. C. He was a Greek politician and orator. As a boy he is said to have had an impediment in his speech, which he overcame, and subsequently became one of the greatest orators the world ever knew, and on this count his fame rests. He was a professional writer of speeches for the law courts, and what Homer was as a world poet, Demosthenes was as an orator. His style, in his speeches that have come down to us, is free from rhetorical embellishment, and it was probably his manner, quite as much as his matter, that made him the man he was among the ancients. It is quite probable that there have been other speakers of more recent times that have been quite as impressive as Demosthenes, but it has been the conventional thing to refer to him as the greatest orator the world ever knew, and this may be granted as far as the age in which he lived is concerned

Aristotle: Born 384 B. C., died aged about sixty-three years. There is so much that is legendary and misty about the records of Aristotle's life that nothing certain may be confidently asserted. He was a Greek, and he was a philosopher, writing on philosophical subjects, and considering the age in which he lived, his surroundings, and the lack of exact knowledge about mental and physical phenomena, the indebtedness of the world to Aristotle is great indeed. While he is no longer an authority, yet his impress on the thought of the world is so great that he is truly entitled to a first place among the learned. His fame rests on the fact of his being a philosopher, influencing the thought of his age, and interesting, if not influencing, the thinkers of all nations since his time.

ALEXANDER THE GREAT: Born 356 B. C., died 323 B. C. He was the son of Philip, king of Macedonia, and at the early age of twenty headed an army of conquest. He was a military man, second only to Hannibal and Napoleon in the schemes of world conquest. His same is from the fact of his great generalship, unsurpassed, perhaps in the history of the whole world. He was not a great statesman, nor a remarkably good man, but his personality and his genius as a military commander were such that he has made for himself a name, as one of the world conquerors, that time will never efface. He died at the early age of thirty-three as result of a drunken carouse. His successes had led him to pose as a god among his fellows, and while he conquered the world, and will be known to the end of time as a great military man, yet he allowed himself to be conquered by strong drink early in what even while it lasted, proved to be a most remarkable life.

HANNIBAL: A famous Carthaginian name, was born 247 B. C., and died, according to the best authorities 287 B. C. He was a great general, and when only nine years of age accompanied his father on a warlike expedition. At a comparatively early age he succeeded to the command of a large army and attempted to carry out the intentions of his father—the conquest of Rome. In order to do so he invaded Spain and subjugated the tribes there that it might serve as a base of operations against Rome. He then invaded Italy and in a short time all the Northern part was under his control. Further conquests followed, and for fifteen years he ravaged Italy from end to end. It is upon this general fact that his fame is based, and considering the ability and warlike character of the Roman at that time the distinction is well grounded. In the end the Romans combined against him, defeated him, and he took poison to escape falling into their hands. He was a man who had great natural abilities, and control over the rough men of his time.

A QUEER BUSINESS.

Cinevoo is the largest center in the world of new business, one born within the last two yes but already grown to sturdy dimensions. It of sists of the renting out of huge lists of names possible patrons to dealers who seek a mail on business, particularly in tural districts, Brokera firms by methods which will be explained should collect hundreds of thousands of letters written persons residing outside of the big cities-lette which the senders wrote originally to some busin firm inquiring about goods or making a specific order. These letters they sort into packages 500 or 1,000, classifying as a rule by the business which mention is made in the contents, and tent persons who think they can sell more of that say sort or of kindred goods to the writer.

The system, its import, and its scope are easied explained by example. Suppose Mr. Brown is dealer in second-hand bicycles, articles which an apt to be hard to dispose of in a big city, but for which there may be a demand in the country. The margin of profit is not large enough, however, to warrant him in the expenditure for advertising necessary to bring his goods to the eyes of the public which will give them a market. He concludes his best chance is to deal with the individual, he of the small town and the farm. The next question is the find out the individual. He goes to the letter broker and rents a package of letters.

By reading one of them he finds that John Smith village boy, has written to Jones & Co., dealers rifles, revolvers, etc., asking the price of certains their weapons, telling them to answer by telling mail, so that he can decide what he wants and have it sent to him C. O. D., right away. John is in hurry. That letter is full of character to) Bicycle Dealer Brown. The boy who wants a rife also wants a wheel, that is boy nature. This partic ular boy has saved up a little money, and is no quite a fool. He didn't intend to pay for the rife until he had seen it. With this knowledge to help him Mr. Brown sits down and writes an artfulle ter, directing it to Pleasant Prairie, lowa, or som of its companion places. He believes, he says, has an article which will appeal strongly to Mt.] Smith, both for itself and for its price. It is bicycle of latest make, almost new, and to be so for next to nothing. No sale is desired if it wheel isn't what it is said to be, and in proof of that it will be sent C. O. D., to be first examin Perhaps, also, Mr. J. Smith knows of a friend wh wants a wheel or possibly he has two friends wh would like to glide along country roads on steed of steel. In that event a fitting commission to M J. Smith will be the only fair thing and will be pai most willingly, and so on until Mr. J. Smith cannot help but be impressed by the document. Heread feels quite grown up, and m about fifty cases out a hundred he either buys or induces a friend to de

As no two of the 500 letters Mr Brown has lead ed are from persons in the same town, he does he advertising over a wide field. It may be assurthat he might as well have bought the letters of right; that they will be of no use to any one Nothing could be further from the truth. There is a contract to the country of th vidual who gets the mail order and C () D hib lost. He is like the buyer of patent medicines, he becomes an inveterate purchaser. This lack is the basis of the entire business. Letters are real over and over again, each firm through who hands they pass keeping the list of names channels when the letters are returned. WHAT READEST THOU?

rest of the worst things about a corrupt newspabich gloats over revolting scenes, and horrible of crime and cruelty, is that it circulates among the poor and gives subjects for at and conversation which drag downward. akind of reading matter is very cheap, and so testading influence is felt everywhere. Those become acquainted with intimate life of the ement-house population are appalled at the subsand style of the common talk among the peohere. Workers in villages and small towns peak of the scandal mongers who watch every of a neighbor's life in order to talk about it, gralso the gossip hurries from house to house her budget of news, until a certain fear and and distrust is felt instead of the love we should or our neighbor.

Matthew Arnold has said that "a single line of n working in the mind may produce more ohts and lead to more light which is what man as than the fullest acquaintance with the proof digestion." And so it is that the founding reading club, which will lead these people to good thoughts, and think on things that are and lovely and of good report is striking at ay root of much of the evil in the eyes of men

Our boys and girls are influenced in just the same Indeed this is a fact so well known that it ites but little comment. The boy who runs from home, or grieves his parents by going wil ways as a rule has some yellow paper dorcheap, trashy newspaper which has started his mind the train of evil thought which impels to do wrong. It is your duty and mine to do secan to keep such books and newspapers out he hands of our young people, and cultivate a t for something better. The Circle is doing mething towards this end. But it would accomhar more if every member would more fully ize the great need of shaping the future of our sandgirls by inducing them to read the best s. We are not as enthusiastic in this matter as hould be. Let the future in some degree atone our past indifference. "As a man thinketh in heart so is he." The social life of our boys and the talk in which they indulge, and the books gread, all shape their future for weal or woe.

SYRIAN WOMEN.

is reducated girl is not generally admired, she not make a desirable wife, because "she is too t for any man and she likes to converse." give honor to a woman who is talkless. And you cast away the one with the good

yes," she said, "my god must have the best." the Poor mother had a true doctrine but she d to a bad use.

BOOK NOTICES.

THE CRISIS IN CHINA, pp. 271, price, \$1 50, Harper & Brothers, New York, profusely illustrated.

This is a reprint from the North American Review of twelve articles on China written by as many men thoroughly familiar with the politics and situation in the Flowery Kingdom. Naturally there is no continuity to the book, each article being separate and distinct from the others. But each article is from the highest and most competent authority in the special domain of its treatment. Naturally George B. Smyth, President of the Anglo-China College at Foochow, knows what he is talking about when he writes on the causes of the Anti-foreign feeling in China. And the Chinese Minister at Washington is authority on his own country when he writes of mutual helpfulness between China and the United States. Every other contributor to the book is equally well informed, and, taken as a whole, it is the most acceptable book of the season on China, now occupying such a share of attention of the public.

. China is so little understood, even by scholars, that any effort given out by those who know, must be and is, peculiarly acceptable at the present time. It is not the view of one man, but the subject is viewed from twelve angles of observation, including that of the native, and he who reads cannot but have a better knowledge of a very complex subject. It is not, strictly speaking, a young folks' book, and for that matter neither is the INGLENOOK a young folks' paper, and wherever there is a reader who desires accurate information of the political and social condition in the oldest empire in the world, this is the book to get it from.

A Georgian Bungalow, by Frances Courtenay Baylor, pp. 121, price, \$1.00, Houghton, Mifflin & Co., Boston, Mass.

This is a book for half-grown children and is a story of Southern life, laid in Georgia. The story itself does not amount to much, though it is well told and will interest and strongly appeal to the semi-grownups. Most of the characters are all of innocent, youthful type and there is a liberal sprinkle of negro dialect and mild adventure in the way of fishing and the like. The best chapter in the book is a description of a negro cake walk and the writer must have seen one to describe it as she has done. The story winds up with a shipwreck, and while there is no high moral to it yet it is a good book to buy for a present to a family of children aging from ten to eighteen who will read it with pleasure and be none the worse for it.

THE INFIDEL, by M. E. Braddon, cloth, 454 pages, Harper & Bros., New York. Price, \$1.50.

This is a novel and those who read fiction, and many do, will find it a very dramatic story laid in the time of John Wesley's ministry, during the great Wesleyan revival. The story centers around Antonia Thornton, a very talented young woman, the daughter of a weak and irresolute hack writer. She did the most of her father's literary work, and both were pronounced atheists. Thornton was a dissolute criminal of the better class while his daughter, Antonia, was a woman of the purest character and highest impulses. Lord Kelrush was a nobleman of a not very admirable turn of character, a patron of Thornton, much with them, and as a result fell in love with Antonia to whom he proposed a mesalliance which was vigorously resented. Kelrush went away and was stricken with a fatal sickness. Meantime Antonia learned that she really did love Lord Kelrush.

Kelrush on his deathbed sent for Antonia to make her his wife, and with all haste the young woman, accompanied by her father, left their humble lodgings and in the spacious apartment of the dying man was united to him in marriage. He signed a will making her heir to all his immense property and she promised him to never marry another. This ends one part of the book.

Antonia, now Lady Kelrush, finds herself in possession of a title and immense wealth, and after due mourning goes abroad and enjoys herself in the ways and along the lines appealing to a woman of education and refinement. Travel and its broadening influences work wonders with Lady Kelrush, who, while still an atheist, goes around helping the poor.

Geo. Stobart, a typical early Methodist of the Puritanical type, falls in love with her. She listens

to the services of the grim Whitheld with his doctrine of selection and reprobation, and is untouched by his teaching. She attends Wesley's preaching and is converted, though not in the Salvation Army sense or methods. She goes about doing good, especially among the poor. She then goes to Ireland to escape Stobart, really loved by her, and then, in overworking among the sick, dies. John Wesley, present at her death, writes thus to Stobart: "I had been kneeling by her bedside in silent prayer for some time, her marble hand clasped in mine, when she cried out suddenly, 'Husband, I have kept my vow,' and, looking upward with a seraphic smile, her spirit passed into eternity."

The only fault of the book, as it seems to us, is its roundabout way from the start to the dramatic end, but it is a story that is exceptionally well told and it is a good, pure book, most likely to be read with most interest by older people. The love parts of it are never mawkish, while the dramatic and tragical settings of the story make it of unusual interest. We recommend it to our readers who, wanting fiction, should get the best, among which this is undoubtedly to be ranked.

🚣 Sunday 📶 Sehool 🟯

HYPOCRISY.

Any man who is a Christian can and should be courteous and kind to all men, whether they be Christians or not, and should both feel and act kindly towards them as citizens, neighbors and fellow-creatures. And if we know they have never obeyed the Gospel, and are not Christians, we should be courteons, friendly, and treat them with respect. But we cannot know or recognize such as Christians, and be consistent. We would not give much for any man's principles, who can set them aside for a little act of courtesy, or a little pretense of liberality. It is nothing but a sham, an empty pretense, and hypocrisy.

HAWTHORNE in his allegory of a "Threefold Destiny" pictures a dreamy young man who imagined that three wonderful events were to happen to him and fill up the measure of earthly happiness. He became so sure of those events that at last he left his native village and wandered all over the world to meet them. But his search was in vain. Disappointed he returned to his mother's home, and to his surprise found them there. The moral is a good one for many persons young and old who are anxious to do something beyond the ordinary, They can find their work close at hand among the common-place duties of life. No need to go forth to teach the heathen in far-off lands so long as you yourself are a heathen when tested by the Sermon on the Mount; nor to attend the great universities in quest of a higher education, before you have practically mastered Paul's lesson on charity.

It is foolish to try to measure God by human standards, and to say that what is reprehensible in the conduct of men is equally reprehensible in the conduct of his Maker. God is the giver of law whether it be natural or spiritual, but he is above law, and can do as he pleases with his own. He can suspend the power of gravitation as he did at Gibeon, and neutralize the effect of fire as he did in the furnace of Nebuchadnezzar. If he sees fit to destroy people by floods or tempests, plagues or famine, no person should presume to question his love or goodness, and if he has determined to punish impenitent sinners everlastingly who shall venture to doubt his justice or mercy? He is not to be judged by our limited notions of the universe.

A pozen disciples who confine their faith and worship within the limits of the apostolic teaching and show in their daily lives the fruit of the Spirit of holiness are a far greater power for good in any community than five hundred nominal Christians who follow the fashions of this world and pervert the Gospel to suit the tastes of the present age. Many a large and wealthy church, like that of Laodicea, instead of being a blessing is a curse to the people among whom it is located. It gives a false picture of the kingdom of God, and calls good evil and evil good.

Maxb unemployed is mind unempoyed,

CITY PIGEONS.

A KEEN observer who is much about town declares there are fully half many as dovecots in Chicago as there are homes. Eight out of every ten boys, the observer says, must be lovers of the pretty feathered fowl. To the casual observer this statement would seem an underestimate; the boy who has not pigeons at one time or another during his boyhood probably has unsatisfied ambitions. H he has no yard for his pets he will build a house and a platform for them on the roof, or if the roof is not open to him he will put up a pole and build his dovecot thereon. It is one of the satisfactory points about pigeons that they will live and thrive wherever they are housed in a cellar or on the housetop, as the convenience of their owner suggests.

The most popular place for these slittle houses is the roof, either of the house or shed, sometimes both, for start as modestly as one may the doves soon outgrow their cot and additions and annexes are necessary.

If you would see the pigeon-houses for yourself take a street car and go anywhere, or take particularly an elevated train and keep your eyes on the housetops. You will see not only the cots, but the pigeons, out on the roof to get the warmth of the sonshine. It will prove no mean array, for the dainty pets are of the choicest breeds and evidence the best of care.

When Chicago boys took to pigeon-raising, ever so many years ago, they were not satisfied with the modest gray birds. They must have the fantails and the ponters and the carrier pigeons, and like every other animal fancier they must have registered stock. After this fashion a start, made modestly a few years before, will spread itself into an elaborate undertaking. The first pigeons, which were probably Christmas presents, will soon be overlooked among the other and finer pets and their unadorned beauty will be quite put to route by the beleathered and bedecked varieties. And unconsciously as they perch on the roof the humbler bird will take an insignificant perch, leaving the ridge pole for the more aristocratic. There the fantails will spread their phimage and the ponters smooth their breast feathers. It is one of the daintiest sights to see a family of the pretty creatures out for their sunning.

Go wherever you will -north, south, west the dovecots and the pigeons are to be found. They are not too cheap for the rich or too expensive for the poor. The poor homes of the river districts are conspicuous possessors of them, and they seem never to be missing from the establishments of the boulevards. In the regions of flats the array of dovecots would lead one to believe they were part of the flat paraphernalia, just as is the icebox and the electric lights. They are built in-rows along the caves, each cot with its tiny porch in front and its occupants always on view. On sheds, wherever they are to be found, these bits of fanciful architecture are set up in groups, forming a regular village

There are more kinds of pigeons than one could undertake to remember, unless one were a boy and a pigeon fancier. Needless to say, a boy knows every variety that the market affords, and no matter how large his bird colony may have become he has always plans for adding just one more to his collection. The tipplers and the tumblers and the homers are but a few of the great families into which the smaller families are divided. There is as great a difference in tipplers as there is between the smooth and the muffed birds of each particular kind, and another striking difference is seen as well between the same birds when arrayed in different colors.

The colors of the pigeon form an endless variety of changes and characteristic differences. The soft dove and white pigeon is no more like the gay red ones nor like the plain white ones, again, than if it were a different bird. The colors come in endless variety and arrangement, as though nature were doing her best to make the pretty pets the daintiest creatures in the bird kingdom. Probably it is this very thing which has made them the favorite pet of Chicago, and it is certainly this which makes them an ornament to the poorest and at the same time to the finest housetop in the city.

them has a trick which gives its members a popular precedence over their bird friends. The tumblers are a plain, apparently ordinary pigeon, but as the name indicates their performance is not at all ordinary in the feathered families. The tumblers do just what they claim to do-they tumble. Put them on the floor or in the yard and at the signal they will turn a perfect back somersault. The parlor tumblers, the smallest of the variety, make the most interesting demonstration of this peculiar faculty. The somersault the parlor tumblers turn raises them less than three feet from the ground, while the performance of the ordinary tumbler is on a much larger scale, the somersault being turned in midair. The parlor tumblers are a particular favorite of boys, although they are among the most expensive varieties and many boys covet them in vain.

Not all the dovecots in Chicago are owned by boys far from it. Men are as fond of the birds as the boys are and as frequently have their housetop collections. Indeed, they go into the pigeon raising far more extensively than do boys and often an entire roof will be covered with their bird shelters. In this way some expensive and rare collections are kept in the most unexpected places about town. The roof of a large apartment-house on the south side is the home of nearly 300 pigeons, the property of the house owner. This man lives in one of the flats himself and can give several hours a day to the care of his birds. He reaches their novel home by means of a ladder which he must put in place for each visit. Up the ladder he carries all the food and water which the birds use, together with an occasional armful of straw for bedding, This sometimes requires ten or more trips a day from the housetop to the ground, but the man works with the greatest interest and with no apparent fatigue. When he is on the roof the birds swarm about him with a cooing that can be heard by passers-by in the street; they settle over him like swarms of flies, flapping their wings until they look as though they might fly away with their own-

The average collection of pigeons numbers about twenty-five, although a fancier does not consider 100 birds a large collection. A dovecot is a deceiving thing; it looks as though it could hold at the atmost four birds when on the contrary it will easily hold twenty. After the same fashion a collection of birds is deceiving; the owner thinks he has ten birds when he really has twenty.

FADS ABOUT FUNERALS.

A RECENT telegram from New York, states that Mrs. George Norton, a wealthy resident of Pawling, was buried sitting in the very self-same armchair in which as an invalid she spent the last three years of her life. This curious form of interment was directed by her will, and the detailed instructions were faithfully carried out. The body and chair were inclosed in a huge case, and the grave containing them was walled in with brick and surmounted by a heavy marble slab.

Not long ago there died in a North London suburb a lady who wished to be buried in the bedstead in which she had lain continuously for nearly a quarter of a century prior to her decease; and to insure, as she thought, her wishes being respected, she left a plump contingent legacy to a relative, As the bedstead in question, however, was of the old "four-post" variety, and an unusually massive specimen at that, the cometery authorities objected. Eventually a compromise was effected. The bedstead was taken to pieces, and from the timber so obtained a sort of box coffin was constructed for the reception of the remains.

It is, however, among the mining population that instances of funeral eccentricity are most common. lack Hustler, a coal-hewer of Tong, near Leeds, who died the other day at the age of sixty-seven, was buried in a coffin constructed to his own specineation twenty years ago. It was made of pitch pine, with silver handles, and the lid was binged at one end. The deceased was buried with a lump of eoal which he had carefully preserved for years. It served as his pillow, and his tobacco and pipe also found a place beside him. This latter custom is said to be very prevalent among the coal miners. The tin miners of Cornwall almost invariably in-Pigeons are not trick animals, but one class of clude an umbrella among the coffin "furniture." It loved .- George Macdonald.

would be interesting to learn the origin and signs cance of this strange use.

Some years ago an old and wealthy Derbyson farmer expressed a wish to be embalmed-th body, after being so treated to be sunk in one of the lime-impregnated subterranean springs so coe mon in the Peak district. The old chap's last was es were faithfully carried out, and after three year the corpse was found to be completely incased in filamentary shroud of pure white limestone. For some time it remained on show, but eventually the authorities interfered and the ghastly relic was n terred in the ordinary way.

Brooches, rings, medallion portraits, and other similar articles, mostly valued for old association's sake, are constantly being consigned to the grave even among the poorer classes of the community Indeed, in a large East End cemetery, not lonago, a body was buried with a large sum severa hundred pounds—in Bank of England notes, the valuable roll being placed inside the little hollor wooden pillow which supported the head. It difficult to surmise the object of this strange proceeding, as the only result would be, of course, to present the institution in question with the face value of the notes. It may have been, however, that the intention was to try and disappoint some expectant heir-in-law a species of ostentations post-mortem spite which is far more common than most people suppose.

DOORPLATES OF THE PAST.

"PEOPLE who get about town much must have noticed one change that has taken place in the past few years," said the man with the red mustache. "and that is the abolition of doorplates for all excent business purposes. There was a time, and not so very long ago, either, when everybody that aspired to any kind of social prominence decorated his front door with a plate on which his name was engraved. These plates were made of all kinds of metal, ranging from plain tin to solid silver, according to the prosperity of the owner. Some of them were very expensive. I happened to be in the engraving business when the doorplate craze was raging in its most virulent form, and I know for a fact that we turned out any number of plates that mounted up to and even beyond the \$100 mark.

"One of the most expensive plates we ever made was for a man who lived over on East Twenty-seeond Street. This man was a Russian who hadembraced American customs, and he had a name, I can't remember now what it was, but I do know that it used up about all the plate we had in the shop to fit him out, and that when we were finally through with him his front door resembled nothing so much as the billboard of a show. There was a peculiar thing about another block over in that part of the city. There were forty houses in that block Each was ornamented with a doorplate, and on thirty-one of these houses the name was Green I went over to that neighborhood the other day out of curiosity. There are no doorplates there now. and I had no means of ascertaining whether the Green colony still sticks to its old haunts.

" In one way these doorplates were a mighty hat thing. They gave a stranger within our gates in valuable assistance in sizing up the nomenclate of the city, but they savored too much of self-advertising to suit the quiet tastes of the more con servative element, and gradually the custom west out of fashion, until now a private house that sports a doorplate is a curiosity.'

HAVING ALL SORTS OF FUN.

A woman sent her small boy into the country and after a week of anxiety received this letter "I got here all right, but forgot to write sooner. feller and I went out in a boat and the boat topped over and a man got me out. I was so full of water I didn't know anything for a good while. The officer host has er boy has to be buried after they find him horse kicked me over and I have got to have so money for fixin' up my head. We are going to an old barn on fire to-night and I should smile it don't have some fun. I shall bring home a tree pole cat if I can get him in my trank

THE GOSPEL MESSENGER,

A Religious Weekly, at \$1.50 per Annum.

The Govern Massenger, published in the interests of the Brethree, or Dunker, Church, is an uncompromising advocate of primitive Christianity.

And must earnestly plends for a return to the apostolic order of worship and practice.

It holds that the Bible is a divinely-inspired book, and recognizes the New Testament as the only intallible role of falth and practice for the people of God.

It also holds to the doctrine of the Trioity; teaches luture rewards and punishment, and emphasizes the importance of a pure, holy and upright life before God and

It institutes that only those who remain faithful until death have the promise of eternal life; That Faith, Repentance and Haptism are conditions of partion, and hence for the remission of sins;

That Trine lumersion of dupping the candidate three times face-forward in Christian Raptism;

That Feet-washing, as taught in John 13, is a divine command to be observed in the church.

That the Lord's Support is a meal, and, in connection with the Communion, should be taken in the evening, or after the close of the day;

That the Salutation of the Holy Kiss, or Klas of Charity, is binding upon the followers of Christ;

That we would not contrary to the spirit and self-denying principles of the religion of Jesus Christ:

That a Non-Conformity to the world in daily walk, dress, customs and conversation is essential to true huliness and Christian plety.

It maintains that in public worship, or religious exer-cises, Christians should appear as directed in 1 Cor. 11:

It also advocates the Scriptural duty of Anotating the sick with oil in the name of the Lord.

lu short, it is a vindicator of all that Christ and the Apostles have enjoured upon us, and alms, amid the conflicting theories and discounts of modern Christendom, to point out ground that all must concede to be infallibly ante. Address:

Exegesis on Divorce and Remarriage REVISED EDITION.

A comp'ete analysis and analogy of all the Scriptures on this great question, in which the ambor clearly shows that the mairiage bond is annulled by death only. The Covington Greatte states this matter thus "The growing looseness of the marriage bond, makes this pamplilet timely, and the elder proves that the Scriptures positively forbid divorce." This was the doctrine of the church in an unbroken line for over one hundred years. All admit that this is "the sale side," which must be the side of truth,-Christ's side. Two cover pages have testimonials from brethren. One from an Elder reads thus: "Dear Brother I. J .- I shall ever feel grateful to you for the light you have thrown on the divorce question. Previously I have been a strong advocate for remarriage. much regret my course. Your effort to hold up the right on this serious question is a noble one." INGLENOOK.

"The Inglenook" will be Sent to any Address the Rest of this Year for One Dellaw will be Sent the Rest of this Year and all of next Year for One Dollar.

The Best Way is to send the Dollar and be Done with it. After You Have Read it for a Week or two, You'll be Sorn that You Didn't Save Money by Subscribing for the Whole Year at Once. It's a Paper

that Grows on One. Once Read, Always Read!

We Want Agents, == Real Live Agents

In Every Part of the Country. Anybody can solicit Subscribers at the Twenty-five Cent Rate, and Whoever Sends in Club of Ten of These. Can have his Choice of ONE of the following books:

Dictionary of the Bible, Beside the Bonnie Brier Bush, Natural History of Birds and Quadrupeds, Black Beauty, Dirain Life,

Drummond's Addresses, Adventures of a Brownie, Ten Nights in a Bar-Room, Intellectual Life, Imitation of Christ, Etc.

If he gets twenty subscribers he can have two books; for thirty subscribers three books, and so on. And they cou be had in an hour's work in many a place. Whoever shows himself an efficient agent will be put in line for the Fall work connected with the Inglenook. There is a library of Fifty bound books waiting for somebody.

The Agent who sends in the largest list of dollar subscribers between this and the first week in January, 1901, will have sent him a Library of FIFTY BOOKS. Here is the list:

Adventures of a Brownie, Æsop's Fables, Auld Licht Idylls, Autobiography of Franklin. Antocrat of the Breakfast Table, Bacon's Essays, Beside the Bonnie Brier Bush, Black Beauty, Burns' Poems. Child's History of England,

Confessions of an Opium Eater, Dictionary of the Bible, Dream Life, Dummond's Addresses, Emerson's Essays, Ethics of the Dust, Fairy Land of Science, Eifteen Decisive Battles, House of Seven Gables, Inntation of Christ,

Intellectual Life, Lays of Ancient Rome, Longfellow's Poems, Lorna Donne, Mosses from an Old Manse, Nat. History Birds and Quadrupeds, Pue's Poetical Works, Prine and 1, Rah and His Friends, Reveries of a Bachelor,

Samantha at Saratoga, Sesame and Lilies, Sketch Book, Sticket Minister, Stories from the History of Greece, Stories from the History of Rome, Story of an African Farm, Ten Nights in a Bar-Room, Thirty Years' War, Twice-Told Tales,

Window in Thrums, Education, In His Steps, Minister's Wooing, Professor at Breakfast Table, Lamb's Tales from Shakespeare, Lallah Rookh, On Liberty, Tanglewood Tales, Sign of the Four.

The Agent sending in the next largest list will have the choice of TWENTY-FIVE books out of the above list. The third largest list will entitle the Agent to FIFTEEN of the books, his choice; and the fourth largest list will win TEN of the cloth bound books. There is also a cash commission going to the Agent. We prefer the services of the Messenger Agenti he will write at once for the place, but we will put the first live applicant into line, as the INGLENOOK is not going to be the las If agents desire to enter for the Library they should say so in order that we may keep tab on subscriptions re ceived at the office. Elgin city is barred in the competition for prizes.

The announcement of the successful Agent will be made in January, 1901.

A Live Paper for Live People.

The Inglenook is no longer an experiment. It is regarded as phenomenally successful by experienced newspaper of who know what they are talking about. The reason is not hard to find. It is a FIRST-CLASS PAPER, with nothing of and commonplace about it. It is up to date, and always will be. It will have something new in each issue, it always ha and it never will fall below its self-set standard,—being the best paper of its kind in the world. You can't read it without The INGLENOO being interested and instructed. The whole wide-spread world is ransacked in the interest of its readers. isn't made with a dull pen and a pair of shears. It is a live paper for live people.

The like of it wa Some of the best known men and women in the church will write for the INGLENOOK next year. never undertaken in the church before. Look at the names, note the subjects! Every man and woman in the list know what they are talking about.

WILD GOOSE HUNTING.

Our in the farther Northwest, in Minnesota and Dakota, the season is better than the average, and here are birds enough to give abundance to any shooter who knows when he has enough, and does not want to make a slaughter. Not only is the duck crop good, but the geese are now coming down in numbers sufficient to assure the lover of goose shooting a chance at his favorite sport in any one of many localities. Goose shooting is an art of itself, and some shooters become so attached to it that they well night forsake the marsh and steams where they have erstwhile hunted ducks, and take to the pit and the decoys on the stubble fields exclusively.

In goose shooting, as in every other line of sport with the gun, there are several ways of playing the ame, and only one right way. There are different places and methods by which this, the wariest of all wild fowl, may be taken, but the most effective may to outwit the honker is to hunt him on the uplands, and not along the waters. There is no bigger brain under feathers than that in a goose's noddie, and it requires study to outline the system thich now is most commonly pursued by the sucessful goose hunters.

The wild goose never sleeps, so far as mankind is ble to discover. He never leaves his flank exposed, and never fails to post his pickets. If he lights on a marsh or prairie it is sure to be in the addle of a wide strip of burned-over ground where e can see several times the distance of a gunshot, and he sure that no enemy can come up under covto molest him. If a flock of geese is swimming n some sheltered stream, and the ambitious hunter shinks him of slipping up behind the bank and potting them on the water, he is sure to hear a onk of warning from some unseen sentinel, and to dlaess the big birds rising far out of range.

If the shooter lies in wait for them at some fence in the country where they have been in the labit of crossing, it is ten to one that they will in ome way detect his presence and sheer off to one ide, out of range, as they come over. There is no when the goose loses sight of the great of wild life, that eternal vigilance is the net of safety. He knows nothing but suspicion, does nothing but look out for himself, and he the latter well in advance of all immediate tessity. If he sees a suspicious character a mile this Landons not wait till the character comes thin half a mile, but at once gets himself farther ay from that particular neighborhood.

let the wild goose, even that grandest of all the genuine Canada honker, has his bline and this was long ago discovered by the the genuine Canada honker, has his blind tend shooter, who knows his habits like a book, knows how to take full advantage of them. ettenderfoot on the goose hunt in North Dakota, thistance, having discovered a lake where the to be seen in great flocks every day, are to be seen in great flocks every to sheak up along the edge of the lake to a shot from shore. He might perhaps think it to lie in wait in the reeds of the shore, and try

to get a shot or so at the fowl as they pass over, going out or coming in. By this latter method he might, indeed, succeed in getting a bird or so, though he would begin to wonder why he got no more. The old shooter who understands goose lore, would tell him that his course was the worst possible if he wished to get any number of birds. He would take the novice away from the lake where the geese were seen resting, leading him perhaps eight or ten miles from the lake, out into the open country, where the wheat stubbles stretch for miles.

The wild goose is a creature regular as a clock. He makes two feeding flights each day from that bit of open water or sand bar which he has selected as his temporary resting-place. Suppose you have located a lake where there are numbers of geese to be seen daily. It will not take long to discover that they have chosen a certain line of flight, They always go in and out at a particular point, and it is always the one which they think is the safest. If there is a shore line of rushes and other cover at one point, and at another a high, hard bluff, with no cover, you will find that it is the latter place where the flight will cross. The first flight is in the early morning, about daybreak. At about ten o'clock the birds will sail out over the water at a great height, and then pitch down in a thousand sudden and grotesque circles, one of the oddest sights a hunter sees. At midday the geese rest and sun themselves, preferably on some bag or sandy bank. Near two o'clock, as though by a common signal, they rise and again leave their resting-place, going out upon the feeding grounds again. At dusk they return to their roosting place, where they have been sunning themselves during the warmer hours of the

Now, these birds must eat, somewhere, and they must eat a considerable amount of food, for a goose is a large bird. Naturally it will seek to make its living along the lines of the least resistance, will feed where it can get the most food at the least expense of labor. Hence, the problem which interests the old-time goose shooter who has located a good body of geese on a roosting place is, not to find the best cover near the water, but to find the feeding ground which they have chosen out in the open country. He knows that if he can find some farmer who has a field where the geese have been feeding for a few days without being disturbed, he has solved his problem, for the wise birds know it is good policy to let well enough alone, and they will continue to regularly visit any feeding ground where they have not been disturbed. Having located such a farm, the shooter learns from the farmer, or from his own observation, what part of the field the geese are in the habit of using when they come in to feed

This is the point which he selects for the site of his pit. He digs this pit at some time when the birds are not about, and is careful in digging not to change the look of the ground. The loose earth he removes in sacks, or carries far out and scatters in the sun so that it will dry out to the color of the surrounding earth and not show up to the keen eyes of the game. The pit is dug deep enough to hide the head of a man sitting down in it, and is big enough for two, for ordinarily two guns will shoot out of the same pit.

The decoys are then set out. These are works of art in their way, though close at hand they do not look like geese. They are simply sheets of thin iron, cut into the profile likeness of a goose, and painted to further carry out the resemblance. These profiles are provided with a spike at the bottom, by means of which they can be stuck upright in the ground. They are put out around the pit, at different angles, so that some of the decoys may offer a side view, no matter from which direction the birds may come.

The sport of goose-shooting is a trifle strenuous for a city man, who is not used to seeing the sun rise. He must get up in the black of night, eat a "Plentee Chinamen left."

hurried breakfast, drink a cup of coffee more or less bad, and then go out into the coldest, shiveriest air that mortal man ever faced, for the time of gooseshooting is after the chill of autumn is well established and the air is full of frost. It seems dark and gloomy out there in his hole in the ground, and the tenderfoot wonders whether or not he is having a good time.

It seems an age until the sky begins to clear a bit, and a faint spot in the East to show where the sunrise is to be. Objects begin to become visible, and the tenderfoot can see the ghostly forms of the decoys standing up rigidly before the pit. Now there comes, far off, from where no one can just tell, a faint, soft, musical, mysterious note. The old shooter raises his head, grasps his gun, and gazes out eagerly while he listens.

Far away on the horizon, toward that lake where the geese were first located, there now shows against the sky a faint, dark line. The excitement of watching the oncoming of a flock of honkers is something not surpassed in any form of field sport, and is often too much for the novice, who becomes excited and almost invariably rises too soon and shoots while the birds are too far away. The older head warns him solemnly to keep still and keep down in the pit until he gives the word to fire.

The babble of the fowl now comes on until the chorus is confusing. The birds have sighted the decoys, and wonder what these new fowl are doing on their own private and preëmpted feeding ground. They come on and on, and the tenderfoot shivers and trembles in the pit, for to his eyes, peering through the fringe, the birds seem big as meetinghouses. They come on and yet on, and the leader in the pit is forced to catch the barrel of the tenderfoot's gun to keep him from springing up and firing.

They swing actually directly above the decoys. Then as they look down they lose sight of the decoys and do not understand it, not knowing yet that the birds they are addressing are but thin shams, and hardly to be seen at all edgewise. At this moment the surprised flock takes a pitch, and a curve, and a tumble. The air is full of legs, and feathers, and voices. Vast white, and gray, and brown, and black bodies fill all the air. And now, almost beneath the confused mass of deceived fowl, there rise two muffled figures. Once, twice, three, and four times, and then again for a time or two. the thin lines of fire pierce the air. Three geese, four, five are down, struggling on the stubble; the rest are screaming, and climbing, and clawing away from that dreadful spot as fast as they can go. The tenderfoot has killed his first goose and the old hunter has not killed the tenderfoot, which he has been much tempted to do.

HE GOT THE TEN CENTS.

"GIMME ten cents," commanded five-year-old Jimmie of his sire as the latter was about to start from his home in the west side for his downtown office, five miles distant.

"Haven't got it," replied the father. "Come down to the office and I'll fix you out."

Laughing at the success of his evasive reply, the lawyer turned away and soon was on a car headed for his office. He was busily engaged with a client a few moments before noon when in walked his five-year-old, dusty and begrimed, and demanded "that ten cents." He had walked the entire distance-five miles.

WHEN the Yellow River flood carried off its thousands a Californian attempted to break the news gently to his cook, as it must, he thought, shock a Chinaman to learn that so many of his fellow countrymen had miserably perished. So he approached the climax of horror by degrees, expecting a perhaps passionate outbreak. But the cook's only comment was the eminently practical reflection:

🛎 Correspondence 🛎

A WEDDING IN CHINATOWN, CHICAGO.

Wednesday night there was a great festival in Chicago's Chinatown. Lanterns were hung out from the shop doors and the oriental merchants put on their best jackets for the celebration. It was not a New Year holiday, it was not any of the annual feast days, this gala event. Indeed, it was a wedding, not an ordinary wedding either, but one which Chinatown might well celebrate. Never before in Clark Street has there been a wedding celebration in which one of the small-footed women has taken part. Chicago is well supplied with Chinamen, but it is different with Chinawomen, and well may the colony welcome a kimono to its midst.

Little Sella Yoy came all the way from Portland, Oregon, to become Chicago's first Chinese bride. Could the tam-tam's bail her too merrily? She reached town Monday in her wooden-soled shoes and embroidered wrappings, every inch a Chinese maiden. She could talk very little English and was alraid of the strange city. Moy Ing, her lover, met her at the station jauntily dressed in a suit of brown clothes and a broad-brimmed hat, for Moy Ing is much American. Sella Yoy was properly awed by her luture lord, and as becomes a true Chinese maiden she humbly followed him through the station.

At the street an automobile was waiting. Now, Sella Yoy had never seen an automobile, let alone having ridden in one, and she thought her end had come, although she obeyed tearfully when Moy Ing told her to step in. The automobile went off like a great buzzing bee, with Moy Ing sitting proudly beside his weeping bride. It was a great treat for Moy Ing—that automobile ride. It made him the most distinguished man in Chinatown and he felt that he had brought honor to his name—No Chinaman had been seen in Clark Street in one of the strange machines. The young men looked on with envy and the old men with considerable concern while Moy Ing lifted his bride to the ground at the door of his restaurant.

"See, I have chosen my bride," he called to the crowd in his own odd chatter.

And his countrymen understood that the wedding festival was about to begin. They swarmed from their basement homes like so many ants and, chattering, scurried up the restaurant stairs. Thereupon the wedding breakfast was served in the balconied, second-storied restaurant and the festival of three days was on.

A Chinese wedding is no matter of an hour; it requires days of eating and merriment. And Moy Ing, being a man of means, could have the best, his larder was filled with eastern delicacies and his cook the finest from the orient. The balcony of his fanciful yellow restaurant was hung each night with lanterns and a Chinese welcome was pasted on its door. No wonder the celestials put on their daintiest silk jackets and their newest caps; such a wedding is a rare treat in Chinatown. Moy Ing played a handsome host, and morning, noon, or night his table was wide enough for the guests.

Wednesday night the final banquet was given to the accompaniment of firecrackers and tam-tams. And everyone who had accepted Moy Ing's hospitality carried to the last feast a wedding present. Sam Moy, the chief adviser of Chinatown, gave a silver tea set, and Hip Lung, the oldest and most prosperous of the merchants, gave an embroidered satin kimono for the bride. Everyone gave according to his wealth and his standing among his people and there was a display of much eloquence in the presentation speeches. Hip Lung, in a heavy blue silk robe, sat at the head of the table; he was the oldest man present and was consequently looked upon as the sage. It was he, therefore, who was chosen to represent the bride, who was compelled by custom to sit behind a curtain, hungry and alone. The wedding feasts had little enjoyment for her, because she was a Chinese bride and could not appear among her guests. She was probably very glad when the last tam-tam had been put away and the guests had gone, leaving the lanterns to flicker dreamily in the smoky room. At any rate, her wedding was over and she need sit no longer with her back aching under her heavily embroidered robe and her wedding headgear.

The wedding festival was a memorable one to Chinatown and it is being chattered about now in the laundries and the tea shops. All the "washee" men took part in it and to their thinking it was just as a wedding should be. It may be that the bride, for all her ride in a real, live automobile, is still old fashioned enough to agree with them.

CANNING PEACHES.

BY TRA E. FOUTZ.

THE canneries are controlled in the same way the evaporating plants are. In the canning of peaches, however, all sizes are used more generally than in the evaporating of them. Mostly women and girls are employed to prepare them but men take them through the processes.

They are first sorted into the different grades of which there is four; the first, second, third and fourth. The first grade is called the pie; the third the extra and the fourth XX (double X). The first grade is canned with the pecling on but the other three grades are pecled; generally by hand. They are all cut into halves and the seeds taken out.

They are then packed by hand into tin cans which hold one quart and weigh about three pounds when full. The first step is the dipping. The cans are put into wooden trays which hold one dozen. There are strips on each side of the trays about one and one-fourth inches above the bottom so that the cans will not slide off. Eight of the trays are put into a square iron cage at once. It is three feet square and of four inch mesh. By means of a crane it is let down into a wooden tank which contains boiling water. The tank is the same shape and size except that it is four inches larger each way. The cans after being filled with the water are taken out and the top is cleaned off. They are then capped and soldered.

The next step is the processing. They are at once placed into an iron cage which is perfectly round. It is of a long mesh about two by eight inches. They are piled into it with care one upon the other. One hundred and seventy can be put in. The cage is let down into a round iron tank which contains water that has been heated above the boiling point. The tank is five feet high and four feet through. Water at that temperature soon makes them soft and they are only left in about three minutes.

The cans are then too warm to be handled and have to be cooled off. They are put into a round iron cage and let down into a wooden tank. They are left in the cold water until they can be handled. Water is running into one and out at the other end of this tank all the time. The others are filled and emptied twice a day.

It is very interesting to go through a cannery and see the different processes. About 10,000 cans are put up in one day at an ordinary cannery. Only one grade is taken through the processes at once and when peaches for that grade run out another grade is taken. There is generally a building at each cannery in which to pack the cans of peaches. They are not labeled until they are shipped or are put into the cases. About as soon as the canning season is over they begin to ship them out as the wholesalers lay in their winter stock.

Waynesboro, Pa.

THE FIG.

BY N. R. BAKER.

How many Inglenookers have ever seen a fig blossom? I shall not ask you to raise your hands, for I am sure no hands would go up. I have eight bearing fig trees but have never seen a bloom. Nor has anyone else. They do not bloom. There is a minute bud under the bark. This bud contains the elements of a flower but is exactly the same green color as the bark and no one but a botanist would think of calling it a flower at all.

This little bud, without changing external shape or color, simply bursts the bark by increasing in size and becomes the fig that ripens, in warm weather, six weeks later. When ripe, being too soft to ship, they are never seen in northern markets except in the "green" or raw state.

The fruit is shaped somewhat like a pear and is kept continuously running.

ranges in size from that of a hulled walnut to tage

The "fig tree" is properly a shrub, growing in this climate to a height of twenty-five feet and sometimes more than a foot in diameter.

It is too cold for figs to do well north of the southern boundary of Tennessee or about the thirty-fifth parallel of latitude. In the great February blizzard of 1899 nearly all the fig trees in the United States were frozen to the ground. But they have sprung up again from the roots and many hundreds of bushels were raised during the past summer. Some varieties bear the first year and ripen fruit every week from June to November.

Except in California, 1 believe, figs are not dried for market in this country. On the shores of the Mediterranean the fig is indigenous—that is it is to be found wild and grows without cultivation. There the quality is of the finest and labor is cheap. Dried or "boxed" figs come from there. But for canning and preserving even here the fig is considered delicious.

The fig tree is not evergreen but sheds its leaves in winter—deciduous is the long word for it. The leaf is sometimes eight inches across.

The famous banyan, a tree that lets roots down from limbs that are several feet above the ground, is a variety of the fig.

Whister, Ala.

ELECTIONS IN FRANCE.

PEOPLE who think that one election day is enough would be horrified at the idea of having two, as is the rule in France. On the first election day, always a Sunday, the electors including a male citizens of twenty-one years of age who have lived for six months in one place, cast their ballots for members of the house of deputies. Before the voting begins the presiding officer at each polling place unlocks the urn in which the ballots are to be placed and exhibits it to prove that it is empty. He then locks the urn and puts the key in his pocket. The men who help in receiving and counting the ballots are volunteers from among the electors. When the votes are counted it may happen, for instance, that Durand, socialist candidate, receives 1,000 votes; Dupont, the republican candidate, 2,800 votes; and Booneval, the royalist candidate, 3.000. In the United States Booneval would be elected. Not so, however, in France. Another election is held on the following Sunday, and before a candidate is declared elected he must have a clear majority of all the votes cast. In most cases the candidates receiving the smaller number of votes with draw, leaving the fight on the second Sunday be tween the two leaders. Any man twenty-five years old, who is not otherwise disqualified, may be a candidate for the house of deputies. There are no necessary expenses connected with running for office, and sometimes a deputy is elected without spending a cent. In other cases immense sums are spent and bribery is common. The deputies are paid S5 a day, and have also the right to ride free on the railroads. The members of the house deputies and the senate, sitting together, elect by majority vote the president of the republic, when serves seven years.

WOMEN WITH BEARDS.

THERE is a barber in New York who makes a speciality of shaving women. He has a number of regular customers. One of them is a wealthy Cuban woman, who spends a great deal of time it the Fifth Avenue hotel. In speaking of his customers, he said:

"They don't want depilatories They want to be regularly shaved, just like a man. They have naturally heavy growths of beard. They like the naturally heavy growths of beard. They like the naturally heavy growths of beard. They like the naturally heavy growths of beard they like the week for ten years. She won't let me touch be with any but the sharpest razor.

"To look at her no one would imagine that see could grow a beard that would put many a man it shame. Her complexion is smooth and clear at her skin fine and firm. She could have her whates her skin fine and firm. She could have her whates permanently removed by a preparation or by the needle, but she prefers to be shaved."

A watch will tick 160,144,000 times in a year it is kept continuously running.

Nature & Study

FLYING SQUIRREL'S WAYS.

If there is a four-footed animal in the New Eng-Awoods which is entitled to the name of " genthe best sense of the term, that animal the flying squirrel. He is quiet in manner and in bos has an unusually gentle disposition and at-205 to his own business without making a nuiesce of himself. He has none of the impudence ragnacity of his red cousin, and he is a character Youth greater refinement than his large and powstal relative, the gray squirrel.

Though the smallest member of his family here-Hous, as a woodsman he is without a superior. We course, when it comes to tree-climbing and travthrough the tops of closely-grown trees, the ray squirrel is simply magnificent. But in the no woods, where the trees stand farther apart, the hing squirrel has a decided advantage, for he can est sail through the air from one tree trunk to an-

Like most people of real worth, he is modest and rubtrusive, so much so, in fact, that he may often ing in a wood for years without anyone being mue of his presence. Even when it is known that heisthere he is seldom seen, for he usually sets out stdark and is rarely abroad in the daytime. His popearance is in keeping with his character. The oftvelvety fur of his upper parts is of an inconencuous shade of gray, and the under parts are thie. The black eyes are very large and promiant, the whiskers dark and long, and the general pression of the face good-natured but earnest. The claws are much curved, and as sharp as fish-

But the most peculiar parts of his anatomy are the membranes by which he is enabled to make his ong flights, or rather sails—for flying squirrels do totreally fly—through the air. These membranes, meon each side of the body, extend from the wrist the forefoot to the wrist of the hind foot, and are ormed by the extension of the skin of both the uper and lower parts. Consequently, though quite hia, they are of double thickness. They are covtted with short fur both above and below.

When not in use these membranes are inconspicious, for, being elastic, they contract, forming an irregular ridge along each side. When the squirrel tuhes to "fly, ' he springs into the air from the up-M part of a tree, and by spreading his legs as wide she can, stretches the membranes taut, like the tovering of an open umbrella. On this natural prachute he is able to sail for a considerable disance, but always from a high point to a lower one. his tail also is well adapted to this mode of travding, for instead of being bushy like those of other quirels, it is flat like a feather.

In traveling through a wood a flying squirrel has to the top of one tree and jumps in the direcnon of another one along the line of march. For bout three-fourths of the distance he descends at in angle, which varies according to the length of effight and the height of the starting point, and then with a curving upshoot he alights with a little mack upon the trunk of the farther tree. He then up to the top or near it, and sails away to the takitiee, and repeats the performance until he has impleted his journey.

As a rule the flight is not sharp and clean cut, but spewbat quivering or fluttering, at least in appearance. This fluttering is not, I think, the result of this fluttering is not, I think, the leaves the the should say, to the action of the air upon the attredges of the membrane. The same effect is upon a larger scale, when the wind flaps the Re of a mainsail.

Some flying squirrels build nests of leaves in the tetops, and most of them live in holes in the taks and most of them live in noises ...

The last year's nest of a flytond branches. The last years nest tond in a squirrel, and if the tree happens to stand in a ramp, it is not likely to remain long without a tant, into a decayed trunk or branch the woodinto a decayed trunk or branch and a half in dieder, and then hollows out a chamber about a The following autumn, after the young the following autumn, after the possession and are flown, the squirrel takes possession of the fine and carries into the hole a quantity of the fine bark of cedar trees or other soft material suit-

In November he retires to this snug retreat and never so much as pokes his nose out until the following March. In this respect, again, the "flyer" differs from all other New England squirrels. The red squirrel may be seen abroad in all weather, the gray squirrel wakes up on warm days and comes out for food and exercise, and even the little chipmunk, although he remains in his underground home, gets up occasionally to nibble at his store of grain or beechnuts. But, as far as known, the flying squirrel sleeps the winter through.

The young are usually born in the latter part of March. There are generally from four to six of them; wee, blind and naked, but with a hereditary tendency to cling to everything they touch. The first hair to appear is that of the whiskers, which are visible when the babies are but a few days old. A little later the cutting teeth appear in the lower jaw, and every day the semi-transparent bodies become more and more fully clothed with fine, soft

Before they are hidden by the hair the blue veins can be readily traced through the delicate skin, particularly in the flying membranes The eyes open when the youngsters are a month old; at least that has been my experience with those born in captivity. When about six weeks old the little fellows begin to crawl out of the nest, to play like kittens, but more gently, and to nibble the crumbs of partly eaten nuts cut into by the sharp teeth of the moth-

And what a lovely little mother she is! She takes the greatest care of them from the time they are born. She tucks them under her, pulls the eedar bark over them and blocks up the entrance on cold days to keep them warm. If you put your finger into the hole she will rake all the babies out of harm's way with her front paws, and then with her nose she will make a determined effort to push your finger out of the hole again. Failing in that, she will not bite you, as a red squirrel would have done at the beginning, but she will probably take your finger gently in her teeth, as though to ask you please to be a gentleman and refrain from causing her any further annoyance.

Even if you remove the young ones from the nest she will not bite you, but she will come out after them at once in evident distress. If they are near the mouth of the hole, so that she can reach them without leaving the nest entirely, she puts out her head, seizes the youngsters by the neck or back with her teeth, and pulls them in after her, one by

But if she has to leave the nest altogether, she picks the children up, turns around and pushes them into the hole before her. A flying squirrel once disturbed in this way, is not likely to allow the matter to pass unheeded. She is almost sure to remove her family to a new home at the first opportunity.

A short time ago a Stamford gentleman had an interesting experience with a flying squirrel, and he kindly gave me an account of it. There is a little river running through his grounds, and on the bank of the river grew a tree with a decayed branch upon it. Wishing to have the branch removed, he sent up a workman to saw it off, and stood by to watch the operation. Near the end of the branch there was a small hole, and when the saw began to move he noticed the whiskered head of a flying squirrel come sniffing out. In a moment it went in again, but presently the squirrel returned with a young one in her mouth.

The workman was ordered to stop sawing, but the little "flyer" ran out onto the end of the branch, and without hesitation sailed across the river. Alighting upon a tree on the opposite bank, she laid the baby safe in a wide crotch and at once sailed back for another one. Four times did the brave little mother make the trip, until her children were safely removed from the doomed branch. What became of them is not positively known, as further observation was prevented by nightfall. It is fairly safe to say, however, that unless a hungry owl interfered with her plans, the faithful mother had them all safe in a new home long before daylight.

THE velocity of light is 192,000 miles in a second of time. From the sun light comes to the earth in eight minutes. From some of the fixed stars of the twelfth magnitude it takes 4,000 years for the light to reach us.

VEGETABLE IYORY.

In the Young People's Paper, Mary F. Bigelow has a very interesting article on vegetable ivory. She

The ivory plant is a native of South America and is most interesting in its growth.

It is a member of the palm family, bearing its foliage in a beautiful crown, at the top of the slender trunk

So slender, indeed, is the trunk, and so heavy the crown of foliage, that the trunk is borne to the ground, and lies sprawling - sometimes to the length of twenty feet, resembling a huge root, and giving the plant the appearance of rising from the ground without a stem.

The feathery leaves of the plant are of a beautiful pale green color, each one being divided into twenty or thirty pairs of long, narrow leaflets, arranged in rows on either side of the midrib.

The natives find these leaves useful as thatching for the roofs of their houses.

The flowers are borne in large clusters, and are chiefly remarkable for their sweet and powerful odor, which constantly draws about the plant myri ads of small insects.

The ivory plant is sometimes found scattered about in forests of other trees, and sometimes growing by itself in dense groves; in which case it completely drives out all other forms of vegetation.

The fruit is incased in a thin, hard shell, from eight to twelve inches in diameter, covered on the outside with rough, conical protuberances.

This shell is divided into six or seven compartments, each of which contains from six to nine seeds or nuts; triangular in shape, and about two inches in diameter, and each one being incased in its own individual shell.

The changes that take place in these nuts, in the different stages of their growth, are extremely interesting. In the first place the shell is filled with a thin, clear liquid, which, although of an insipid taste, is drinkable; and sometimes proves very acceptable to the weary traveler, when water is not attainable.

Later on, this liquid becomes sweet and milky; when it is eaten with much relish by turkeys, hogs

Then, as the nut ripens, it turns gradually to the ivory-like substance, which is so much used in the place of real ivory.

The ripe nut is very hard, pure white in color, and of a perfect uniformity of texture throughout.

When the nut is planted, and after it begins its growth, it is again changed to a soft pulpy mass, and on this the young plant feeds until old enough to send forth rootlets and draw its sustenance from the earth.

Beside the various fancy articles which are made from the vegetable ivory, it is very largely used in the manufacture of buttons.

On account of the size of the nut, articles made from it are necessarily small, though sometimes large articles are made by a skillful joining together of the pieces.

THE ESKIMO'S HUSKIE.

THE wild dog, uninfluenced at all by association with man is typical of nothing but the wolf, and in the circumpolar ice he is found in numbers roving over the fields of snow and ice, frequently in company with the wolves. The Eskimos have taken these wild creatures and by a rude process of selection and training they have developed the "huskie," a colloquial abbreviation of the word Eskimo. These animals represent a type of dog but little removed from the wolf-hardy, vicious, swift of foot and keen of eye. They have been trained to haul sledge loads of goods across the snow and ice and this comes as natural to them now as for a pointer to point. They possess the blood of the wolf, however. in their veins - the taint of the jackal. At the first opportunity they will run away and join the wild dogs and deteriorate rapidly in their company.

Throughout the great northwest it is hard work to make up a full team of strictly pure huskies. The leader of the team is invariably a trustworthy huskie, but harnessed behind him will be one or more wild creatures that are kept in harness only through the moral influence of others .-- North Amer-

ican Review,

INGLENOOK. THE

PUBLISHED WEEKLY

At 22 and 24 South State Street, Elgin, Illinois. Price, \$1.00 a year. It is a high grade paper for high grade boys and girls who love good reading. INGLENOOK wants contributions, bright, well written and of general interest. No love stories or any with killing or cruelty in them will be considered. If you want your articles returned, if not available, send stamped and addressed envelope. Send subscriptions, articles and everything intended for THE INGLENOOK, to the following address

BRETHREN PUBLISHING HOUSE; Elgin, Illinois.

Entered at the Post Office at Elgin, Ill., as Second-class Matter

TO OUR WRITERS.

LET us have a little confidential chat with those who write for us, and get our situation fairly before the contributors, present and future. In the first place we have had an exceptionally good lot of contributions sent us, and several new writers have been discovered, who, if they keep their heads, will one day be famous. To them, and to all who may write for the paper in the future, we want to say something.

In the first place get a good quality of paper. Nothing is so cheap as cheap stationery. Good paper is so cheap that all who write at all should secure it. Then use a good black ink, and form the letters so that there is no mistaking your words. In the choice of a subject be sure not to select an abstract subject. Keep on the earth. Leave the skies to those who can fly. Not one boy or girl of twenty, or even twenty-five, can do justice to a subject like Liberty, or Freedom, or the like. It is a great 'deal better to tell how a flower pot is made, or give an account of how a cat mothered a puppy or a squirrel. People will read the latter while not one in a hundred will read a dissertation on the dignity of labor.

Make your story short. Half a column is better than a column, and unless your subject will not at all admit of it, keep within the bounds of a column. Use short, easy, telling language. Don't try any such thing as fine writing. The Editor doesn't appreciate it.

Fold or flat out your manuscript. Never roll it. And there is not the slightest use in writing a longwinded letter explaining how you came to do it. We don't care anything at all about this. What we want is the article, and your name and fame will have nothing whatever to do with the copy's fate. We will read it carefully, and decide accordingly. If you get your article back with an editorial letter pointing out defects, take it kindly. It is nothing to us, and if we go to that trouble be sure there is some reason for our action. If, after all, you think there are others who know a good thing when they see it, send your article off to them, to some paper bigger and better known than the 'Nook, and when it is printed and makes a hit send us a copy and proceed to make our life miserable by showing us how we missed it.

Do not expect your articles to appear the next issue after you send them on. There are communications on file that will not be printed for the next six months. There are reasons. It manifestly would not do to print a Christmas story with roast turkey and all that, in July, nor would an account of a day's outing under the trees make good reading in December. Then, while your article may be all right, there may have been in the last week's issue several along the same line. If you don't get the article back it will bob up some day in the 'Nook when you least look for it.

And now you man or woman, old or young, who think you can do it, give it a trial.

WHAT'S THAT NAME?

Ir you read the second page of the cover you will see a goodly list of books that will grace somebody's home next year. When the time comes in the holiday season we will assemble those books, fifty of them in one lot, and put them in a suitable box. All that is wanting then is the name that goes on the box, and off they go to some happy and lucky agent who has sent in his list of subscribers and outnumbered all the others. Now what is feet.

the name that goes on the box of books? When it is published in the INGLENOOK, together with the number of subscribers sent in, there will be any number of people who will be saying and thinking "If I had only known," etc. Now the fact is the present is the time to do the thinking and the canvassing. The winner will be someone who is a worker. There are numerous thickly-settled communities where our people's houses are like beads on a string along the roads, where the library could be won in a thorough canvass, but it is altogether likely that the box will not go to such a place. Where there is somebody who gets up early and works intelligently in all probability there will be a long shelf full of the best works in the English language, a year of good reading, and the books to be kept after they are read.

We have no idea of the name and address that will go on that box. We know no more about it than you do. All we know is that it will give us pleasure to mark some reader's name on the package, and call up the expressman and start the premium on its way. There will be no delay, no waiting, as the books will be sent as told on page two of the cover. Is it to be that your name goes on that box of books? It all depends on yourself. It is a free canvass, open to you as to all the rest. Go in and win.

OUR SHORT SERMON.

Text: Are They Read?

When a preacher makes an announcement that he is going to hold services at a given time and place he knows how well the community like his ministrations by the attendance. If he has a good and an attentive congregation he is justified in the continuation of his services. If there is no congregation he also knows what to do. But this sort of preacher has the visible result before him. He sees, and so he knows. But when the preacher of the Inglenook takes his place on the rostrum, or behind the table, which in this instance is a typewriter, he has no way of knowing how many there are who are open to impression. He can not see his congregation. They make no noise, and there is no swelling hymn, nod of approval or sign of dissent. He does not know whether there is a single hearer. It may be there are many, few, or none at all. How is he to

Now the preacher in this instance proposes to talk to his silent and unseen congregation and he does it in this form in order that he may know whether or not the Short Sermon idea is being well received. He has never yet taken up a collection, but he intends doing it now. And it will not be in money, but in ideas. It will take the form of a postal card, and if you like the sermons as they have appeared, and wish them continued, all you have to do is to say so on a card addressed to the INGLENOOK, and we will then know that we have readers, or hearers, which is the same thing in this instance. No responses will be taken to indicate an empty house and a discontinuance of the sermons, their place being taken by other matter. The question has been put in this place, because those who never read the sermons will not see it at all, while those who have been interested in our services in this way will have a chance to express themselves. What do you say? Are the sermons read or not?

CERTAINLY.

"Teach applied Christianity on the Sahbath," says The Chicago Journal, "and it may be applied during the other days of the week." Apply it during the other days of the week and it will not need to be taught on the Sabbath.-Council Bluffs (Iowa) Nonpareil.

Bur as long as people forget this lesson so long will the teaching have to be repeated, and the experionce of the ages is that once a week is the time for repetition,

If the earth's surface were level the water of the oceans would cover it to a depth of six hundred

OUR QUERY COLUMN.

What is the difference between a Consul, a Minister and Ambassador to a foreign country?

WHEREVER there is much trade with a foreign country, or much travel, a Consul is appointed. H duties are mainly with the individual, to help him out of trouble, and to represent the interests of his home government as far as the traveling public of trade is concerned. A Minister or an Ambassador is resident at the capital of a country, and is interested mainly in the relations between the countries in a political way. He deals with larger question of state that may come up. The place of business of a Consul is called a Consulate, that of a Minister a Legation. Generally they are simply rented houses, though they may be owned by their respective governments.

Is it right to make and use domestic wine?

The right or wrong of it, as far as the individual is concerned, depends on the intent and use of the wine and his ideas of total abstinence.

What is a cipher code?

A system of secret writing that is supposed to be understood only by the parties using it. There i no code that can not be translated by others if enough of it in writing is had, and time is given.

Have I the right to set up a fruit stand in front of a man's house if I do not interfere with him?

No. He can order you off, and have you arrested and punished if you do not go. The fruit stands are where they are by renting or sale.

* * *

What is the cost of a good automobile?

At present they are very expensive, running from \$500 to almost any figure. In a few years they will be cheaper, and be as common as bicycles.

What is meant by a book being out of print?

That it is not now printed and consequently not for sale as usual with books. If a thousand or ten thousand copies of a book are printed and the plates or type broken up or recast it would be out of print when the edition was sold.

There is an apple tree on my place that produces fruits perior to anything ever seen by any of the neighbors. How shall I go about making anything out of the tree?

Send samples of the apples to prominent fruit growers for an opinion, and if they agree on it superiority then make an arrangement with some reliable nurseryman to sell him grafts. It will all depend on the business handling of the project.

I think I have ability as an artist. How will I make sure of

There is an article on that very subject pigeonholed for the 'Nook. Wait for it.

Is there anything in planting seed or butchering "in the

Not a thing in the world, but thousands of per really think so, and as a rule nobody is harmed by the delusion.

I read in a story book of burning wreck wood in a cottage. What was meant?

In a cottage, or any other pleasure house, near the sca, where there is an open grate, the wood of soul old wreck that has laid long in the water is in great demand for firewood. It is cut into proper lengths and dried. The water has in solution salts, etc., that absorbed by the wood, give off colored flames

Can I make a good lawn late in the Antomore

As good a way as any is to thoroughly prepare the soil, and wait till the first "skift" of snot Then sow your seed on the snow on that you that see that it gets on evenly and let it alone. Spring you will see the result all right enough.

I read of eggs being canned. What is the process? See back numbers of the 'Nook for full descr? tion of the way it is done.

HOW PERFUMES ARE MADE.

Iseems a strange place for a perfume manufac-On one side the Chicago River stagnates, of the combined odors of a thousand and on the other switch engines clang back of forth, busily violating the city's smoke or-

And yet on a bright spring morning, when the rigy windows of the factory are agape, it is no unsal sight to see a group of men and boys stand-2000 the sidewalk with their hands in their pockand sniffing the odors which the breeze brings They can have apple-blossoms, ater of roses, eau de cologne -anything, just as if the were attending a charity ball. And the red hack building goes on in its own sweet way, makat little oasis of fragrance in a Sahara of vile

laside of the factory the scent is still more in-1858. It is a bouquet of hundreds of different perln the main room there stands a number of as distilling tanks about the size of small baras and stretched out at one side of them are coils adleaps of iron pipes. Below them stand closed is into the funnels of which drips the perfumery. Around the sides of the wall of this and adjoining oms stand almost endless rows of bottles of all sits and shapes, each filled with some oil or eseace out of which the scents are made. Most of hese are imported from foreign countries by the hicago factory, where they are mixed, distilled and bottled for the market. Practically no permery is made in its original form in Chicago.

One of the largest rooms in the corner of the bilding is devoted to the packing and bottling of the product of the distillery. Here rows of girls stat long tables with big canisters of the perfumevin front of them. Out of these the small, delitate-shaped bottles are filled. Then the glass stoppers are put in and colored cotton is wrapped wound them. Over the tops little hoods of lambthin are drawn and tied with colored ribbons. Then the labels are pasted on and the bottles are manged in neat boxes ready for shipment. It is Mather slow work, and the girls who do it have to be skilled as well as artistic. Much of the perfume manufactured is used in making toilet soaps in the adjoining factory, but a large quantity is sold for general use.

Attar of roses is an oil made from rose leaves and it comes largely from India and Constantinople. I late years the Balkan provinces in Bulgaria have also been a great source of the supply. Nearvall the blossoms used are taken from a bushy vaacty of the damask rose, and the rest come from the white musk rose. Beginning in the last of May trops of boys and girls with baskets on their arms dimb the long mountain slopes before sunrise in the morning to gather the roses. It is important that hey be picked while the dew is yet on them, so hat they will remain fresh until they reach the disblery. The still-houses are mostly placed in the anter of the great rose gardens, and as fast as the bads of blossoms are brought in they are placed in g, cool cellars. The stills are of tinned copper, tha miniature furnace underneath. About twenhe pounds of fragrant blossoms are put into ach of them, then water is added and the fires farted. When about one-fifth of the contents has to drawn over through a water-cooled worm the is emptied and recharged and the process is speated until all morning's harvest of roses has

The first product is simply rosewater like that told-time housewife used to make in much the This rosewater is now returned to the and about one-third its bulk of "second roseis drawn over. Throughout this liquid etic are scattered little globules of a precious oily the scattered little globules of a precion of the top bottles, and the oil gradually comes to the top ad is dipped out with a spoon. The attar costs sout & an ounce, but this will not seem unreasonhen it is known that 60,000 roses have been sed for every ounce.

Nearly all the ordinary perfumes are made by a known as enfleurage. This consists in dig freshly-gathered flowers in a glass case, the thich has been daubed with lard to the depth thelf an inch. In the course of a day the lard abthe essential oils in the flowers and they

are replaced by fresh ones Sometimes it takes as many as eighty charges to fully impregnate the lard, and sometimes, where the scent is very strong, it requires only half a dozen charges. When fully charged the lard is scraped off, melted and combined with alcohol, which brings the volatile oil to the surface. It is then skimmed off and filtered ready to be bottled and shipped. The waste leaves from the process are used as fertilizers for the flower gardens from which they originally came.

The oil of lavender is procured in a similar way. The growers of Surrey, England, carry their harvest to one of the many distilleries which dot the coun try. The oil is contained in glands situated chiefly in parts of the flower, but also extending down into the stalk. The first run takes two hours and the result is a fine, clear and almost colorless oil. The second run requires four hours, and the oil is of an amber color and poorer in quality.

A few perfumes, like oil of bergamot, are obtained by pressure. The rasped layers of the unripe fruit are placed in hydraulic presses and squeezed until the oil runs out.

Combined perfumes are known as bouquet odors, and upon his skill in making such mixtures hangs the perfumer's success.

Fashions in perfumes vary greatly. Fifty years ago lavender was much thought of; later, musk came into favor, and since that time fashion has run the whole gamut of rose perfumes, violet, apple blossoms, lily of the valley and half a hundred more. For a time sachet powders were very popular. They were made by grinding together vanilla, musk and tonquin beans in various proportions. Violet sachets are also much used.

DUST STORMS IN ARIZONA.

JOHN KIRSHAW, Jr., writing from Tucson, Ariz., to the Charleston News and Courier, says:

I saw a reference in a Charleston paper the other day of the horrors of a dust storm in the Transvaal. We inhabitants of the great American desert would like to compare notes with the people of the Transvaal along this line. Perhaps nowhere in the world, the Sahara desert not excluded, are the dust storms so violent and frequent as in this country.

The surface of the desert is nothing more than a thin shifting layer of dust, and the least gentle breeze starts the worst sort of a dust storm, whose hoarse roar can be heard for miles on the desert.

The desert is very sparsely covered with a rank growth of stunted bush, called "greasewood." This growth is so stunted and sparse that it has no effect in breaking the progress of the storm

The approach of a dust storm cannot with accuracy be predicted, even on the most violently windy days. There is no sceming law governing the movements of this nauseating dust. I have seen the time when within five minutes after a perfect calm a violent dust storm has formed, and in as many minutes later is going across the barren and sunbaked desert with a roar that can be heard for a dozen miles.

This roaring of the dust storm is well known and feared by both man and beast. The movements of cattle when a dust storm is approaching are interesting. The animals, if given time, seek shelter beneath bushes and trees, but if the storms are too near for that, they almost instantly kneel and put their heads low down and away from the direction of the wind. Not infrequently cattle are killed in scores by these storms. Water is scarce enough as it is, and when the wind storm comes along and fills in the shallow watering holes, dug in the dry river beds, the cattle are not able to go farther in their everlasting search for water, consequently they lie down and die right in the ditch.

Not infrequently cowboys and travelers are lost on the vast plains that are so monotonous in appearance after one of these dust storms. There is no man living who can stand to breathe unprotected during one of these storms when caught in an exposed place. The sand stings like a cut when blown against your face, and the fine dust penetrates every portion of one's clothing. Cowboys are often caught on the open desert, and either suffocated as the result of the dust or are lost, owing to the fact that the trails are entirely obliterated by the sand.

The usual method of warding off the danger of these storms while on the desert is when they are through success, but through misadventure.

seen approaching to throw your horse down, and, removing his saddle, utilize the blankets to cover one's head in the direction in which he wishes to travel.

The duration of a dust storm varies. I have seen one here that blew without a cessation for three days and nights. And on the other hand, they may be only of a few hours' duration.

There is absolutely no escaping the dust of one of these storms, for it penetrates through everything. It gets into everything, and the flavor when mixed with foodstuffs is anything but pleasing.

The storm has the appearance of a huge black, or, rather, red, cloud when coming over the desert. and its base is on the ground, while the top reaches into the heavens.

A strange but true fact in connection with one of these dust storms is that they seldom occur on a cloudy day, but bob up unexpectedly on the brightest sorts of days. In the space of two minutes after the storm has struck a location the sun is either totally screened, so much so as to make it appear as if night had arrived a little prematurely, or as to give everything the reddish glare of an eclipse. The atmosphere sometimes takes days to clear. Storms are especially bad and frequent now, as there has been not a drop of rain falling for over five weeks, and the sun sometimes goes up to 180 degrees on the desert in the middle of the hot weather.

WHERE IS THE WEST?

When the writer was a boy his parents were smitten with the western fever, and he remembers well the posing and the striving after effect with other schoolboys in the matter of being a western explorer, a pioneer, in fact. It was intended to settle somewhere on the eastern border of Ohio. We never went, but it was a good deal of glory while the fever was on. And the other day a man out on the Pacific Coast announced his determination of going back East to see his people who lived in Iowa. Now the Inglenook goes in all directions. It is read out on the Pacific Coast, on the Gulf of Mexico, in sight of the great lakes and on the Atlantic Coast. It is published west of Chicago, but if anybody suggested Elgin as being in "the West" he would provoke a smile. Going on out toward the Pacific each State would tell you that the West was further on. Now what are the actual facts in the case? As far as the terms East and West are used to indicate new settlements or older communities there is no such thing in the present day. East and West are geographical terms, useful in their way, but have lost the significance attaching to them in the days of the Indians and government lands out on the frontier of settlement. There is no such thing as the wild West. The cities anywhere toward the Pacific are as advanced as anything in the East, in fact, they are far and away ahead in most things, and after a man has lived in the so-called West till he has become accustomed to his surroundings, when he returns to his Eastern home he finds everything very tame and commonplace. East and West have become terms of direction and no longer signify either advancement or culture or the want of it.

WITHIN and close around the borders of the Chinese empire are the homes of one-half of the human family. Yet how little that half knows of our half, and how little we know of it. If we were of two different species we could not be stranger to each other than we are. For seven centuries our travelers have been piling tome upon tome in the mountain of our oriental books, yet what do we know of a Chinaman, except that he wears a flowing shirt and queue and prefers the chopsticks to a kuife and fork? Whatever other information we may have concerning him is equally superficial and useless. Of the processes of his mind, of the passions of his nature, of the inner life of himself and his family, of the ambitions of his nation we are as ignorant as we were when the Venetian Voyager returned from the court of Kublai Khan. Contented in our ignorance, we have set up a Chinaman of straw, to which we have attached the convenient label of "barbarian."

Our bravest and best lessons are not learned

EAST HANDLES CLEAN MONEY.

An important piece of news which escaped observation last week was the shipment of \$100,000 currency to New Orleans, for it seemed to indicate that the interior currency movement was beginning. This movement usually commences early in August and lasts until well into December, after which the money is returned to New York to draw interest until again wanted for moving the crops.

This ebb and flow of currency to and from New York helps to keep the money of the country clean and bright, for the banks here sort all the bills they receive and those which are soiled and tattered are returned to Washington for redemption through the subtreasury. In the subtreasury itself a watch is kept for all mutilated and light weight coins, which are withdrawn from circulation.

The same thing is done in other cities, but the further from Washington they are the larger the cost of expressing the currency to that center. Hence in the far west bills and coin are kept in circulation much longer than in the east. When the bankers' convention was held in Denver two years ago the New York bankers were much impressed with the amount of silver dollars in circulation and the worn condition of the coins. Many of them were almost illegible

Maurice L. Muhleman, one of the deputy assistant treasurers at the subtreasury here, was asked to-day for figures to show the average duration of bills and coins of different denominations. He replied:

"The life of a piece of money varies greatly. Coins are almost indestructible. Coins of the Roman empire are dug up to-day as good as ever, Almost the only loss in coins is from abrasion. In the case of gold coins this loss is important and is regulated by law. A gold coin is accepted at par if its loss from abrasion does not exceed one half of one per cent in twenty years. That would be at the rate of .025 of one per cent a year.

"Bills, however, wear out rapidly. You know from your own experience that when you get a bill of large denomination you put it away carefully in an inner compartment of your pocketbook and never touch it again until all your smaller bills are gone. That shows why the bills of small denomination wear out more rapidly than those of a large denomination. A dollar bill sees a great deal more of life than a ten-dollar bill.

"You pay it to your butcher Saturday morning, and he hands it to the doctor, who passes it on to a trained nurse, who sends it to her mother and she pays it to her grocer on the east side. He pays it out to his clerk, who leaves it in a saloon on his way home. The same night a criminal gets it in change for a counterfeit and he loses it over the gambling table. It is restored to respectable surroundings again Sunday morning by going as part of a retainer to a lawyer, whose wife puts it into the contribution plate in church the same evening, and on Monday it is deposited in a bank. It does not remain there, however. A neighboring department store wants all the small bills it can get and at once it is again in circulation. All this time the ten-dollar bill has been lying neatly folded in your pocketbook "

From figures furnished by Mr. Muhleman it is learned that the average life of a \$1 silver certificate is only a little over one and one-half years. A \$2 certificate lasts about two years and a \$5 certificate about three years. A \$10 bill lasts nearly five years. Five-dollar bills would last longer if there were more \$1 and \$2 bills, but when the supply of these is gone the fives are cagerly sought by the banks. More \$5 bills are shipped to the interior each year than bills of any other denomination. Bank notes being generally of larger denomination than silver certificates last longer.

Few minor coins of an earlier date than 1853 are in circulation, because as fast as they reach the treasury they are recoined, the seigniorage on them being about ten per cent from the recoinage.

The great demand for horses in South Africa has had a considerable effect on the omnibus service in London. No less than 1,627 horses have been taken from the London Road Car company, and consequently many busses have lately made only four instead of five journeys a day.

WHEN OCEAN WAVES RUN HIGHEST.

THE wind changes from south to possibly southeast. The officer in charge shakes his head as he looks at the barometer falling. It begins blowing harder and harder. Down, down goes the barometer and the whistle calls the messenger, who knocks at the captain's door with " M. --- wanted me to tell you, sir, as how he thinks we may have a nasty blow. The wind is coming up." Does this feaze the captain? Not much. He puts on his big boots, wraps his woolen comforter around his neck and goes on the bridge. Perhaps he never says a word during the whole trouble and the officer directs everything, as usual -but he is there, and when he gets there he takes the responsibility for everything, and Mr. - may feel a little easier. The wind picks up from a stiff breeze to a moderate gale, then to a gale-fifty miles an hour,-then to a hurricane—sixty-five to seventy-five miles an hour. It howls so a man must shout to be heard ten feet away. It blows strips of paint off the funnel and deckhouses. The crests of the seas are whirled into spray and the sides of the waves furrowed with little ones. A man cannot stand against it without clinging with both hands to some support, and a seaman ordered to make fast some ropes on the deck is blown against the rigging and held there for ten minutes.

Finally he manages to creep on hands and knees to the shelter of a deckhouse. The air is so full of spray that it seems as if a heavy rain were falling. The waves roll higher and higher. In an hour they are ten feet from trough to top and in three hours are nearly on a level with the first deck below the bridge. An hour, later they are rushing from the southeast forty feet—careful measurement—from trough to crest. The clouds are rushing over in such masses as to almost touch the ship. "Stop the engines and let her drift," comes from the captain.

"Clang!" goes the gong and the propeller, which has been half the time in the water and half the time beating the air as a wave lifted it, ceases its revolutions and gradually the great hull swings broadside to the sea. Then begins a battle royal between the handiwork of man and the elements. The best artisans constructed the former out of the best steel in Britain's most noted shipyard. Every bolt was screwed home and every rivet clinched tight. The ship begins to roll from side to side. The seas lift this 10,000 tons of weight so that a third of the bottom is entirely out of water, then let her down with a thud that makes her tremble, but never flinch. Up and down she goes, the deck-sides playing see-saw with each other. First one will be high above the water. Then it goes down. The waves seem to grow higher and higher, and as the bulwark is within a few inches of the foaming water you look up and up at a liquid mountain, greentopped with white. It seems hundreds of feet high, but you are looking obliquely and thus the distance is magnified.

It is a sight never to be forgotten, and few care to see it a second time, as they cling to whatever support offers itself to keep themselves from being washed into the water or thrown against the upper works. Miniature whirlwinds branching off from the hurricane twist the spray into little waterspouts, whirling them over the decks, up the masts and drenching the man in the crow's nest. Farther and farther rolls the vessel, until the foaming water runs along among the cattle, washing through the compartments and soaking them to the knees. But it is a healthy bath.

Is there any danger? None so far. The green hand might expect that every minute the hull turn completely over, but that is simply impossible. Now the reason for trimming the cargo properly is seen. It acts like a foundation in holding the ship. The cook's department cannot be trimmed and suddenly the kettles, pans and dishes start for the door in an avalanche, as the deck tips more than usual.

For six hours the roar of the wind continues with scarcely a second's intermission. Then it lulls a bit and the sky lightens a trifle. This is the beginning of the end, but for two hours longer it continues before the lulls become more frequent. Finally the engine starts again and the vessel is headed on her course, victorious at every point. She has not shipped a sea. Not a wave has rolled over her, and not a gallon of water has entered her hold.

Finally the captain comes down and changes his

clothes. "Yes, it was quite a blow," he says, lighting his pipe. What the captain does has been mystery until now. He seems to write a little smoke considerably, take a nap in the afternoon draw his pay merely for this? No, it is for being in the right place and doing the right thing at the right time.

SHOPPED WITH A \$1,000 BILL.

One day last week a well-dressed woman entered a State Street store, and stopping at the hosiery counter, made a purchase amounting to forty cents. In payment she tendered the clerk a hank note which, when unfolded by him, almost took away his breath. It was a \$1,000 bill!

The clerk never before had seen, even in dreams a \$1,000 bill. He gazed at it in a bewildered way. The clerks on either hand, although politely attentive to patrons, caught a glimpse of the bill and looked unutterably surprised. So much in so little was astounding.

"I'm sorry," said the shopper, "that I've no smaller bill with me this morning. I hope it will not bother the house to make the change,"

"Not at all, madam," said the clerk proudly and promptly, recalled to himself and sensitive for the financial fame of his firm. "There may be a lattle delay in counting out your change: that will be all. Just have a seat, please."

The bill was thrust into a little box along with the forty-cent purchase slip and started downward to the office of exchange. Arrived there it created such a commotion among pompadours and shirt waists that the head floorwalker was called into consultation. He caught up the surprising bill and carried it to the head cashier. Then, in secret conclave, it was decided that before the bill should be cashed, it must be known to be genuine. It was thereupon sent out to a bank, where it was tested and found to be "all right."

In the interim of waiting for her change \$99960—the shopper discovered that the pair of hose she had selected did not quite suit her, after all; and so the \$1,000 bill was finally returned to her.

"I shall have to have it changed presently," she remarked as she tucked it into her pocketbook, "for I must have some things upstairs."

Meanwhile, by a system of telegraphy peculiar to department stores, the fame of the hosiery transaction had spread over the main floor and upstars and down. "The woman with the \$1,000 bill," was the whisper as the shopper sauntered through some attractive aisles and stepped into an elevator. And so it came about that when, on an upper floor, she had invested to the amount of \$200, the clerk was quite prepared to be handed a \$1,000 bill. It was graciously received at the desk. It had now acquired a pleasantly familiar look. Eight hundred dollars were counted out and delivered to the shopper, who thereupon took a quiet departure.

Then followed a second general surprise like address left for the delivery of the purchase was in a questionable part of the city. Suspicion awake A \$1,000 bill was hurried a second time to a bank. This time it was found to be a genuine—counterfelt. The trick grew plain as the store reflected. For the good bill presented in the course of her shand purchase down stairs the woman had substituted its counterfeit semblance in making her upstairs payment.

The goods were not delivered, and so the surprised business house had that day to record a deficit of \$800.

WHY CARAMELS?

The groceryman on the corner relates that to cently a little girl entered his emporium and, time ly laying down a dime, asked for ten cents' work of candy.

"It's for papa," she said. I want in s'prochen when he comes home."

The groceryman proceeded to dig out some of a stock, when the little girl interposed

"Don't give me that kind. Give me caramely just love caramels."

"But I thought these were for papa," the groceryman remarked.

"I know," explained the little girl, "hut when give them to papa he'll just kiss me and say cause I'm such a generous little girl he'll give them; back to me. So you'd better give me caramels

THE WATER OF LIFE.

& English correspondent in South Africa says though he has thirsted in the thirstiest corners the globe, the thirst of the veldt is a fresh ex-He says: "It will be quite curious to live reports water bottle slung about one's shoulder. be can scarcely remember the day when water regarded with reverence and jealous envy, aken it could be made to run clear, continuous and walued by a turn of the finger. Here where one times by tired limbs the weight of what one drinks, thought of water flowing through pipes seems a cam of paradise. And such water! grough which one could see, which left no mud at ecottom of the mug, and did not stain what it gilled on. The water we drink here is often too bickeven to filter. At Ramdam there was a big and. The water was very shallow, but the mud rsblack and deep. If one bathed in it, one sat gently half in mud and half in brown syrup, and hanked God for water. One rose from it with green leeches hanging from one's body like bits of kaweed, and with a sprinkling of other less known geets. Horses looked askance at the pool but the men drank of it greedily, and drank of it where vione they could reach it, where the horses hoofs tidehurned it into a blackish-green liquor thick as

The water of life will quench the soul's thirst as withing else can. Leave the broken cisterns and think from the fountain of eternal life.

LINDA GILBERT.

Accord many years ago a little girl of twelve persof age was passing an old brick prison in Chiago, on her way to school, when she saw a hand beckening from behind a cell window and heard a kery voice asking her to please bring him something to read.

thing to read.

For many weeks after she went to the prison they Sunday, carrying to the poor prisoner a book to read from her father's library. At last one day the was called to his deathbed.

"Little girl," said he, "You have saved my soul. Promise me that you will do all your life for the poor people in prison what you have done for me." The little girl promised and she has kept her promise. Linda Gilbert is known to-day as the prisoner's friend. She has established good librates in many prisons, and visited and helped hundreds of prisoners; and from the great number she has helped six hundred are now, to her certain howledge, leading bonest lives.

Jissus teaches the true secret of a successful life. I we follow him we cannot fail. His life was periat. Full of suffering, it is true, but it was a sintestife, a gentle, loving life, and his very sufferings are for the good of humanity. Such a life, so lived, following success, even though it brings not wealth for worldly fame. One may be poor and have only alonly place in the world, but if he is unselfish and so filed with the light of God's love that men can athful, true," then will his life be a power for good congress and love rule the world."

LIP SERVICE.—The ordinary Mohammedan prays borning and evening but their prayers are not very barfelt as they stare around and take notice of everything while praying. We often read of the help pray of these people to their religious duties, but pray of the and offer praise to Allah, but the strong their religion seems to do is to make inaccessible to the Gospel.

ENLARGE the place of thy tent, and let them stretch forth the curtain of thine habitation, spare thou shalt break forth on the right hand and on left, and thy seed shall inherit the Gentiles, and the desolate cities to be inhabited."—Isaiah

L Sunday A School

GOD'S SPECIAL OIFTS.

Every art or work, however unimportant it may seem, is a gift of God; and all these gifts are bestowed by the Holy Ghost for the profit and welfare of man. Let us begin with the lowest. One can spin, another can make shoes, and some have great aptness for all sorts of outward arts. These are all gifts proceeding from the Spirit of God. If I were not a priest, but were living as a layman, I should take it as a great favor that I knew how to make shoes, and should try to make them better than anyone else, and should gladly earn my bread by the labor of my hands. There is no work so small, no art so mean, but it all comes from God and is a special gift of his. Thus let each do that which another cannot do so well, and for love, returning gift for gift.-John Tauler (born 1290, died

THE LOVE OF CHRIST.

To know the love of Christ passeth knowledge. While we were yet sinners Christ died for us. We were reconciled to God by the death of his Son. Greater love hath no man than this, that a man lay down his life for his friends, says Jesus; and yet he died for his enemies. Thus we love him, because he first loved us. And the love is so wonderful, that he makes us sons of his Father, who had been his enemies. Rebels are put into office in the kingdom; we are made kings and priests unto God. We should count all but loss, for the love of Christ, and should let it constrain us.

In all the best men you meet, perhaps the thing that is most peculiar about them is the child's heart they bear within the man's. However they have differed in other respects-in their tempers, gifts, attainments-in this they agreed. With those things they were so to speak, clothed upon,-this was their very core, their essential self. And this child's heart it is that is the organ of faith, trust, heavenly communion. It is a very simple thing so simple that worldly men are apt either not to perceive or to despise it. And young persons, when they grow up and enter the world, are tempted to make little of it. They think that now they are men they must put away childish things, must fearn the world and conform to its ways and estimates of things. But the childish things which St. Paul put away belong to a quite different side of child-nature from the little child which our Lord recommended for our example.

Perusing the history of society and religion from earliest time to the present, we note how the forms and devotees have passed away, but the unseen truths they hid away, or did not perceive, are abiding still, and always will abide. Generation has succeeded generation, and empires have given place to empires, but each has been more luminous than the last. Adam lived and died, but the race he fathered still multiplies upon the earth. The patriarchal fathers passed away, but the simple truths of God that they taught and lived still live in us. Moses meekly lived, and wrote, and died, but the example of his meekness is still felt, and the law he gave is still as true as when old Sinai echoed back in thunder tones the sanctions of Jebovah. Israel rose and fell, but the principles of the church, of which the nation was a type, still exist, and spread their sway over all the earth.

Derivation of the Word Sunday.—The word "Sabbath" is a Hebrew term for a period as well as quality of time, and means "rest." . In the Bible it is used only with this meaning. Periods of one year or of seven years were thus characterized. Every seventh day was observed by the Hebrews as a weekly "Sabbath." In addition to this day others were appointed in which obligation to cease from labor was as binding as the observance of the weekly "Sabbath."

"Sunday" is so named from the day which was dedicated to the worship of the sun. Christian nations observe it as their "Sabbath;" but "Sabbath" is not "Sunday."

THE eternal stars shine out as soon as it is dark enough. Thomas Carlyle.

THE WORLD'S MOST FAMOUS MEN.

CICERO: Born 106 B. C. died 43 B. C. He was an orator, a statesman, and a man of letters. It is difficult to say in which department of knowledge he excelled. He occupies a large part of Roman history, but his fame is based on his literary work that has come down to us. This consists of orations he delivered in the political life of his time, and they are models, to this day, of statesmanship, and of moral and intellectual culture. His lasting impress on his people, and through them on those who have followed, constitute him one of the highest and best specimens of ancient culture and morality of the time when great men were not wanting. While he was a great orator, it is not as such that he is placed among the world's great, but rather the subject matter of his orations compels our respect and admira-

CÆSAR, JULIUS: Born 100 B. C., died 44 B. C. He was the greatest man of the Roman world. His fame rests not alone in his statesmanship, but he was also a man of letters. As an orator he was second only to Cicero. He is one of the strongest figures in the whole Roman people, great as a soldier, politician, orator and writer.

Virgin: Born 70 B. C., died 19 B. C. One of the greatest of Roman poets. The impress of Virgil on the mental equipment of the world is clear when it is remembered that his poetry is still studied in schools to this day and probably will be to the end of time. His fame is due to his pre-eminent ability as a poet, one of the greatest of antiquity.

Augustus Cæsar: Died 14 A. D., in his seventyfifth year. He had been adopted by Cæsar, the dictator, who had no son of his own and thus became a
leading figure in the history of the Roman empire.
His reign is called the Augustan age and was
marked by the Latin literature attaining great eminence, but the country was doomed to decline in
spite of the heroic efforts of Augustus to elevate his
people.

PLUTARCH: A Greek writer whose date of birth and death is not accurately known, but he lived, probably, about seventy-five years after Christ. His fame rests on his "Parallel Lives," or, as it is generally called, "Plutarch's Lives." He wrote much more, but it is little known by scholars, and it is mainly by his "Lives" that he is known. His idea, apparently, was to take two eminent men, a Greek and a Roman, and give a history of the life of each, tracing the points of resemblance and similarity, both morally and in achievement in each. Thus it comes that nearly all his "Lives" are in pairs. He was a man of vast learning, and his compilation of historical facts about the great men who had lived and figured largely in the history of the world make a valuable work of reference to this day.

MARCUS AURELIUS: Born in Rome, 121 A. D., died 180 A. D. One of the greatest of the Roman Emperors. He was hostile to the Christian religion, and adhered to Stoical philosophy. His high morality and calm philosophy in a rough age are what entitle him to his place among the great. His teaching was that of a splendid pagan, and included among other things, the idea of living close to nature, and cultivating wisdom, truth and virtue. What he taught and practiced was not new, in its parts, but was new in its combinations, and the leading feature of it was its tenderness and justice to all men. He was never in a hurry, but regarded every moment as to be occupied advantageously. When his position compelled his presence at the theater, or the public games, he carried with him reading and writing material and occupied his time with mental improvement. His greatness is due to his high morality, and his approach to the virtues of Christianity in a day and age when Christ was not universally received.

By different nations every day in the week is set apart for public worship—Sunday by the Christians, Monday by the Greeks, Tuesday by the Persians, Wednesday by the Assyrians, Thursday by the Egyptians, Friday by the Turks and Saturday by the Jewish race.

LIGHTHOUSE LIBRARIES.

"THE lighthouse establishment" is the name of an institution which has, quite unknown to the general public, been circulating good literature among the light keepers and life savers of Lake Michigan, Thirteen years ago, when the lights came into the great lake waterways, the books came as a similar missionary to light the homes of many of the tiny lake shore towns. These little towns had known nothing of books or public events before the bookcase libraries came, any more than the lake captains had known the help of the government light service. However, the books came then, and they have been coming ever since, and libraries have been circulated back and forth between the Atlantic coast fighthouses and the lake stations with very few people outside the service knowing of it.

Even the librarians of these lake states are ignorant of the good which is being done in this quiet way. Chicago philanthropists and those of the eastern lake cities are periodically agitated with a desire to help the light keepers. 'People making an occasional visit to the light stations off shore are impressed with the loneliness of the keeper's life. At the same time they are imbued with a desure to share with the keeper and his family such winter evening friends as one may have. They come home to start a movement which will result in furnishing books and pictures to the light keepers. It is probably the case that they have visited the Gross point light or another of the near-shore stations which are within communication distance of the city, and are therefore not supplied by the government with reading matter. If their movement is not successful it is not because their momentary enthusiasm is lacking the fact remains that these movements have never terminated successfully. It is also true that a winter seldom passes during which some such movement is not started

So it goes with philanthropy. And yet in furness it must be said that there are people who, working upon a smaller philanthropic basis, collect their magazines and old books at the end of the year and give them to Inspector F. M. Symonds of this district for distribution. These offerings of current literature are eagerly received by the government officer, and everyone can guess how thankfully by the light keepers.

The lighthouse establishment does not send out many periodicals or, indeed, many of the newer books. Their libraries are made up of representative literature, special attention being given to the interests and needs of the prospective readers. In the Lake Michigan district there are now in circulation some fifty libraries, each containing thirty-three books.

When they were first sent west, thirteen years ago, each library contained a Bible and a hymnal. But as there were then enough Bibles and hymnals to go around, and no need of moving them from station to station, they were made the property of the light keepers. Of the other books sent out there is a good collection of interesting volumes for men and women and children Cooper was given a place of honor at the head of the authors' list, and his story of "The Pathfinder" was probably the most popular of the entire collection. At least, it was the first book to need replacing, and it has since been more frequently replaced than any other book in circulation. Another well-read volume was that entitled "The Man Who Became a Savage;" it is a book which was popular among the light keepers of the east and was sent out in many of the libraries which first came to Lake Michigan. In the collections now are such books as "Caleb West, Master Diver," "The Life and Voyages of Christopher Columbus," "Humorous Masterpieces" - all well thumbed.

One of the libraries contains among other books: "British India," Frazer; "The Headsman," Cooper; "A Drama in Dutch," "John Wycliff," Sergeant; "A Market Value," Grant Allen; "Jeanne d'Arc," Oliphant; "A Story of the Plains;" "Lorenzo De Medici," Armstrong: "Captain's Dreams and Other Stories," King; "Rachel's Share of the Road,"

It is not strange that the people who watch the government light in a lonely corner of the world should be most interested in tales of adventure and travels. It is at least so with the light keepers, and their libraries wear out accordingly on these lines.

these thirty-three books which the government sends them, but it is generally that length of time before the entire neighborhood, if there is any neighborhood at all, has had the good of them. And no light keeper would think of sending the books away until the neighbors had read them, for he is awake to a sense of his responsibilities and he has his own philanthropies. In this way the books become a blessing not to one family alone, but sometimes to four and five hundred people who are huddled together in winter quarters along the bare and cold north shores.

The advent of the books in this way comes to be an event of the greatest importance in a town, and the lightkeeper's home becomes a center of interest and education. The education value of this work has never been estimated; in fact, there have been no records of the work in this district; the inspectors have done what they could and as they could to promote the library interest. The lighthouse tender carries a reserve stock of libraries just as he does of groceries, and in making the round of inspection the books are exchanged upon the request of each keeper. Libraries that are collected at one station are carried on to another, and in this way they make a complete circuit of the stations before being sent east for the final exchange.

The central station or home library for this work is at Tompkinsville, N. Y., and from there all the isolated light and life-saving stations under the control of this government are supplied with reading matter. When this library movement first began it was under the control of the governmental department. All of the first libraries were supplied by the government and circulated through the regular government agents. Now, however, a philanthropic organization has taken up the work, which, although it receives considerable help from the government, is largely supported and controlled by private, philanthropic interests.

None of the stations which are in direct communication with the world, as within the radius of a large city or town, are supplied with the libraries It is to the isolated lightkeepers and station men that the little help is given to keep them in touch with outside interests and the world's doings. The contributions which come from outsiders to the office of the inspector are entirely unsolicited. People who have visited the lake resorts during the summer and have become interested in the lights and the lightkeepers have offered their contributions to the relief of these isolated people. Books, magazines and newspapers have been sent and always willingly received and immediately distributed among the lonely stations.

CAN I GET AN EDUCATION?

BY ALBERT C. WIEARD.

"Yes, if you are worth educating." So said one of our college presidents. Shall I tell you of some of the pluck and planning, and struggle and selfsacrifice that he had in mind when he said that?

Whether you can educate yourself or not does not depend on how much money you have, or on how great your opportunities are, for we always find time and money for what we think most important; but it does depend on how bad you want it and on how much ingenuity and self-denial and perseverance you are capable of.

There are boys who would rather have a new buggy and a fine span of horses, and spend their time in roaming over the country, than to have the trouble and patience it takes to get more brains. But there are young men who have sense and pluck enough to do better than that.

I knew two young men who came to school with hardly enough money for one-third their expenses. They rented a little room in one end of an empty store building very cheap, secured a store box for a table and another for a cupboard; and for seats they extemporized a bench by laying a board across two small boxes, if I remember correctly. Here they boarded themselves very cheaply.

I knew another young man who in boarding himself had his trunk for cupboard, and for dishes had one rice cooker, one big spoon, one small spoon, one knife and fork, and one tin plate,-and, really, what more did he need? - using for other dishes old tin cans out of which he had cut the top.

At one of our schools, by actual, accurate account, It does not take a family an entire year to read a brother and sister boarded themselves one whole

winter at an average cost of forty-two and one ba cents each per week. Their staple article of ion besides entire wheat bread, was a breakfast for which they themselves prepared, from a bushe! wheat that was given to them, in the following ma ner: They washed the wheat, then dried it in oven until crisp, then ground it in a coffee mill, a afterwards boiled it thoroughly.

For meat they bought soup bones, and cooke with them broken rice, etc.; but you couldn't ba kept a rat over winter on what they wasted, B so far as I know they were as well and respectable and happy and apt as any who "fared sumptuous every day."

One of the best students I ever knew lived for w weeks, I'm told, on three dollars. He did sweepin and chores for tuition. On Mondays he helped neighbor wash; and yet 1 do believe he did mo work than any other man in school. His clothweren't always made at the dearest tailor's, and the butcher didn't get rich off him; but everybody like him, and the angels laughed at the good he did.

There was, it is said, in the east, a young man who had poor health and an empty purse, but a burning thirst for knowledge. So he went to New Yor City, got himself a bushel of fine wheat and apple and this was his food for the winter. He ate it ray so that he would be obliged to masticate it thou oughly. It is said that he regained his health while succeeding in his school work.

A friend of mine who had to remain home until of age, and afterwards gave considerable of h hard earned money to relieve his father's financia embarrassment, but still forged his way to the front graduating from one of our colleges, and afterward from a state university, and is to-day a professori a college. This friend told me of a young man a the state university who had his father and sister to support besides educating himself. This is how h did it, keeping himself in school all the while. C evenings he worked up a paper route and delivered the daily each evening, so getting paid for his exer cise; on the weekly holiday he worked down town in an office, turning his holidays to account; and a night he slept in an undertaker's office as night porter, even earning money while asleep.

Yes, certainly, if you want it, really want it, you can get an education, whether you have a centora million, but do you want it, indeed?

HOW INDIANS CATCH SKUNKS.

BY AN INGLENOORER.

In the autumn, when the leaves begin to in brown and crackle under foot, the most of the lo dians leave their reservations and go out alor the creeks and rivers of Middle lows to spend little while in camping, fishing and hunting, or, i other words, get as near back to their old ways a possible.

To catch the skunks, several bucks start out with their axes and spades and a large leather bagin which to put the animals after they are caught

When they come to a fresh skunk hole, they t a stick and find which way the hole runs found out, they go at intervals of about ten feet chop away the ground until they come to the This leaves part of the hole covered and part u covered, and the skunks seek shelter in the place which are undisturbed.

One of the party then gets a long millow sap pling and cuts the wood out of the small end lear ing a bark lash. With this instrument he gen down on his hands and knees at the end of the h towards which the skunk's tail points, while another er gets at the other end to keep him from running out. The lash is then wound around his tail and his is soon in the Red Man's hands, who dispatchesh by a blow behind the ears with a club, and he? then deposited in the bag ment or co-

GIRDLING THE GLOBE

By ELDER D. L. MILLER,

Author of "Europe and Bible Lands," "Seven Churches of Asia," and "Wanderings in Bible Lands."

The author tells of things seen in his travels around the world; and writes in such an interesting and impressive manner that the reading of the book will give one a better idea of things than would be received by many hundreds who would make the trip themselves. Note what one writer says:

I have examined and read Bro. D. L. Miller's List book, "Girdling the Globe," and find it an excellent work. White all of his books are good and instructive, I put this as THE BEST, in fact the most interesting book I ever read outside of the Bible. Everything is made so clear and plain by the author. I would recommend all to secure it if in their power to do so. Surely a cheap trip around the world! Who would not take in such a trip and at the same time enpay the comforts of home?

The Red Morocco binding, with gilt edge, gold back and side title, and handsomely finished in every way, makes a magnificent Christmas present to your near relative or dearest friend. Price, \$3.00, prepaid. What better do you want?

THE INGLENOOK

"The Inglenook" will be Sent to any Address the Rest of this Year for One Dollar will be Sent the Rest of this Year and all of next Year for One Dollar.

The Best Way is to send the Dollar and be Done with it. After You Have Read it for a Week or two, You'll be Sorn that You Didn't Save Money by Subscribing for the Whole Year at Once. It's a Paper that Grows on One. Once Read, Always Read!

We Want Agents, == Real Live Agents

In Every Part of the Country. Anybody can solicit Subscribers at the Twenty-five Cent Rate, and Whoever Sends in Club of Ten of These, Can have his Choice of ONE of the following books:

Dictionary of the Bible, Beside the Bonnie Brier Bush, Natural History of Birds and Quadrupeds, Dream Life.

Drummond's Addresses,

Ten Nights in a Bar-Room.

Imitation of Adventures of a Brownie, Imitation of Christ, Etc. Intellectual Life,

If he gets twenty subscribers he can have two books; for thirty subscribers three books, and so on. And they could be had in an hour's work in many a place. Whoever shows himself an efficient agent will be put in line for the Fall work connected with the Inglenook. There is a library of Fifty bound books waiting for somebody.

The Agent who sends in the largest list of dollar subscribers between this and the first week in January, 1901, will have sent him a Library of FIFTY BOOKS. Here is the list:

Adventures of a Brownie, Æsop's Fables, Auld Licht Idylls, Autobiography of Franklin, Autocrat of the Breakfast Table, Bacon's Essays, Beside the Bonnie Brier Bush, Black Beauty, Burns' Poems. Child's History of England,

Confessions of an Opium Eater, Dictionary of the Bible, Dream Life, Drummond's Addresses, Emerson's Essays, Ethics of the Dust, Fairy Land of Science, Fifteen Decisive Battles, House of Seven Gahles, Imitation of Christ.

Intellectual Life. Lays of Ancient Rome, Longfellow's Poems, Lorna Doone, Mosses from an Old Manse, Nat. History Birds and Quadrupeds, Poe's Poetical Works, Prue and I. Rab and His Friends, Reveries of a Bachelor,

Samantha at Saratoga, Sesame and Lilies. Sketch Book, Sticket Minister. Stories from the History of Greece, Stories from the History of Rome, Story of an African Farm, Ten Nights in a Bar-Room. Thirty Years' War, Twice-Told Tales,

Window in Thrums, Education, In His Steps, Minister's Wooing, Professor at Breakfast Table, Lamb's Tales from Shakespeare, Lallah Rookh, On Liberty, Tanglewood Tales, Sign of the Four,

The Agent sending in the next largest list will have the choice of TWENTY-FIVE books out of the above list. The third largest list will entitle the Agent to FIFTEEN of the books, his choice; and the fourth largest list will win TEN of these There is also a cash commission going to the Agent. We prefer the services of the Messenger Agent if he will write at once for the place, but we will put the first live applicant into line, as the Inglenook is not going to be the last If agents desire to enter for the Library they should say so in order that we may keep tab on subscriptions received at the office. Elgin city is barred in the competition for prizes.

The announcement of the successful Agent will be made in January, 1901.

A Live Paper for Live People.

The Inglenook is no longer an experiment. It is regarded as phenomenally successful by experienced newspaper mea who know what they are talking about. The reason is not hard to find. It is a FIRST-CLASS PAPER, with nothing old and commonplace about it. It is up to date, and always will be. It will have something new in each issue, it always has and it never will fall below its self-set standard,—being the best paper of its kind in the world. You can't read it without The INGLENOOR being interested and instructed. The whole wide-spread world is ransacked in the interest of its readers. isn't made with a dull pen and a pair of shears. It is a live paper for live people.

ARTIFICIAL EYES.

One who will talk with any prominent optician morerning artificial eyes will be prepared to believe then he says that few persons have any conception the number of artificial eyes that are worn. The est way to ascertain how many are worn is to learn low many are bought. This is not so difficult as night be supposed, as not all opticians deal in artiicial eyes, and those who do deal in them are not at Ill secretive as to the facts of the trade, with one exteption-they are sure not to reveal the names of heir customers. There are ten opticians in Chicago who have customers for artificial eyes, and they kllabout 2,500 a year. Probably more than half the number are sold by three dealers, who carry severally large stocks and give special attention to the fitting of eyes.

By far the greater number are sold to city customers, though some go out on orders to persons in the country. Individuals in all classes wear them. To be without an eye may be the misfortune of the nch and poor alike, and the rich cannot be supplied with a better artificial eye than can the poor out of the largest stocks carried by opticians. The price is not high, ranging as it does from \$5 to \$10.

Sometimes a wealthy man or woman will ask to be shown a more costly article, making objection to the common substitutes that anybody can buy for a kw dollars. But the best material that has been ound usable in artificial eyes is used in the manufacture of all of them, and it is not expensive. The Only way to increase the cost is to have an eye spetally matched, in the comparatively few cases there a tolerable match is not obtainable from stock, and this is done on a particular order sent to the

In most of these cases the buyer would better are trusted to the dealer at home to supply his nant suitably. No one can exactly describe either bis own eye or the eye of another. What is the of your eye? You cannot tell definitely. What is the color of my eye? I cannot tell you definitely. No more can the maker of artificial eyes this, and when he attempts to match a natural Te that he looks into by one of special make he is lot sure of doing it more exactly than it could be one out of a tray containing 100 artificial eyes. And yet some individuals are so sensitive to their Sufortune and so particular in selecting a match they will travel thousands of miles to give their ader to a maker. This is no exaggeration, for sime such individuals will cross the Atlantic and the European continent as far as Germany to give their order.

The best artificial eyes are made by dwellers in Black Forest, Germany. There are no extensive

under the same roof with the houses of the makers. They are not made in quantities in anticipation of large orders, but only after they are ordered by the

What shall be the description of artificial eyes that is to say, what colors and shades of colors the eyes shall have in large quantities-will depend upon what country or section the particular order comes from. In one country or section blue eyes of all shades predominate, in another gray and in still another brown-there are no black eyes. The dealer will engage some maker in the Black Forest to make him up a quantity of eyes of the prevailing color of natural eyes in his section among his customers. The maker knows far better than he can be told how to differentiate the shades of color.

A prominent optician has just returned from the Black Forest, where he received a quantity of artificial eyes previously ordered and lodged an order that will he filled next year. He says that he met dealers there from every country and from many parts of this country. The making of the curious article is a principal industry of that part of Germany. "The woods"-that is to say, the Black Forest-is full of this kind of artisan. They seldom leave their native country and never in large numbers. A few have from time to time emigrated to the United States, and such of them as here prosecute their trade are settled in New York. But they do not make artificial eyes in quantities—they prefer to fit eyes to individual customers. If any German of this trade has ever settled in Chicago the fact is not known, for certainly no artificial eyes are made in this city. Probably none will very soon be made, as single-made eyes cost half as much again as those made up for stock.

Recognizing the fact that no two persons have eyes exactly alike, it will readily be understood how difficult it is to match a natural with an artificial eye, and also how extensive the stock carried must be in order to fit the majority of patients. The average stock carried by the leading opticians in Chicago numbers about 5,000. Out of this great number most persons can be fitted, but some from either a peculiarity of the natural eye cannot, or of disposition will not be fitted. Hence orders are constantly being placed for special fits either in New York or Germany. They are defects in the natural eye that may be specially matched, but this cannot as surely be said of shades of color. Thus conditions vary considerably, but either out of stock or by individual orders sent forward to the makers it is frequently possible to fit a patient with eyes that none but an expert can detect.

It is interesting to examine a tray full of artificial eyes. The natural eye is globe-shaped, but the artificial eye is not so. Owing to the fact that upon removing the natural eye there is left what is known in the profession as a stump, which occupies a part of the cavity, a globe-shaped eye cannot be put in. The eye is made in this way: First, a globe is blown of a material of a glassy nature, resembling very fine porcelain. Then the globe is cut in two and the part that is not to be used is thrown away. It is heated again and the cornea or colored portion is set in. The cornea is made of white glass, always leaving a black center representing the pupil, and around the pupil the other shades of color are infixed. Afterward the veins or blood vessels are added The whole is then given a coating of enamel. A quantity of eyes, such as is usually ordered by the larger dealers, will number 5,000, and it is possible that no two of them all are exactly alike.

The life of an artificial eye is usually about one year. The acids in the secretions of the socket are destructive to the enamel, and when this becomes rough the eye should be thrown away to avoid irritation and inflammation. Some natural eyes have the appearance of artificial ones, owing to peculiar defects, such as some artificial eyes are seen to have when compared with the natural organ of sight.

Schonies for their manufacture, but only little shops the expense have a change of eye every three or six Many customers of the opticians who can afford

months. Every prominent dealer has a room in his building where customers are received and fitted. Some female customers are so sensitive on the subject that they come heavily veiled and no one sees them hut the operator who attends to them. But the large majority of the customers are not of the rich or particularly well-to-do classes, but are found among the artisans, who are apt to meet with accidents, and the poor, who are subject to eye diseases. But, owing to the cheapness of artificial eyes, the unfortunates often manage to find their way to the optician, who sends them away comparatively happy.

Now and then, however, there is one of these persons who expects to be able to see with an artificial eye, and when this happens the patient is for the time being very unhappy. Young children are sometimes among the customers. One of the State street opticians lately fitted a child only two years old with an artificial eye and made the little fellow's parents joyful. Of course, the eye was small, and a larger and still larger one will have to be used as the child grows. So the socket will grow and expand and show no deformity. Without this treatment the socket would contract and shrivel.

As said above, there is no black eye, but eyes that are taken for black are only dark brown. Negroes' eyes are the darkest of all, or appear so because of the darkness of the skin. For the same reason the whites of a negro's eyes appear whiter than they really are. Blue and blue hazel and gray are the dominant colors. The white or sides of the eye is technically called the schlerotic, the colored portion the iris and the black center the pupil. The eye of no white person is ever so dark that the pupil cannot be seen, but this often is the case with negroes' eyes.

COUNTRY AND CITY FEET.

"IT is a fact not generally known that the feet of city women average all the way from one to three sizes larger than the feet of country women of equal station in life," said a shoe dealer and manufacturer.

"Let a country born and bred woman who wears a No. 3 B shoe come to the city to live, and inside of six months she will be wearing a No. 31/2 C, and that before the end of two years, or say three years, she will be glad to be able to get into a No. 5 B.

"Asphalt and cut stone pavements are responsible for this peculiarity, just as they are responsible for the increased sensitiveness and enlarged growth of a horse's feet. The feet of the thoroughbred that has never cantered over anything save the yielding sod of a stock farm or the soil of the race course show a marked difference after the same horse has been driven several years over the hard city streets.

"In the feet of a woman who has always lived in the country the muscles are soft and supple, while the same muscles in the feet of the city woman are firm and hard. The reason of this is that when the city woman walks those muscles are brought into what you might call gymnastic exercises with the hard pavement as each step is taken. With the hardening of the muscles there also is a gradual enlargement of the entire foot."

OYERHEAD RIGHTS.

Although any one may extend an overhead wire across or along a street, it does not seem generally known that no wire may pass over a house without the permission of the proprietor, even though the wire be in no way connected with the house. The owner may, if he pleases, take them all down, for his freehold extends from the centre of the earth up to the sky. The landlord of a large boarding-house on Beacon Hill made the electric light company provide bulbs for the lighting of his dining-room in return for the privilege of stringing wires upon his roof.

Danish lighthouses are supplied with oil to pump on the waves in case of a storm.

🛎 Correspondence 🛎

MOSS-MAD FOLKS IN MAINE.

THE latest vagary which the summer visitors have brought to the front in Maine is the erection of wooden cottages having the outside densely coated with a heavy growth of green and gray moss. The abandoned farmhouses were searched for lichened corner and straddle boards, and extravagant prices were paid for bits of ancient wood that held living specimens of mossy growth. Some anxious souls went so far as to peel the moss-grown bark from the north sides of beeches and maples and use it for veneer to disguise the newness of the wood inside.

Early in September, when most of the summer visitors had gone moss mad, an old skipper came to the wharf with a load of new boards from the Bangor sawmills. He could not sell a stick, though his customers told him they would pay any price for boards that displayed a good crop of moss, the more moss the better.

"How many of these boards do you want?" asked the captain.

"All you can get for us a whole cargo if it is possible."

"Don't buy any from other men who offer you mossed boards, and wait here two weeks, and if I don't give you all the moss you want. I'll let you have this cargo for nothing."

He hurried his load upon the wharf and was out of sight before the sun had set. Ten days later his schooner came back loaded to the water line with aged boards so deeply clad in moss that no one but a barber could tell the kind of lumber that supported the crop. The boards were piled upon cross timbers so that the delicate lichens could not be rubbed away, and every piece from the top of the swelling deck load to the keelson, ten feet below water, was matted in rank masses of the plants, which everybody was trying to secure. He sold out his load for three times the price asked for clear pine, and made enough by the trade to buy a new schooner.

After the money had been paid over and the skipper was ready to go away he told his customers where he had found so many ancient boards. Near where he lived was an old and poverty-stricken line of railroad, which had been lately leased to a new and wealthy corporation. Among the first improvements undertaken was to pull down a long stretch of fence that had been put up to keep the snow from drifting across the rails, and to replace the rotting barrier with something new and more substantial. The corporation offered to give the old fence to anybody who would pull it down and take it away. Believing that the boards were worthless, the captain had laughed at the offer until he came to Cape Rozier and learned of the local passion for moss-clad homes. After this he lost no time in closing the trade with the new company, making more than \$2,000 out of the cargo of boards that were good for nothing except firewood and not worth the taking down for that purpose.

HOW THEY SHOP IN CHINA.

When a man or woman goes into a shop in China, a clerk with much ceremony brings fragrant tea, which is served in fine style.

The compliments of the season are exchanged, the topics of the times are discussed, there are talks about the weather-in fact, every kind of evasion is employed to keep away from the real reason of the visit, which is to buy something.

The proprietor solemnly watches these proceedings from afar. The style of compliment is of this order:

"In what celestial country did your exalted excellence purchase the superfine garments upon which I feast my eyes? Surely in no miserable and unworthy land like our own?"

When tea and talk are exhausted, the little pipebearer, who always attends his master or mistress out of doors, lights a pipe for his employer. There are only a few whiffs in each pipeful, so the process has to be frequently repeated.

Then business begins. The shopper asks the price of the required article; and makes an offer for it that is much lower. This is promptly refused in language that is courteous and polite beyond de-

scription. Then the possible purchaser departs with great dignity and clegance.

When the bargain is completed, the purchaser never pays for it himself. The chief steward is called, notified that the article has been accepted, and when the bill comes in, the "boy" settles it, giving an account quarterly to his master of money disbursed for the household.

Money, as we have it, is unknown in China. There are no silver dollars, no fractions of dollars, as quarters and ten-cent pieces; no paper banknotes. There is a coin called "cash," with a hole punched in the middle, that is used for small transactions. "Cash" can be strung like beads on a string. It takes one hundred pieces to equal the value of one standard cent. Gold is only used for ornaments in China, never for current coin.

THE POLICE OF JAPAN.

WHEN the Japanese consul takes his walks abroad in Chicago he is shocked and surprised to see every policeman swinging or tossing a mighty oak stick and evidently on the alert to swat somebody with it. In fair Nippon, whence the Hon. Mr. Fujita comes, the policeman are called "peacemakers" and their mission is of a far more pacific nature than that of the police officers here. They are not looking for trouble. They try to prevent it. They do not seek to arrest as many prisoners as possible. On the contrary, they strive to quiet the angry passions of the little men who occasionally engage in brawls and quarrels and send them to their homes.

But it must not be thought that the Japanese police officers are without means of defense or in such a position that they would have to retreat before a belligerent prisoner. They make arrests when necessary, but they do so in a different way-as the Japanese do so many things differently from the Americans. There is an art –a trick of wrestling known to the police force of the little empire which enables them to subdue refractory prisoners without breaking their skulls with an oaken club. That method would be called "rough work" by the Hon. Toshio Fujita were he given to American slang, which he is not. It is an art very difficult to explain, but just as easily used on Americans as on Japanese if only the police were instructed in the method.

When a disorderly man in Tokio or Yokohama objects to accompanying a police officer, instead of beating him into submission as though he were a refractory horse or a dog, the Japanese policeman seizes him with a peculiar wrestling grip in which the thumb and forefinger of the right hand come into play and the prisoner speedily finds himself on his back. He is not hurt; it is not necessary to send him to a hospital. He is merely overpowered by superior cleverness, and in a few minutes he finds himself in the patrol wagon started for the stationfor they have patrol wagons in all the principal Japanese cities.

This art of handling prisoners is taught the policemen in the gymnastic course which they must undergo before they are eligible for the force. As is the case in London, the policemen are not passed physically merely because of the possession of a certain amount of brute strength, because they lift a certain weight or push an indicator to a required figure on a dial. They must be agile, athletic and adept in manly exercises and the principal of these is the method of handling prisoners so they may be subdued without unnecessary violence.

The Japanese policeman is armed with a short sword, but he never uses it except for self-defense. Even then he is not permitted to use it unless he is attacked by more than one man or by a prisoner with a weapon, which occurs very seldom. A Tokio policeman would not last an hour on the force if he drew his sword and assaulted a single prisoner. Of course, that is the theory on which the Chicago police are supplied with clubs and revolvers-that they may defend themselves, but in nine cases out of ten they are used for offense instead of defense. If a man under arrest shows the slightest resistance, even though he be one-third the size of the policeman, out comes the club immediately and he is beaten on the head as though the policeman's huge frame were in imminent peril. If a prisoner, arrested on the most trivial charge, breaks away and runs, out comes the revolver and his life is placed in jeopardy, though he may be charged only with vagrancy

or some such offense and would be discharged;

The Japanese police, says Mr. Fujita, carry firearms—indeed, revolvers and similar weapons scarce there outside of the army, and the consu. clares the result is that there are almost no footpg and holdups in the cities. He admits that there very many pickpockets, but the hold-up man w his gun is almost unknown.

In Tokio there are 3,457 police officers traveling beats—one for each 556 inhabitants. In additi there is a mounted force of 251 "inspectors," or responding to the Chicago "patrol sergeant" at the New York "roundsman," whose duty it is keep an eye on the patrolmen and see they are po forming their duties. There are twenty-five pring pal police "offices" or stations and ten branch s tions, the former commanded by captains and if branches by lieutenants. Scattered through t city at various prominent points are 403 little house like patrol boxes, only enough larger to accomm date four policemen. In each of these two police men are always on duty, while two others on the same beat are patrolling the district. Every two hours they change off, so there are always two por licemen there on call in addition to the men on post

These boxes are connected with the stations by signal boxes and telephones exactly as our patro boxes are, and the officers are required to report their movements at regular intervals. Here a policeman on his beat cannot be found unless the seeker chances to be in the very block with him He may be only around the corner, but if he is ou of sight the citizen who wants an officer in a hurry might as well be a mile away. In Tokio the man who wants a policeman has but to look up and down the street for a police patrol-house and he is sure to get two policemen. They do some things better over there.

FOOD FOR THE FAMISHED.

"Did you ever hear of the ocean storehouse in Torres Strait? " asked an old seaman. " It's called Deliverance Island, though it is sometimes marked on the charts as Berby Island. It is like a mound rising out of the ocean, the highest point being about fifty feet. It is well-nigh barren, having only a few bushes and shrubs. On one side is a sandy beach, on the other a fissure torming a sort of cave, in which stores are left by men-of-war and merchant vessels passing through for the relief of distressed and shipwrecked sailors. I went in there last year from the Enterprise, an American bark.

"During a calm we lowered a boat and pulled. In this cave we found tins of preserved meat, his cuits, tobacco and a wooden box marked 'postoffice.' Our skipper, Captain Samuels, wrote a letter to a friend of his in Boston. It reached him, 100. Deliverance Island that day belonged to the French, but we took down their flag and hoisted the stars and stripes. That is the custom-the last ship through the straits hoists its flag on this ocean storehouse and post office."

HADN'T THE FACE TO DO IT.

HEXRY, fresh from Pecatonica, came to the city and accepted a position as office boy for a firm the Board of Trade Building.

Henry succeeded in performing his office duties to the satisfaction of everybody, but he could not learn to use the telephone. An unaccountable nonousness took possession of him whenever he found himself alone with the instrument and called upor to converse with it.

This nervousness was understood by the other boys, who generally relieved him of the terroro responding when a call came.

But one day he was alone in the office.

There came a ring at the telephone

"Henry," called out the manager, from an inner room, "answer that telephone call.

"My tace "1-I can't, sir!" gasped Hemy dirty!"

Is you are true to your Master he will succor you when tempted; the victory that overcometh is jointly man faith, not in yourselves, but in the omnipotent so of God, whose you are and whom you serve Triumphs over temptation will strengthen year

Pa. If any of the readers of this sketch would see him now, they must come here.

To be better understood, Diplodocus is one of that To be better understood, Diplodocus is one of that this of prehistoric animals known as Dinosauria. He was a lizard-like animal that lived during the Mesozoic period of the earth's existence. In form to evidently was slender and graceful, in size organic. The length of the skeleton follows: Head Medican neck 21 feet 4 inches, back 12 feet 4 inches, sarrum 2 feet 6 inches, tail 31 feet, making a total of 69 feet 2 inches. This immense length is composed of 74 vertebrae, the largest of which weighs shout 250 pounds. The longest rib in the body is 5 let 812 inches long. The cervicals of which there are 15, have an average length of over 17 inches. Iteskeleton when mounted will stand 16 feet high, and its entire weight will be about 15 tons.

His body was supported by four limbs, while his eck curved upward somewhat after the manner of

When Diplodocus died his body was covered by the elements. By reason of fire, air, and water, in the earth and on its surface, upheavals and changes occurred which completely hid from sight and knowledge his huge skeleton.

If this monster could give us the history of his life, as he moved around among the marshes and near the waters of that prehistoric period, doubtless satisfying his hunger on the succulent aquatic plants then growing, surely we would listen with monder and awe. But only time will tell what the geologist and paleontologist will compel the rocks and clay to reveal.

The Carnegic Museum has the honor of having the only complete specimen of this reptile yet found. *Diplotocus* was discovered by Dr. J. L. Wortman in the Jurassic of the Lower Sheep Creek Rasin, Albany County, Wyoming.

Through the financial encouragement of Andrew Carnegie, and the persistent efforts and untiring real of Dr. W. J. Holland and his corps of assistants, the Carnegie Museum is moving rapidly loward the front in the number, value and character of its exhibits.

No one of the "INGLENOOR" readers should think of passing through Pittsburg without stopage to visit the Carnegie Museum and Library. A large addition to the building will be creeted, when from will be prepared where Diplodocus can be properly mounted as deserves the King of the Saur" family.

Pittsburg, P.2

Note.—lamindebted to the kindness of Dr. Holland, directof the Museum, for the data in this article.

THE MADSTONE.

BY W. H. VON PLEES.

The most of us have heard or read of what is though as a "Madstone," but few of us know what is or what it looks like, and still fewer have ever

To be its possessor is to have it under lock and bey, hidden away in some secluded corner and only letsuasion, and some possessors have even been large.

Large sums of money have been paid for its posdown from generation to generation by will. Later is a stone in Boonville, Mo., that is said to possession of the Boone family since 1837.

In general, owners of the stone cast a halo of mysticism around it, as though it were possessed of some occult power.

In appearance the stone is an irregular, porous brown stone. It varies in size, but in general is about the size of a pigeon's egg. Tradition has it that they are found in, or come from the stomach of a certain species of deer, but I propose to tell how the stone can be made artificially, as made by the snake charmers of Ceylon and also by some of the monks of Manilla, who have found this a very lucrative business in supplying the merchants of India, where it is known as the great East Indian "Pramboo-kaloo" remedy for snake bites.

This East Indian madstone is made by taking a piece of horn, hart's horn is considered the best; which is roasted very slowly until it is thoroughly charred throughout. It is then ready for operations.

A natural madstone can be found in what is known as red shale, or red shell; and also in a nearly black variety of a similar rock. If among either of these rock deposits, a piece of stone or pubble can be found that will adhere very strongly to the tongue, it is suitable for use and only needs grinding down to a convenient shape.

In use, either natural or artificial, the stone is moistened with water or saliva, or better still, if obtainable, a little spirits of hartshorn. The stone is then pressed into the wound and allowed to adhere until it drops off. After use it is to be put in some sweet milk to remove the virus, washed and dried.

The Mexicans have a stone, the "Piedra ponsona" which is substantially the same as the East Indian stone, which they use for snake bites.

A CAT HOME.

A NEW home for the friendless was opened in Chicago last week without the formalities that usually accompany the opening of such an institution. Out on Grand boulevard the Chicago Cat Refuge, one of the oddest institutions in the country and without doubt the most complete home for the housing of homeless felines in the west, opened its doors.

The Chicago Cat Refuge is the innovation of Mrs. Leland Norton, president of the Chicago Cat club, owner of the famous Drexel kennels and an enthusiast on the question of blooded feline stock. new home is a modest one-story brick structure, built for the accommodation of stray cats that roam through the alleys and disturb the slumbers of peaceful citizens with their midnight serenades. The refuge is provided with everything essential to the keeping of cats. The building is divided into wards, each containing a number of spacious wire net cages. When a cat is admitted to the refuge it is immediately examined, registered and assigned to a cage. Here it is fed, washed and, in fact, given every care. Each cat is allowed plenty of exercise in a large yard and once a day they are taken out for an airing.

The very best of foods are used to feed the cats and the culinary department of the refuge is as well kept as in the average house. All the food used is specially prepared by an attendant familiar with the wants of the immates. Twice a day the cats are fed. The bill of fare consists of a variety of meats, potatoes and breadstuffs.

Sick and maimed cats are accepted for treatment and are placed in the sick ward, the most interesting section of the refuge. Here everything for the treatment of sick and injured cats is at hand. When a cat is found to be so ill that recovery is impossible or so badly injured that it cannot possibly recover it is taken into another room and chloroformed. In most cases the same fate is meted out to the females. When a cat has been cared for and is able to make a fairly good appearance the refuge finds a home for it, and in this manner Mrs. Norton hopes to rid the streets of many a cat. Since the opening of the refuge twenty-eight cats have been taken in and disposed of. Those that were healthy were washed and given away, the sick ones were treated and in most every case the refuge succeeded in restoring the cat to its normal condition.

For the last month Mrs. Norton's mail has been filled with requests from people who are desirous of ridding themselves of a cat that is an old house pet and has become a nuisance. So numerous were the applicants that Mrs. Norton has decided to refuse to admit any cat that is being cared for at

present. In her opinion, if a cat has been cared for and well treated for years until it becomes too old to be useful it should be chloroformed. By adopting this rule Mrs. Norton hopes to exclude cats that are not in need of shelter, and to use the entire space for the accommodation of eats that are in distress. The refuge has attracted so much attention and so many people persisted in being shown through the refuge that Mrs. Norton has decided to refuse admittance to the refuge every day with the exception of Wednesdays. In this manner she hopes to free the cats from the gaze of the visitors.

HABITS OF "DA MONK."

ALL monkeys sold for the amusement of children on the streets must be very young at the time of sale. A monkey of the ring-tailed kind is good from the time he is ten months old to his second birthday. After that he does not care to learn how to take off his hat, or do a cake walk for a cent.

The fact that he will eat potatoes in preference to all other foods teaches him that no matter how he acts he can get enough to eat.

When a year old his price is from \$15 to \$20. Being ring-tailed he knows that people like him because he is not vicious, and being an American, is considered to have more brain than the foreign monkey. Though subject to sickness on account of cold he will live long if given proper care. A man with a monkey earning good money knows how hard it is to train a green subject, therefore he takes good care of him, even going so far as to have a pocket made large enough to hold the monkey when the east wind blows.

Regarding their training, Mr. Yannetta said that monkeys are hard to handle until they are taught to wear clothes. Up to this they will refuse to do anything but bite. After coaxing fails to put them in a mood to wear clothes, a little whip is brought into play, and as none are in the room but the trainer and his pupil, the latter soon learns that to live means that he must be the means of giving others a living.

Once he gets to like nice clothes he is given every attention; and as soon as he masters one trick he is rewarded with such little things as peanuts and candy. It is certain that a monkey knows the man who has trained him and is very reluctant to do anything for anybody but his first master.

This is one reason why there is practically no market for monkeys except in dime museums. A trained monkey will bring in price from \$100 to \$200 in cold cash.

Being a trainer the owner of a monkey knows just when he has outlived his usefulness. For a small sum and a green monkey he will part with the trained one, and the man who last becomes master is the one who has to stand the funeral expenses.

This means that a man must know which is which to keep on the right track of monkey stock. Sick monkeys, unlike sick horses, can never be sold. When sick a monkey will act like a baby, only that he dispenses with the music of which babies have such a large stock when teeth are sprouting.

A good monkey will not seek fight. He is afraid of dogs, but when it comes to fight, fight he will, and as he always lands on the top of the dog, the dog is soon a blind or a dead dog. He will sleep well, but the fact that his master is always on the lookout for money teaches him to awake lively at the jingle of pennics.

THE ROCKING SONG.

My bed is like a little boat

Nurse helps me in when I embark.

She girds me in my sailor coat.

And starts me in the dark

At night I go on hoard and say
Good night to all my triends on shore.
I shut my eyes and sail away.
And see and hear no more.

And sometimes things to bed I take, As prudent sailors have to do Perhaps a slice of wedding cake, Perhaps a toy or two.

All night across the dark we steer:

But when the day returns at last,
Safe in my room beside the pier,
I find my vessel fast,

INGLENOOK. THE

PUBLISHED WEEKLY

At 22 and 24 South State Street, Elgin, Illinois. Price, \$1.00 a year. It is a high grade paper for high grade boys and girls who love good reading INGLENOOK wants contributions, bright, well written and of general interest No love stories or any with killing or cruelty in them will be considered. It you want your articles returned, if not available, send stamped and addressed envelope. Send subscriptions, articles and everything intended for THE INCLEMOOR, to the following address:

BRETHREN PUBLISHING HOUSE, Elgin, Illinois

Entered at the Post Office at Elgin, Ill., as Second-class Matter

THOMAS D. ENGLISH'S ADVICE TO WRITERS.

NEVER write poetry until you are at least thirty, unless you fall in love, when it will come to you like the measles. You would hetter begin with stories; that is, if you have a leading idea and can invent situations. Do not attempt the novel until you have passed your fortieth year. A novel requires a knowledge of men and manners, a study of human character and powers, to create dialogue, and invent surprises. I know that there have been instances when young men have written clever poem's and novels, but these were freaks of genius which do not often occur. Avoid attempts at humor. That mine has already been worked for more than it is worth and the best of it seems to be labored. What the funny men do produce is not equal to the unintentional humor which is to be found in Congressional speeches on the tariff, and in the old-fashioned epitaphs in the country churchyards. - Success.

The above is from a successful literary man, told in a successful journal. Our experience with that very thing, as editor of the 'Nook, moves us to bear testimony to its truth. We have had no end of alleged poetry and stories sent to us, and we have been at our wit's end to justly dispose of them, and yet not unnecessarily hurt the feelings of our contributors. We do not want to discourage our contributors who would like to get into print. The 'Nook idea, in its incipiency, was to give the young writers of the church a chance. It was entirely impossible that success should follow. It would have been cruelty to print much that has come in. The editor has killed off enough essays and their kind to be hung for it a hundred times over. The writers may have thought that they were enlightening the world, but we knew to a certainty that it was commonplace and badly told at that. What we want are the novel and instructive things that come under your notice. We would rather have a good dog story than a mile of poetry. The remarks a Thomas cat made to a visitor's dog who thrust his nose in the basket occupied by the feline, and what happened the window sash in the midst of the argument, if aptly told, is much more interesting than the poem on Winter. Oh yes, we know we are without æsthetic taste, but we do know what ninety-nine out of a hundred 'Nookers would rather have.

A KIND OF MAN.

up a world, out of the whole lot that is said to en- reflected all around." The man and the rest of ter into its composition, is the man who is known to pretty nearly every church. He is the man who is not in any church, never has been, and is not likely to be. But he likes to be talked to, and he is always ready to be addressed on the desirability of his joining the church. He has a lot of weak objections, some stock passages of Scripture he wants to talk about, and after you are through with him he is just where he was when you began. He has come to think that he is of so much account that everybody is hidding for him, and he rather prides himself on his importance, and sometimes he makes a boast of the attention he attracts. He is nearly always a middle-aged man, and he has a "leaning" toward the Brethren, but it ends in a leaning. If he moved away, in the midst of any other people, he would have the same leaning. He is the kind of man you are told, when you hold meetings in his neighborhood, that "You ought to go and see him before you go away." Yet no matter how often anybody sees him he always remains as he is.

Now there is a way with this sort of man that would be well to follow, and that is to let him alone. A man who has lived fifty years in sound and sight of a church, and who, for forty years, more or less, has had his duty told him without effect is altogether in a position for a little wholesome neglect. When he begins to find out that he is not the lost coin that he thinks he is perhaps he may try to take a little interest in his own soul's salvation, and try doing something for himself instead of being all the time carried as though he were a child. Give him a rest.

CHRISTMAS PRESENTS.

THE writer remembers an occasion when he was in a far Southern State, in August, in a specially hot season, when along came a drummer with a lot of trunks full of samples of Christmas goods. People in the South make more of Christmas than Northern folks do, and it was a peculiarity of that section and perhaps of others, that the selection of gifts was made away ahead of time, and when the day arrived there was no hurry in the matter of appropriate souvenirs.

It may seem a little ahead of time for the INGLE-NOOK to think of Christmas, so far off, but not really so after all. It is doubtless the intention of many a reader to remember friends and relatives when the time comes, and the 'Nook wants to make a suggestion. Sometimes people are at their wit's end to know what to give. They want to do something, but they hardly know what is best. Often a book is thought of, and this is a good idea. Books are cheap, they are always in order, and generally well received. But the usual fate of a Christmas book is to be read a little, laid on the table, and promptly forgotten when out of sight. Now we think we know of an acceptable present for old and young that will be better appreciated because it repeats itself weekly, and that is a subscription to the Inglenook, either for one of the family or an absent friend. It will only cost a dollar, and for fifty-two times in the year it will come regularly, and be of interest and advantage to the reader, a perpetual reminder of your kindliness. Long after you have passed over, the recipients will remember the time you sent them the Inglenook, and it will be the cheapest and most advantageous gift you can make. If you tell us to do so we will advise the friend of the gift, mentioning names, or not, as you prefer. By taking the matter in time the party will get the first copy of the new year, and every number thereafter to the end of the year. Of course each present reader will be sure to remit in time for himself that there may be no break in the weekly 'Nook visit.

A MESSAGE FROM INDIA.

"TELL the 'Nook man that we like the INGLE-NOOK exceedingly. It spoils my complexion, my wife says, for I often stop talking or eating and fall One of the kinds of people that it takes to make to reading the 'Nook, and the color of the cover is them in India, will find the color of the cover less verdant in the future. We are groping about, looking for the best, and we are getting there.

HERE'S A GOOD IDEA.

"I am an old woman of sixty-three, but I have young people who come to see me, and I like to have some good paper for them to read, so I send for the Inglenook." The above is from Montana, and the 'Nook doesn't believe the writer to be old at all. People are never any older than their hearts get to be.

Skill in English orthography is purely an arbitrary accomplishment. It's a feat in mnemonics and doesn't necessarily presuppose the possession of any special intellectual gifts. The only way that the average man retains his ability to spell with reasonable correctness is by keeping constantly in practice and seeing the written words before his eyes. Let him suspend that mental exercise for a short time and the first thing you know he'll be spelling elephant with two I's.

OUR QUERY COLUMN.

Please explain in detail how to grow an apple tree tree to

THE rule for almost all seeds is to plant the said one and one-half its diameter deep in the ground All fruit seeds must be frozen to germinate well An apple seed is no exception. When the apple seedling is a year old graft its terminal shoot on a bearing tree and it will fruit in from three to four years from the seed.

Where do you find the material that goes to make the la GLENOOK so interesting in the way of little known inform

From all over the world, wherever we can get hold of it. People on the other side of the world are preparing articles for it.

I have heard that one of the presidents of the United States could neither read nor write. Is this true?

Probable reference is had to Andrew Johnson who was taught to read and write by his wife,

What is the cost of a good typewriter, and would it be diffecult to learn to operate it?

Anywhere from ten dollars to a hundred, depend ing on the make and condition. It is not hard to learn how to use onc, but bad English shows up plainer on the printed page than in writing.

I would like to become a proofreader. How shall I pro-

Master the English language thoroughly, and then go into a printing office and learn it practically. It can hardly be learned outside of the office.

I have heard it said that Canada is as large as the United States. 1s this correct?

It is larger in area.

Is the United States going to hold on to the Philippines?

Yes. It is easier to hold on than to let go, the way matters are shaped now.

What do the letters seen at the left of an advertisement

It is likely that you refer to the office abbreviations showing how long the ad, is to run, etc. They are for the quick help of the printer.

Are women workmen more reliable and expert than men?

Up to a certain point they usually are, and after that men best them in skill and endurance.

. . . Can 1 make perfume by the enfleurage system described of the 'Nook?

Yes, but unless your flowers were plenty it would not pay to try it.

"I have a poem t dashed off, etc."

Can I learn taxidermy out of a book?

Yes, if you are clever, but working for a time in a practical taxidermist's place would be a wonderful lielp.

Is it any discredit to be an old maid, so termed?

Not a bit. A good many old maids have stories that would be very much to their credit if known.

BIGGEST TOV FACTORY.

The largest toy factory in the world is in New York, where playthings in tin are manufactured literally by the million. It stands five stories high and turns out 1,607 distinct varieties in tin toys No. 1 is a tin horse, No. 1,607 a tin menagerie output of circular tin whistles is 2,000,000 per at num. To make a tin horse twelve inches long des have to be cast costing £15. The children of different countries. ent countries have different tastes, but tin sweets are wanted all over the world, the analytary instant being universal in the nurseries as in the courts and cabinets of the world.

Good Reading

WILL YOU HAVE AN APPLE?

Field see a boy or girl munching a big red apple? the you been that same boy or girl, as the case interpolation of the case a good There is something There is something about a red that appeals to all humanity, though an apneed not be either big or red to be good. In the best apples are not always the biggest. got big or little they are good, even the worst of There are thousands of anchees, but out of the whole lot the very best in exeral cultivation are not a numerous list. Each of them is good in its way, and at its proper gason. The best apples will not do well either far North or far South. It is essentially a temperate smale fruit. If you can't find an apple to suit you New York or in Pennsylvania you might as well

Few people know how many apples are grown in ecountry. We will not think of individual apples or even bushels, but let us consider barrels. He have produced in one season two hundred and un millions of barrels of apples Think of that! freny winter there is about ten millions of barrels arried over from the past season in cold storage bouses. These fruit storage houses are differently constructed from others and the temperature is held at thirty-eight degrees Summer and Winter, and an apple will keep in that kind of "weather' indefinitely, as far as business purposes are con-

There are apple orchards in New York that have hundred thousand bearing trees in them. What splace this must be in blossom time! And by the may, in the near proximity of the larger cities many an honest penny is turned by selling blossoms. But let us not think of apple blossoms now. It is the apple itself we are considering. And by the way Missouri is an apple State. There is an orthard at Westport of two thousand three hundred acres, and another at Olden, Mo., contains three hundred thousand trees.

Not very long ago the possession of a large apple orchard, in a year of plenty, was a veritable mine of disaster. The writer has seen in his own orthard apples go begging for takers Luscious rambos, great oblong bellfleurs, juicy pippins were lying snound without either market or takers of any kind. The reason was that everybody had apples and nobody wanted them. The next year the price was adollar a bushel. All that is changed now in the great apple centers. The cold storage plant carries over the crop from a time of plenty to a season of scarcity. Every season millions of barrels are stored in this way. One wonders where the apples all go, who eats them, and what becomes of them, when he reads the figures of production. Take Canada, for instance. It is not generally regarded as an apple producing country, but in the season of 1899-1900 the shipments from Halifax to all foreign ports was over two million barrels, while at the same time nine million barrels were shipped to Chicago and New York.

It should be further remembered that when these arge shipments are spoken of, amounts that stag ger comprehension, no account is taken of the milions of barrels that are consumed at home, in the schools, on the streets, in the workshops and offices. The dinner of the school child is incomplete without an apple or two-you know how it was yourself and if there is none in the bucket or basket it was breause there was none at home to get. And the demand is still increasing, and will continue to in-Grease with the population. The time when there ill be no further use for the apple tree is very far off indeed.

000 GETS DENTAL BRIDGE.

MODERN dentistry was brought into service yeslerday to relieve the sufferings of a thoroughbred alldog and at the same time make it possible for am to enjoy the pastime of gnawing at the juicy marbones cast from his master's table. For the stime in the annals of natural history a canine made the possessor of an up-to-date dental indge, the structure consisting of six teeth of gold two of porcelain. The operation was entirely sccessful and Dr. C. F. Piatt O'Connor, who per-

formed it, expressed the wish that the average human patient might be as well behaved under a similar ordeal.

The dog is an English bull and is the possessor of a brindle coat as perfectly marked as one of the oil creations of Tavernier. Nature has adorned him with a face that would cause the flight of an army of seasoned burglars, but his disposition among friends is as amiable as that of a committeeman in search of a subscription. Had it not been for Dr. O'Connor's intimate acquaintance with his black-muzzled patient it is probable that the operation might never have been performed.

The odontologist constructed the bridge with a view to service in the matter of eating rather than as a weapon of offense and defense in dealing with dogs of less aristocratic breeding. The dog was supplied with gold teeth some time ago, but these gave way under the strain of contact with bones, and the idea of the bridge was suggested.

For four weeks past the dental surgeon has been at work making plaster impressions of the animal's lower jaw and preparing the bridge. Two of the teeth are of porcelain and placed in the center of the bridge, while the balance are of gold. Handsome had become so accustomed to the dental chair that he required no urging to take his place before the dreaded presence of mallet and cement mixer. The dog's mouth was stuffed with absorbent cotton to such an extent that only the lower jaw was visible, and Mr. Piatt undertook the task of placating the patient during the operation.

The bridge was fastened to the two remaining prongs in the lower jar, a liberal supply of coment being applied to hold the structure in position. Handsome glared at the dentist throughout the entire operation, but inasmuch as it was accompanied with but little pain he made no hostile demonstration aside from growling vigorously when the mallet was brought into use for the purpose of settling the bridge into its foundations.

Fifteen minutes were allowed to bring about the hardening of the cement, after which the animal was released. The sensation of being the possessor of a mouthful of shining gold and porcelain teeth did not appear to please the dog greatly at first, but after trying in vain to remove the bridge with his tongue and paws he settled down to enjoy the luxury in stolid fashion.

The fitting of the bridge was done only after several impressions of the lower jaw had been made, and once having been adjusted, fitted perfectly to the gums.

"There is one consolation in connection with this operation," said Dr. O'Connor, as he released his canine patient; "my subject will not be able to ask me how long a time must elapse before he gets used to his teeth, and furthermore he will not be able to dig pins between them. Handsome proved a model patient."

GODS LIVE IN INK.

INDIAN ink is not made in India, nor do any of the materials used in its manufacture come from that country. It was first made in China 3,000 years ago by a Chinese alchemist, Tien-Tschen by name, who, while experimenting upon some nostrum for the eternal preservation of life, accidentally produced a black substance in the form of a last Inglenook, but even then she ought to be out liquid paint or varnish. This was the first Indian

Until recently the process of manufacture has been a secret; but it has at last been discovered, and the ink can now be made by imyone.

The black pigment which forms the base of the ink is the soot obtained by burning lac and pine charcoal. This soot is powdered finely and mixed with fish-glue, isinglass, or horn-glue, and sometimes, in making the finer qualities of ink, pearls are boiled in glue.

Sometimes dried ox tongues are added to give the ink a purple tint, and the bark of the pepper tree has been used to produce a tinge of blue, The ink is carefully molded, dried and packed in wormwood leaves, with lime or ashes, until well seasoned.

Sepia, the coloring liquid of the cuttlefish, was not added to the ink originally; but as the best Indian ink in use at present has a brownish tint, it is evident that sepia is used. Sepia alone is used frequently in China in preference to the black ink.

In China all "good" Indian ink is supposed to be inhabited by gods, to whom prayers are sometimes addressed. There are so many gods that it is difficult to find lodgings for them all; they are billeted, therefore, upon any convenient article, such as a stick of Indian ink!

NO ONE KNOWS THEM ALL.

THE growth of the English language is so enormous that it would be practically impossible for the most learned man to be acquainted with every word. Intelligent persons, even those engaged in the learned professions, do not make use of more than from 6,000 to 8,000 words all told, although there are properly belonging to our language over 200,000. The famous writer or authority of to-day, whether he uses words to express nice shades of meaning or as technical tools of thought in his own department, must have at his command a vocabulary of from 30,000 to 40,000 words, the latter being the maximum acquired by any man now living. There is a large number of words which until recently have escaped the attention of lexicographers. In the text of the "Encyclopedia Britannica" there are 10,000 words which have never been formally entered and defined in any dictionary. In the Century Dictionary there are 70,000 words found in no other, and it has been said that there is not to-day any man living who is sufficiently learned to write one average page of 7,000 pages of this dictionary. To give some idea of the tremendous growth of the language the words and phrases under the letter A have increased in fifty years from 7,000 to nearly 60,000.

THE MAN WITH THE BROOM.

BEATRICE HARRADEN thinks that women should bring up their sons "to do things in the home," and that men should not be permitted to stand with reluctant feet upon the kitchen threshold, but should learn to master the problems of that domain just as women have learned the secrets of the countinghouse. As a rule men have never manifested any great longings to learn the mysteries of dough and dishwashing, and they neither care to be tied to apron strings nor to have these tied about them. But once get a man into leading strings and he is both happy and useful in a kitchen, and he will apply the same systematic thoroughness to breadmaking as he does to breadwinning, Of course, it is not to be expected that a man will do his own work and a woman's, too, but there are times when he can readily spare a few moments to domestic tasks. And in that trying hour of need when the maid-of-all work goes her way, if a man will show a disposition to help fill the gap, or better yet, to fill the coal scuttle, or sweep the carpet, he will prove a helpmeet indeed. And, as Miss Harraden says, if he is a gentleman, he will do these

The above is a Chicago editor's view of a man's helping about the house. It is correct enough, and there are thousands of men and good men, too, who help in the kitchen. But it is a sad sight to see the woman go into the front room and leave dear James to wrestle alone with a pile of dirty dishes. The only justification is that she has just received the in the kitchen reading it aloud to him while he is wiping the plates.

FEE FOR BANK DIRECTING.

A STRANGER got off the ear, and, accosting a newsboy, asked him to direct him to the nearest

"This way," said the "newsie," and, turning the corner, pointed to a skyscraper just across the

"Thank you, and what do I owe you?" said the gentleman, pulling a penny out of his pocket.

" A quarter, please."

" A quarter! Isn't that pretty high for directing a man to the bank?"

"You'll find, sir, said the youngster, "that bank directors are paid high in Chicago."

According to statistics lightning strikes more women than men each year-probably because they are more attractive.

THANKSQIYING DAY A HUNDRED YEARS AGO.

BY MRS. O. B. WELD.

I AM an old woman nearing the end of life, and I want to tell the INGLENOOK family something about how they kept. Thanksgiving Day a hundred years ago in Connecticut. I have the account from my grandmother, who died more than fifty years ago. I have never forgotten the story.

It was at Fairhaven that they lived, and the day was a great one in the whole country at that time, Preparations were made a long time ahead, and for the few days preceding there was always much haste and confusion. Connected with each house in that day was a large Dutch oven, one of the kind rarely seen now, and in this the dinner was cooked. It was usually a huge affair in which all the baking was done for the numerous members of the families of that time. There were no stoves, and what was not cooked in the oven was prepared over an open fire in the kitchen. In that time they had slaves, the system not being abolished yet.

The Thanksgiving meal was cooked in the oven, beginning the night before. Naturally part of the dinner would cook before other parts, and it was the duty of Uncle Rastus and Aunt Chloc to stay up the night before and keep things going right in the oven.

The dinner, my grandmother said, consisted of roast turkey stuffed with oysters, of which there was a plenty in the immediate neighborhood, together with all the pies one can think of, the varieties being limited only by the material out of which it was possible to make pies. One thing was never omitted, and that was a dish of baked pears, and a huge pan of baked beans was always an accompaniment, together with side dishes of chicken pies and the trimmings. One may well wonder what they did with all this lavish profusion of food, but it was at a time when dyspepsia was almost an unknown factor, and appetites were uncommonly large.

On the morning of the day itself the whole family went to church, an account of which may not be without interest. The denomination was Congregational, and the pastor was Dr. Trumbull, one of the old kind of digmtaries, with a three-cornered hat and knee buckles. The building was a wooden structure with box pews for the families, and there was never any heat in the church, no matter how intense the cold. It was regarded as worldly to have heat in the church. A mother with small children might be conceded a foot stove, as it was called. It is related that when the ungodly and worldly finally prevailed, and heat was introduced as the years went by, two old maid sisters swooned away the first service, overcome by the "overheated" air.

But some provision against the cold was a necessity in those days, and it took the form of small structures, surrounding the main church buildings, belonging to the several families, and these were called "Sabba-day" houses. In these fire could be had for warming after the long rides some of them had to take to get to the service.

When the church bell began to ring the minister started for the house, and when he entered the door it stopped. He walked up the aisle in stately fashion, bowing to the right and the left, and the men rising and bowing in return and the women curtesying as he passed. The service on that one day always was on the goodness of God, and the element of hell fire, so commonly enforced, was not known, probably to be made up for on later days. The sermon lasted an hour and a half, which was rather shorter than usual. After the service the family returned home with whatever visitors happened to be with them, and all the members of the family, wheresoever dispersed, made it a point to be at the old homestead on Thanksgiving Day if at all possible. The dinner was served at three o'clock in the afternoon, the servants having prepared the table while the others were at church. Everything was in lavish profusion, and as a reminder of the scarcity of food among their Puritan ancestors a few grains of corn were always laid beside each plate. Prohibition was unheard of in those days, and there was an ample sidebnard, well supplied with strong

After dinner, and when the wreck had been cleared away, then came the dance. Old Uncle Rastus, in one corner, gave them Virginia reels, and similar tunes, and all took a part, except the minister who

stood in the door and looked on. It was hinted that all that kept him off the floor was the fact that he was too old and too fat to participate.

At eleven o'clock all was over, and after the feasting and the revelry all gathered in the large front room, where the minister read a chapter, had worship, and then they went to their several homes, some of which would be quite a distance away.

It was a time of comparative innocence, and while there has been much improvement along the lines of Thanksgiving observances, yet there is much that can be imitated to advantage from the old times.

SPORTING PARADISE IN ALASKA.

REINDEER have made themselves thoroughly at home in Alaska—that marvelous country whose richness in animal life and agricultural possibilities is not yet half suspected by the majority of Americans.

The pilgrim fathers of the family were imported from Lapland in the early stages of the Klondike craze, to be worked and eaten by the starving miners. They luckily escaped being eaten, and were later reinforced by 700 reindeer doe imported by the government from Siberia.

From the mixed herd of 1,000 head, or a little more, they have multiplied to 3000, and under Uncle Sam's protection they promise to play an important part in the future of Alaska and add greatly to its wealth.

The twenty-five Laplanders who came over with the first consignment are on their way home with about \$700 each, saved out of their earnings as reindeer drivers and mail carriers.

But Alaska needed no importations to add to its fascinations. Gold? Of course—everybody knows about that, but everybody doesn't know that gold is one of the least interesting things about the country.

Take strawberries. Alaska has near Big Stone a strawberry bed seven miles long and two miles wide. Fourteen square miles of strawberries! And they are beauties. Nothing finer is grown in this country outside a hothouse.

Raspberries and blackberries, too, reach a high pitch of cultivation in Alaska, which is popularly supposed to grow nothing more nourishing than glaciers.

Oats spilled by mules as they feed grow wild higher than a man's head, and would yield, it is estimated, 200 bushels to the acre. Alaskan tomatoes are described as big as a man's hat. All manner of fruit and vegetables belonging to temperate climes thrive amazingly.

All this, of course, is south of Bering sea, in a region where, thanks to a warm ocean current, the temperature seldom reaches zero, even in the long winter nights.

As for game, big and little, it is of unmatched richness, but bids fair to be extinguished by commercial greed and recklessness. Deer exist no longer, and the moose and the sea ofter are hovering on the verge of annihilation.

Nevertheless, an Alaskan traveler, C. F. Periolat, has just returned home with a collection of the largest moose heads in the world.

But the sportsman is less of a menace to the fauna of Alaska than the trader. The skin of a single sea ofter will now sell in London for as much as \$1,200.

THE SHADOW OF THE PAST.

SHE laid her face against her mother's breast and sobbed.

"My poor child, what is it?" the older lady asked. "Has Reginald been cruel to you?"

"No, mamma," the bride replied, "it is not that. It is all on account of a terrible discovery. 1——"

"Ah!" the fond mother exclaimed, "then he did not tell you all before it was too late! Oh, my poor child! Oh, the monster! There is a dark page in his life! Ah, how can man be so base! How——"

"He found the photograph of me sitting in a wash bowl," the stricken one interrupted, "that you had taken for a baby food advertisement!"

Then they sat there, dumb with grief.

THE man who flops to t'other side Provokes my ire intense; But he who flops my way displays His natural common sense.

THE FADING LEAF. - Isa. 64: 6.

BY J. S. MOHLER.

When the Winter had passed and the season grew with the trees of all kinds little leaflets were born. And grew larger and larger,—the trees spreading der With a garment of green, which, for the season they were

"And the blight from the frosts of the Autumn has co

"And the leaves are now fading, and soon they will fa From the trees that are low, and the trees that are tal

On the ground they will lie, and all equally low.

Neath the mold, and the frost, and the ice and the some
And sciently rest on the bosom of the earth,
And mingle with the dust that gave them their birth.

Thus speaking to mortals - the low, and the high. That soon, like the leaf they will fade, and must die And together will lie in the dust of the grave - The Ruler, his subjects, and the Master, and slave

Lord, teach us to number in wisdom our days!
And learn of our frailty, and walk in thy ways,
And though like the leaf we fade, and we die,
That our spirits may dwell with our Maker on high
Pleasant Grove, Kans.

ACCIDENTS FROM SMALL CAUSES.

Only a week or two back the ancient Swan hotel at lpswich, England, was destroyed by a fire, which originated through rats gnawing matches.

The sudden appearance of a hilarious mouse among the occupants of the gallery of the Victoria theater, Westminster, on boxing night, 1858, started a panic, which resulted in the death of fifteen people.

A mongrel cur strayed on to the St. Leger course some years ago, just as the field swept by. Seven horses came down in a heap, and of the jockeys who were riding them five were hurt—three seriously.

To win a bet of twopence, a little pit lad, employed at the Ferndale colliery, in the Rhondda valley, picked the lock of his safety lamp with an ordinary hairpin. He himself, together with nearly 200 of his mates, perished in the explosion which followed.

At Sheoburyness, some fifteen years ago, Col. Francis Lyon invented a new kind of sensitive fuse for big-caliber shells, and invited a number of gunnery experts to be present at the trials. On the night prior to the day on which the experiments were to be made he locked up a number of the fuses in a shed in which were some fowls. The chickens started scratching and the dust flew up and settled on the threads of the screws of the fuses.

When, next morning, an unfortunate gunner started to fix one to a live shell, the missile went off, killing the operator, the inventor and five other persons.

Burrowing rabbits so weakened the foundations of a tall chimney at Cleekheaton, Yorkshire, that it fell, crushing to death fifteen people.

The gambols of a big retriever—some say the playful antics of two children - sufficed to week the West Coast Scotch express last year. A managed trolley was started, ran down the sloping platform, and toppled over on the line in front of the train.

The "Esperanza" was cast away on the coast of Chili, through a toddler of five meddling with the compasses. She had on board ninety-seven souland all but cleven perished. Among the savel was the inhocent cause of the terrible catastrophe

A fire, which was directly responsible for the los of more lives than any other single conflagration originated through the vagaries of a tarantula. The scene was Santiago, and a grand religious for tival was taking place in the principal cathedr. The building was a sea of drapery, flooded with every variety of illumination.

Twenty thousand silver lamps were in full blate and the acolytes were busy lighting the 2,000 tager on the grand altar when the errant spider skippe into the central aisle and alarmed a lady, mointo the central aisle and alarmed a lady, mointo the central aisle and alarmed a lady, mointo the acolytes, or some of them, looke screamed. The acolytes, or some of them, looke around to ascertain the cause of the commotion, and around to ascertain the cause of the commotion, and one of the naked lights they carried came in central tage.

A few minutes later the vast cathedral was a rating furnace, in which were being consumed more than 2,000 bodies.

"COME LET US REASON TOGETHER."

BY ALICE LONG.

2005 cruse of comfort failing? Rise and share it with another, all the years of famine, it shall serve thee and thy hother redinae will fill thy storehouse, or thy handful still renew; redinae will often make a royal feast for two.

the heart grows rich in giving; all its wealth is living grain; and which mildew in the garner, scattered, fill with gold the

plain.

Site burden hard and heavy? Do thy steps drag wearily?

Site burden hard and heavy? Do thy steps drag wearily?

Site burden, God will bear both it and thee."

1 asH I could tell the readers of the Inglenook seconfort the above lines have been to me. The roset we follow them, the nearer we come to God, and the more intimate we are with his people and miraceds. Maybe many of you are familiar with heal, I hope so. Then I know your hands have resounded to the soul's desire to more fully consegale what we are and have to the Master's use. It sevident that the heart of the author was inspired hymplicit faith in the "Giver of every good and griect gilt " The lines are full of "giving" and "receiving" from God. This world is a great exchange, giving and getting is the routine. If we go tostore, market, or depot, we give that we may get. Everybody does this, must do it, some time, in ne way. Then why not make it profitable? "We 6, says one, yes many say so. True, it means profit-and loss to thousands; profit in this world, loss in the next, may I say? I wish I could, but it means worse than loss alone. If the profit has been regardless of the honor and glory of God, it is loss of heaven, but there are also regrets and remorse in lost opportunities; then as we labor let us take into consideration the hereafter. How? And whatsoever ye do, in word or deed, do all in the name of the Lord Jesus, giving thanks to God and the Father by him. Col. 3: 17. "And whatsoever ye do, do it heartily as unto the Lord and not unto men, knowing that of the Lord ye shall receive the reward of the inheritance, for ye serve the Lord Christ."

A MOTHER HOUSE.

THERE are some carnest missionaries trying to Nork among the Italians of New York City. They make their work among the children a special feature. Child-life among the Italians in the slums is the more than an ugly dream. They want to establish a "Mother House" in the very heart of the halian quarter. Two little girls of three and seven Years of age respectively, who are well-known to be habitual drunkards, will be the first to enter when the house is opened. Others more or less versed in the wickedness of the streets are awaiting with great Patience the day when they can enter; for the Nother House will simply mean a widening and enlarging of the city missionary's present plan of rethe children in her own little flat. They count this a great privilege, but her room is small, only a few can come; it is hoped that many will when the house is in operation. The distinc-Splie the house is in operation. The same and the plies, the family life, the mother love, and the Cristian home. Some day we trust that such work Some day we trust that Circle.

📥 Sunday 🖫 School 📥

THE Christ of the New Testament is not the Christ of any modern party, nor is his Spirit the life of any sect. His character and deeds are made known by the inspired writers, and the statements of these in reference to what he is and what he has done must be accepted as final. It is too late now for men to doubt or question the credentials of the apostles of Jesus. When they went forth among the nations their Master went with them and confirmed their word by repeated miracles, so that their hearers were left without excuse if they refused to believe and obey the Gospel. To these inspired ambassadors we must now go, if we would learn who Christ really is and what are the workings of his Spirit. To them we must go to hear the Gospel and know how men are saved by it. The experiences of the great and good, however interesting they may be, are not the rule by which to distinguish truth from falsehood. John gives the divine criterion when speaking of himself and his fellow apostles, he says, "We are of God: he that knoweth God heareth us; he that is not of God heareth not us. Hereby know we the spirit of truth and the spirit of error." This was the test in the first century; it is still the test in the nineteenth.

WE lately heard a man defending the diversity of religious sects on the ground that among them each person could find one suited to his taste and habits, "For," argued the man, "God is an infinite God and has an infinite number of ways of salvation." We called his attention to the law and to the testimony, and asked him to consider the statements of Scripture on this point. No matter what good the theologians find in divisions and sects, the Holy Spirit declares them carnal and sinful, and affirms that there is only one "name under heaven given among men whereby we must be saved." Jesus himself says, "Except a man be born of the water and of the Spirit he cannot enter into the kingdom of God." Can the opinions of men to the contrary falsify the words of him who is the Way, the Truth, and the Life? or bring into this kingdom those who reject the counsel of God and pervert the Gospel of his

A POOR widow who was very sick told us to take her two children and care for them. She said she would have to die, and would not come with us. We took the children and prayed for the mother, and in a few days, as we were giving out food and the Word, behold, here came this poor woman. She must have crawled part of the way, for she was so thin and weak and could scarcely stand. She was crying and asked for her children, just as you mothers in the home land would do. I could not keep the tears back." One of the native workers whom she could understand better than me, told her where the children were. In the mean time, a little boy of the Orphans' Home showed her his clothes and said, "See what nice clothes I have, and I have plenty to eat." This gladdened her heart and she too stayed with us.

Too often Bible characters are used merely as lay figures on which to hang a moral. It would be better occasionally to let the moral take care of itself, and put all one's force into an effort to make the man real and lifelike. To this end there should be a more definite purpose in Bible reading, and instead of the old-fashioned way of reading the chapters just as they come, a topical method should be adopted.

To govern one's self is a high attainment and needs constant vigilance. Every Christian should be able to control his appetites and passions, and should lead not only a rational but a spiritual life; that is, a life in full sympathy with Christ and in harmony with the apostle's doctrine. Yet many professors seem to think that religion is only for Sunday.

THE devotional nature grows by steady exercise and gives increased pleasure to its possessor. The foolish and the wicked do not like to keep God in their thoughts, for the remembrance of him awakens conscience and condemns their daily conduct.

Gon is to us what we are to God .- Joseph Parker.

THE WORLD'S MOST FAMOUS MEN.

Constantine: Born 274 A. D., died 337 A. D. Called Constantine the Great. He was great as a soldier and a statesman. He was an emperor said to have been converted by seeing a flaming cross in the sky. It was by his work as a politician that he is entitled to fame. He made Christianity an instrument of worldly power such as it had never been before. It is doubtful whether he was more than half Christian himself, being given to pagan practices. But as an emperor of the country that lasted a thousand years he is entitled to his place in the

Augustine: Born 354 A. D., died 430 A. D. He was one of the four great fathers of the Latin church, and the greatest of the four. His fame rests on the fact that he has done more to influence Christian thought than any other man who ever lived. His greatest work is The City of God, a vindication of Christianity, being a description of the church rising on the crumbling ruins of the Roman Empire. He had a profound insight into the Scriptures, and was an unceasing searcher after the truth. His writings are characterized, at times, by strong selfassertion, but in the main they are the work of an honest, conscientious, great soul. The personal excellence of his character, combined with the man's eminent ability as a thinker and writer, together with the depth of the literary additions to the world's storehouse of thought, make him one of the greatest characters since the time of Christ.

JUSTINIAN: Born, 483; died, 565. Surnamed the Great. He was the most famous of the emperors of the Eastern Roman empire. His greatness is mainly due to his codifying the Roman laws, which were in much confusion when he took hold of them. He had three great foreign wars on his hands during his reign of thirty-eight years. He was a Christian, but only in the sense of believing in Christ, and cared little for ecclesiastical matters. He comes down to us as a great legislator more than anything

MOHAMMED; Born about 570 A. D. He was the founder of Mohammedanism, author of the Koran, claiming direct revelation from God, and influenced, first and last, hundreds of millions of people. The founder of one of the great religious systems of the

CHARLEMAGNE: Born 742, died 814. He was emperor of the Romans, and was great because of his effort to engraft on the Teutonic races Christian Roman culture. He failed, as the enterprise was too great and life too short for its accomplishment. His greatness was in the nobility of his aims in the strengthening of the Christian religion among pagan nations, which, though a direct failure, survived him in many ways.

ALFRED THE GREAT: Born 849, A. D., died 901. All historians agree in characterizing Alfred the wisest and greatest king that ever reigned in England. His devotion to learning, and his efforts in the line of popular education, would entitle him to a place among the great of the world. He was the real founder of England's naval power, and both as a great man and a good one does he merit the place he is assigned in history. He rebuilt the monasteries that had been destroyed in wars, and invited the learned everywhere to come and settle in them. These places were, in his day, the seats of learning, and no man ever lived who did more for the educational advancement of the English people than Alfred the Great. He was beloved by his people, a thing not always characteristic of kings, and he merited all the credit he received. He was a wise administrator of public affairs, the wisest England ever had, and comes down to us as great in fact as in name and repute.

MOCK MONEY OFFERED THE DEAD.

A curious industry in some of the provinces in China is the manufacture of mock money for offering to the dead. The pieces are only half the size of the real coins, but the dead are supposed not to know the difference. The dummy coins are made out of tin, hammered to the thinness of paper and stamped out to the size required.

PICTURES OF MEMORY.

Among the beautiful pictures That hang on Memory's wall Is one of the dim old forest, That seemeth the best of all; Not for its gnarled oaks olden, Dark with the mistletoe; Not for the violets golden That sprinkle the vale below; Not for the milk-white lilies That lean from the fragrant ledge, Coquetting all day with the sunbeams, And stealing their golden edge; Not for the vines on the upland, Where the bright red berries rest, Nor the pinks nor the pale, sweet cowslip, It seemeth to me the best,

I once had a little brother, With eyes that were dark and deep; In the lap of that dim old forest He lieth in peace asleep; Light as the down of the thistle, Free as the winds that blow, We roved there the beautiful summers, The summers of long ago; But his feet on the bills grew weary, And one of the autumn eves, I made for my little brother A hed of the vellow leaves. Sweetly his pale arms folded My neck in a meek embrate, As the light of immortal beauty Silently covered his face; And when the arrows of sunset Lodged in the tree-tops bright, He fell in his saint-like beauty, Asleep by the gates of light.

—Alice Carey.

HOW RUBBER IS HANDLED.

Therefore of all the pictures

The one of the dim old forest

Seemeth the best of all.

That hang on Memory's wall,

THE best India rubber comes from Brazil, and the best of that from the upper Amazon River, and this is the "fine Para" of commerce. It is sent to the factories in the United States in the shape of irregular lumps known as "bisquits," and the bisquits are made by the "seringueiros," the rubber gatherers of Brazil.

The scringueiro starts out with his little tomahawk about eight o'clock in the morning, for if he plunged at an earlier hour into the rank undergrowth of the forest in which the rubber tree grows the heavy dew would soak him through in a few minutes. With his tomahawk in hand he goes from one rubber tree to another, cutting little gashes in the bark and fastening under the cuts small tin or clay cups, not much larger than teacups. He blazes the trees until noon, when he retraces his steps and finds that the cups are filled with the milkwhite sap which has dripped from the wounds he made in the bark. The sap is poured into a basinlike vessel and taken to the but where the gum is to be cured. This is done by smoking the gum over a queer furnace shaped like an inverted vase, under which is burned the nuts of the urucary, a species of palm. The nuts make a dense smoke, which pours out of the neck of the furnace. The workman, squatting beside his fire, dips into the rubber sap a wooden paddle, to which clings a thin layer of the sticky juice. Then the gum-smeared paddle is held and turned in the smoke until the water in the sap evaporates, when the paddle is dipped into the sap again. This operation is repeated until the gum forms a large lump on the paddle about the size of a man's head. This is cut from the wood, and after the "bisquit," as the ball of gum is called. has been exposed to the sun for a time, to complete the drying, it is piled up with the other bisquits and shipped away.

The India-rubber manufacturer first cleans the rubber, for bits of leaves, pieces of bark, earth, stones and other foreign substances are mixed with it in the bisquit, so the bisquit is put in the "washing machine." This is composed of a pair of toothed rollers, over which a perforated water pipe hangs. The crude rubber is cut, squeezed and mashed between the rollers, and a spray of water carries off the impurities. The rubber comes from the washing machine in irregular strips, rough as bark, and resembling somewhat the old slabs of lumber which are piled up outside a sawmill. The "mixing" machine, to which the rubber is taken next, is not unlike the washing machine, for it has a pair of steel from special designs, with the name of the com-

the compound which the rubber-maker mixes with the pure rubber. It is at this stage of the manufacture that the old overshoes, arctics, garden hose and other worn-out rubber goods begin life again.

In the compound also is the sulphur, in one form or another, which "vulcanizes" the rubber and which gives to manufactured rubber those preservative qualities, the absence of which prevented rubber from entering into the industrial arts until it was discovered that sulphur was the substance the chemists had long been looking for. The washed rubber mechanically combines with the composition in the mixing machine, and it is then either taken to the rolls where the rubber is coated on duck, or else to a machine which kneads the rubber preparatory to pressing it into molds. At no stage of the process is the rubber ever melted. It is warmed up at times, but molded solid-rubber goods are pressed into molds, not poured in.

A large portion of rubber goods ought to be called rubber-clad goods, for they are made from duck or canvas of different weights, coated with rubber, and this is done in the frictioning machine, which consists of iron or steel rolls placed one over the other, in which the duck and rubber are pressed together. As the duck passes between the rollers the sheet of rubber laid on top is pressed into the duck, and the pressure is so great that the duck and rubber become almost one material. This rubberclad duck is the basic fabric from which garden, fire-engine, steam and other hose, belting, packing, gaskets and other rubber goods of like character are made. Hose is made in fifty-foot lengths, from two to ten ply, and it is all made on iron mandrels, or rods, which are of the same size as the inside diameter of the hose.

A strip of pure rubber fifty feet long and just wide enough to double around the mandrel is first wrapped around the iron rod, and, as the fresh-cut edges are touched with naptha, the rubber unites and forms a pure rubber pipe, which is afterward the inside of the hose. The rubber-coated duck is next wrapped around the pure rubber pipe, which is still on the mandrel; if the duck is wrapped around twice the hose is two-ply, if four times the hose is four-ply. The duck is wrapped around the mandrel by machinery, and small rollers press the edge of the duck, so that every inch is subjected to pressure. Then another strip of pure rubber is put around the duck for the outside, and the hose, still on the mandrel, is put in the "heater." This is nothing more nor less than a gigantic boiler, fiftyfive feet long or longer. Steam under pressure is admitted to the heater and the sulphur in the compound becomes chemically united with the rubber and the rubber is "vulcanized." The hose is kept in the heater from one-half to three-quarters of an hour and then it is taken from the mandrel. Its ragged ends are neatly cut and it is ready to receive the brass fittings. In stripping the hose from the mandrel compressed air is used. The air is admitted between the hose, and the mandrel, and the hose, expanded by the air, slips off easily.

Rubber belting for machine-shops and factories is made from the rubber-coated duck, and it, too, is made up into two-ply, three-ply and up to ten-ply, depending on the number of times the long strip of duck is folded upon itself. When it is folded up, however, it is not cured in the heater, but in a long hydraulic press which squeezes the folds of the rubber-coated duck until the several layers of canvas and rubber are practically one solid piece. At the same time steam is introduced to complete the vulcanizing process and make the adhesion better and the union stronger. The belting is pressed in sections, as the press is not long enough to take in an entire length of belting, and each section is under pressure from twenty minutes to half an hour,

Rubber bands sold by stationers and used by the millions in offices and stores are cut from a pure rubber hose which is placed on a mandrel in a lathe. As it revolves a knife cuts off sections of the hose, and these narrow sections are the rubber bands.

The large perforated rubber mats which cover the floors of halls and rotundas in business blocks are cut out by hand. The thick rubber sheet is laid on a block and with different-shaped dies the pattern is punched out. In this way it is easy for the manufacturer to make rubber mats to order and rollers, and over them is a box or hopper filled with pany or firm in the center of the mats.

ARE YOU AN HEIR?

The story of the fortune of Anneke Jans w written many years ago, but in the last few years in has been allowed to die out, but now the Bank of Holland has demanded an accounting, and a commission has been sent to Holland to determine the claims of the heirs to the estate residing in this

The story reads like a romance. Away back in the seventeenth century Anneke Jans was born in Holland She was the daughter of the King by morganatic wife. Early in life she had a romance of her own and married a man named Jans. With him she sailed for America to join the Dutch colony in New Amsterdam, but Jans was lost in a ship wreck, and the wife of royal blood came to America alone. When she reached her home in the new world the King deeded to her a large part of the land which is occupied by the city of New York After the transfer of the Dutch colony to the Eng. lish the King died and left \$80,000,000 in trust inthe Bank of Holland for the benefit of his daughter Anneke Jans. But she never returned to her native land to claim the dower left by her royal father and a short time later she was married to Aureshaudes Bogardus, the first preacher to come to New Amsterdam, and from this marriage the hein to the great fortune resulted. Anneke died shortly after the birth of her third son, and from that time to this no settlement of the property has been made.

After a short time the property in New York was leased to Trinity church, in New York, to be used for church purposes, and the annual rental was paid until a few years ago. Now the church has refused to pay the rental and a commission has been appointed to go to Holland to make good the claim, There are something like 300 heirs to the estate living, and should their claim ever be made good they would receive princely fortunes.

THE HORROR OF WAR,

THE world can never be called civilized as long as war is encouraged. Its horrors are terrible and the sights and scenes on a battle field are awful to look on. Will the time ever come when Christian ethics will prevail? A Chinese correspondent has this:

Wherever a lyddite shell bursts you may look for dead within a range of twenty yards. It killed the Chinese soldiers and rolled them over by concussion down the ruts worn by the water of rainfalls to the street, where they lay in a pile even as the debris from a runaway on a mountainside. If the shell carried over the wall into the town-now we know why Admiral Seymour hesitated so long to throw shells in Tien-Tsin, though we were suffering shell fire in the concession, while the viceroy was blandly conducting business in his yamen in the native city as usual—and burst in a mud house, you found the members of the family piled one on top of the other, slaughtered in a flash. Though the dead be Chinese, and there was a rifle and pleaty of cartridges near at hand, the white man shudders at such a sight, especially if, as I found in one house, he sees one member of the family with his jaws and nose shot off, but still breathing in bloody bubbles from his gullet.

ANTS WHICH SEW UP HUMAN WOUNDS.

THE native Brazilian, far removed, as he usually is, from doctors and surgeons, depends upon a little ant to sew up his wounds when he is slashed or scratched.

This odd creature is called the surgical ant, from the use to which it is put.

The ant has two strong nippers on its head. They

are its weapons for battle or forage. When a Brazilian has cut himself, for example, he picks up an ant, presses the nippers against the wound, one on each side, and then gives the insect?

The indignant ant snaps its nippers together jercing the and squeeze. piercing the flesh, and bringing the lacerated parts close together. The Brazilian at that moment give the ant's body a jerk and away it flies, leaving the nippers imbedded in the flesh.

Of course, this kills the ant, but it has served as

The operation is repeated with other ants until most useful purpose in life. the wound is sewed up neatly and thoroughly

What They Say!

Chicago Says:

The INGLENOUR is par excellence. It has The lander of the Youth's Companion in our in our church publications.—John E. Mohler. Each number seems better than the gring one. I have a Sunday-school class the boys and girls, from thirteen to eighteen es, and all get the Inglenook as a Sunday. apaper, and they are delighted with it.-R. Hiller.

Clarence, Iowa, Speaks Out.

his with much satisfaction that I express rapproval of the Inglenook. Its appearare and general make-up are such that it at recommends it to the reader. It has found gray into many of our homes, and the peoeast truly glad for its cuntinued success. El John Zuck.

0 0

Mt. Morris Says:

The INGLENOUR easily takes rank among he best young people's papers in the country. is better than most of them because of the seace of the silly love stories and light read-R. It is a most valuable addition to the which's publications. No family should be mout it .- Eld. D. L. Miller.

0 0

Lanark, Ill., Has An Opinion.

We have been receiving the INGLENOOK nate it started. We like it very well. I would Teto see it go to all the homes of the land. The short sermons are good for both old and wang.-Eld. I. R. Trout.

0 0

From the College.

Itake the INGLENOOK. I am much pleased with its steady and almost marvelous growth. The fact that it is sought after by our people, bihold and young, is evidence that it proves self to be in fact what it purports to be. - J. G.

0 0

Hear Virginia Talk.

Of all the young people's papers that I have wer seen and read I think there is none that | ard. till wield as great or as desirable influence over its readers are the INGLENOOK.—W. K.

And Hagerstown, Md., Has This:

Thave been a constant reader of the INGLEook from its begunning to the present time, and while it is not specially intended for the old, yet I find something that interests me in tach issue. I am interested in the 'Nook befold my expect. ons. I especially recommend it to the arring readers. - Eld. A. B.

We think the INGLENOOK an interesting and instructive paper .- Mr. and Mrs. L. A. Pol-

Across in Pennsylvania.

I am highly pleased with the INGLENOOK. Its pages are always well filled with fresh and interesting reading matter.- IV. G. Schrock.

0 0

South Bend, Ind., Thinks.

The INGLENOOK is an interesting paper. It is read by old and young in our family. Try it, and you will be pleased with it.-Eld, S. F. Sanger.

Ohio Has Its Say.

We are highly pleased with the INGLENOOK, and think it worthy of a place in every family of the Brethren. It interests old and young. Its literary qualities are of the first rank .- Ino. Calvin Bright.

0 0

Pennsylvania Knows a Good Thing,

An interesting paper that should be read by every member of the church. I have read it long enough to feel that I cannot be without it, It is always brimful of good, newsy and spicy reading matter, suitable for old and young. I think it a grand acquisition to our church literature. God bless the Inglenook .- John C. Zug.

0 0

And Also Hagerstown, Md.

The Inglenook I regard as quite an acquisition to our church literature, and it supplies a long felt want. It is very instructive and newsy. While intended for the young, which place it has successfully filled, yet we find the older of the family anxiously awaiting its coming. God bless the INGLENOOK .- W. S. Reich-

From Somerset County, Pa.

I have been a reader of the INGLENOOK since it first made its appearance, and for the home, and the family, for both old and young, I think it a most excellent paper. It is always laden with good things, and should be in every home in our Brotherhood .- Jasper Barnthouse.

0 0

From the Sunflower State.

A rare treat is the weekly visit of the INGLE-NOOK to our home. It possesses the rare gift of bringing reliable information on topics never heard of before. The Question Column is another feature of great interest,-Daniel Vaniman.

A College President Remarks:

The IndleNook gives an amount and variety of valuable information found in few if any have known the Inglienook from its birth, other papers of its kind. It is interesting to and can truthic Py say that it is the most inan educator that should be in every home where there are young people, -S. Z. Sharp

As Seen In Michigan.

There is no better paper published for our young people than the Inglewook. May the Lord wonderfully bless its mission. - J. A. Chambers.

Down In Virginia.

It seems to me that each issue of the INGLE-NOOK gets better. Surely no home in the Brotherhood can afford to be without a publication which contains each week so much information and wholesome instruction .- J. IV. Wayland.

0 0

Lancaster Heard From.

The Inglenook's weekly visits into our own and a number of other homes in the Laneaster City, Pa., church is much appreciated, and its pages gleaned immediately on its arrival, as it has become generally known that it contains live subjects and short statements which is so much desired because of the great abundance of printed matter now in circulation. It certainly is the paper from which can reads tell who and what he is as well as the he had much valuable information at a minimum cost.-T. F. Imler.

GIRDLING THE GLOBE

By ELDER D. L. MILLER,

Author of "Europe and Bible Lands," "Seven Churches of Asia," and "Wanderings in Bible Lands."

The author tells of things seen in his travels around the world; and writes in such an interesting and impressive manner that the reading of the book will give one a better idea of things than would be received by many hundreds who would make the trip themselves. Note what one writer says.

I have examined and read Bro. D. L. Miller's last book, "Girdling the Globe," and find it an excellent work. While all of his books are good and instructive, I put this as THT BEST, in fact the most interesting book I ever read outside of the Bible. Everything is made so clear and plain by the author. I would recommend all to secure it if in their power to do so. Surely a cheap trip around the world! Who would not take in such a trip and at the same time enjoy the comforts of home?

The Red Moroeco binding, with gilt edge, gold back and side title, and handsomely finished in every way, makes a magnificent Christmas present to your near relative or dearest friend. Price, \$3.00, prepaid. What better do

Have you a copy of this excellent book? Has the territory around you been canvassed? If not, write us at once. We have liberal terms to offer you.

INGLENOOR

"The Inglenook" will be Sent to any Address the Rest of this Year for Twenty-five Cents, or i will be Sent the Rest of this Year and all of next Year for One Dollar.

The Best Way is to send the Dollar and be Done with it. After You Have Read it for a Week or two, You'll be Some that You Didn't Save Money by Subscribing for the Whole Year at Once. It's a Paper that Grows on One. Once Read, Always Read!

We Want Agents, == Real Live Agents

In Every Part of the Country. Anybody can solicit Subscribers at the Twenty-five Cent Rate, and Whoever Sends in Club of Ten of These, Can have his Choice of ONE of the following books:

Dictionary of the Bible, Beside the Bonnie Brier Bush, Natural History of Birds and Quadrupeds, Dream Life,

Drummond's Addresses,

Ten Nights in a Bar-Room,

Adventures of a Brownie,

Imitation of Christ, Etc.

If he gets twenty subscribers he can have two hooks; for thirty subscribers three books, and so on. And they could be had in an hour's work in many a place. Whoever shows himself an efficient agent will be put in line for the Fall work connected with the Inglenook. There is a library of Fifty bound books waiting for somebody.

The Agent who sends in the largest list of dollar subscribers between this and the first week in January, 1901, will have sent him a Library of FIFTY BOOKS. Here is the list:

Adventures of a Brownie. Æsop's Fables, Auld Licht Idylls, Autobiography of Franklin, Autocrat of the Breakfast Table, Bacon's Essays. Beside the Bonnie Brier Bush, Black Beauty, Burns' Poems, Child's History of England,

Confessions of an Opium Eater, Dictionary of the Bible, Dream Life, Drummond's Addresses, Emerson's Essays, Ethics of the Dust, Fairy Land of Science, Fifteen Decisive Battles, House of Seven Gables, Imitation of Christ,

Intellectual Life, Lays of Ancient Rome, Longfellow's Poems, Lorna Doone, Mosses from an Old Manse, Nat. History Birds and Quadrupeds, Poe's Poetical Works, Prue and I, Rab and His Friends, - Reveries of a Bachelor,

Samantha at Saratoga, Sesame and Lilies, Sketch Book. Sticket Minister, Stories from the History of Greece, Stories from the History of Rome, Story of an African Farm, Ten Nights in a Bar-Room. Thirty Years' War, Twice-Told Tales,

Window in Thrums, Education, In His Steps, Minister's Wooing, Professor at Breakfast Table, " Lamb's Tales from Shakespeare, Lallah Rookh, On Liberty, Tanglewood Tales, Sign of the Four.

The Agent sending in the next largest list will have the choice of TWENTY-FIVE books out of the above list. The third largest list will entitle the Agent to FIFTEEN of the books, his choice; and the fourth largest list will win TEN of thes cloth bound books. There is also a cash commission going to the Agent. We prefer the services of the Messenger Agent he will write at once for the place, but we will put the first live applicant into line, as the Inglenook is not going to be the las in anything. If agents desire to enter for the Library they should say so in order that we may keep tab on subscriptions re ceived at the office. Elgin city is barred in the competition for prizes.

The announcement of the successful Agent will be made in January, 1901.

A Live Paper for Live People.

The Inglenook is no longer an experiment. It is regarded as phenomenally successful by experienced newspaper men who know what they are talking about. The reason is not hard to find. It is a FIRST-CLASS PAPER, with nothing of and commonplace about it. It is up to date, and always will be. It will have something new in each issue, it always has and it never will fall below its self-set standard, being the best paper of its kind in the world. You can't read it without The INGLENOOL being interested and instructed. The whole wide-spread world is ransacked in the interest of its readers. isn't made with a dull pen and a pair of shears. It is a live paper for live people.

The like of it was Some of the best known men and women in the church will write for the INGLENOOK next year. Every man and woman in the list knows never undertaken in the church before. Look at the names, note the subjects!

what they are talking about.

LIZZIE HOWE: The Shadows of City Life. T. T. MYERS: How a Pope is Made.

HOMEWARD BOUND.

To my beloved ones my steps are moving;
Not hard the road that ends in love and home;
Have done my eyes, have done my feet, with roving;
Tis 10 the well-known gate 1 look and come.

Your watch is now on the eternal mountains;
Our eyes are gazing upward from afar;
Your rest is now by the clear-welling fountains;
Ours is the journey still, the toil and war.

Years have gone by since the last words were spoken, O, loved and saved, how gladly shall we meet, In the home city where no ties are broken, Where love is perfect, fellowship complete.

-Horatius Bonar.

SABOTS-WOODEN SHOES.

There is a market for wooden shoes in Chicago, but that fact does not mean an increase in Dutch comedy turns on the vaudeville stage. To the nerage mind a vision of the big, clumsy wooden those of the fatherland is inseparably connected with footlights, a long pipe, a baggy German cap and the other inevitable parts of the "make up" of the familiar comedian who rolls his "r's" horribly and talks about "Looie." All the wooden those do not grace the stage, however. In fact, so small a proportion of the entire product is required by the actors who make a specialty of dumping around the stage in sabots that it is not over appreciable. But the demand for the big wooden shoes continues Where do they go?

People who deal in them—and there are more ims carrying them as a side line than one would imagine—have different answers to the question. Of course, no firm deals exclusively in wooden shoes. The demand does not reach such proportions as all that. But nearly every house dealing in wooden ware—tubs and pails and chopping bowls and all that sort of thing—have wooden shoes depicted in their catalogues and carry them in stock. The wooden is not that no firm is kept three by the wooden shoes industry, but that there is any demand at all for the big, heavy things in competition with the perfect products of American shoe factories. But there is.

In the first place, strange as it may seem, there is steady call for the wooden shoes from the class people who were used to wearing them in the fa-Merland and are not happy without them—immirants from the Netherlands, where the shoes are immensely popular in the wet and swampy parts of becountry owing to their imperviousness to water. These people are employed in large numbers on he farms in the country surrounding Chicago-not within walking distance, of course, but in the trade mits of Chicago firms. Both men and women ad employment on the vast acres of the adjoining lates, tilling the soil, planting, weeding and doing all the other little stunts which fill the markets potatoes and cabbages and things. They have been used to wearing wooden shoes in the old counhy. They cannot get accustomed to the leather They don't want to get accustomed to them, tact. They would rather slip on the sabots, in hich they can splash through mud and water if 20cd be without danger of wet feet.

Passengers on the suburban trains which run brough the market garden country west and north Chicago, if they peer closely at the figures bend-3 and toiling over the rows of lettuce or beets, often see the preposterously big wooden shoes, of peeping, but staring out from beneath the blue on of some Hollander maiden, quite as they did lew years ago in her native land. She likes them, when she goes to the general store of the vilthe she asks the dealer to get her a pair. They te very cheap, compared to leather shoes—fifty rets will buy a pair, and they will outwear half a pairs of shoes—in fact, they are almost inderecible under ordinary circumstances, and that them to the thrifty foreigner who count the nickels. Not all of them are to be

found in the fields, however. Men in a few odd vocations have discovered that the old wooden shoes are better for some purposes than their more pretentious cousins of calf or cowhide.

In work which keeps a man in a very hot place, such as stoking in a big furnace-room or in the heart of a lake steamer, the wooden shoes are said to be better than leather foot coverings. Not only are they easier on the feet, but they do not dry up and crack and wither away in the heat as the \$3 shoes from the American factories do. Wood is a slow conductor of heat, compared with leather, and the excessive thickness of the wooden soles allows the stokers who wear them to stand and walk for hours on a floor so hot the hand could scarce be borne upon it, and yet their feet do not feel the excessive heat. It does not penetrate the wood.

In the rear rooms of some of the larger butcher shops downtown which cater to the restaurant trade a great number of chickens are killed and dressed every day. These are not pleasant places to work in. They reek of blood and the steam from the kettles in which the fowls are plunged to loosen their feathers. The floors are slimy and slippery with the blood of hundreds of slaughtered chickens and the men tramp about in wooden shoes. They say they are the only things to wear in such work. Leather shoes rot very rapidly and in a day or so the blood and moisture seeps through their seams and makes things unpleasant and unhealthy. The wooden shoes are so heavy and thick it would take a year for the stuff to wet them through, and so the wise butchers wear them. They say they do not mind their weight after they become accustomed to them. The thick soles add two or three inches to everyone's height and altogether the queer things which most people see only on German comedians seem to fill a place in the commercial world made for them alone.

CONCERNING YOUR HAIR.

Does cutting promote the growth of the hair? This question is answered by the Frankfurter Wochenblatt in this wise: "It is believed by laymen and professional hairdressers that cutting largely increases the growth of the hair. This belief begins with the involuntary comparison of the hair with a plant. As grass that is often cut short grows again and becomes thicker, so, it is believed, the hair should do when it is cut. This comparison, however, is a false one. A developed hair is a perfectly formed mass of horn which has nothing further to do with the case in which the hair rests than to receive from it from below further growth and to be held firmly by it. . . . In this mass of horn, as in the nails of the fingers and the toes, there is no longer any sap in circulation; this mass, so to speak, is a product which cannot be quickened and strengthened by new nourishment, because the latter cannot enter it. On the other hand, what happens in a blade of grass is totally different.

"The blade of grass is a network of fine ducts, in which is constantly circulating the nourishment which the blade draws from the root; it presents, in contrast with the dead body of the hair, a living, vegetating substance which has a most intimate connection with the condition of its root and which dries up infallibly when it is separated from its root, while the hair will remain unaffected for thousands of years after its papilla has withered away. We need cite only one irresistible proof of this-the hair on the head of mummies. The root of the hair as long as it exists can produce a new hair when the old hair has fallen out, while the root of many a plant gives existence to one sprout only and then together with it declines and dies. The more a hair is disturbed in its natural growth by continually cutting off its ends the less rest its papilla, the real producer of the hair, finds; the papilla, being constantly incited to excessive production, wavers finally in its activity, decays and dies. For this reason a woman with a bald head is never or seldom seen, rude.-Joubert.

as the natural and very slow process of the growth of a woman's hair is not disturbed. The individual hair reaches a definite length; after years it falls out of itself and a new hair begins to appear as soon as the papilla has had time to rest itself thoroughly and to prepare itself for the process of a new growth. These are the reasons which lead to the obviously valid conclusion that cutting the hair is rather injurious than useful."

NAMES OF PRESIDENTS' WIVES.

Of course there's nothing in a name, yet all women are anxious to have appropriate if not picturesque names for themselves and to bestow on their daughters. Yet some of the most noted women of the United States have not been especially favored in this respect. Among the wives of our presidents Mary occurs but once—Mary Todd Lincoln—and there have been two Abigails—Abigail Powers Fillmore and Abigail Smith Adams.

Washington and Jefferson both had wives named Martha—Martha Dandridge Custis and Martha Wayles Skelton, both handsome and attractive widows. With the exception of the wives of Monroe and Johnson—whose wives were both named Eliza—there appear no more duplicate names in the presidential wife list. Monroe married Eliza Kortwright and Johnson married Eliza McCardle, who taught her husband to write and cipher, he already knowing how to read.

Madison married a Dolly—Dolly Todd—and the name itself savors of brightness and home love. She also was a widow and one of the most remarkable women who ever presided over the white house. Two very stately names dignified the presidential mansion in the days of Tyler and of Garfield—Letitia Christian Tyler and Lucretia Rudolph Garfield.

Grant's wife was named Julia—Julia Dent. Mrs. Hays bore the rather plebeian name of Lucy—Lucy Webb. Zachary Taylor's wife was Margaret. Mrs. John Quincy Adams bore the stately names of Louisa Catherine.

Not many Bible names appear in the list—the New Testament supplying those of Mary and Martha, afore mentioned, and the Old Testament adding Hannah, Rachel and Sarah—Hannah Hoes Van Buren, Rachel Donelson Robards Jackson and Sarah Childress Polk.

Pierce's wife bore the good, old-fashioned name of Jane—Jane Appleton Pierce. William Henry Harrison married an Anne—Anne Symmes, and the later Harrison a Caroline—Caroline Scott. The wife of Arthur had the unusual and not pretty name of Malvina—Malvina Stone. Mrs. Cleveland was Frances Folsom and Mrs. McKinley was Ida Saxton.

FROZEN MEAT LOSES FLAVOR.

MEATS frozen and kept in cold storage for long periods do not undergo organic changes in the ordinary sense—that is, they do not putrefy, soften or smell bad, but they certainly do deteriorate in some intangible way. After a certain time frozen meat loses some life principle essential to its nourishing quality. Such meat lacks flavor; it is not well digested or assimilated.

FEATHERS BLOWN OFF CHICKENS.

A DEVICE for plucking feathers from chickens has been patented in Great Britain. Cross currents of air set in motion by revolving electrical fans completely strip a bird of every feather and particle of down.

POLITENESS is a kind of anæsthetic which envelops the asperities of our character, so that other people be not wounded by them. We should never be without it, even when we contend with the rude.—Joubert.

THE SOD HOUSE.

BY JESSE Y. HECKLER.

WHEN the first emigrants to the new world landed on the Atlantic coast they found plenty of timber with which to build them houses, and as they moved west into the seemingly boundless forest of America the log cabin was everywhere the pioneer's home.

But finally the great timber belt was passed, and the boundless and treeless prairie stood out before the emigrant as he ventured westward. For sometime they seemed reluctant to leave the timber country, but when the great fertility of the prairie soil became fully known, men ventured into it. Necessity became the mother of invention and the tough prairie sod that was broken up suggested itself to the hardy pioneer as material wherewith to build him a house.

The first sod houses that were constructed to shelter the emigrant family were small and rude, frequently not more than twelve by sixteen feet on the inside, some even smaller, and so low that a man had to stoop to enter the door. Many had no floor but the earth, and not more than two or three windows of four 8 x to lights each. For the roof a few pieces of timber must be found to stretch across the top of the wall. Then some brush was secured and packed on top of the timber, that covered with sod, constituted the roof. But heavy rains would often penetrate the sod roof, and the earth for a floor made things very uncomfortable for the occupants.

But the art of building sod houses has been improved on until the sod house of the present day is a thing not to be despised.

A sod wall three feet thick, nine or ten feet high, large enough for two or three rooms, a good roof and floor, plenty of windows, its walls plastered, makes a very comfortable house.

A double window on the south side makes the hay window. In such I have seen the house plants, thriving with brighter foliage and finer flowers than I ever saw them anywhere else. And the atmosphere that gives such thrift to plant life I also notice gives good health and rosy cheeks to the children, out on the frontier, who are so fortunate as to be raised in the "Soddy,"

This article is written seated in a pleasant sod house where I have been comfortably and pleasantly entertained for the past week.

Brocksburg, Nebr.

COMMENT.

We have been urging our writers to tell us of the novel and instructive things they see and know about. This is one of them. Whoever can and will repeat this sort of thing for the 'Nook will make the Editor chuckle with glee. Anybody can write about Liberty, or Territorial Expansion, and just the same nobody but himself and his family will read it, but it takes live persons, with eyes in their heads, to see a "soddy" and know enough to describe it for the 'Nook We once were in a sod house where there was a grand piano, too big to have come through the door, and on inquiry this story was told us. The family had failed in the East, and lost everything, but there was so much sentiment attaching to their piano that they took it along West, put it on the bare prairie, and built a sod house around it.

THE MOUND BUILDERS.

BY A. W. DUPLER.

A NATION of workers have built numerous mounds, of various sizes and shapes, in the valley of the great Miche Sepe. They have left behind them a record that proves that they were industrious. Where did they come from? - is naturally asked by the inquisitive student. America was surely peopled since the flood. H inhabited previous to that time, they were evidently all destroyed. Many minds have spent their best thought to find out how it might have been peopled since the flood. Many theories have been advanced, each to get the mark of doubtfulness. Some think that the

driven castward across the Pacific by storms. Others that they were Phoenicians driven westward by storms on some of their great navigating expeditions. Others that they crossed the Bering Sea when frozen over, while some conjecture that America was at one time connected with some other continent, and that the inhabitants migrated there on dry land.

No man knows to a certainty, where the original inhabitants came from, nor is it likely that they ever will. We know they were here and built large mounds, and now comes the question as to where they went. Accepting the theory that they were a distinct race from the Indians, their last end is as doubtful as the first. Some think they left the North and went to Mexico and Peru, but the civilization of the Aztecs was greater than that displayed by the Mound Builders in the Mississippi Valley.

Others argue that they were exterminated by the Indians, a theory, though plausible, is not, in the writer's opinion, as good as the one supposing that they were the ancestors of the Indians themselves. It is very probable that the mounds in western New York and adjacent parts of Ohio and Pennsylvania were built by the Iroquois. Some may argue against this theory that the Indians have no traditions that their forefathers erected mounds. That may all be, but how many people in this enlight ened country can even tell their own great-grandmother's maiden name? How, then, can it be expected that a barbarian should know how his forefathers did several hundred years ago-yes, a thousand or two?

Some may claim that the Indian had not the skill and ingenuity to build the works the Mound Builders left. The Mound Builders could have had such men as Logan, Pontiac, and Tecumseh in their time. The brain of such men, that could plan gigantic military campaigns of the kind that they planned and carried into execution, could also devise and erect a mound of all the beauty of the Serpent Mound in Southern Ohio. The same amount of grief and endurance that prompted the Indians to make great sacrifices on the death of a chief since the white man has known him, might in an earlier day have moved him to erect huge piles of earth over a dead warrior. Indeed, De Soto's chroniclers state that the Indians they found in their journeys lived in groups; the chief's house built on a large mound, while those of his subordinates were built on smaller ones around the larger one. Also, when a chief died, his successor, instead of using the old mound, had a new one built. Another argument is that, if these warriors could plan such military enterprises, they also could erect fortifications suitable for their protection in times of danger. Also, some Indian traditions say that mounds were built over the graves of their chiefs, some being added at different times. Some mounds seem to prove this by indicating having been started at one time and finished at another. Again, the flintheads found in the mounds are of no higher degree of workmanship than those known to be made by the Indian. Then, why can the Indian not have the honor of having the Mound Builder for an ancestor, instead of assigning to the latter some doubtful end?

Thornville, Ohio.

POWWOWING.

BY ANNA M. MITCHEL.

PROBABLY some of our readers have never heard of the powwow science, and to enlighten such it will be necessary to explain what a powwower is.

This gifted being is a person who, disdaining the use of drugs and medicine undertakes to "cure" various diseases by simply performing some mystic rites over the patient, at the same time silently repeating certain magical words of exorcism. Under the incantations of the powwower any ordinary disease is supposed to flee in hot haste.

In the good old times of our forefathers the powwower was a very important personage in a neighborhood. In those days physicians were few and far apart, and the patent medicine man didn't take such a solicitous interest in the health of the public as he now does. Consequently our ancestors had to depend a great deal upon the virtues of various homemade teas to tone up their systems and eradiinhabitants were originally Chinese or Japanese cate that "tired feeling" so graphically and touch-

ingly described in the newspaper of to-day, Rewhen the disease was of such a character that the delicious compounds of hoarhound, boneset, sasse, fras and the like, were unable to effect a cure, then the services of the powwower were called into ac-

In these days of mesmerism, magnetic healing, sciences and "ologies" of all descriptions the old fashioned powwowers are nearly lost sight of Nevertheless they are not extinct. For while they are not called upon so frequently as of yore, to exercise their power in dispelling diseases, this art is still practiced in different localities.

To insure success along this line, however, it is necessary that the patient has full belief in the efficacy of the powwow. His bump of imagination should also be fully developed. While the operation is being performed strict silence must be observed by all present, for one audible word will break the charm and the powwow would be a fail.

Anyone aspiring to be a powwower must learn the "words"—wherein the secret lies-from one of the opposite sex. Otherwise they will be of no value, neither to the teacher nor the one taught. Now as this "word" part of the formula is most jealously guarded by the practitioners of this science, conscientious scruples will prevent me from informing the public what the "words" are, It would be most unbecoming to thus divulge to the world the secrets of this worthy profession, But to illustrate a little the method of procedure, we will suppose the patient is afflicted with erysipe-

The powwower takes a red silk thread and carefully measures the length and circumference of the patient, also takes the dimensions of his head, in the meantime silently repeating the magic "words." This is done three separate times and then the thread is placed where it will soon shrivel or waste away, as up the chimney or under the drip of a

Another formula much recommended is for the patient to stand erect, while the powwower takes a shovelful of burning coals and beginning down at the feet of the patient slowly brings it up and over his head and down to his feet again. This is done three times, the coals being dumped into a convenient receptacle each time and a fresh supply secured The "words," of course, accompany the coals. Some complaints, such as swellings, tumors, and the like, are usually powwowed for during the decrease of the moon. Taking fire out of burns, stopping blood, relieving pain and various other ailments too numerous to mention are all under the power of the full-fledged powwower, who has only to use the formula with variations according to the nature of the disease.

While no doubt many marvelous cures have resulted thereby, we assure any one desiring to experiment along this line that it is a perfectly sale and harmless remedy to try.

Newburg, Pa.

WHEN VISITING FOREIGN LANDS.

"IT is perfectly natural," said one whose our business takes him about more or less, "that a man should be interested, wherever he may be, in thing pertaining to his own business. I know lam mine. When I strike a strange place I like to go through the quarter where they carry on the business that I am engaged in and see how they run things in it there. But I have lately met with two illustrations of this sort of thing that seemed to me to be rather curious as well as interesting.

"Talking with a New York paint mannfactured about paint of a certain kind, the paint man said. incidentally, that he had seen paint of that color of walls in Pompeii. Oddly enough the other curion illustration arose out of the same ancient city. New Yorker engaged in the manufacture of lead pipe said incidentally to something that he was telling me about lead pipe, that he had found a Pompeii lead pipe in fair condition. This pipe while covered with an incrustation that had gath ered upon it in the long time it had been buried yet cutting with as bright and perfect a cleavage of though it had been made yesterday, instead many centuries ago.

"These two things interested somewhat the paint man and the lead man respectively and the

certainly interested me."

Nature & Study -

THE CHINOOK SALMON.

BY JUSTUS H. CLINE,

THAT part of southwestern Washington which lies the angle formed by the Columbia River and the Pacific Ocean can boast of two great leading induslumbering and fishing. Her forests are men the most magnificent in the world. The shundance of rain and the long growing season tive conspired to produce marvels in vegetable The many bays, that indent the coast line, and the numerous rivers that empty into the ocean afford fishing grounds that are well nigh ideal. In fact better fishing facilities are not offered in the

Many varieties of fish are caught, but the one that attracts special attention is the chinook salmea. Canned salmon is a most familiar article of merchandise and may be seen on the shelves of almost any village grocery or country store, but there are many interesting things connected with the nature and propagation of it that are not well

The salmon is a beautiful fish, having a symmetrical shape and a good size. The weight varies from thirty to seventy pounds. A few specimens have been caught weighing more than eighty pounds. These are exceptions, however. We might place the weight of an average salmon at forty pounds.

The salmon is a salt water fish, and makes its home at sea. It seeks fresh water only during the spawning season. The numerous rivers of Oregon and Washington, which empty into the sea, offer excellent spawning grounds and during certain seasons they literally teem with fish.

It was the fortune of the writer to spend a number of weeks of the past summer on the Columbia River near its mouth. While there I became acquainted with a gentleman who had served the government a number of years in the capacity of Fish Commissioner. Through his kind information lam able to give the following concerning the nature and propagation of the salmon:

The life of the salmon is four years. These years are spent at sea. Near the expiration of this time the fish seeks fresh water in which to spawn. Salmon spawns hut once. After this it never returns losea but dies. Spawning is accomplished in this way. The fish go in pairs. The female goes before depositing her spawn; while the male follows close behind depositing his upon that of the female Thus fertilization is brought about. The quantity ol spawn from a single fish is enormous.

Owing to a marked decrease in the number of salmon because of the inefficiency of the natural process to hatch a large percentage of the spawn and preserve the young fish when hatched, the United States government has established a number of hatcheries in the creeks and rivers that empty into the Columbia, and thus artificial means are used to assist in the propagation of the fish. Nice ipcimens of the salmon are caught, taken and allowed to spawn in the hatchery. Here the spawn is carefully guarded as well as the young fish after the hatching has taken place. When the young bave attained sufficient strength and size to escape the dangers of the open sea they are set at liberty. In this way the percentage of the spawn wasted is very small and the increase in the number of salmon is clearly evident.

Strange to say, after the end of four years the young salmon that has been set at liberty will reofficial possible to the same spot in which it was batched, to do its own spawning and die. But few accomplish this, however, for the net of the fisher man is always in readiness for the fish that enters the mouth of the river. Lordsburg, Cal.

PORK AS SEEN IN HISTORY.

THE hog of to-day constitutes no less than 370 different articles of commerce, and next to cotton and wheat, furnishes the largest values in exports the United States. Its name has become an tpithet. Its application to man means greed and tager, like the puddle duck. It takes mud baths.

So do men. There is much virtue in mud. The hog bathes in pools of it to coat his skin against the attacks of insects; man dips his festered hide in it to improve his circulation and draw out his gout and rheumatism. The hog is pachydermatous; so is man-notwithstanding Cuvier's classification. I have seen men, know men to-day, with skins thicker than the hide of the rhinoceros, says a writer in the New York Press. The hog is omnivorous—so is man. The hog is carnivorous by choice—so is man. The hog is herbivorous, granivorous, gramnivorous and phytivorous by education—so is man.

These reflections are induced by the indignities offered a useful animal. The hog was the cleanest of beasts until man built a sty and imprisoned him in filth, fattened him on filth, killed him in filth and ate him in filth. No animal, wild or domestic, is so clean about its bed as the hog. It wants pure, sweet, fresh straw every time. The hog has brains. It has been known to excel the pointer in scenting quail. An authentic instance is mentioned by Bingley in "Memoirs of British Quadrupeds" of a keenscented sow that would stand at birds which the dogs had missed. Who ever heard of an educated ox or sheep? Yet we have had on our stage educated hogs that could spell and play cards, count and tell the time. Hogs make docile pets. Many a poor family has its pig sleeping on the pallet beside the children, privileged to the best in the house.

The hog caused the biggest mutiny ever known in the history of the world and was responsible for men being blown from the muzzles of cannon. When Great Britain shipped cartridges to India for the native troops she reckoned without her host, for the ammunition was greased with lard, which so offended the religious scruples of the sepoys that they arose as one man in rebellion. The American hog nearly caused war between Germany and the United States and only the diplomacy of Whitelaw Reid obtained for the animal admission into France.

Moses and Mohammed were opposed to the hog, because, while it divides the hoof and is clovenfooted, yet it chows not the cud. The camel is not eaten for opposite reasons—it chews the cud, but is not cloven-footed. The hare is also unclean, because, while it chews the cud, it divides not the hoof. All civilized nations have passed and repassed laws governing what a man shall eat and how much it shall cost him, but the only sumptuary measure that ever stood the test of time is the law of Moses concerning the hog. It has been on the statute book for 3,390 years.

HERMIT CRABS.

BY DECIMA G. WAREHAM.

Few people have ever had an opportunity to observe these quaint little Hermits of the Pacific coast. Unlike the monks of old they do not live isolated lives, but build little colonies in the sand.

The male crab has two more claws than the female. These are used for fighting. He has a very warlike disposition, and woe to the intruder who pays any attention to his wife, for he is very jealous and only a duel will retrieve his honor. Like the antlered monarch, whose horns are frequently found interlaced, so the tourist finds many skeletons of these crabs with their claws so woven in battle they could not pull them asunder.

Unlike most sea-people, Mr. Crab, wife and family, always build a home of their own, and though Mrs. Crab is very plain in appearance, the household larder is always supplied by her.

The shell of the Hermit is very pretty, with an orange lining. Tourists desiring these shells will chase the creatures across the sand, until fatigue renders the shells too heavy for them to carry, and they drop them on the strand, and then scamper on uncumbered, looking very much like hairy brown spiders. The shells do not originally belong to the Hermit, but to the Ring Snail. The crab is no respecter of persons, so when he wishes a new home he drags the snail from its lodgings and establishes himself within, probably easing his conscience with the assurance that "possession is nine-tenths of the law."

Davenport, Iowa.

"ALLOW me to express my appreciation of the Nook. It is one of the best papers I know of."-Alice Garber, of Iowa.

STARCH MADE FROM POTATOES.

NEARLY sixteen thousand tons of potato starch are turned out annually in this country.

The potatoes used for starch are the small and injured ones of the crop. Sixty bushels of them yield a barrel of starch. They are washed and reduced to pulp by machine, and the pulp is carried by water into tanks, at the bottom of which the starch settles. The starch is then transferred by shovels to another receptacle, where it is stirred and beaten to a cream. After settling again, to remove all impurities, it needs only to be dried in order to be fit for commercial use. The drying is done in kilns, by steam coils, and, when the starch comes out, it is so white and beautiful as to resemble driven snow.

The commercial starches in use to-day are made from maize, potatoes, rice, wheat, sago, flour and tapioca flour. Rice starch commands the highest prize, and maize starch is the cheapest. Wheat starch comes next in value to rice starch, and potato starch third in the list.

WEIGHT OF A LION.

"What does a lion weigh?" Ask that question of any acquaintance and see what he will say. Those who know the look of the king of beasts best, and how small his lithe body really is, will probably come furthest from the truth. About 300 to 350 pounds is a usual estimate. But this is below the mark. A full-grown lion will tip the scale at no less than 500 pounds. Five hundred and forty pounds is the record for an African lion. His bone is solid and heavy as ivory.

The tiger runs the lion very close. A Bengal tiger, killed two years ago by an English officer, scaled 520 pounds. A tiger of this size has, however, considerably greater muscular strength, than the biggest lion.

Few people know that a grizzly bear can give points to any other carnivorous animal in point of strength. A grizzly bear weighing just four hundredweight has been watched carrying a heifer of more than two-thirds its own weight for two miles up the most steep and rugged mountain side, and this without pausing one instant for rest. The grizzly bear is the largest and most powerful of all the bear tribe, but his cousin, the cinnamon bear, runs him very close; and the big white polar bear, though not really so dangerous a customer, is capable of performing the most extraordinary feats of strength. A polar bear has been seen to move with his paws a bowlder six men had with difficulty put in position to guard a cache of provisions.

SMALL BUT YERY STRONG.

THE humming bird flies as the Irishman played the fiddle-by main strength the frigate bird relies on his skill in taking advantage of every varying current of air, and the skeleton of the one indicates great muscular power, while that of the other shows its absence. No other bird has such proportionally great muscles as the humming bird; the keel of the sternum or breastbone from which these muscles arise runs from one end of the body to the other, while at the same time it projects downward like the keel of a modern racing yacht. These muscles drive at the rate of several hundred strokes a minute a pair of small, rigid wings, the outermost bones of which are very long, while the innermost are very short, a feature calculated to give the greatest amount of motion at the tip of the wing with the least movement of the bones of the upper arm, to which the driving muscles are attached. Another peculiar feature is that the outermost feathers, the flight feathers or primaries, are long and strong, while the innermost, those attached to the forearm, are few and weak; so far as flight is concerned, the bird could dispense with these secondaries and not feel their loss. Finally the heart, which we may look upon as the boiler that supplies steam for this machinery, is large and powerful, as is necessary for such a high-pressure engine as the little humming bird.

BEES are known to be excellent weather prophets. There is a common country saying that "a bee was never caught in a shower." When rain is coming bees do not go far, but buzz about close to

their hives.

THE INGLENOOK.

PUBLISHED WEEKLY

At 27 and 24 South State Street, Eigin, illinois. Price, \$1.00 a year. It is a high grade paper for high grade boys and girls who love good reading. INGLENOOK wants contributions, bright, well written and of general interest. No love stories or any with killing or cruelty in them will be considered. It you want your articles returned, if not available, send stamped and addressed envelope. Send subscriptions, articles and everything intended for The Inglenook, to the following address:

BRETHREN PUBLISHING HOUSE, Elgin, Illinois,

Entered at the Post Office at Elgin, Ill., as Second-class Matter.

BANNED.

In the next issue of the Inglenook will be started a story of the days in the church when banning was enforced. There are a good many of our young members who do not know what the ban is, or rather what it was, for it has been done away with, and happily, too. It is a relic of an old time misconstruction of Matt. 18. All members of the Brethren understand what is meant by the law of trespass, and all understand the routine and all know the result when one of the parties will not hear the church. In olden times in the church, our own, and some allied forms of worship, such as the Amish, the construction of what was meant by leaving the disfellowshipped one to stand in the relation of the heathen and the publican was taken with a terrible literalness, and in carrying it out the results were sometimes most lamentable. The story in the 'Nook, next week, might have been true, in fact it is true, though the assembling of the names and places is necessarily faulty. The story hinges on a man and woman's love, and their disobedience and the fearful results that followed. It will be a revelation to most readers concerning a time when hearts were not less loving, but when duty was iron handed.

Next following the banning story, and running into January of the new year, will be a story showing how a young brother and sister made the mistake of their lives in a clandestine marriage that set a whole community by the ears, and wrong was barely averted. The moral of the story is an excellent one, and every person may well remember its lesson, to keep clear of secret alliances

THE HOME GIRL.

THERE is one person who has never received the credit that is her due. Reference is had to the home girl, the one who is always expected to do everything and keeps things together while her brothers and sisters take life, as it comes, outside the home. Is there some extra work to be done? Mary does it. If somebody has to stay at home, Mary stays. If there is a pile of stockings to darn or clothes to mend Mary attends to it, while the rest of the family go out nights, enjoy themselves, or think they do, and then, when they return, Mary has things in readiness for them.

Her name may not be Mary, but the situation does exist, and too often at that. Now what is there to do about it? Nothing that the 'Nook can see. If some man, seeing her worth, comes with evident designs on the family's kin slave what a row there is, by common consent, to keep her out of her birthright and continue her on the wheel! The man is belittled, she is nagged and ridiculed, and too often the taskmasters prevail. An honest man turns his back on the soulless lot and seeks worth elsewhere while the woman goes back to her slops and patching. It is not a very beautiful picture but it is not hard to find in reality. As matters stand there is nothing to be done. Often the girl gets sick mentally and comes to the whining and snuffling stage, regarding it as the hand of providence and intent of God that she should be a carrier of water and a slopper of pigs all her days.

But there is another side to it all. Instead of her slaving along till her parents die, the home sold and divided, and she an unwelcome burden on her brothers and sisters, let it be understood by all who read that there are two things that can be done. One is for the unthinking parents to make Floribel and Gertrude do their share of the work, and see to it that Mary gets equal privileges. The other is to remember that under the common law Mary is her own mistress if she is over twenty-one and that any fine morning she can serve notice on the taskmasters that she intends going out to service and working where her tasks will be at least paid for and

herself appreciated. There are thousands of places waiting for Mary, and hundreds of men waiting for someone who knows how to make a home for two. Honoring parents is certainly well and good, but no obligation is ever imposed without a corresponding duty on the part of those who receive.

A NEW 'NOOK FEATURE.

Some time ago we dropped our Short Sermons, asking for the voice of the 'Nook congregation as to whether they should be continued. The result is most favorable. Many replied that they should be kept up. But on consideration we have decided on a change. We hold that it is a good thing for a preacher to stop before people get to going out of the house to get away from him. Preaching is like letter writing—the secret of success is in making people wish that there was more of it. So we will call the service over, and in its place take up something entirely new.

Now there are in the Bible a great many things that are new and strange to the average reader, things that do not appear on the surface, and we are going to take these up, and tell about them. Thus, for instance, under the caption of "The Trade of the Master," we will tell something of a carpenter's calling as practiced by Christ. It was not in building houses, as we have them, for the houses were then built of stone. And then there is the official relation of Matthew to the Roman Government. What was he doing at the customhouse? Why did they have him there at all? What was baptism for the dead? Who knows? Now it will be evident that in this line there is an endless chance for knowledge. And then, in the case of preaching, you have to sit quiet and take all the preacher says. True, you can waylay him on the road home and have a discussion with him, but you can't get up in meeting and ask questions. In our new departure you can ask all you have a mind to along the lines of exploration. We don't know it all, but we have better facilities for finding out than falls to the lot of the average reader. The idea will be developed in an issue or two. A number of the articles must be prepared, hedging against sickness and accident. Read what comes and possibly you may get a new idea now and then.

FROM INDIA'S CORAL STRAND.

"THE INGLENOOR is surely a surprising and enterprising little volume. There is something enticing about it that makes us want to read it."

Another correspondent has touched us on the raw, and does it in song.

THE INGLENOOK COVER.

Where there sits a sister sleeping, With her knitting in her lap, While her eldest son sits near her, Stiff and stuck up like his pap, With Napoleon on the mantel—On the wall an M. E. steeple—What the world is this new paper, INGLENOOK to teach the people?

And then, as if to condone for harrowing us, he sends in a long list of subscribers, natives of eminent station, and those standing highest in the estimation of their people. As for the cover, we have troubles of our own, don't mention the cover to us. Still there is something fairly good in it. The cat is not so bad. On behalf of our thousands and thousands of readers on this side of the world, the INGLENOOK salutes and welcomes our new Indian fellow readers.

OUR INGLENOOK.

SEVERAL letters that came to us to-day have referred to the paper as "our INGLENOOK." We like that form of expression. If you are a member of the Brethren church the paper is as much yours as anybody's, and if you are a subscriber, as every household in the church ought to be, you have a right to suggest improvements, and constructive criticism is invited. The Editor is a sort of hired nurse to watch the infant and see that nothing "comes over it," and while his say is final as to what goes in or out, anything for the good of the child is welcomed. We want to see it on the table of every family in the Brotherhood, and we want it to be a credit all around.

OUR QUERY COLUMN.

How does rosewood get its name?

Not because it is rose colored, but because the fresh wood smells like roses.

I read about flowers costing thousands. Why so?

Because they are rare. Orchids are in this class, and they are hard to get, and hard to care for.

By what organization was the discovery in Egypt made in the year 1881?

We think by one backed by the University of

Is the New Testament Greek classic?

In the school sense, no. That it was done as it is shows that the writers were not scholars turning out a fictitious story.

What is a vegetarian?

A person who lives on vegetables. The list is longer than one would suppose it to be, and with nuts, constitutes a very good bill of fare.

Is it right to make much ado in the way of feasting, etc., at

* * *

If one has the turkey it is all right, but if not it is a case of sour grapes. Then it is not good to make "much ado"

Can I grow mushrooms without much instruction?

There will have to be a good deal of instruction and careful following it if you expect to succeed. It can be done, but it is a difficult and troublesome business.

I believe I have found gold in considerable amount. How shall I go about proving it?

Free gold is not likely to be lying around loose in your part of the country. The chances are that you have found iron pyrites, worth a few dollars a ton to make sulphuric acid from.

What is meant by the phrases, "The stone age," and "The iron age?"

When primitive man used stone for weapon fashioning, and in the culinary art, that time was called the stone age. When he had progressed in knowledge to the point of using iron, that marked theiron age, and so on. There is no well-defined limit.

In the discovery of the tablets at Nippur five or six thousand years before Christ is mentioned. Does this not ante-date Adam?

No. The date you have of Adam's time is not as exact as the Nippur record. That somebody guessed Adam's age and put it in a book does not mean much.

How does the 'Nook get its accounts of unusual and link known industries?

In every way, from going and writing them upon the spot to getting them in any and every method. The thing is to get them, and we are doing it, and expect to continue it. There is no end to such stories.

How is the postage on newspapers and publications at ranged for?

Usually the sacks are filled at the office of publication, then weighed, either at the post office, or at the printing office, and the postage paid and the bags taken to the train. The Inglenook is sacked on the second floor, weighed by a representative of the post office, and trundled out of the back door to the train. The payment is on the pound basis.

Will you please tell us who the Editor of the INGLENOISES and why his name does not appear in the paper? Please at swer this in the columns of the Messenger.

The Messenger Editor has turned the above query over to us for answer. Two Irishmen, one noted for his remarkable personal ugliness, were discussing the arrival of a new baby at the ugly manking the arrival of a new baby at the ugly manking the arrival of a new baby at the ugly manking the arrival of a new baby at the ugly manking the arrival of a new baby at the ugly manking the said that the home. The father in a burst of pride, said that the newcomer "looked just like him." The other took newcomer "loo

WHERE THEY BAKE IN EARNEST.

Fig the purposes of this article it were best to one of the National Biscuit Company's facwas for partial description—it would be imposbe to describe it fully without the assistance of a practical machinists and bakers. There ethree of that company's factories in Chicago Kennedy, the Aldrich and the Bremner. The Respedy is much the largest and finest. It occuis a building of enormous size and of the newest The first two stories, together with rebasement, are given up to the machinery and ne workmen. In the third story are the offices, riere a small army of entering clerks and accountpls is busily at work. In a room by himself on his floor is the manager of the working force in the edding. He has to do, too, with the traveling elesmen, and on the wall before him is an immense sp of the territory over which the company operto from this point. It is much the largest terripry operated from any point by firms or companies this business. All from the Rocky mountains to be eastern boundary of Ohio and from the northern foundary of the United States to the Gulf of Mexto is supplied with crackers and sweet goods by bis company from its three factories in Chicago. Forty traveling men are constantly employed and lare pegged on the map daily. That is, each of beforty is represented on the map by a peg of a certain shape or color stuck into the map, which kg is moved every morning from over the town there the traveling man was the last night to where he should be the next morning. Instructions, when occessary, are telegraphed and seldom is a message lost because of unpunctuality on the part of the slesman to arrive at the place he is pegged for. On the section of the map where the lines of Illitois are indicated there are many fewer pegs than on each of the other sections, and the explanation of this is that stocks of the company's goods are boused at Bloomington and at Springfield, and that the local managers at these two towns each has a tomplement of traveling salesmen, whom he sends out and keeps track of himself.

Some of the processes of manufacture are jealously watched by the company's faithful servants, for there are other bakers and competition is sharp. There are valuable secrets in this business, as in most other businesses that are conducted on a large scale. But some of the processes the visitor, who 1830 fortunate as to gain an entrance to the factory, is permitted to witness; and if he is extremely forlunate he will have them explained to him. Dough, brinstance; what is dough like in a great bakery? tis like that our grandmother mixed and kneaded then you were a boy, or perchance like that she mixes and kneads nowadays. Or call it a sponge. aportion of flour stirred up in water, with yeast added, composes a sponge. When it is a domestic omposition it is placed in a tin pan and allowed to at over night to rise. In the big factory it is put into a wooden trough, two feet deep and twenty feet long. (The advocates of phonetic spelling should know that in the bakeries t-r-o-u-g-h is protounced trow). In a few hours it will rise suffi-Gently, and then it is "taken"—this is a technical krm, meaning that it is inspected—and then it is dimped into a machine mixer and there receives Note flour and other ingredients.

The mixer is spiral in form and something like an St beater, but it works horizontally and not perAndicularly, as does an egg beater. When properMoved the dough is put back in the trough and lowed to stand until it has gained the right ersame as decomposition—it does not sound quite to say rottenness.

Now the sponge is ready to go into the rollers. The whole batch does not go in at once, but is cut led through another set of rollers to make it of the statement of the cutter. It is crackers that are making now. It is crackers that are making now. It is crackers that are making now. It is crackers that are making now is carried on a moving apron to where the "peeler" is them up and places them on the oven shelf.

the latest improved baker's oven has a revolving largine the cars of the Ferris wheel to be oven the sand you have a modern reel oven. The

ovens in the Kennedy bakery are from twelve to fifteen feet wide and about thirty-five feet deep. There are fourteen of them in this establishment. They are walled up and over with bricks. The machinery consists of a steel shaft, at each end of which is a large wheel. Between the outer edge of these two wheels swing the shelves. The fire is on the floor below. The crackers go round on the swings a certain number of times-the expert knows exactly how many times they should go round in a certain degree of heat to be properly baked—and then the revolutions cease and the crackers are taken out by men with peels in their hands and placed on large carriers. These carriers are made of steel and sheet iron and are of a size to admit one panful from each shelf.

The carriers are worked by machinery, which takes them to the packing floor. Here the goods are taken to tables, where they are broken and separated by girls and packed into "cottons," cans or boxes. The cottons are in sheets of the thickness of heavy wrapping paper; the cotton for them is specially prepared in a manner that is a trade secret. It makes a pretty secure package and with a lining of waxed paper added and a seal at each end a package is obtained which is moisture and air proof.

The variety of crackers known as Uneeda biscuits is turned out by the Kennedy bakery and from its fourteen ovens it turns out daily the filling of 2,300 packages, or 500,000 individual crackers.

Classified sweet goods also are manufactured in this factory. There are 100 different kinds of such goods now and more are being concocted every few days. The machinery with which they are made is similar for the most part to that with which crackers are produced, but a few of the machines used in this department are intricate and costly.

In a single oven forty-nine barrels of flour are used each day. During last year the National Biscuit Company used 2,124,303 barrels of flour. The sales of the company's goods during the year amounted to \$35,651,898.84.

PEANUT OIL.

The American peanut industry flourishes mostly on account of the craving of the small boy. Wholesale commission merchants and grocers ship the raw nuts from the south in great, rough sacks, and they are sold out in small quantities to the street-corner fruit venders. But the charms of the pudgy paper bag with its two little ears hold their own with little difficulty against the wedge of sticky candy with its conglomeration of nuts. Besides the sale in these forms confectioners within the last few years have been making a good many salted peanuts, and some persons prefer them to almonds.

But outside of the consumption of peanuts in one of these forms—and the voracity of the small boy makes the quantity enormous—the peanut has no other known use in this country. The "known" is used advisedly, for many a person with epicurean tastes who orders a salad at a downtown restaurant and pours over it what he believes to be a rich oil of the olive is only using a product of the humble peanut. Indeed, so fine is the peanut oil made in foreign countries that it is difficult for even the most expert dealers to tell it from the genuine olive oil. Being a great deal cheaper, it is therefore much used as a substitute.

The manufacture of peanut oil in Marseilles, France, and in Germany has grown to be, within the last ten years, a great industry, and it has no competitors in this country to hamper its growth. The peanuts used come from the east and west coasts of Africa, Mozambique, India, the United States and a very few from the Argentine Republic. The best grades for the production of oil come from the valley of the Senegal in Africa, yielding about fifty-one per cent of oil in weight. The American peanut is smaller in size, but much finer in grain and of a far better flavor. The oil, however, is not of as good a quality and the nuts yield only about forty-two per cent of oil.

The process of expressing the oil is similar in a good many respects to that used in the cotton-oil mills of the south. Most of the nuts are imported shelled, owing to the greater ease with which they are shipped. As soon as they reach the factory they are placed in a machine which resembles the American fanning mill for wheat, and the dust and pieces of shell are blown out. They are then eject-

ed into a cylinder, through which they are propelled by an Archimedean screw to a pair of heavy iron rollers, through which they pass and are crushed. These rollers are so constructed with springs that if a hard body, like a pebble or a piece of iron, gets between them they will spread apart enough to let it through.

Passing the first crushing machine the partly broken nuts are carried forward to the second, where the pressure is greater, and they are again crushed. From here they are bolted through a sieve, the finer peanut "flour," as it is called, shaking through and the coarser remaining to be ground over again. The flour is conveyed along by means of another Archimedean screw to a pair of mill-stones similar to those used in an old-style flour mill. As it sifts out of the spout it is carried to a large vat, where it is slightly heated and then pressed into "scourtins" or woven bags of horse hair. The scourtins are conveyed to the hydraulic machine, where they are subjected to the tremendous pressure of 2,850 pounds to the square inch and left for an hour. At the end of that time all the oil that can be obtained in the first yield, about forty per cent, has been extracted. This is the most valuable product of the nuts. It readily brings from \$7 to \$8 per 100 pounds and is a fine, clear oil of about the color of olive oil.

After the first pressure the meal is removed from the scourtins and raised to a temperature of about 158 degrees, after which it is again pressed and this time yields about thirteen per cent of oil. This second pressing is worth only about half as much as the first.

Besides the use of the oil for salads it is extensively devoted to the manufacture of fine white soaps, for which France is noted. The greater proportion of it is consumed in this way. The finer parts of the first pressing are also used extensively in the manufacture of oleomargarine and other compounds placed on the market as substitutes for butter.

The shells and husks of the peanuts are sometimes ground up and fed to cattle, but for the most part they are regarded as valueless.

But the refuse left in the scourtins after all the oil has been extracted is becoming yearly more valuable. Indeed, it is now regarded in Germany as the main product of the oil factories. As a food for cattle and sheep it has a value of \$30 to \$40 a ton. It is also fed to horses in cold weather, but in summer it has been found to be too heating. Within the last few years its usefulness has been much extended by the preparations in Germany of peanut flour for the use of the army and for general consumption. It is exceedingly rich in nitrogenous substances and is therefore an excellent substitute for meat for the industrial and peasant classes.

It is made in several forms: First, peanutgrits, the coarse meal dried, purified, bolted and packed in papier-mache boxes containing one German pound and sold at retail for twelve cents each. In this form it is used for soups and cakes. Peanut flour, the second product, is much finer than the grits and is a most palatable dish. When cooked it tastes a good deal like oatmeal. Peanut biscuits or crackers are the third manufactured product and they are said to be not only toothsome but nourishing. A biscuit is also made with the addition of a little chocolate for the use of persons suffering from diabetes or from excessive stoutness. Its richness in protein and its low proportion of carbohydrates, like starch and sugar, gives it its medicinal value.

Extensive experiments have been made in Germany in feeding the inmates of the hospitals, and, although many of them were afflicted with dyspepsia and other alimentary diseases, it was found that the peanut-flour food was not only enjoyed by the patients but well assimilated. The German government has also tried it as rations for soldiers, and it will probably be more extensively used in the near future. Peanut-oilcake food may, before many years, be as common on the restaurant bills of fare in Chicago as buckwheat cakes.

As the industry grows it is also likely that factories will be set up in America, although so far the small boy and his sister have been able to consume most of the product.

THE poet and statesman Lowell said: "In the scale of destinies, brain weighs more than brawn."

Good Reading

THE difference between man and animals is a great one, considered from the physical and mental standpoint, but still there may be a bond of union and sympathy that gives rise to sincere sorrow when it is broken.

Such was the case between the writer and Squeak, And who or what was Squeak? It was nothing but a common, everyday mouse. This was the way of it.

The writer was alone in his spacious library. He was alone in the big house. Books, the silent mentors of the heart, were ranked and tumbled around the room. The table was piled with magazines and stacked with papers. The roomy rocker was comfortable and on the table was a shiny typewriter. Before it, rocking idly, was a man touched with the frost of years and sad at heart. The woman of the home, and there is a woman in every real home, had been called recently, and had gone never to come again. The daughter had left for the new life in a distant city, and the place was silent and lonelythe loneliness of bereavement and sorrow. So the man was alone, gathering up his burdens in thought and wondering how long it would be till the unseen angel behind saw the last sand fall from the upper end of the life glass.

In one corner from behind a bookcase a little mouse crept timidly. It ventured part of the way across the floor and scampered back to its retreat. Then it came again, darting hither and thither over the carpet. The next day it came again and was less fearful. So some food was provided for it and it came regularly, as the days went by. One day it clambered up, paw over paw, on the drapery of the table cover that touched the floor, and explored the upper world of the table top. There it found food and apparently knew no fear, even when the writing machine was thrashing out copy for the printer. Then we began to study the little bluegray thing and constituted ourselves caterer to it. And what do you think it liked best-cheese, cake, crackers? No, but how it did take to apple seeds? I have seen some grand sights in my time in this and other lands, but none come to me with more vividness than this little animal sitting up, squirrel fashion, an apple seed in its tiny paws, peeling the outer hull and then eating the white, tender meat, as daintily as you please. After eating came the face washing, the putting the shining coat in order and caring for the tail to the very tip. No dainty maid or perfumed beau was ever more careful of clothes or fingers after an orange than was mousie after half a dozen apple seeds. And then sometimes the little animal would curl up like a cat and sleep, never more than a minute or two, right on the table beside the writing machine. The secret of the whole business was in the fact that it had never been either scared or hurt. I know there are people who hunt down God's creatures to their death whenever and wherever they see them, but we will not go into the ethics of that, simply saying that the strength of a giant does not mean that it confers the right of torture or killing the weaker. Then there began the strange friendship between us. It was an unworded compact. The man on his part, agreed to furnish apple seeds, pie crust, some cake, and to be sure to neither scare nor hurt the mouse. The mouse agreed to come every day at or about two o'clock in the afternoon if the above was faithfully carried out,

The mouse came regularly enough, and showed its good faith by even allowing its back to be stroked with the finger tip while it ate pear seeds, which, clearly, were regarded as better than apple seeds. Occasionally it showed signs of an intention or desire to have a romp with the fast flying keys of the machine. Apparently the mouse reasoned, if this lumbering giant will neither hurt nor scare me, the machine will not. So it became familiar with the typewriter. But it had not reckoned with the combination of the two, and so one day when the man was writing fast the machine suddenly stuck. There was a nervous push of the keys, and then a pitiful, reproachful little "squcak," and we stopped to investigate. Down in the bowels of the machine was the mouse, crushed, dead, and limp, killed by the operator,-murdered all unknowing by its best and only human acquaintance.

though Death had chosen the house for his home. Then we took it gently in the palm of the hand and noted the glossy fur, for it had lived well, the glazed eye, and we wondered, as millions have done before us, why Death divides those who love one another. We took it out, and to be sure that the terror of all mousedom, the house tiger, should not mutilate the remains, we turned up the brown earth where the lilies grew and buried it with only a yellow-belted, droning bumblebee as mourner, and the blue sky over all.

HOW ROCK CANDY IS MADE.

ROCK CANDY is the purest confection made. It is simply large crystals of sugar beaded on strings, and when it is not colored it has nothing in it but sugar, and the best sugar in the market at that.

Time was when every school boy in the country knew the taste of rock candy, and carried it around in his pockets, but the caramels, gum-drops, Turkish pastes, nugats, chocolate creams and other forms of the mushy candy which the dentists say is ruining the teeth of the rising generation have shoved the old-fashioned rock candy to one side, and the crunch of strong white teeth on the hard crystals is seldom heard. Large quantities of it are still made, however, and, in fact, the output increases from year to year, for liquor dealers, druggists and patent medicine manufacturers consume tons of the strung sweet. A well-known dentist is authority for the statement that if molasses candy, rock candy and hard bread were eaten by boys and girls instead of paste candies and soft bread the next generation of dentists would have little to do.

It requires strong teeth to break up rock candy in the mouth, for the crystals are glazed, hard and smooth-surfaced.

The manufacturer of rock candy begins with refined granulated sugar of the best quality. Brown or soft white sugar will not do; he must start with crystals. He first empties between four and five barrels of the sugar into a copper boiler which is five feet in diameter and between three and four feet deep. After the sugar has been dumped in, from sixteen to twenty gallons of water are mixed with it and then the steam is turned into the coil of pipes on the bottom and around the sides of the pan. After half an hour's boiling the sugar has changed into a clear, thick sirup, and it is drawn off through a pipe in the bottom of the pan through fine sieves into copper pots beneath. In these copper pots, each of which is about two feet in diameter at the top and a foot in diameter at the bottom. the sirup crystallizes into rock candy. The copper pots have little holes in the sides, and through these holes cotton cords are run, so that the pot from the bottom up is strung with the strings, which are placed in the pots before the sirup is poured in. They are fastened in the holes with plaster of Paris, which not only holds the cords in place, but closes up the holes so that the hot sirup cannot leak out. Each pot holds about five gallons of sirup and weighs about forty pounds, and after they are filled to the top with the boiling sirup they are carried to the hot house and left there for a time.

The hot house is usually made entirely of brick, with strong shelves on all sides. Under the shelves the steam pipe which heats the house is coiled and in this hot house the pots, with their sweet contents. are left for two or three days in a temperature of about 160 degrees. The heat causes the sirup to crystallize and the crystals arrange themselves on the cotton strings and the side of the pot, forming a cover of crystals for the copper pot. When the three days are up the pots are taken down from the shelves and the thin crust of crystals is smashed in. Then the clear sirup, which is used in saloons and at soda-water fountains is drained off. Clear water is dashed into the pot to wash the sirup from the rock candy. Then the pots are turned upside down over a trough and left there for a day in a temperature of 70 degrees, while the remainder of the sirup drains off and the rock candy becomes glossy and hard. The plaster of Paris is scraped from the sides of the copper crystallizing pots, thus releasing the strings, so that when the pots are thumped down upon a table and rapped with a mallet the rock candy falls upon the board and is broken up and weighed out into five-pound and forty-pound boxes.

Yellow rock candy is often colored with burnt

shallow copper pans, which are placed directly or the blaze of a hot fire. About 100 pounds of su and four gallons of water are mixed together in the pans. In a short time the sirup begins to burn an a thick, irritating smudge rises from the sugar as compels the workmen to cover their mouths at noses with cloth or wear respirators, for they a obliged to stand over the pans to stir the content In a short time the sugar is burned to a crisp an then it is washed with water, pounded and ru through a sieve. The red rock candy is colon with carmine and is the only rock candy which ha anything in it but sugar.

LIES WE TELL.

CAYENNE pepper is prepared not from a peppe plant, but from a capsicum.

Neither is burgundy pitch pitch, nor does it com from Burgundy.

Jerusalem artichokes do not come from Jerusa lem. The plant is not a native of the holy lar The Jerusalem artichoke is a sunflower, and gain its name from the French word, "girasole," mean ing "plant which turns toward the sun."

Turkeys do not come from Turkey. The birdi a native of America.

Camel's-hair brushes are made from the soft bushy tail of the common squirrel.

German silver is not silver at all, but an alloy of various of the baser metals, which was invented; China, and used there for centuries.

Cork legs are not constructed of cork, neither die they come from the city of that name. The usua material for a cork leg is weeping willow, covered with raw hide.

Cleopatra's Needle has nothing to do with Cleopatra, but was set up about 1,000 years before that lady was born by Thothmes III.

OSTRICH PLUMES SCARCE.

THE London papers note that the supply of os trich plumes in that city, the center of the trade, ha been greatly curtailed by the south African war. I is said that there will be a deficiency of nearly \$270 000 worth of feathers at the next sale in Minding lane. To these sales, which take place six times year buyers come from every part of the continent and even from America. Over \$4,000,000 worth of feathers are sold every year, making an average of S675,000 at each sale. Since the capture of Khar toum there has been a steady supply of ostrid feathers from Barbary and, though the south African feathers still command the higher price, their supremacy is threatened by the Barbary feathers At Mincing lane the cost of the feathers ranged from \$7.50 to \$75 or \$80 per pound weight. The best wing feathers give about 110 to 120 in the pound, and at the highest price this works out at less than seventy-five cents each. As man the white feathers scarcely need cleaning, and a dyeing and curling are very inexpensive, either the middleman or the milliner must reap handsome profits from the fashionable weakness for these beautiful feathers. The smaller feathers from the tail and body of the bird are used for boas.

A JEWEL CLEANER.

A New York woman has a unique manner a making a living. She goes from house to house to the fashionables of New York, and directly and the eye of her customers cleans the family jets She carries all her implements for cleaning in a tle hand satchel and thus almost unincumbered good her rounds.

BEES IN PALESTINE.

UNDER rational treatment the average yield of a beehive in Palestine is 100 pounds.

Life is often but a dream to a young manus Lying on the table, only a mouse, it seemed as the making of rock candy. The sugar is burned in experience treads on his corns and wakes him up

CLOTHING IN CHINA.

It is safe to say that four-fifths of the clothing by the Chinese is cotton. Rich and poor, what had low, dress in cotton clothes.

The importance of this fact in its bearing upon lectica's great cotton-growing industries can tectica's great cotton-growing industries can make the overestimated. Here are over 300,000,-over 100,000, our next door neighbors, furnishing an expeople, our next door neighbors, furnishing an expeople market for one of our most overworked to so for outcome. Connect the cotton-producing the with the far east by an isthmian canal and the outcome with its vast populations under an elightened government, and it will be scarcely estable ever again to glut the cotton market of

Jocold weather coats and trousers, double and lined with cotton wadding take the place of the lewy woolens worn by western nations. This is try much cheaper than wool. It is clumsy, of cruss, but that does not inconvenience the wearer, is his clothes hang so loose upon him that there is

As to the future, it is in every degree probable that in time much less homespun will be worn, and pathine spun and woven cloth will take its place. Incliterary classes wear foreign cloth for outside aments almost entirely now.

Awoman can spin from three to five ounces of botton in a day and earn about one cent.

"DO MISSIONS PAY?"

THERE is a widespread skepticism as to the value of mission work. People are asking for fuller and more accurate information concerning the need for them and what they are doing to satisfy that need. A course of reading like that offered by the Circle, asswers these questions and gives all the information needed on the subject.

It costs the United States \$120 to take care of an anchistian Indian in Dakota, and but \$7 to take care of a Christian Indian. Again, it is a fact that missions have not taken out of the world's pocket-book five percent of the money they have put into that pocketbook.

CIRCLE MEETING LESSON.

So we built the wall .- Neh. 4: 6.

ARTANERNES LONGIMANUS is on the throne of Perna. Nehemiah filled the important office of cuplearer to the king. He learned of the ruined desole condition of Jerusalem, and in fifty-two days had the wall rebuilt, the gates hung, the city forthed. Good leadership inspires the people.

They built the wall in the face of discouraging mheism. Read Neh. 4: 1-3. Was there ever a took for God undertaken that these "hinderers" the not busy? They find fault with the prayer meeting, the Sunday school, our mission work, and that Reading Circle But we can build, we can work apatiently and cheerfully and not grow discourged, when they criticize.

They all worked together. Nehemiah says "we." The Pharisee said "I." Co-operation will accompash wonders. When parents and children, and sachers all labor together with the superintendent, and the minister, then the church is "building," is the mission, by doing many good works.

back one did whatever he could. Sometimes they be burdens, sometimes they grasped weapons, we stood as sentinels, others bowed down 'neath put and choose. The willing worker says, "I'll do ti if it is only an obscure bit of work that is given the is faithful over a little.

be outlook was dark and gloomy they prayed to Then they set a watch against their enemies.

Then they set a watch against their enemies.

The topic and praying and working were all together. Tennyson said, "More things are prayer than this world dreams of."

BOOK REVIEWS.

"Counsel Upon the Reading of Books," Houghton, Mifflin & Co., Boston, Mass. A book of 306 pages. It is made up of six papers based on lectures arranged for by the American Society for the Extension of University Teaching, delivered in Philadelphia last winter. As good a thing as there is in the book is the preface by Henry Van Dyke, on reading and books generally.

This will be a helpful volume to those who read much, as well as for those who expect to read systematically. It will pay you to buy the book and read it carefully. Usually when a teacher goes about outlining a course of reading for others he simply sets the table with the things he likes himself, but in this volume it is managed better. There are six of them, and they each tell a different story, and they don't clash because of that difference. One talks about history, another discourses on fiction, while a third discusses essays and their kind. By the time one gets around the six of them, he is helped in as many different ways. Then the way their stories are told makes the book easy reading. It is all bright enough, and up to date, but is never heavy or wearisome. In order that you may have a taste of the method of the first contributor to the book we extract from page 21:

"Read the preface first. It was probably written last. But the author put it at the beginning because he wanted to say something particular to you before you entered the book. Go in through the front door.

"Read plenty of books about people and things, but not too many books about books. Literature is not to be taken in emulsion. The only way to know a great author is to read his works for yourself. That will give you knowledge at first-hand.

"Read one book at a time, but never one book alone. Well-born books always have relatives. Follow them up. Learn something about the family if you want to understand the individual. If you have been reading the "Idylls of the King" go back to Sir Thomas Malory: if you have been keeping company with Stevenson, travel for a while with Scott, Dumas, and DeFoe.

"Read the old books,—those that have stood the test of time. Read them slowly, carefully thoroughly. They will help you to discriminate among the new ones."

The object of the book is to enable those who read, especially those not yet well versed in analytical methods, to get the best out of the authors followed. Doubtless your nearest bookseller could get it for you, or you can order directly from the publishers. It is worth while.

"Women of the Bible," Harper & Brothers, New York, pages 188. This is a new book on some old subjects. It is a beautiful volume, handsomely illustrated, and about as far away from the coarse subscription book taint as can well be imagined. The name is suggestive of the oldtime coarse woodcut, and the stock talk about the women of the Bible, but it is anything but that. It is the kind of a book that would make a good Christmas present for either man or woman, and we are pleased to call the attention of our readers to it here.

It is a composite affair, dealing with Eve, Sarah, Rebekah, Miriam, Deborah, Ruth the Gleaner, Hannah, Jezebel, Esther, Mary Magdalene, Mary and Martha, and the Blessed Virgin Mary. Each of these is taken up by prominent ministers of literary ability, such as Lyman Abbott and Cardinal Gibbons, and the characters dealt with philosophically, from the individual's point of view. The authors being as varied as their subjects there is naturally no continuity of style about the book, and this is a good point in its favor. One does not get wearied with the platitudes of one man, in fact there is no platitude about any of them. The treatment of the several subjects is bright and happy, and what is more to the point, it is new and interesting. There is nothing of the superannuated preacher's Sunday-school book cant to it, and no reader of the Bible can fail to be interested in the volume. Cardinal Gibbons in treating the Blessed Virgin Mary gives the Catholic version of their adoration of the mother of our Lord, and it is done in an unobtrusive way that will interest every Protestant reader and offend none.

It is unfortunately true that the treatment of whole world could not pay.

biblical subjects in most of the literature of the day is commonplace and singsong in character. This book has not a flavor of all that. It is all decidedly out of the ordinary, and each writer approaches his subject with a reverence that would satis., ? medieval saint. There is nothing of the destructiveness of the modern viciousness of the so-called higher criticism, while at the same time there is much in the book that will be novel and new to the reader-things well known to scholars, but not in interesting shape for the lay reader, as ordinarily accessible. A good many of these things are brought out in this book in a way that cannot fail to interest the man or woman of average intelligence, and we cordially recommend the purchase of this book, either for personal use, or as a beautiful gift for a friend. The illustrations are, of course, all ideal, but they are well done, in the highest style of the art, and as the frontispiece there is the composite picture of the Madonna. Ask your nearest bookseller for it, -"Women of the Bible," Harper Brothers.

ILLUSTRATIONS OF MINISTRY.

A Russian soldier, one cold winter night, was on duty in a sentry-box. A poor working man passing by, moved with pity, took off his thick sheepskin coat and gave it to the soldier to keep him warm, adding that he would soon reach home, while the soldier would have to be at his post all night. Notwithstanding this act of kindness, the sentry succumbed to the terrible frost, and was found dead in the morning. Some time afterwards the benefactor was on his deathbed, and had a dream in which Jesus appeared to him. "You have got my coat on," said the man with great surprise. "Yes," Jesus replied, "it is the coat you loaned me that cold night when I was on duty and you passed by."

"REPETITION is the mother of memory," so do not weary of repeating old truths. But be sure that they are truths, for many sayings pass under this name that have no right to it. Be not eager for novelties or ambitious of a wide range of subjects. "A little of everything and not much of anything" is a foolish motto for preacher or teacher. For the instructor in spiritual things familiarity with the Bible is the one indispensable intellectual qualification. He may know many books and be versed in numerous sciences, yet be a fool and slow of heart with respect to the Gospel. In many cases the ignorance of the pastor is concealed by the still grosser ignorance of his hearers. To spare themselves the trouble of scriptural investigation, they take for granted that he knows all about the matter, and are ready to accept any absurdity that happens to be in fashion. But if these hearers would be benefited they must study and think for themselves, and regard themselves, each one, as responsible for the use they make of their opportunities.

To govern one's self necessitates a control of one's thoughts. Here is Paul's rule for this:—"Whatsoever things are true, whatsoever things are honest, whatsoever things are just, whatsoever things are pure, whatsoever things are lovely, whatsoever things are of good report; if there be any virtue, and if there be any praise, think on these things." (Phil. 4:8). The same apostle urged his brethren at Colosse to let the word of Christ dwell in them richly in all wisdom.

To spread truth and expose error is a noble mission and one to which every man is called. If he is slow of speech or timid in spirit he can circulate tracts and papers, and thus influence many minds. The devil is busy all the time in scattering poisonous literature over the land, and the friends of Christ should be equally busy in furnishing the antidote. Be prodigal in sowing the seed of the kingdom, and then you can pray in hope for a bountiful harvest.

Christ was sold for the price of a slave, but he bought our freedom from sin at a price which the whole world could not pay.

UNITED STATES PRISONERS.

THE department of justice, by reason of the fact that it has control of all the prisoners of the United States, has on its rolls a number of prison inspectors. These officers make regular visits to all prisons where prisoners of the federal government are confined. They investigate the treatment of the federal prisoners, the food they receive, their clothing, etc. An informal understanding the department has is that its prisoners shall not be subjected to corporal punishment. This fact led to a discussion recently of the management of the Elmira reformatory of New York, so long under the management of Superintendent Brockway. Mr. Brockway had been using the lash in trying to induce better behavior, and the department had a long correspondence with him.

"Brockway was one of the greatest prison managers in the United States," said one of the prison inspectors, "and I make the prediction that the Elmira reformatory will never be the same thing again it was under him. He knew more about convicts than any man in the world and could manage them better, despite the attacks made on him. Brockway used to have three classes of prisoners in his institution. The classes were made for the reward or punishment of prisoners. The first class consisted of well-behaved prisoners. They did not reach that class until their records warranted it. When they did so they were entitled to wear blue suits, much resembling the uniform of a naval officer. The uniforms were really pretty. The men were also entitled to many privileges. They ate at a table of their own, had nice plates and table ware, with white linen, and many things to make their surroundings attractive. The second class consisted of prisoners who might be termed probationers. They were a gray uniform of not as good material as the first-class men, and had a portion of the privileges and pleasures of the first class. The second class was made up of the main body of the prison. The third class was made up of bad fellowsthose of bad behavior, I mean. They had to dress in a scarlet uniform, the cloth being red enough to be seen a long distance. They are out of plates that had been cracked and misused by the firstclass men, and on cheap tables, to themselves. There was no linen on their tables, and they were known to other prisoners as "the lobsters," on account of their bright uniforms. They were generally called lobsters by all the others, and the punishment was severe. It was a frequent occurrence for federal prisoners to come to me and ask to be taken out of this class. Brockway had many other methods that showed him to be a great prison man-

"I have found that the best managed prisons in the United States are those where the prisoners are well fed. It is the old story of a man's stomach. Satisfy that and the man is satisfied. This is especially the case with convicts. Their mental development is not such as to give them mental worry and so the physical are the greatest troubles they have. The West Virginia penitentiary at Moundsville is the best in the country in this respect, When I go there and call upon the United States prisoners they have no complaints to make. Almost without exception there is no fault to find, The food is carefully prepared and is abundant, they say. But many other prisons are not that way. The food is such as to cause dissatisfaction and the men are always complaining of ill-treatment and lack of proper food. Some prisons really give the men scarcely enough to live on and then punish them severely when they complain.

"The warden of the Fort Leavenworth penitentiary, formerly the warden of Joliet, never uses a whip on convicts. He is an advocate of solitary confinement as a last resort in punishment. A bad man will be put in a room removed from other rooms, where there is nothing or nobody to be seen or talked with. His food will be bread and water. He generally gets the worst of the bargain in a few days and is then conquered."

Sign your name and address every time you write us, and do it so plainly that there is no mistaking it. Nearly fifty thousand letters come to the Publishing House annually, and it is a marvel that we remember so many addresses. Take no chances. Each time you write us sign your name and address.

MADE GOOD DETECTIVES.

In New York City and the surrounding towns almost 100 women are engaged in detective work; in Chicago the number similarly employed is quite large. A large percentage of these women are employed in the big stores, where shoplifting is so commonly practiced, that the head of one large establishment said: "We could no more do without a detective in this store than we could do without a model to show off our gowns." The dodges of shoplifters are innumerable. Some wear long capes and slip lengths of silk or passementerie, feathers and handkerchiels under their arms; others wear outer skirts with long slits concealed by the gathers, so that they can slip their thefts into pockets in an underdress known as a "kickskirt." Handkerchiefs and gloves are tucked into muffs and bodices, and, worse than all, children are pressed into the service. One successful woman thief tucks lace and embroidery and any knick-knacks she can lay hands on down the backs of her two little children, who are exquisitely dressed; others instruct their small daughters to take anything that is put in their way. Children of eight and nine make clever shoplifters. Sometimes two women work together and then it is very difficult for the detective to trap them. Women detectives are valued and well paid when they are skillful.

CANNOT KILL THE CACTUS.

One of the commonest of cacti in gardens is the echinopsis multiplex, a small sub-globular species, with five or six sharp ribs, and sparsely sprinkled with a few clusters of long black spines on the sharp edges of the ribs. It sends up, occasionally, a large white tubular flower, which, like so many of the family, opens at night and soon withers away. In Germany a druggist, Ludwig Rust, placed a specimen under a scaled glass case seven years ago, and it is said to be yet in a "thriving condition," to the surprise of the scientific men of Berlin, who are puzzled to know where it obtains its carbonic acid. Meehan's Monthly says that many suggestions are advanced as to the source of this element. So far as the published account goes, however, there is no indication that the specimen was weighed before it was encased, or weighed after its seven years of entombment—no evidence, it may be said, that any carbonic acid was absorbed. It is just as likely to be a case of dormancy. It is now well understood that in the absence of exciting causes dormancy in vegetation may be retained indefinite-

CHARLIE'S SKIN.

STUDENTS in dermatology are much interested in the skin of the monster elephant Charlie, once the great attraction of the Crystal Palace. The skin weighs no less than a ton, or exactly one-fourth of the total weight of the animal during lifetime.

As soon as the natural moisture has dried up the skin will be mounted by a taxidermist to represent Charlie crashing through a forest jungle, just as he did through the Palace on the day when, after killing his attendant, he was shot with a sporting express rifle. Charlie's height was ten feet three inches, and as he had been before the public for nearly forty years, his value was estimated at \$10,000.

HIS NOM DE PLUME.

"Wille traveling on the continent last summer," said a gentleman who has just returned from a European trip, "I engaged the services of a courier, and one evening, on arriving at an inn in Austria I sent him to enter my name in accordance with the police regulations of that country. The man replied that he had already anticipated my wishes and registered me as an American gentleman of means.

"But how did you write my name?' I asked.

"'I can't exactly pronounce it, but I copied it carefully from your portmanteau, sir.'

"'But it is not there,' I said. 'Bring me the book.'

"The register was brought, and on looking at it, what was my amazement at finding, instead of a very plain English name of two syllables, the following portentous entry: 'Monsieur Warranted Solid Leather.'"

THE WORLD'S MOST FAMOUS TEN.

HILDEBRAND, also known as Gregory VIII, born in Tuscany, about 1015, and died 1085. H was one of the greatest of the Roman Cathol Popes. His claim to greatness in the direction of influencing men lies in the fact of his corrections abuses in the church and the establishment of it central power. At the time of his incumbency h found the church more or less at the power of the state, and he also found the church at the mercy of the people composing it. He changed all this, make ing the state subordinate to the church, and he cen tralized the power of the church within herself, tw things that, in greater or less degree stand to the day. In short, he pitted himself as Pope against civil government, and against subordinate interfer ence within the church itself, and he won in both His was a gigantic character, and what he accom plished survives in greater or less degree to the day, and as there are millions in the Catholic church it is easy to perceive his rank among those wh have influenced mankind.

WILLIAM THE CONQUEROR: Born 1027 or 1028, died 1087, king of England having conquered Harold king of the English, in 1066. He was a great warrior as well as a statesman. His conquest of England marks the beginning of an era in that country, the effects of which are felt to this day.

DANTE: Born 1265, died 1321, a great Italian poet. He wrote much that is still read, and is great as one of the world poets. His greatest poem is the Divina Commedia.

GUTENBERG: Born about 1410, died 1468. Gutenberg's claim to honor among men lies in the fact of his invention of movable types. Prior to his invention the reproduction of a manuscript was a very tedious and expensive operation with the pen, and only the wealthy could come into possession of any considerable number of books. The introduction of movable types, the very principle on which the printing of this article depends, changed matters so that books could be multiplied indefinitely, and the boon to mankind is so great that it can not be estimated. The invention, more than any other, perhaps, has dominated the world. Gutenberg had his troubles, and never reaped any material personal advantage from his invention, but, on the contrary, with the characteristic reward of the great, died poor, friendless and childless. There is no known portrait of the inventor, all the representations being purely imaginary, as they occur in old prints, and on medals.

COLUMBUS: Born 1436, died 1506. An Italian by birth. Great because he discovered the New World in a mistaken search for a new way to the East ladies.

COPERNICUS: Born 1743 in Prussia, and died 1543 He was a teacher, a priest, and a physician. As teacher he devoted himself to the study of mathe matics, and in this he excelled. His fame rests of the fact that he was an astronomer and evolved the system that bears his name. At the time there wen a number of cumbrous astronomical systems, one of which was correct, and Copernicus undertool the compilation of the truth of these varying sys tems, and the formation of a new theory. This h did, and it is known as the Copernican Theory is astronomy. It was an imposing structure, and whi not correct, still it laid the foundations of future development that has given us the exact knowled of the heavenly bodies now in our possession. wrote other books and was, altogether outside of his astronomical system, an author of repute in day, but it is on his astronomical studies and h compilation of the various systems of the time that his fame rests.

Angelo, Michael: Born 1475, died 1564. The last and most famous of the great artists of Florence, Italy. He was a great painter, sculptor and poet. The Last Judgment in the Sistine chapel his, and is the most famous single picture in the world.

RAPH.EL: Born 1483, died 1520. An Italian artis of widest range of thought and execution. most popular of the great masters of painting.

What They Say!

Chicago Says:

INGLENOON is par excellence. It has in our church publications.—John E. Mohler. Each number seems better than the reding one. I have a Sunday-school class and boys and girls, from thirteen to eighteen and all get the INGLENOOK as a Sundayand they are delighted with it. F R. Miller.

Clarence, Iowa, Speaks Out.

his with much satisfaction that I express erapproval of the Inglenook. Its appearnee and general make-up are such that it at Recommends it to the reader. It has found stay into many of our homes, and the peothe truly glad for its continued success.—

Mt. Morris Says:

The INGLENOOK easily takes rank among to best young people's papers in the country. isbetter than most of them because of the sence of the silly love stories and light readto it is a most valuable addition to the bribren's publications. No family should be ithout it .- Eld. D. L. Miller.

0 0

Lanark, Ill., Has An Opinion.

We have been receiving the INGLENOOK patit started. We like it very well. I would ite to see it go to all the homes of the land. Deshott sermons are good for both old and peng.-Eld. I. B. Trout.

00

GIRDLING THE GLOBE

By ELDER D. L. MILLER,

Author of "Europe and Bible Lands," "Seven Churches of Asia," and "Wanderings in Bible Lands."

The author tells of things seen in his travels around the world; and writes in such an interesting and impressive manner that the reading of the book will give one a better idea of things than would be received by many hundreds who would make the trip themselves. Note what one writer says:

I have examined and read Bro. D. L. Miller's last book, "Girdling the Globe," and find it an excellent work. While all of his books are good and instructive, I put this as THE BEST, in fact the most interesting book I ever read outside of the Bible. Everything is made so clear and plain by the author. I would recommend all to secure it if in their power to do so. Surely a cheap trip around the world! Who would not take in such a trip and at the same time enjoy the comforts of home?

The Red Morocco binding, with gilt edge, gold back and side title, and handsomely finished in every way, makes a magnificent Christmas present to your near relative or dearest friend. Price, \$3.00, prepaid. What better do you want?

THE INGLENOOR

"The Inglenook" will be Sent to any Address the Rest of this Year for Twenty=five Cents, or it will be Sent the Rest of this Year and all of next Year for One Dollar.

The Best Way is to send the Dollar and be Done with it. After You Have Read it for a Week or two, You'll be Sorry that You Didn't Save Money by Subscribing for the Whole Year at Once. It's a Paper that Grows on One. Once Read, Always Read!

We Want Agents, == Real Live Agents

In Every Part of the Country. Anybody can solicit Subscribers at the Twenty-five Cent Rate, and Whoever Sends in Club of Ten of These, Can have his Choice of ONE of the following books:

Dictionary of the Bible, Beside the Bonnie Brier Bush, Natural History of Birds and Quadrupeds, Dream Life,

Drummond's Addresses,

Ten Nights in a Bar-Room, Adventures of a Brownie, Imitation of Christ, Etc.

If he gets twenty subscribers he can have two books; for thirty subscribers three books, and so on. And they could be had in an hour's work in many a place. Whoever shows himself an efficient agent will be put in line for the Fall work connected with the INGLENOOK. There is a library of Fifty bound books waiting for somebody.

The Agent who sends in the largest list of dollar subscribers between this and the first week in January, 1901, will have sent him a Library of FIFTY BOOKS. Here is the list:

Adventures of a Brownie, Æsop's Fables, Auld Licht Idylls, Autobiography of Franklin, Autocrat of the Breakfast Table, Bacon's Essays, Beside the Bonnie-Brier Bush, Black Beauty. Burns' Poems, Child's History of England,

Confessions of an Opium Eater, Dictionary of the Bible, Dream Life, Drummond's Addresses. Emerson's Essays, Ethics of the Dust. Fairy Land of Science, Fifteen Decisive Battles, House of Seven Gables, Imitation of Christ,

Intellectual Life, Lays of Ancient Rome, Longfellow's Poems, Lorna Doone, Mosses from an Old Manse, Nat. History Birds and Quadrupeds, Poe's Poetical Works, Prue and I, Rab and His Friends. Reveries of a Bachelor,

Samantha at Saratoga, Sesame and Lilies, Sketch Book, Sticket Minister, Stories from the History of Greece, Stories from the History of Rome, Story of an African Farm. Ten Nights in a Bar-Room. Thirty Years' War. Twice-Told Tales,

Window in Thrums, Education, In His Steps. Minister's Wooing, Professor at Breakfast Table, Lamb's Tales from Shakespeare, Lallah Rookh, On Liberty, Tanglewood Tales, Sign of the Four,

The Agent sending in the next largest list will have the choice of TWENTY-FIVE books out of the above list. The third largest list will entitle the Agent to FIFTEEN of the books, his choice; and the fourth largest list will win TEN of thes There is also a cash commission going to the Agent. We prefer the services of the Messenger Agent i he will write at once for the place, but we will put the first live applicant into line, as the INGLENOOK is not going to be the last in anything. If agents desire to enter for the Library they should say so in order that we may keep tab on subscriptions re Elgin city is barred in the competition for prizes.

The announcement of the successful Agent will be made in January, 1901.

A Live Paper for Live People.

The Inglenook is no longer an experiment. It is regarded as phenomenally successful by experienced newspaper me who know what they are talking about. The reason is not hard to find. It is a FIRST-CLASS PAPER, with nothing of It is up to date, and always will be. It will have something new in each issue, it always has and commonplace about it. and it never will fall below its self-set standard,—being the best paper of its kind in the world. You can't read it without The INGLENOOL The whole wide-spread world is ransacked in the interest of its readers. being interested and instructed. isn't made with a dull pen and a pair of shears. It is a live paper for live people.

The like of it wa Some of the best known men and women in the church will write for the INGLENOOK next year. Every man and woman in the list know never undertaken in the church before. Look at the names, note the subjects! what they are talking about.

NATURE AND ART.

How shall I paint a picture?
And how shall I sing a song?
When the winds of God in the heavens
Are chanting the whole day long,
And the ear that's attune to music
Can list to the mighty verse
That the winds and the waves are singing,
In the halls of the universe.

And how shall I mix my colors?

And shall I not be afraid?

When the Lord has painted a picture

With the pigments himself has made,

And the eye that's attune to beauty

Can look with a long delight

At the fresco that he has painted

On the walls of the day and night.

—Bertrand Shadwell.

THE BANNING OF ELLEN WOODS.

In Three Chapters .- Chapter One.

THE blue Juniata winds its way around and through the mountains, and either babbles over shallows or creeps through the deeper pools on its may to the Susquelianna. It passes through fertile valleys, reflecting the mountains on one side, and the scattered trees on the other bank, till it takes a wm, and the scenery is reversed. At one of these places it flowed near a grove in which was a Dunker church. Those who pass on the Pennsylvania tains might see it to this day, if they are sharpeyed. A closer view of the church on the particularday in question would have shown half a hundied carriages, wagons and vehicles, of all descriptions, in the grove about the house. In instances the horses were unhitched, and in others they were ted to the maples which were just shedding their hame-colored leaves.

laside was a Dunker council in operation. A buildred people were present, and the service had been opened with singing and prayer. Grave, quiet men, and meek-eyed women sat in silence. The Elder in charge called for the report of the visiting Deacons, and one after the other they rose and gave the result of their tour among the brethren preparatory to the coming love feast. Interest tentered in the report of Bro. Jas. Holsopple. He tose and said that he, in company with the other brother, had visited Sister Ellen Woods at her father's home. They had not seen her, she having tefused an interview. But they were given to understand that she had discarded the bonnet, and had openly worn a hat, contrary to her parents' sishes and the order of the church. He had heard hat she said she did not care what the church did in the premises, and that was all there was to re-

Then a silence fell on the assembly. It was case that had been carried over and now decisive action would be taken. Nobody spoke for a few minutes, when the Elder arose and asked the will of the church. There was no reply, and after a moment's quiet he requested the immediate relations of the girl to withdraw till a vote had been taken. forty people silently arose and walked out. When the door had closed on the last one the Elder rose and said that the voice of the church would now be then, and he asked what action should be pursued. here was a minute's silence, when one of the Deacons stood up and said that there was but one ting to do, and that was to expel her. The conregation nodded approval, and then the Elder ded on any others for remarks. In the rear of the ouse a young sister rose and said that her course been a had one for the young of the church, ad that there was only one thing to do, and that to make an example of her. Uncle Isaac Price in his place and called the attention of the embership to Ellen's youth, and plead in a mild to Etten's youth, and piede ...

His remarks did seem to elicit much approval. Then a sister, longer young, never good looking, and unmarand likely to remain so, rose and said that

there was no use in having decisions and laws unless they were obeyed. She moved that Ellen Woods be not only cut off but banned. She said further, that though it was not a church offense, she had heard on good authority, that Ellen intended marrying Henry Zook, an Amish man of the neighborhood. If Ellen Woods had made her choice as she did, let her take the consequences and be put in avoidance. When she sat down the silence of death overspread the congregation. It was more than they bargained for, and yet they would be called upon in a short time to decide that very question.

The Elder said a few words, and remarked that it would be better if a personal vote were taken, and he designated three members to circulate among the people and mark their votes. This was done and the papers laid on the table. The Elder took them up, added the results, and with a pained look in his eyes announced that Ellen Woods had been voted out of the church and put in avoidance. He told someone to open the door and call in the relations. They came trooping in, seating themselves where they had been before. Then the Elder, paper in hand, rose and said that the finding of the church had been that Ellen Woods had been expelled and banned, or put in avoidance. It was customary for some member to be told off to acquaint the unfortunate person with the result. In this instance it was not deemed necessary, for well up to the front sat the father and mother of the girl, and it was held that they could tell her that from henceforth she was a stranger to all that she had once held dearest. The father never moved a muscle, but the mother put her handkerchief to her eyes and sobbed aloud. Some of the older ones shed silent tears.

Banned, put in avoidance, ah, reader, you don't know what it meant, you cannot. It was a doom to a living death. Think of Ellen Woods, by far the handsomest young woman in the whole Valley, a woman with the figure of a Hebe, the eyes of a fawn, and a peach-blow complexion! Her twenty-two years had been spent in the Valley, and at an early age she had united with the church. She was an only child, and, as said before, the handsomest woman in all the country round about. But in an evil hour, after a visit to Harrisburg, she had tired of the garb, and had taken to worldly ways. She and Henry Zook, a neighbor youth, were engaged to be married, and life was all rosy to her. What cared she for the decision of the church? Happily the ban has been put aside these later days, but it was a terror when it was enforced. Ellen Woods was as good as dead to all the members of the church. At her own home her father and mother could not talk with her. She had to eat alone, and when communication was necessary she did the talking and they answered in monosyllables. When she went abroad and met her once brothers and sisters on the highway they stared straight ahead, never looking at her. On the streets of the village they passed her by as though she had no existence. No unkind words were spoken. She was simply nonexistent to them. A hundred homes had been open to her a week before. Now, had she knocked at the door of any one of them, no word of welcome would be spoken to her. Nor would she be invited in the house. If they met her toiling along the road with a laden basket not one would ask her to ride with them. She was dead and buried under the ban. It was a living death in

Over the hills, on the very same day, the Amish brethren, met at a great red barn, discussed the case of Bro. Henry Zook, charged with intent to marry an outsider, one not a member of their church,—of marrying out of the Lord. He was told that if he did it he would ban himself. He was present when the verdict was rendered, but gave no sign. That night as Ellen's mother passed the door of her daughter's room she noticed that it had no occupant. She searched the buildings for

her, but could not find her. It was thought that she had taken her clothes and gone over to Zook's. So the father, to make sure of it, saddled a horse and rode over late at night to ascertain the facts. She was not there, and neither was Henry. All they could tell him was that he had gone away saying that he would not return.

(To be Continued).

SUCTION OF A FAST TRAIN.

"THE theory that a moving train carries along an enveloping air is very interesting," said an engineer, " and I believe there is a good deal of truth in it. I first had my attention attracted to the subject by a curious incident that happened several years ago at a crossing near Birmingham, Ala., where trains pass twice a day at a speed of about forty miles an hour. The tracks are seven feet apart and there would seem to be ample room to stand between them in perfect safety. One afternoon a small fox terrier dog belonging to a section boss was asleep in the middle space and woke up just as the trains closed in from each side. There was a barrel on the ground near by and the dog in his fright jumped on top of it. That possibly brought him into one of the rushing envelopes of air; at any rate he was whirled off his feet and thrown clear to the roof of the opposite car, where he was subsequently found, jammed against a ventilator chimney, with no injury except a broken leg. How in the world he ever made such a journey and escaped alive is a mystery, unless his fall was deadened by a cushion of air.

"Apropos of atmospheric pressure, it is a wellknown fact that there is a 'vortex space,' or 'zone of suction,' directly behind any rapidly-moving train, and its presence accounts for a grotesque happening that took place some time ago on the Southern Pacific. While the California-bound express was going through western Arizona at a clipping gait a passenger who was on the verge of the mania rushed out on the rear platform, climbed on the rail and jumped off. He was wearing a very long linen duster and a muscular tourist who happened to be on the platform at the time grabbed it by the tails as it sailed by and yelled for help. When some of the others ran to his assistance they found the lunatic stretched straight out in the air behind the platform, howling like a Comanche, but safely anchored by his duster, which had turned inside out and caught him at the shoulders. The muscular gentleman was hanging on for dear life, but had it not been for the fact that the would-be suicide was virtually sustained and carried along by the suction of the vortex space something would certainly have given away. They reeled the man in like a kite and he promised to be good. We have very little exact knowledge at present of the atmospheric conditions that surround a moving train. A fuller knowledge of them may lead to the solution of some baffling problems in traction."

DON'T WORRY.

HENRY WARD BEECHER said: "Do not worry, count your blessings and you will find nothing to worry about." Friends may desert you, sickness may claim you, yesterday's prosperity may mean to-day's poverty, and fame may soar beyond your grasp, but what are all these in comparison with God's blessings? Do your petty sorrows blind you to Nature's pictures, the golden tints of autumn, the white purity of winter, the hope and joy of the awakening spring, and summer's balmy perfection? The little sunbeam that steals in at your window and throws a bright veneering over your room, is a blessing that more than compensates for all your sorrow.

THERE are various ways of killing popularity, but after you have delivered a long speech to a tired audience you need not bother about the others.

W Correspondence W

FREAK FARMING IN INDIANA.

DE KALB County farmers are becoming freakish in their farming. It is much the same all over the State. Instead of depending on corn, wheat, rye and the old standbys, some farmers are filling their purses by raising such products as skunks, weasels, rabbits, frogs, ginseng, leeches, tom cats, noxious weeds and other things which the old-school farmer has made it a point to get rid of.

Indiana has six skunk farms, among which is the farm of E. D. Raub, one mile north of Indianapolis. A trust has recently been formed and the skin of a black skunk is worth \$2 and those of the striped ones will bring from \$1.50 up. They are now being raised by the thousands. The skunk is a sensible animal. It appreciates good treatment and is a respecter of persons. Those who have located farms too near cities have been experiencing some trouble, as the scent is something terrible. The kittens are pretty little pets, are easily handled, do not demand much care, are cheaply maintained and easily placed on a profitable market.

In Posey County they are raising Angora cats on farm basis proportions. There are several farmers and a genuine tom cat jobber, named Herman Euler. He alone has handled over 3,000 during the past three years. Almost all of the l'osey County cats find their way into the store of John Wanamaker. The Philadelphia women are great fanciers of Angoras, and this breed is sold at from \$25 to \$50 each without much trouble. Cats at \$20 apiece make money faster for the farmer than corn, oats or rye.

There are many rabbit farms in the State. One of the largest is in Wabash County and contains nearly sixty acres. Robert Coe, of Indianapolis, has a big variety of the Belgian hares and is shipping them to all parts of the country. He is constantly purchasing new breeds and expects to raise 1,000,-000 hares a year when in full running order. They are fed on hay and during the first seven months of their lives they will eat fifty-six pounds of hay or 280 pounds of green grass. Their pelts are in demand and the meat of the animals is edible. From their hair the finest crush hats are made. The skins are worth from ten to twenty-five cents at the factory. Hares are easily handled, are a somewhat more desirable crop than skunks and there is little danger of an off year.

Other farmers are looking to the Chinese markets for financial return, and are engaging in the culture of ginseng. This formerly grew in the forests, but has been dug out by the herb ductors and farmers as an obnoxious weed. It has suddenly flashed upon the money-getting sense of the farmer that the roots of this same we'd sell at a good price. It is the panacea for all ills of the Chinese, and during the present war there has been great demand for large quantities. When they are in love they use it, when they have hay fever it is what they gnaw on, and when fate hangs over them, as it now does, they use it as a talisman to drive away bad luck. In fact, a Celestial home without a stick of "seng" in it would be incomplete. For many years peppermint weed was thought obnoxious and grubbed out. Now there are farms all over the northern part of the State. The largest is owned by Mark Beeger, at Mishawaka. Its uses are numerous, but the greatest demand comes from the manufacturers of print fabrics, who use it to make the color solid. The successful peppermint farmer can make from \$75 to \$450 per acre from his land.

Until this year onions have never been raised in De Kalb County, and now the farmers are sowing them by the acre; and, this year being exceptionally wet, they have harvested enough to bring them in \$300 per acre.

Goldfish farming is another which belongs to the freakish class, and the biggest farm in the world is located in Shelby County. It is known as Spring Lake fishery, and over 2,000,000 fish were shipped last year. This farmer has become wealthy.

There are a number of bullfrog farms in the State. and the farmers get from fifty to eighty cents a dozen for the frogs, which are of the American jumbo breed. Hickory nut orchards are not uncommon now. The shellbarks, which formerly brought seventy-five cents a bushel, now sell at seventy-five

tention to the gathering of the fur from the swamp cattails and field thistles. This is baled and shipped for stuffing mattresses. Near the Kankakee marshes the gathering of cattails has become quite an industry, and tons of the stuff are shipped regularly. With the digging of the marl from the bottom of the lakes it would seem that almost the last method of making money had been reached, though we may expect stranger things than this to happen.

LIKE A WALLED CAMP.

PEKIN, which is properly pronounced Peeching, according to Mr. Williams, has a population at the present time of somewhat less than 3,000,000. Its name means Northern Capital. The high walls surrounding it are composed mainly of earth dug from the environing moat, and are faced with brick and stone. At intervals of sixty yards square towers project, and similar towers stand on either side of the sixteen gates, connected in front in every case by a semi-circular fort. Each gateway is surmounted by a wooden building several stories in height, with painted portholes for imaginary cannon. Save for the high lookout towers over the gates the city would rather resemble a walled encampment than a metropolis. There are no spires, pillars, minarets, or monuments, only the varied colors of the tiled roofs, red, green, and yellow, relieving the monotony of the scene within the walls. Here and there are large clumps of trees, and before every official residence is a pair of flagstaffs.

Pekin has no manufactures and no trade in any proper sense. It is fed mainly by supplies from the southern provinces and by flocks raised in the northern part of Chili. The thoroughfares leading across it from gate to gate are broad, unpaved avenues more than 100 feet wide. The side streets are narrow lanes. The streets are bustling and gay with signs, but at times almost wholly impassable on account of mud. The avenues are lined with shops, whose fronts are made of movable panels in such a way that they can be removed entirely in the daytime, exposing the interiors and the goods for sale. Many of the houses are painted green and blue. At the intersections of the avenues are honorary portals erected to the memory of distinguished persons. At night the thoroughfares are lighted by lanterns before the doors of the houses, but by no other means, so that the illumination is imperfect. The Manchu women ride astride, and representatives of various Asiatic tribes promenading the streets lend picturesqueness to the throng.

KEEP TAB ON HONEY BEES.

"TALK about your queer trades," said a man from Texas, "what do you think of bee tracking as a means of making a living? I know several professional bee trackers who have never done anything else in their lives, and their skill is something almost incredible. What is the work like, do you ask? Well, I'll explain. Down in Bee county, in my State, where some of the greatest apiaries in the world are located, all honey is graded and marked according to the bloom from which it was obtained. For example, you may have your choice of cotton blossom, wild clover, horse mint and several other brands, each distinct in flavor, but it was discovered long ago that the colony from each hive or cluster of hives always draws its sweets from some one particular flower and religiously shuns the others.

At the beginning of the honey-making season the proprietor of a bee farm wants to know, of course, how much of each flavor he is going to have, as a basis for calculations; so he sets the tracker to work. The tracker, who is always a native Mexican, mounts his tough little broncho, rides over to a row of hives, waits until a big, healthy-looking bee emerges, and, when it flies away on its daily quest, he gallops along in its wake. Often the feeding ground is miles distant. and the bee takes anything but a bee line. On the contrary, it takes long detours, frisks and frolics through gardens, loafs in shady groves and has a good time generally, but it is the rarest thing in the world for it to shake off its 'shadow.' How the Mexican manages to keep it in sight and distinguish it from other bees it meets en route I have never been able to understand. The business seems accents a peck. Many farmers are devoting their at- tually to develop a special faculty. When the bee

finally reaches its destination the tracker takes a mental note of the variety of flower and then returns home. Next day he verifies his observation by following another honey gatherer, and then labels the hive and proceeds to the next one When his task is done the apiary man knows exact. ly what he can depend on in the several flavors. The trackers are well paid—enough to let them loaf between seasons."

CHILDREN AND CHICKENS IN MEXICO.

BY OLAF,

I must tell you that the boys and girls in Mexico love chickens just as the boys and girls in this country do, and make great pets of them. But the chickens there do not have so good a time as the chickens here, for there is no nice yard in which to run,-I am writing about the chickens in Mexican cities.

What would you think of chicken coops on top of the houses? Well, that is where ever so many of the chickens are raised. As the tops of the houses are flat, this can easily be done. And the poor things get so little to eat, they look lean and starved, and their feathers stand all sorts of ways, and are not smooth and glossy as are the feathers of our chickens. But the children love them dearly. They will let them come into the rooms and play all about. Sometimes they even sleep with them tightly hugged against their breasts. One little boy loved his chicken so well he couldn't bear to be parted from it. So he took it to school hid. den under his blanket. In the midst of the recitation the chicken scrambled out, flew to the top of the teacher's desk, and, flapping its wings, crowed lustily. All the children laughed, of course, but the teacher looked very grave. She told Manuel that school was not the place for chickens, so he never ventured to carry his chicken any more.

One of the saddest things about chickens in Mexico is that they are used to gamble with.

MIRRORS THAT DECEIVE.

It is a consoling thought to know that even the very best of mirrors does not flatter you. We are now assured that the reflection we see there does not accurately portray our likeness. The hair is wrong in tone, the eyes are not quite correct in color and the skin always has a more gray or pallid shade in the glass than it has in reality. You may be certain that, however plain your face seems, it is by no means plain as it appears in the telltale mirror. Secondly, you cannot assume your natural expression while peering in the looking-glass. The eye must be in a certain position before you can see at all and the eye, so far as expression is concerned, governs the face. The consequence is that you can see only one of your expressions in the glass and that expression is one of attentive examination, says the Philadelphia Times. All the other express sions by which your friends know you, favorable of unfavorable, you have never seen.

Of course, it is quite possible to simulate different expressions, such as surprise, pleasure, aston ishment, delight, inquiry, and so on, when standing before the glass, but you cannot really judge their effect upon your features in this way, for the expressions are all studied; it is when your ges tures are unconscious, when you are "off yo guard," that the real light and shade of facial evpression comes in and some girls who, when look ing in the glass, imagine themselves to be hopeless ly plain, have moments when to onlookers, they are if not positively beautiful, at least attractive and charming.

ACTIVITY is the law of all intellectual and animal life. The more you live in conformity to that the the happier you will be. An active life, like purling rivulet, is an unfailing source of gladne health and contentment, while an indolent life. the stagnant pool, breeds discontent, disease a death. No man enjoys with a keener relish night's repose and the Sunday and holiday tes than the son of toil.

It costs Uncle Sam nearly two millions of dollars day to per day to run his Government, but, honestly, it

Nature & Study -

HERE IS A CURIOUS PLANT THAT COUGHS.

It is now well known that the sharp and broad distinction formerly made between animals and plants does not conform to the facts. The cells of plants, like those of animals, are differentiated in plants, respiration, excretion—even for the perception of light. The sensitive plant (Mimosa) has well-developed sense of touch.

A certain tissue in the leaves of plants performs the functions of a liver.

The respiration of plants is especially interesting.

On the under side of leaves and on green stems are millions of microscopic mouths, each of which is opened and closed by two movable lips. These openings are the terminations of passages which are filled with water, vapor, air and other gases, produced by the chemical changes which accompany

The vine called the coughing bean (Eutada tussians) is a native of moist, tropical regions.

By accidental transportation of its seeds it has gradually spread to much less congenial spots, especially railroad embankments, where it endures drought very well, though its growth is stunted. But there is one thing which it cannot stand, and that is dust. When the breathing pores become choked by dust the gases accumulate within the leaf for a time and then are forcibly expelled in an audible paroxysm of coughing and sneezing which makes the leaf tremble violently. At the same time the whole plant becomes red in the face, so to speak, through the sinking in of the green chlorophyll grains and the appearance of particles of red coloring matter on the surface.

The Eutada is sometimes cultivated as a house plant. Sweeping the room is very apt to set the poorplant a-coughing, to the intense astonishment of persons who are unfamiliar with its peculiarities.

BAKED ALIVE.

ln Everybody's Magazine there is an article descriptive of a new cure that seems almost incredible in its workings. The writer tells how it feels:

The sensations experienced under the baking process are said to be unique. The patient is prapped in an ordinary sheet before being placed on the sheet of fibrous magnesia in the oven. The ends of the oven are covered by canvas, which renders the central compartment air-tight. The patient's feet are completely enclosed, but the head is left out. The application of heat up to about 120 degrees F. is hardly noticeable. Jets of hot air then begin to make themselves felt, and when 200 degrees F. has been reached, the patient feels as if ted-hot air were raining upon him.

Water boils at 212 degrees F. and yet in these buman hot-air bakeries patients are able to stand 300 degrees F. without serious inconvenience—168 degrees F. above the boiling point of water! Of course, this high degree of heat may not be sustained for any length of time; but it has been maintained with good results for upwards of fifteen mindes. Even 400 degrees has been borne for a subject ordinary cases to such high temperatures.

From 200 degrees to 300 degrees F. patients perspite freely, the perspiration being carried off in the form of steam through the funnels at the top of the baking machines. It feels at first as if one actually melting away. The extremities tinkend then seem to become numb for the first fiften or twenty minutes after 200 degrees F. has pleasant, and one becomes somewhat drowsy. An intense thirst is experienced. Liquids are not forsent may sip ice water whenever very thirsty. In all of the particular to keep the head cool, bags of ice are applied from time to time.

A number of very remarkable cures have been relown physician of Brooklyn recently published in
schotair, and it furnishes most remarkable reading.
The not the cases well authenticated, they would be testimonials for "cure-alls." Persons
the for years from chronic rheumatism, in its

worst form, have been practically cured, and many diseases that have stubbornly resisted all forms of medical treatment have capitulated to the hot-air machine. Even cases of pneumonia have yielded to hot air after other remedial agents have failed.

When it is remembered that, under this treatment, human blood is subjected to heat a hundred or more degrees above the boiling point of water, its successful application is truly marvelous. After a while people may "throw physic to the dogs" and pin their faith to the hot-air machine. Who knows?

LIVING LAMPS.

Charles F. Holder, in talking about animal phosphorescence, says: "It is possible to read by the light of the humble earthworm. One of the most brilliant displays of animal phosphorescence I have observed came from such a source. Its discovery was accidental. In passing through an orange grove one rainy night, in southern California, I kicked aside a large clump of earth, when, to all intents and purposes, a mass of white molten metal went flying in every direction, affording an unusual display.

"The cause of the light was a single, possibly two, earthworms, not over two inches in length. The luminous matter was exuding from them and had permeated the surrounding soil, rendering it phosphorescent. The light-emitting mucous came off on my hands, and the light lasted several seconds, gradually fading away.

"Possibly the most remarkable light ever used for purposes of reading is the beautiful pyrosoma, a columnar, jelly-like creature, one of the free swimming tunicates. They are usually from one to two feet in length and three or four inches across, open at one end. The column is an aggregation of animals, each of which takes in water and expels it by an orifice in the interior; and this volume of water, rushing from the open ends, propels the animal along. Its luminosity is wonderful, its name, fire body, well chosen.

"To illustrate its intensity a Portuguese sea captain secured six of the animals, which he placed in glass jars suspended from the ceiling of his cabin. By their own light he wrote a description of their beauties.

"Bennett, the English naturalist, placed a deepsea shark, of the genus isistius, in a jar in his cabin, and could easily read by its light, describing the appearance of the fish as truly ghastly."—Scientific American.

SHEEP IN SPAIN.

In Spain there are some 10,000,000 migratory sheep, which every year travel as much as 200 miles from the plains to the "delectable mountains," where the shepherds feed them till the snows descend. These sheep are known as transhumantes, and their march, resting places, and behavior are regulated by ancient and special laws and tribunals dating from the fourteenth century. At certain times no one is allowed to travel on the same route as the sheep, which have a right to graze on all open and common land on the way, and for which a road ninety yards wide must be left on all inclosed and private property. The shepherds lead the flocks, the sheep follow, and the flocks are accompanied by mules carrying provisions, and large dogs which act as guards against the wolves. The Merino sheep travel 400 miles to the mountains, and the total time spent on the migration there and back is fourteen weeks.

WHY WE WINK.

No satisfactory determination has been made of the reason we wink. Some suppose that the descent and return of the lid over the eye serves to sweep or wash it off; others that covering of the eye gives it a rest from the labor of vision, if only for an inappreciable instant. This view borrows some force from the fact that the record of winking is considerably used by experimental physiologists to help measure the fatigue which the eye suffers.

In another line of investigation Herr S. Garten has attempted to measure the length of time occupied by the different phases of a wink. He used a specially arranged photographic apparatus, and affixed a piece of white paper to the edge of the eye-

lid for a mark. He found that the lid descends quickly and rests a little at the bottom of its movement, after which it rises, but more slowly than it fell.

The mean duration of the downward movement was from seventy-five to ninety-one thousandths of a second; the rest with the eye shut lasted variously, the shortest duration being fifteen hundredths of a second with one subject and seventeen hundredths with another, and the third phase of the wink, the rising of the lid, took seventeen hundredths of a second more, making the entire duration of the wink about forty hundredths, or four-tenths of a second. The interruption is not long enough to interfere with distinct vision.

M. V. Henry says, in L'Annee Psychologique, that different persons wink differently—some often, others rarely; some in groups of ten or so at a time, when they rest awhile; and others regularly, once only at a time. The movement is modified by the de gree of attention. Periods of close interest, when we wink hardly at all, may be followed by a speedy making up for lost time by rapid winking when the tension is relieved.

OREGON HAS RED HUCKLEBERRIES.

A woman who has just returned from an outing in the Caseades wants to know why the "high-bush" red huckleberries are not found in the market here. She gathered a lot of them in the mountains, and says they are, in her opinion, much superior to the "low-bush" blue huckleberries, being more acid, and having something of the flavor of the cranberry. A man who has often eaten these berries in the mountains agrees with her as to the flavor of the red huckleberries, and suggests that one reason why they are never seen in the market is that they are not plentiful on the bushes, and it would be a great deal of work to gather a quantity of them. The woman replies to this that they are plentiful this year, at all events.

HARDY VEGETARIANS.

Peasants of Russia live mainly upon thin vegetable soup, sauerkraut, rye bread and oil. The Scotch highlander, whose courage and hardihood are proverbial, seldom touches meat, living mainly upon oatmeal, vegetables and buttermilk. Among the most active and vital people of the world are the Irish peasants, whose diet consists almost entirely of potatoes and buttermilk. The farmers of Corsica live all winter upon dried fruit, mainly dates, and polenta (chestnut) meal. During the middle ages the Moors used to provision their fortified cities with chestnuts and olive oil.

SHOOTING INTO A HAILSTORM.

To break up a hailstorm it is necessary to destroy the revolving or whirling current of air. This can only be done by an opposing current of air, hence the philosophy of shooting cannon balls at the hail clouds is plain. The cannon balls passing through the air create a temporary vacuum, which is quickly filled by the air rushing in behind the ball and toward the clouds. When this current of air becomes stronger than the whirling current or strong enough to interfere with it the whirling current is overcome and the hailstorm is destroyed.

The wild goose is susceptible to a certain amount of domestication. It readily consorts with the tame flocks, learns that no harm is intended and will come to feed as readily as its companions. It never loses its inborn desire for wandering, however, and in autumn and spring will honk constantly to bands of former companions passing over in migration.

In each beehive are a number of nursing bees who do not go out to gather honey, but look after the eggs and young, and a certain number are always told off to ventilate a hive. These stand close to the entrance and fan strongly with their wings.

A DEALER in artificial limbs estimates that 300,-000 Britons have lost one or both legs.

On an average a cow yields 350 gallons of milk a year.

INGLENOOK. THE

PUBLISHED WEEKLY

At 22 and 24 South State Street, Elgin, Illinois. Price, \$1.00 a year. It is a high grade paper for high grade boys and girls who love good reading. INGLENOOK wants contributions, bright, well written and of general interest No love stories or any with killing or cruelty in them will be considered. It you want your articles returned, if not available, send stamped and addressed envelope. Send subscriptions, articles and everything intended for THE INGLENOOK, to the following address:

BRETHREN PUBLISHING HOUSE, Elgin, Illinois.

Entered at the Post Office at Elgin, Ill., as Second-class Matter.

THE WINTER EVENINGS.

Now that the Winter is on us the best method of spending the hours in which one is necessarily housed is to be a subject for consideration in every household. Many a boy has been driven from home by the lack of adequate and suitable entertainment. His mother is knitting in silence, the father reading and the old clock going tick-tock, tick-tock, in the corner or on the mantel. There is nothing for him to do and when he complains he is advised to read - the Bible. Here is where parents make an egregious blunder. The advice is good but unsuited. It is like locking the father in a cell and telling him to amuse and interest himself in a Latin grammar.

Naturally the boy drifts away from such a home and soon learns to spend his nights in more congenial company. Mention books and the undiscerning parent says that he has books and the boy never reads them. There are the Bible and "The Doctrine of the Brethren Defended," and, yes, an ancient government report, not to speak of a Fourth Reader!

There are only two things that will save a boy under such conditions. One is that he may be of exceptionally strong turn of mind and get books and papers of his own. The chances are that, left to his unguided choice, he will accumulate a stock of penny dreadfuls, and go to sleep dreaming of Indians and hold-ups,

The thing to do is to give him what he wants, and what he really needs, of palatable reading that will at once hold his interest and instruct him. The INGLENOOR is a publication of that character. and there are books without end. A boy who has grown up without "Robinson Crusoe" has missed much of life. White's Natural History of Selbourne, in the hands of a boy, inaccurate as it is, has made more naturalists than any other known volume. A man with no thought in his head but corn and black hogs may regard money as wasted if put into books and papers, but when he is lying awake nights, waiting for that grown boy to get home, he may finally realize that it would have been better to have made home attractive. It is still better to take time by the forelock and so arrange home that the boy will find more there than elsewhere, and so stay where he belongs.

STUMBLING-BLOCKS MAKE STEPPING-STONES.

STRIVE vigorously to form, early in life, a habit of using everything that comes to you, whether pleasant or unpleasant, fortunate or unfortunate, to your advantage. Do not allow an unpleasant letter, a disagrecable criticism, an uncharitable remark, loss of property, or other trial of any kind to cloud your whole day and cast shadows over your life. Resolve vigorously to make every seeming stumbling-block a stepping-stone to higher and nobler endeavor. If you can make no other use of misfortune, you can use it as a point of departure for new and more determined effort, an occasion for turning over a new leaf. Make up your mind resolutely that nothing shall stand in the way of your genuine success. You cannot allow your life to be darkened by the clouds cast over your path by others who seem to wish to injure you. Treat trouble and misfortune as the oyster does the grain of sand which irritates it. Cover them with pearls and make them things of beauty. Misfortunes and difficulties make stronger those who have the courage to surmount them and use them as steppingstones instead of stumbling-blocks. If you will determine resolutely and vigorously that every apparent misfortune that comes to you shall be turned into a blessing you will soon lose all fear of evil and will become strong to battle with seeming opposition. For, after all, what we call the misfortunes of life and the things that make us unhappy are not such, in reality. - Success.

A SPECIALTY OF OUR PAPER.

WE call the attention of our readers to something they can hardly fail to have noticed. It is that there is always one or more descriptions of things that are common enough, but the how of their manufacture is not common property by any means. The 'Nook tells how it is done. We are going to make a specialty of these unusual things in the future. Read them carefully, for a good many of them cannot be had in print in any other paper. While we are not a newspaper in the sense of furnishing the news, yet we are still a newspaper in the way of furnishing our readers something that is new in the way of information, and it will be done from week to week.

THE CHICAGO NEWSBOVS' THANKSGIVING FEAST.

THE eighteenth year Thanksgiving Feast of the newsboys and poor children of Chicago came off on schedule time, and 14,000 of them were fed,full. Here is the menu in its totality:

520 Turkeys,

10 Barrels mashed Potatoes,

35 Barrels Apples,

4 Barrels Cranberry Sauce,

1500 Gallons Milk,

960 Loaves Bread,

50 Boxes Grapes,

250 Bunches Bananas,

25 Boxes Oranges,

975 Dozen Cakes,

1800 Pies, Assorted.

It strikes us that the greediest 'Nook boy alive could have had his fill for once had he been there.

It is most encouraging to note that the daily press is giving more attention to the subject of training the young to respect the rights and feelings of animals. The following, from an editorial in the Leader, of Richmond, breathes the right spirit, and shows where humane teachings should be-

"Every child should be taught to be kind to animals, and savage instincts should be curbed. Instead, children are often positively encouraged in the home circle to be cruel. This is from thoughtlessness or from a disposition to humor the child in all its whims. Many a poor kitten suffers daily torture at the hands of its little master or mistress, and nobody seems to think that it makes any difference. We pity the goat that has a boy for its master, for the days of such a goat are full of trou-

"The baby that is permitted to torture a kitten and the boy that is permitted to torture a goat are being badly trained, and the result of such training will be manifest in later years. Every child should be taught the great lesson of consideration-should be taught to be considerate of the feelings of human beings and of brutes. Otherwise the child is almost sure to be cruel and selfish as it grows up."

It is said that what is in the mouth of everybody must be true, and if this is correct, the INGLENOOK grows on acquaintance. Very frequently we hear the expression, "He didn't care anything about it at first, and didn't read it. But one day he looked at it, and then he read it through, and now he wants it the first thing when it comes." This is the history of the 'Nook, wherever it goes. It grows on one. There is a fascination about its ever new subjects that attract and hold attention. There is something novel in it, and it is interesting because it is educational and out of the ordinary.

Don't allow your subscription to lapse. Don't wait till the last minute to renew. Don't miss a number and then say that you would like to have such and such an issue. If it is a back number the chances are that we do not have it to send. Send on your subscription at once and give yourself a treat that will repeat itself fifty-two times a year, ever new and entertaining. Make yourself a Christmas gift.

He who is lord of himself and exists upon his own resources is a noble but a rare being.

No man ever became great or good except through many and great mistakes.

OUR QUERY COLUMN.

How is white beeswax made?

WAIT. Watch the 'Nook. Description coming

Who writes the book reviews in the Inglenook?

The Editor.

Why does not the 'Nook pay for its articles?

Because it has ten times more than it can use, which is gladly given by its friends,

What is to be done with a lad who will carry a pistol?

Take it from him, and if he does it over you do something in the woodshed good and hard,

Has the Salvation Army a paper?

Yes, the War Cry, peddled everywhere by the sisters composing the army,

Is it a certainty that Christ was born December 25?

It is a certainty that nobody knows anything at all about it. It was observed on different days in different ages of the world.

Could I get a position as clerk in a city store?

You might, but by no means go to any city without knowing just what is ahead of you, and with money to get back home in case of failure.

is there anything in palmistry?

Very little to our notion. It is nearly always associated with astrology or some such ancient powwowing.

Is there any harm in a glass of wine?

It is playing with a redhot coal of fire, and thousands of years ago it was said that those who were deceived by the mocker were not wise.

Some people believe in the existence of mermaids. What is your idea of the matter?

We have no ideas about something that has no existence, and never had.

Do cigarettes do the harm they are represented as accom-

Yes, and there is no more harmful and no nastic way to use tobacco. A boy is a great fool to voluntarily take to them.

I would like to have a good watch in a very plain case. How shall I go about it?

Buy as good a watch works as you care to, and have them put in as plain a case as you may fancy If you are buying a watch to wear this is the best way. You can get works that will outwear you an be good for your after-comers.

Is it right to read fiction?

It all depends. To make a business of it wrong. A good story is like an ideal picture. picture is in colors in one instance, and in words the other. The "Pilgrim's Progress," "The Ho of David," and many other good books are purtion. Life would be a very hard lot without dreams and castle building.

Do trains often run sixty miles an hour, and is it not esta

Trains very often run faster than that, and if the is an accident it matters little whether it is sixty forty miles an hour, everything goes to smash either case. There is no record, however, of a train running off the track because of its speed, fact if everything holds together it is more likely stay on the rails when going very fast than ab going slow.

Is a guessing contest the same as a lottery?

All chances deliberately gone into for the end gain are more or less of the character of a lot It is the principle of getting something for no that gives it the flavor of a lottery. Money mains, at is always at the bottom of all such chancing. is as well to keep out of it. Lotteries and change ever off were common enough in earlier days, even churches, but the practice will not hold out und close ethical scrutiny. It is a sort of gambling.

A HOROLOGICAL SCHOOL.

THIS is a pretty big word for a school where they gach watch making and repairing, but it is the only The full of it is The Elgin Colof Horology, Engraving and Optics. It is wated here in Elgin, and you might pass it a hunbed times and not recognize it, but it is here all is nere all that is claimed for it. It rgar in 1888, and is one of the very few instituposs of its kind in the United States. Indeed we be informed that there is none in Chicago, and ghat is not found there is a rarity, sure. There are 101 very many anywhere, for that matter. Though Elgin is where there is one of the largest and best saich factories in the country, they do not teach the business where they make watches. It is done in the factory by machines that do all but talk. In the Horological school it is all done by hand, and the result of individual thought. In fine it is a place where they teach watch repairing, and engraving, and as much of optics, spectacles and the like, is the average jeweler requires. And they do it rell. The thing about it that impressed the 'Nook man most was the fact that they taught the real thing, not books, but the whole of watch tinkering in its every department.

They do not teach watch making, and the lady in charge said that only among the Swiss were watches made by one person "from the ground up." In the United States it is done by machinery. At this school men come from all over the country to learn the business. They will not take an applicant under seventeen, and the actual age of the learners seemed to run from about twenty to twice that. There are no women learning, and the head of the workshop did not seem very favorably impressed with the capacity of a woman to learn the business. What they do teach is the repairing of any and every part of a watch. Here is the how of it.

A man wishing to learn the business comes to Elgin, goes into the school, which by the way is a practical workshop, and he works under personal instruction till he has mastered the business to that extent that he can take a place in any watch shop in the land, or start in business himself, and hold his own in any and every part of the work. To do this requires his presence at the School for from a year to a year and a half, according to what he knew before he came, and his capacity for catching on to what is required. In any event he is not given a diploma till he knows it all. If he only Nants to take a part of the course he can do so, and geta certificate that he has been at the School and has been under instruction. But he must know the us and out of a watch through and through before begets a diploma. He has to be a credit to the inslitution, if it can be called that.

The students, or learners, or whatever they may be called, have six instructors, who give personal attention to them, and they pay \$40 a quarter tuition, and look out for themselves in the way of loard, etc. They are also required to purchase a st of tools which costs from \$30 to \$40, but these belong to him when he is through. The benches, lathes, and all the natural and necessary belongings of a practical shop are fixtures in the School, and will be started at the foot of the ladder, receiving the is able to take new work.

Now how does the school get its material to work lt is sent in from all over the country for fine lepairing. It is something like this. You have a the watch that gets out of kelter. You take it to the "watchmaker" at your home town, and ask him thether he can fix it all right enough. He takes a Polessional look at it, and says he can, but that will have to leave it with him for a week or two. night. You let him have it. Now he knows Sedet that while he can fix the hands all right, defect in the balance wheel is entirely too much bim. But he isn't telling his customer that. hat he does is to take his trade journal and conthe advertisements of places made and provided This such emergencies He sends the watch on the Elgin school, with orders to straighten out Parts on the other side of his skill, and leave rest to him. The matter is taken up in the thool by the learners who see it done, do it themtakes, or what not, and back it goes to your "watchwho turns it over to you in time, all right,

and he may even point out to you the difficulty which he had to remedy. It is the same thing as sending the patient beyond the skill of the country practitioner to the city hospital, with the difference that in the case of the individual everybody knows what is happening, while with the country artisan he is apt "to never let on." But all the same the learners have had the necessary experience and when they are in business for themselves they are ready for every sort of watch accident that may come to their hospital. It will be readily seen that experience is had in the School that would not be available in the ordinary practice of the profession.

The learners are engaged in actual work, just the same as though they were employed in a shop, observing the same hours, and at night they study the art of engraving. The shop, itself, has no appearance of a school, resembling nothing so much as a large back room in a watch repair shop where they have an enormous volume of repair work to do. Nevertheless it is where from twenty-five to fifty people are learning the watch repairer's art from a practical and business point of view.

It seems to pay the learners, for the management of the School have applications for competent workmen all the time, and when a learner has passed through the mill of instruction and knows it all in detail, he is pretty sure of a job. There are also applications to buy a diploma. It is not necessary to say that these are all rigorously turned down.

The way the watch and clock business is now shaped a young man can hardly get hold of it in any one of the jewelry stores over the country where watches are repaired. He will not there get the chances for fine repair work, at least not in sufficient quantity to do him any good, and he will never be able to take full charge in any large establishment. At the Horological School it is different. There he does get the whole of it, and they will not let him go as a graduate, to work under their diploma, till he really and truly does know it in such a way that he will be sure of himself and a credit to his instructors.

HOUSEKEEPING AT THE WHITE HOUSE.

The housekeeping side of the White House changes with each administration, and reflects, to a certain extent, the characteristics of the successive president's families. Most of the ladies of the White House have been economical housekeepers, and willful waste has never been tolerated. It has been an unwritten rule that economical, but not stingy, housekeeping should prevail at the White House.

The government allows certain essentials in the way of servants and dishes for the family of the president, and if he wishes more than these he must provide them at his own expense. The cost of running the White House has steadily increased year by year, and the parsimonious amount allowed by the government is hardly in keeping with the dignity of the president's position.

Mrs. Cleveland was an excellent white house manager. She was her own housekeeper, and took a personal supervision of the expenses of the household. Her own account books are interesting reading.

Mrs. McKinley is an expert housekeeper, and one who is well fitted to preside over the domestic side of the official home, but her health has been such that she has not been able to give the attention to household matters that she would like. But she does, in spite of failing health, exercise certain supervision that keeps her in touch with the affairs of the household.

She has a general housekeeper, whom she holds directly responsible for all matters pertaining to the linen and cleanliness. The present housekeeper, Marie Barbery, is a middle-aged New York woman, who shows her executive ability in numerous ways.

With the exception of the housekeeper, who is Mrs McKinley's special friend and helper, the servants are nearly all colored. The steward is the most important functionary. William T. Sinclair, the present incumbent, is the first colored man to hold that office. He receives a salary of \$1,800, fixed so by law and paid by the government, and he is under \$20,000 bond. This is considered necessary, because he has in his charge some very valuable property belonging to the government. All the silver, china, and historical articles in the president's private apartments are under his per-

sonal supervision, and he is held responsible for their safe keeping.

The steward attends to all the buying. The government provides the steward with a horse and wagon and in this he drives to market.

The daily expense of the president's table averages \$25, exclusive of state dinners and public receptions. This sum covers the cost of food for guests and the whole retinue of servants.

The supplies are not paid for when purchased, but a bill for them is rendered each month. This bill must be itemized, and the steward must check it before it goes to the paymaster. Usually the housekeeper or the mistress of the White House also audits the bills.

The paymaster is bonded and stands close to the president, and is supposed to look after his interests. All of the bills for the expenses of the White House go to this functionary, who draws them up into a clear, itemized account, which he submits to the president. When they have passed through all of these various hands, they are apt to be accurate, and the president usually pays them by check.

The White House cook is a South Carolina negress, Mrs. Benjamin. She is an up-to-date southern cook and understands the art of making fancy dishes, which seem to please the president and his wife.

Attempts have been made time and again to get the presidents to employ French cooks, but here, too, democratic and patriotic motives have prevailed. None but American white or colored cooks have been employed at the White House, although when large state dinners are given French or Italian cooks and caterers are brought in for temporary service.

The linen, silverware, glass and china are furnished by the government, and the proper care of these is a duty that the president has to trust to those under him.

The White House is really a large hotel, and the same methods obtain here as in a first-class hotel. Mrs. McKinley is daily besieged by begging letters, and these she attends to as best she can. One method is to see that all the food that would be wasted is properly distributed among the deserving poor.

STRETCHING STEEL.

In an article on Bridge Building we see the little known fact that steel can be stretched.

Before a hammer is struck, every single detail of a 54,000,000 pound bridge must be worked out on paper. Every beam, wire, rod, and even every screw, nut and rivet must first have its distinct design. And by "design" is meant not merely a drawing showing its future shape, but the setting forth of every detail. The design must show the length, width, thickness, and the exact number of feet or inches that the piece will be able to stretch, when completed, without breaking. For instance, a design for a certain bar of solid steel that will be forty-six feet long, four inches wide, and two inches thick, must give not only these three dimensions, but must, in addition, tell how many feet that finished bar will stretch, without breaking, when it has been placed in permanent position on the completed bridge. Most of us look upon solid steel as a thing that cannot be stretched, but the error of such a suppo sition was impressed upon the writer when he saw bars of cold, solid steel stretched out as far as six feet without injury to the extent of a crack.

LETTING IT OUT.

- "Did the postmaster leave any letters, Mary?" the mistress asked, on returning from a visit one afternoon.
 - " Nothing but a postcard, ma'am."
 - "Who is it from, Mary?"
- "And do you think I'd read it, ma'am?" asked the girl, with an injured air.
- "Perhaps not. But anyone who sends me a message on a postcard is either stupid or impertment."
- "You'll excuse me, ma'am," returned the girl, loftily, "but it's a nice way to be talking about your own mother!"

He is a very great and a very distinguished man who can afford in this period of the world's civilization to wear bad clothes.

Good Reading

IN A MACARONI FACTORY.

Each year finds the American fonder of macaroni. He is pressing the Italian hard as a lover of the flour-paste, tubular dainty, and no restaurant can claim to be an eating place unless prepared to serve up macaroni and spaghetti in a dozen different ways.

Italians brought hither with their appetite for macaroni the tools for making it. All they needed besides the tools were flour and water, and little macaroni factories sprang up in New York and Chicago. In them the macaroni was made as it has been made in Italy for one hundred years or longer. The kneading, mixing and other parts of the simple process were all done by hand until the American happened to think that the macaroni business was bound to grow, and then machinery began turning out the edible tubes. In Chicago, not far apart, are two macaroni factories. In one Italians with bared arms work over the flour and carry it along to the end by hand. In the other the paste is kneaded under iron knuckles, rolled beneath granite bowlders and squeezed into long tubes by steam power. The machine can turn out more macaroni in a day than the Italian can, but the Italian's factory is the more interesting to the man who wants to know how macaroni is made.

Only the hardest and flintiest wheat is used to make macaroni. Hard Minnesota or Dakota wheat is the best. The west side Italian takes this wheat, washes it and then carefully dries it. In Italy, he explained, they dried the wheat in the sun, but here, he said, waving his hands wildly over his head, there is no sun that can break through the smoke. After it is dry the wheat is ground or pounded into coarse cracked wheat and is then put into a revolving screen which is turned by a crank. This screen makes the first separation, dividing the starch, bran and hard parts of the wheat. Then the broken wheat is sifted through a number of hand sieves, beginning with a coarse mesh and ending with a fine mesh. The knack of swinging the sieve, tossing the grain from one side to the other, and bringing all the bran to the middle or on top is acquired only after long practice, but when the broken wheat has gone from one sieve to the other it is clean, bright, free from bran and almost polished. The macaroni-maker called it "semolina" and then proceeded to make it into dough. The coarse flour was mixed with warm water and kneaded by means of a lever which had on it a three-faced block of wood, with the sharp edge of the prism down. Two men worked this lever and block of wood into the dough, sometimes with a chopping motion and then sidewise. A spring lifted the lever up so that the kneaders had nothing to do but bear their weight on the lever and jump up and down.

After kneading and working it for an hour or so the dough was pronounced just right and ready to be made into tubes. This is done by pressure. The dough was placed in a cylinder which stood upright, with the top open, but the bottom was closed with a perforated plate, the holes being the exact size of the macaroni sticks. A quantity of dough was put into the cylinder and then a plunger was put on top of the dough, half a dozen men took hold of the lever and brought it down, and fifty soft, pliable macaroni tubes shot through the perforated plate.

The sticks were made hollow by means of little round plugs or centers, which were held in the holes by pins. The plugs were smaller than the holes through which the dough was forced, so that the dough really was squeezed through a ringshaped hole. The macaroni-maker smiled when he was asked why the pins did not slit the macaroni into two half-tubes as it was pressed out. Waving his hand condescendingly and lighting a fresh cigarette, he explained that the dough was sticky, and as the pin was at the top of the plug, or, as a machinist would call it, "mandrel," the macaroni tube was made solid again after passing the pin. While the macaroni sticks were coming through the plate a young man fanned them briskly to keep them from sticking together, and another one cut the sticks off about every ten feet and hung them over wooden frames, where they were kept until the macaroni was dry, hard and brittle.

Italians are the workmen in the American factory, too. They first put about 100 pounds of the semolina into a mixing machine. This is of iron, about three feet deep and two feet in diameter. Down the center is an upright shaft which has round bars of steel sticking from it like quills on a porcupine. The broken wheat mixed with hot water was worked into a dough by the steel hars moving around in the mixture, and when the dough was stiff enough it was taken out and put into a rolling machine. The rolling-pin of this machine is a granite wheel which looks like an enormous grindstone and weighs about three tons. This granite roller moves around in a circle over the dough, which was placed in a circular strip on the wooden bed around the edge. For three-quarters of an hour that granite rolling-pin squeezed, squashed and mashed the macaroni dough until it had a satiny feeling and was as fine as silk.

Next came the kneading machine. In this machine the circular bed turned around, and the kneaders-conical-shaped, iron-cogged wheelsdug their hard knuckles into the dough and thoroughly worked out any hard spots that the granite roller had missed. After half an hour in the kneading machine the dough was ready for the press. The cylinder of the press was somewhat like the hand press of the Italian, only it was larger and stronger, for a pressure of 1,000 pounds is brought to bear on the dough, squeezing out about 100 pounds of macaroni in three-quarters of an hour. The macaroni tubes are cut off every ten feet and then are taken to a table where they are cut into the proper length for packing. Then the macaroni is taken to the drying-room and kept there on racks for eight days, when it is packed in boxes for shipment.

ART TREASURES.

ONLY the other day a famous picture by Rubens, the great Flemish painter, was found in a dustbin at Wapping. It had been bought previously for half a crown; but the last owner did not even think it worth that, and the dustman removed it. It turns out to be worth \$55,000.

If you come across a piece of old canvas with a woman's foot painted on it, examine it, for it may be worth \$25,000. One of the finest pictures in the world-Titian's " Madonna of Lucca"-is worth at present \$80,000, and is in a famous private collection. But the picture was mutilated eighty years ago, a piece being cut out by an enemy of the owner and hidden. The picture represents the Virgin Mary, and the left foot, life-sized, is missing. This foot is said to be somewhere in England, and is worth \$25,000, or at the rate of \$5,000 per toe. With the foot the picture will be worth \$105,000, and the odd \$25,000 would be easily procured in exchange for the lost piece.

The "Venus of Milo's" right arm is missing. This Venus is the most famous statue in the world. and stands in the Louvre, in Paris; but her right arm is somewhere in this country.

There is no price one could set on the statue itself, for \$500,000 would not buy it, but the arm would fetch \$50,000, if not more—in fact, that sum was once offered for it. The Venus has lost both arms, but the right one was discovered some years ago by a wealthy English antiquarian, who communicated with the authorities who guard the Venus. It was proved satisfactorily that the arm was the missing one, and the finder was offered his own price for it. But he wanted to purchase the Venus, and add the arm to it. Then he would lend the statue to the Louvre for an indefinite period. The authorities did not approve of this, and the owner came to England in dudgeon, and buried the arm no one knows where. The owner died two years ago, and the \$50,000 worth of marble-no bigger than a man could carry—lies awaiting a finder.

A picture by Van Dyke, worth \$40,000, was stolen from a country seat in Cheshire four years ago. It has not passed out of the country. The thieves, finding it an awkward thing to dispose of, hid it. It was cut from its frame and taken away, with \$7,500 worth of other valuables, in 1896, and every now and then a report appears that it is found; but the famous Van Dyke is still at large.

There is a bronze figure of a "faun" somewhere in Britain, with two murders hanging over its head, and a price of \$15,000 set upon it. It is about three reading it, it does its own talking.

feet high, and one of its owners was murdered for refusing to sell it to a fanatical collector. The owner's heir, who inherited the statue, was killed by house breakers, who rifled his country seat, and carried off the faun, among other things. They were unable to sell it, and it was twice nearly recov ered; but eventually the thieves buried it. If you find it you will realize \$15,000.

If you come across an old sword of the kind that looks as if no human being could ever have wielded it, inspect the hilt to see if there are not five empty jewel-settings on each side, in the form of a cross If so, it is probably the state sword of Edward I who died a goodish time ago, and you will easily get \$3,500 or \$4,000 for it. It is known to be Great Britain, either in some remote dealer's shop or hanging on some smoking room wall. The empty settings used to contain ten of the finest rubjet of the time. The rubies are also at large, but as they are not recognizable from other fine rubies i is little use looking for them. They were worth

In one of the ducal castles of Scotland is a set of splendidly carved old hog-oak chairs. There are four of them, one an armchair, but there should be eight altogether-three chairs and an armchair are missing. Those missing chairs are somewhere it the country, but so far they have not been found. They would fetch \$750 each and \$1,000 for the armchair, if discovered.

One China bowl of Dresden ware is the only thing missing from one of the most valuable sets in the world, and the rest are now carefully guarded in a private museum. This bowl is thought to be somewhere in the Midlands, and may be lurking in some old dealer's shop, or doing daily work in a cottage, The rest of the set, incomplete, is worth \$1,500, but \$750 would be the price of this howl alone.

"Grandfather's clocks" are good things to keep one's eye on, for there is one somewhere whose door panel was carved by King James Il in his spare time. It would fetch \$4,000, however, and may sell for more than that when found. It disappeared-not by theft, but by mismanagementeighty years ago.

A ROUGH SKETCH.

A BIG, comfortable, roomy kitchen. Hot store, with something good getting ready for dinner Ma, a rotund, busy woman hustling around the room, busy with her cooking and kitchen work generally. When not busy she takes up her knitting Knitting socks for William Henry Harrison, a si teen-year old, who is simply "schrecklich" on his socks. W. H. H. is a big, gangling boy, sturdy build, younger than one would take him to be, hands and feet, heedless, growing, falling over life self, but will round out into a perfect man after has passed the pinfeather stage. He is reading t 'NOOK, has in his hand a segment of apple l mouth full, pie paused in air, mouth half open, tent on something near the bottom of the pa Turns the page, takes an awful bite again, and be gins the next article.

" Willie."

No answer, reading and pie go on together. " William!"

"Huh." Another bite of pie and a slight shift position while he reads more intently, and a little faster.

"William Hennery!"

That settles it. William Henry knows by the tone that business is meant, and he gulps the la mouthful, regretfully closes the 'Nook and stand up for orders. He is told to feed the stock and g ready for dinner. After that meal, when Ma the work all done, and the house to herself, s takes her knitting, lays the 'Nook on the table, at with one knitting needle idly scratching back of h ear she takes it all in, slowly, but surely.

And off here by the Fox river, is the Editor mi with a big, broad, good-natured, feeble-minded st on his face, for he sees it all in his mind's eye.

HARVEY BARKDOLL SAYS 50.

"We all prize the Inglenook very highly. The is no better paper, and it ought to be in every he in our land." And others think the same, think of the numbers of people that never heard it! Toll the it! Tell them about it. Once they get start

ooo The o Circle ooo

W. B. Stover, Bulsar, India, President; John R. Snyder, Belleobio, Acting President; Otho Wenger, Sweetsers, Ind., 120 Mrs. Lirie D. Rosenberger, Covington, Ohio, Secretary and Address all communications to Our Missionary Reading and Corington, Ohio.

WHAT IS OUR MISSIONARY READING CIRCLE?

BY J. R. SNYDER.

TRIS question has come to us many times in the sat few years. It might be answered in a few rods, and again we could spend much time in exclaiming it. We shall take the former course and see words as possible.

It had its genesis about eight years ago in Haynesboro, Pan, then the home transiently of Bro. W.B. Stover. It was organized for the purpose of elightenment and information along the line of elightenment and while this was perhaps the primary obtain, yet the deepening of the Christian life had no exall part of the original purpose. This is only a neural result, for no one can become deeply interested in missions and not have his spiritual life the the exame time. It is the spirit-filled life that means much for earnest missionary endeavor.

While the scope of the work has been enlarged site its inception, the fundamental principle of tatinception is the same as at its first organization, m, for the dissemination of missionary literature, the deepening of the Christian life and the extension of the borders of Zion. This aim we ever hope to keep to the front and thus fill a long-felt need in the church, especially among our younger mem-

This is an age of activity. All lines of human enlawor present a scene of animation. This is equaltwe of Christian work. New avenues and fields have opened for development which need workers nto are, in a sense at least, familiar with the generldetail of the work. Personal experiences, in all ases, being out of the question, the next best methd must be brought into use—studying the experimees of those who have come into personal cona with the field and the people. It is wonderful heamount of inspiration and information that can egained in this way. No one can read the lives of Judson, Carey, Moffat, Duff and others, or the ments recorded in the "New Acts of the Apostles," the eye-opening facts of the "New Era," or the olly themes of "Divine Enterprise of Missions," or answerable arguments of "Do Not Say," without wing more and feeling more deeply interested in begreat work of the church-world-wide evangeli-

This is the mission of the Circle, to plan so that his information can be easily and readily placed before a wider circle of readers. It has wielded an underect that is already being felt throughout the durch. No one can measure the influence of readily good books. It is as the pebble cast into the sty are lost in the vastness of the ocean. We ask the every reader of the Inglenook investigate the sinfluence.

Bellefontaine, Ohio.

The Abandoned Trail.—Geromimo, the famous of Apache chief, has a wardrobe of buckskin interest, fine heads and elk teeth. He still retains street one thousand dollars for them. Though the did chief cannot read or write himself, he is very side man. "Apache trail no good any more," is terse way in which he puts it. Wise old chief! Anslian. There should be no hankering after the ball altogether.—Current Events.

"BEGIN in the morning to be and to do,

Nor wait till the noontide hour,

When the spirit is weak and the heart is faint,

And the purpose is wasted power."

*CHRIST would still seek the lost, but he must do

*tdo it now with our hands."

BOOK NOTICES.

"THE ROSTRUM," by Adaline Hohf Beery, the Huntingdon sister. Published by Fillmore Brothers, Cincinnati, Ohio. 40 pp. Paper cover. Price, 25 cents.

This is a collection of original recitations, songs, dialogues, etc., for day-school and Christmas entertainments. Sometimes those interested in such things are at their wit's end to know where to find something new to select from. This is what they are looking for, and it is especially valuable for schools where the teacher knows how to sing. Then as this is by a sister, it would only be due church patriotism to buy the book, but its merit makes it worthy aside from all personal considerations.

- Sunday A School

GOLD DUST.

Swift, speedy time, feathered with flying hours.

—Daniel.

·We want not time, but diligence, for great performances.—Samuel Johnson.

Never think any portion of time too short to be employed.—Lord Chesterfield.

There's two ways of taking a thing easy. You can take and leave it alone or you can take and do it!—Mrs. A. D. T. Whitney.

Every evil to which we do not succumb is a benefactor. We gain the strength of the temptation we resist.—R. W. Emerson.

Every man's task is his life preserver. The conviction that his work is dear to God, and cannot be spared, defends him.—*Emerson*.

Training is everything. The peach was once a bitter almond; cauliflower is nothing but cabbage with a college education.—Mark Twain.

The winter's sunshine has a tenderness unknown to that which blazes down from the zenith at midsummer; and in the pink suffusions of sunset our spotless earth glows like a large, white lily that leans so near heaven as to catch the tint of its invisible roses.—Lucy Larcom.

We are God's plants, God's flowers. Be sure that he will help us to unfold into something serenely fair, nobly perfect, if not in this life, then in another. If he teaches us not to be satisfied till we have finished our work, he will not be satisfied till he has finished his. – James Freeman Clark.

What we call life is but the opening chapter of an endless serial. It is the vestibule of an infinite temple. We climb the weary steps and reach the gates with panting breath, and knock; and an angel with shining face opens to us, saying: "I am he whom you have maligned as 'the King of Terrors.' Come in, and begin to live!"—D. J. Burrell, D. D.

IF YOU ARE IN EARNEST.

ARE you looking for some opportunity for doing good? If you are, take to heart these words of William Burleigh: "There never was a day that did not bring its own opportunity for doing good that never could have been done before and never can be again."

These are true words. You can prove them if you will. It is often true that those who talk most about wanting to do good "if they could" have no perception of the opportunities given them every day of their lives. The real worker in Christ's earthly kingdom does not wait for opportunities; he creates them. If you are in earnest, you will never be idle for lack of opportunity.—The Standard.

AN EXCELLENT RULE.

JOHN WESLEY'S mother once wrote to him when he was in college: "Would you judge of the lawfulness or the unlawfulness of a pleasure, take this rule: Whatever weakens your reason, impairs the tenderness of your conscience, obscures your sense of God, or takes off the relish of spiritual things; whatever increases the authority of your body over your mind, that thing, to you, is sin."

THE laughter cure is the latest for indigestion. Here is a hint for cynics and pessimists.

SEARCH FOR FAITH.

Han the embassy of Emperor Wing-te, A. D. 65, of the Ming dynasty gone 1,500 miles farther in its journey in search of the incarnated God, China would have been one of the greatest Christian nations in the world and all the present trouble would have been avoided. The story of the search for the incarnated God and its strange ending forms one of the most remarkable chapters in the history of a remarkable people.

In order to properly understand the conditions leading to a search for the incarnated God, it will be necessary to go a little into the history of China of that day. The Ming dynasty, which ruled then, had brought China out of a slough of despond, into which it had sunk because of the terrible corruption into which the precepts of Confucius and Lao-tze had fallen. These two great teachers were to China what Marcus Aurelius Antoninus was to the Romans. All three taught the value of good, the necessity of doing good, and other precepts based upon the same proposition. After the death of the Chinese philosophers, their teachings became corrupted until Confucianism became another name for ceremonial usage, and Lao-tzeism under the name of Taoism, a worship of spirits.

It was then, when China was the most highly civilized nation, when it counted gunpowder among its inventions, that the Ming rulers sought to find the true religion—something more noble than a worship of spirits or ceremonials. While still discussing the matter, rumors spread far and near that a new prophet—the incarnation of the real God—had appeared in the far West. Strange stories were whispered beneath the breath of the marvelous power of the new God—how he had raised the dead and had performed other miracles. This eventually reached the ears of the Emperor. Calling the literary and scientific men before him he demanded to know their opinions.

After a long consultation it was decided to send an embassy to the incarnated God with rich offerings, and to ask him to come to China to preach the true word. So a great caravan of richly-decorated camels was gathered, and magnificent offerings were loaded upon their backs. There were superb silks, glittering precious stones, the choicest incense, magnificent ivory carvings, and the finest products of all China. Attended by a huge retinue of coolies and servants and soldiers, the embassy, consisting of China's most learned men, started south, along the coast line, for, in those days, it was not safe to travel too far inland. Days and weeks the caravan traveled. Each day prayers were offered to the incarnate God. On went the cavalcade, passing beyond the boundaries of China, into the unknown land beyond. Everywhere the mission went the word of the search was passed, and soon a huge army entered India.

Once there the stories of the incarnate God became more circumstantial, and with renewed courage the embassadors pressed on. At last Southern India was reached and a positive clew discovered—at least so the embassy thought. Yes, the natives had heard of a great prophet. He had performed miracles and had disappeared in a miraculous manner, none knew whither. He had lived and was born on an island south of India, across the water which the Chinese dreaded.

But, strong as was the fear of water, the desire to accomplish their purpose was stronger, and so, in rude boats, they set sail for Ceylon. The weather favored them, and they soon set foot on the island home of the unknown prophet. There, where the knowledge of his existence was still fresh in the minds of the people, where the Botree, or tree of knowledge, where he had gained inspiration, was still standing, where his personality was not yet forgotten, the ambassadors gained their knowledge of Buddha, Gautama Sidartha, the all-wise.

They had set out to find the incarnate God, Christ the Savior, and had found Buddha. To their minds the precepts of Buddha offered attractions far superior to those of Confucius or Lao-tze, and so the return journey was begun, after leaving the presents and offerings at Buddha's shrine at Kushinara. Then they returned home and spread the new creed far and wide. To-day there are more than 30,000,000 Buddhists in China.

Lors of people grow poor buying bargains.

ODD WAYS OF LIYING.

THERE can be no better illustration of the truth of the moss-grown expression that "one-half of the world does not know how the other half lives " than is found in the discoveries made by a number of census agents. Occupations that were never known to exist have been unearthed by these questioners, and have given the students of odd jobs and unique livelihoods food for much thought.

One of the census takers dropped into East Forty-fifth street and found on a door that confronted him at the third landing the name "Prof. Abunson." The professor had long whiskers and considerable volubility, and said in reply to the query as to his occupation that he was a professional spanker. He showed a business card and an advertisement in a German paper, which said: "Unruly and wayward boys disciplined at parents' residences."

"I always see the culprit before I decide upon the amount of punishment," said the professor. "Sometimes they see me first and then I lose a job. As a rule I inflict the punishment in a room in which there is a clock. I always insist that the parents tell me how long I am to spank the refractory boy. Girls? O, no; I never spank girls."

One of the census takers discovered close to Fort Greene park, in Brooklyn, a man named Brenner, with a sign reading; "Waterbug Killer to United States Navy."

Another queer occupation discovered is conducted by a man who "calls people." His chief customers are those who have to get up at unusually early hours, such as battenders, policemen, motormen and the like. "It's not very profitable, though," he said, "and sometimes it's dangerous. I've been arrested several times for going into hallways before daylight, and once I got a black eye from a man, who threw an alarm clock at me when I called him."

The woman whose business it is to collect corks, and who is said to make \$10 a day is another queer one on the long list of oddities. She gathers all the whisky, champagne and mineral water corks through a number of employes and sells them to the firms that originally cut them,

Close to Bellevue hospital is a woman who sells bottles. Big-hearted "Tom" Brennan gave her the idea, and also a stand close to the dispensary, and she has been in the business outside the gloomy walls for twenty-five years. She has four barrels of bottles in the shed-like structure, which is about half the size of an ordinary newspaper booth. The poor who go to the dispensary for medicines usually fail to take bottles along. The dispensary does not furnish bottles, nor are they sold inside its gates. The "bottle woman," as she is called, sells for one or two cents each glass bottles of all sizes. ranging from the half-ounce vial to the one big enough for horse liniment.

METHODS OF WOOING SLUMBER.

"SLEEP, oh, gentle sleep, how have I frightened thee?" asks the distracted king in Shakespeare's play of "Henry IV.," and it is a question which thousands of weary mortals both before and after framing, though no answer has been forthcoming. That several ingenious persons have, however, solved the problem of inducing sleep the following peculiar methods of counteracting insomnia will clearly demonstrate:

His imperial majesty, the shah of Persia, was a martyr to insomnia for a long time until, in a happy moment of inspiration, one of the court physicians hit upon the extraordinary notion of patting the autocrat on the arms and back until sleep weighed down his eyelids. So admirable was this specific found to be that it was immediately adopted by the shah, and it is stated that the suite which accompanied him to Europe contained, among other functionaries, two "patters," whose sole occupation took the form of helping to send their master into the realms of the drowsy Morpheus.

At the Paris exposition there is shown the model of a cave once occupied by a famous Greek brigand, who was in the habit of being sent to sleep by the dropping of pieces of gold from the roof of the cave on a carpet beneath. The gold thus dropped represented some of the booty that he had acquired from passing travelers, and so dear had

the sound of coin become to him that nothing but its chink upon the ground would soothe his eyelids to sleep. Of all queer methods of inducing drowsiness the foregoing would certainly seem to be the

A gentleman who resided for many years in the town of Worcester was unable to drop off to sleep unless half a dozen peaches were placed under his pillow, as he averred that the perfume of the fruit brought with it a certain degree of drowsiness.

Somewhat similar to the device of this worthy was the plan of a Parisian merchant whose only remedy for sleeplessness was the insertion beneath his pillow of a sachet of lavender, the smell of which, he declared, would send him to sleep in five

Very peculiar was the following: A middle-aged engineer who had lived for many years close to the beach of a seaside town had grown so accustomed to the lullaby of the waves that when business took him to Manchester, where he was thenceforward compelled to live, he found that the absence of the sea murmurs robbed him of sleep. He therefore fitted up in his bedchamber an apparatus which was so constructed that the sound of the waves as they broke upon the shore was most cleverly imitated. Aided by this fictitious appliance, the engineer was enabled to sleep perfectly, and the apparatus continued in constant use until the day of his death, some years later.

In some oriental climes the natives who find themselves unable to sleep by natural means prevail upon their friends to administer to them very sound floggings with hamboo canes. The pain thus sustained is supposed by the natives in question to induce a sensation of drowsiness, followed by sleep. All the same, there are few insomnia patients in this country who would resort to so drastic a measure for curing their complaint.

GOOD JUDGE OF DOLLS.

SHE is a very little girl, only five years old, but in the short period of her few years she has enjoyed a large experience of life with dolls of all kinds and descriptions, who, in the course of their existence under her loving, but not always kind, administrations, have undergone many vicissitudes. So, the little five-year-old, when there came a real live baby into the house, felt herself to be something of a connoisseur in children. When it was put into her arms, this real live baby, she regarded it with a critical air.

"Isn't that a nice baby?" cried the nurse, with the joyous pride with which a nurse always regards a new baby, in which she feels that she has a proprietary interest.

"Yes," replied the little girl, hesitatingly, "it's nice, but its head is loose."

HE MAY BE NOTED SOME DAY.

A GENTLEMAN, who was showing the sights of Salem to some lady friends the other day, visited the birthplace of Hawthorne. This house, every man, woman and child in Salem is proud of and they are also proud of the historical knowledge of the urchins who like to act as guides to visitors, that sovereign's time have been in the habit of and they often ply them with questions to show them off.

This particular gentleman noticed one of the kids kicking his heels against the curbstone, and said, as he looked knowingly at his visitors, "My boy, what noted person was born in this house, do you know?"

"Yeth, thir," lisped the boy, "I was." Since then the Salem youth has not been so attracted to the gentlemen of historic tales.

WAR is the greatest demoralizer in the world. It liberates the savage passions long held in restraint in times of peace. Pillage, murder, rape and all the lesser crimes are its inseparable accompaniments, but the length to which brutal passion has been permitted to go on in China will long be a blot upon Christian nations.

EMMET BOYLES, who lives near Rosendale, Mo., has found in a ravine a mine of curiosities. Among the things found are a petrified cat, a petrified white oak log, mussel shells, snails, etc.; also some fine Indian arrow heads and fine specimens of different kinds of ore.

THE WORLD'S MOST FAMOUS DEN.

LUTHER: Born 1483, died 1546. A German, Catholic priest who cut loose from Rome in what is called the Reformation, giving rise to what is known as Protestantism, all Protestant churches taking their origin, in some way, from Luther's great work in starting the Reformation.

LOYOLA: Born 1491, in Spain, died 1556. A Cath. olic priest who founded the order of Jesuits and was its head. The order has been condemned on all sides, even by the head of the church, the Pope, for its unjustifiable meddlesomeness in secular affairs in secular methods. Loyola is listed among the great because his society has influenced the world of religion in many ways.

Calvin: Born 1509, died 1564. He first studied for the priesthood, but thinking that he had mistaken his vocation he took up the study of law, He returned, however, to theological fields. He was an austere, uncompromising theologian, and his fame rests on the fact that he founded a school of theological philosophy which has influenced nillions. He wrote much, and the Institutio, one of his books, contains the substance of his teachings, He was a logician, a reasoner of the highest type, and though we may differ from him on theological presentations, yet he is beyond question one of the world's ablest thinkers. His belief was, in brief, that some were predestined to eternal salvation. and others to eternal damnation, altogether independent of anything they, themselves, might do This belief, held to by millions, has made him one of the world's greatest men in influencing thought and action.

CERVANTES: Born in Spain 1547, died 1616. writer who has kept the world laughing for over two hundred years. His principal work and the one by which he is remembered, is Don Quixote, humorous account of the adventures of a squire and his servant.

HENRY OF NAVARRE: Born in France 1553, die 1610. King of France. Great because he was the acknowledged head of the Huguenots. His religion, and his relation toward Catholicism, give him a first place in history.

BACON: Born in London 1561, died 1656. philosopher who has influenced mankind by rea son of the greatness of his mind and his systemo philosophy, which, for comprehensiveness and ac curacy of detail, has surpassed all aftercomers whe explored the same fields of thought.

SHAKESPEARE: Born in England 1564, died 1616 The greatest dramatist that ever wrote the Englis language. Nothing ever produced before or alt Shakespeare has equaled him. He seemed to kao all conditions of men and all methods of thought His English is perfect. He has influenced million of readers in all modern languages.

GALILEO: Born in Pisa, 1564, died 1642. Hews one of the earliest and greatest of experimental losophers. Thoroughly skilled as a mathematic he excelled in astronomy, and it was mainly through him that the crude and untrue theories of preco ing scientific men were exploded. He was hall before the religious authorities of the time, and b had much trouble with the ignorant and the fanali al. He came very near the discovery of the law gravitation, and he had few followers, or even in ligent surroundings, at the time of his discover While not the most brilliant, yet of a very substantial characteristics. tial character, his discoveries in mechanical scient entitle him to regard. His bent was intensely protical, and while not complete or fully establish his discoveries as an experimental philosopher the domain of natural science entitle him 10 d place in the history of men who changed thousand invoca and impressed themselves on all aftercomers.

KEPLER: Born 1571, died 1030. Great because he was one of the founders of modern astronous His theory of celestial objects was erroneous many things now better understood, but he fitly be classed with the immortals because of astronomical knowledge.

What They Say!

Chicago Says:

Te INGLENOOR is par excellence. It bas The Included the Youth's Companion in our in our church publications,—John E. Mohler. Each number seems better than the preeding one. I have a Sunday-school class green boys and girls, from thirteen to eighteen rar, and all get the Inglenook as a Sundayedulpaper, and they are delighted with it.—

Clarence, lowa. Speaks Out.

his with much satisfaction that I express grappinval of the Inglenook. Its appeargreand general make-up are such that it at sectommends it to the reader. It has found say into many of our homes, and the peoplease truly glad for its continued success.—

Mt. Morris Says:

The INGLENDOR easily takes rank among best young people's papers in the country. his better than most of them because of the beace of the silly love stories and light readit it is a most valuable addition to the Indien's publications. No family should be sibout it.-Eld. D. L. Miller.

GIRDLING THE GLOBE

By ELDER D. L. MILLER,

Author of "Europe and Bible Lands," "Seven Churches of Asia," and "Wanderings in Bible Lands."

The author tells of things seen in his travels around the world; and writes in such an interesting and impressive manner that the reading of the book will give one a better idea of things than would be received by many hundreds who would make the trip themselves. Note what one writer says:

I have examined and read Bro. D. L. Miller's last book, "Girdling the Globe," and find it an excellent work. While all of his books are good and instructive, I put this as THE BEST, in fact the most interesting book I ever read outside of the Bible. Everything is made so clear and plain by the author. I would recommend all to secure it if in their power to do so. Surely a cheap trip around the world! Who would not take in such a trip and at the same time enjoy the comforts of home?

The Red Morocco binding, with gilt edge, gold back and side title, and handsomely finished in every way, makes a magnificent Christmas present to your near relative or dearest friend. Price, \$3.00, prepaid. What better do you want?

Have you a copy of this excellent book? Has the territory around you been canvassed? If not, write us at once. We have liberal terms to offer you. Address:

THE INGLENOOK

"The Inglenook" will be Sent to any Address the Rest of this Year for Twenty=five Cents, or it will be Sent the Rest of this Year and all of next Year for One Dollar.

The Best Way is to send the Dollar and be Done with it. After You Have Read it for a Week or two, You'll be Sorry that You Didn't Save Money by Subscribing for the Whole Year at Once. It's a Paper that Grows on One. Once Read, Always Read!

We Want Agents, == Real Live Agents

In Every Part of the Country. Anybody can solicit Subscribers at the Twenty-five Cent Rate, and Whoever Sends in Club of Ten of These, Can-have his Choice of ONE of the following books:

Dictionary of the Bible, Beside the Bonnie Brier Bush, Natural History of Birds and Quadrupeds, Dream Life,

Drummond's Addresses,

Ten Nights in a Bar-Room, Adventures of a Brownie, Intellectual Life, Imitation of Christ, Etc.

If he gets twenty subscribers he can have two books; for thirty subscribers three books, and so on. And they could he had in an hour's work in many a place. Whoever shows himself an efficient agent will be put in line for the Fall work connected with the INGLENOOK. There is a library of Fifty bound books waiting for somebody.

The Agent who sends in the largest list of dollar subscribers between this and the first week in January, 1901, will have sent him a Library of FIFTY BOOKS. Here is the list:

Adventures of a Brownie, Æsop's Fables, Auld Licht Idylls, Autobiography of Franklin, Autocrat of the Breakfast Table, Bacon's Essays, Beside the Bonnie Brier Bush, Black Beauty, Burns' Poems, Child's History of England,

Confessions of an Opium Eater. Dictionary of the Bible, Dream Life, Drummond's Addresses, Emerson's Essays, Ethics of the Dust. Fairy Land of Science, Fifteen Decisive Battles, House of Seven Gables, Imitation of Christ,

Intellectual Life, Lays of Ancient Rome, Longfellow's Poems, Lorna Doone, Mosses from an Old Manse, Nat. History Birds and Quadrupeds, Poe's Poetical Works, Prue and I, Rah and His Friends, Reveries of a Bachelor,

Samantha at Saratoga, Sesame and Lilies, Sketch Book Sticket Minister, Stories from the History of Greece, Stories from the History of Rome, Story of an African Farm, Ten Nights in a Bar-Room. Thirty Years' War, Twice-Told Tales,

Window in Thrums, Education, In His Steps, Minister's Wooing, Professor at Breakfast Table, Lamb's Tales from Shakespeare, Lallah Rookh, On Liberty, Tanglewood Tales. Sign of the Four.

The Agent sending in the next largest list will have the choice of TWENTY-FIVE books out of the above list. The third largest list will entitle the Agent to FIFTEEN of the books, his choice; and the fourth largest list will win TEN of thesi There is also a cash commission going to the Agent. We prefer the services of the Messenger Agent i he will write at once for the place, but we will put the first live applicant into line, as the INGLENOOK is not going to be the last If agents desire to enter for the Library they should say so in order that we may keep tab on subscriptions re Elgin city is barred in the competition for prizes.

The announcement of the successful Agent will be made in January, 1901.

A Live Paper for Live People.

The Inglenook is no longer an experiment. It is regarded as phenomenally successful by experienced newspaper who know what they are talking about. The reason is not hard to find. It is a FIRST-CLASS PAPER, with nothing of It is up to date, and always will be. It will have something new in each issue, it always ha and commonplace about it. and it never will fall below its self-set standard,—being the best paper of its kind in the world. You can't read it without The INGLENOO The whole wide-spread world is ransacked in the interest of its readers. being interested and instructed. isn't made with a dull pen and a pair of shears. THE BIRD WITH THE BROKEN PINION.

I WALKED thro' the woodland meadows,
Where sweet the thrushes sing,
And found in a bed of mosses
A bird with a broken wing.
I healed its wound, and each morning
It sang its old sweet strain;
But the bird with a broken pinion
Never soared as high again.

I found its young life broken
By sin's seductive art,
And, touched with a Christlike pity,
I took him to my heart.
He lived with a nobler purpose
And struggled not in vain,
But the life that sin had stricken
Never soared as high again.

But the bird with the broken pinion Kept another from the snare, And the life which sin had stricken Kept another from despair. Each ill has its compensation; There is healing for every pain, But the bird with the broken pinion Never soared as high again.

-Hezekiah Butterworth.

THE BANNING OF ELLEN WOODS.

In Three Chapters.-Chapter Two.

The next day it was learned that Henry and Ellenhad been married, and had taken their departure. The Amish mourned their late brother as one who had passed into the world and who had brought compulsory forgetfulness on himself by marrying out of the Lord. All that Ellen, his wife, had to expect was his in the way of the averted lace and the unspoken word from those who had best known him. Their interests were in common now. For Love, the mystic power that moves the world, they had given up all that was near to them that they might be one in life and death. People have died for love's sake. These two lived in death for each other.

He had secured the position of tenant on a large fam in the neighborhood, and settled down in the house built for hired help. It was in the late Autumn and there was much work to be done on the place. When the bobwhite whistled his clear notes Henry first heard them in the early morning as he dove to the field. Ellen watched the awakening olbird and beast as she cleared the simple breaklast things away and tidied the humble home. As forthe ban, it still held.

One day Henry was ploughing in the field, when, making the round next the road, he saw coming in the distance a familiar wagon and team. It was his hiher and mother who had intentionally driven out of their way to see what could be observed from the outside as to how their son was getting on. Resently the wagon and the plough came abreast Thin easy speaking distance. Henry looked up whem. His father and his mother looked straight and passed on. Not a word or a sign that the once near and dear first-born child was toiling the field before them. Ellen's experience was auch the same, but it had a crueler barb in the One day she was walking to the village total carrying on her arm a heavy basket of butter eggs. Coming behind her was a team and Ron. A look showed the people to be some of nearest kin, and the ones who sat in the next at the church where she had been banned. passed her as though she had no existence. must also be said that after they had passed no and bad been spoken in comment of any kind. spoken in comment of any another people. She was as the heathen to And so the winter passed. The first snow whitened the fields and the hills. Then the lengthening nights and the lowering days the there could not much be done on the farm. spent their spare time with each other, and y bad over again, had talked of the time when bad earned enough that they could move west

and on a homestead of their own be far from the ban and its dreadful workings. In a hundred homes where every inmate had known them, both as children and grown people, their names were never mentioned. Why speak of the heathen and the publicans? Buried in the hearts of almost all was a feeling for which there are no words. They were not heartless. They were not needlessly cruel. They would have died for their welfare "in the Lord," and they were crucifying themselves in the name of Christ and the church.

About six months after their marriage when the late Spring work was on, Henry came in one day at noon and said that he did not feel well. Dinner was eaten and he went again to the fields. He returned early and sat around quietly. He made no complaint but said that he felt dull. The next day it was worse than before. Then he lay down and another did his work on the farm. Very unwillingly Ellen called in the country doctor. When he went out of the kitchen door he told her that she should arrange for a siege of sickness, for typhoid fever had Henry in its clutches. It was mainly a matter of nursing, he said.

Then began the ceaseless vigil. Those who have kept watch and ward when death is knocking at the door know something about it. Ellen did all that human effort could render in the way of care. The people who owned the farm came regularly to see her, and some of the few outsiders who lived in the neighborhood stopped at the gate and asked how he was doing. But of all the complicated relationship on both sides not one crossed the threshold. She met death alone, and she made no outcry. If it was mistaken religious fervor on the outside, love and loyalty took up their abode in the humble tenant house. She asked nothing from them, she expected nothing. As she sat by the bedside listening despairingly to the babble of delirium no thought ever entered her head in the way of asking a truce in the ban. Henry might die, she might die, she hoped that she would, but there would be no weak appeal from the merciless finding of the chosen of the Lord. Into His hands she would trust herself. not theirs.

One early morning when the sun streamed into the room its rays fell on the head of Ellen seated on the floor, her head resting on the edge of the bed, dead in sleep. Tired Nature will stand so much and no more. It is the last feather that does the work. She had not intended sleeping. She would take a rest for just a moment beside the sick bed,—the nights were so long, so long. When she awoke she arose and looked at Henry. It was enough. The open eyes, the drooping jaw, the cramped pose, told the story. He had passed while she slept.

News of this kind travels fast in the country, and the same day the whole countryside had been made l acquainted with the fact and the date of the funeral. Now there is an unwritten law that when death comes to the banned it is lifted long enough to attend the funeral, see the dead buried, but there must be no word spoken. So when the time came at the Zook homestead hundreds of people had met. Dunkers and Amish were there waiting the arrival of the cortege that presently came over the hills. One hearse, one carriage with Ellen, and the owners of the farm on which Henry had worked, one alien neighbor, and that was all. Out on the hillside, within an enclosure, there was the family burying ground. The heap of yellow clay, the rude implements of sepulture were in evidence as the hearse drove up, and helping hands took the cheap black coffin out of the death wagon. Over three hundred people were present, and standing by the open grave was Ellen, alone, and as the German hymn was wailed out by the living, and the long. droning prayer was made, she was furtively watched. They thought that if she had left the church for the world what had she to expect from them. She thought if they had deserted her in the hour of mortal need they might go their ways,

she would walk her path alone. It was an iron misinterpretation of Matt. 18 on one hand and heroism on the other. There was a rambling discourse that had no bearing on the immediate matter of the gathering. The Amish preacher said he would speak to the living, and he touched almost all things but what had brought them together.

Then the crowd separated, and went home. Ellen went back alone to her desolated home. Not a word had been spoken to her. Not a sign had been made. The ban held like steel.

Ellen Woods went home and sat down to think. Widow as she was there were questions to consider. Her future was to be thought over, and in the darkened room she worked it out. She would wait a month or two and then she would go out into the world and work. If it was a man child she would work for him till he was grown and then he would keep her in her declining years. If it should he a girl they would live together always. Meantime the ban held.

(To be Concluded.)

A LIVE DUMMY.

THERE are dummies and dummies. The Editor makes a dummy every week, and it goes to show the printers where he wants the articles in the paper. Then you have seen the lay figures that Isaac Isaacson has in front of his store on which to display an overcoat costing \$3.99. And sometimes the dummy is in the window. But no matter of what made it never resembles humanity in a way to deceive anybody. The Editor has seen people who looked like dummies, but he never saw dummies that looked like people—that is only once did he see one and that is what we want to tell about.

The other day while prowling around for something new to write up for the 'Nook we saw a crowd in front of a clothing store. Passing over to the other side of the street we saw the attraction. It was a dummy in the window, life size, rigged out in an entirely new suit of clothes, overcoat and all, and it had all the high coloring characteristic of the wax figure. There was the same staring look they all have, and it seemed that the thing about it was a very good imitation of a dude who had looked too often on the wine that is red, and sometimes of other colors, and was just a little staggery on his feet. Of course the figure did not move out of its place, but it circled around in a slow, jerky sort of way. The crowd of about fifty people joked and guyed it most unmercifully. Pretty soon I saw that there was no system about the motions such as would be induced by mechanical means. Then I asked a man what it was. He told mc.

Now the truth of the business was that it was a real, live man, a young man, smooth faced, of perhaps twenty-five, painted up in perfect imitation of a wax figure. He had the vacant look, and outside of his turning around as though on a pivot, he was absolutely motionless and expressionless.

It seemed to me to be a very difficult thing to do. Consider! Paint yourself up till you look like a fool, dress up till you are a dude, stand in a show window before fifty people, and never for a moment make a motion but to turn around slowly, preserving the staring wax face and eyes straight ahead, and see how long you can keep it up. The man by me said that he could do it, that is the man in the window could, for from an hour to an hour and a half, till he broke down before the crowd and had to laugh. It was a struggle, for the crowd was trying to break him up, while he was staring at nothing and never turning a hair in the motionless stolidity of the proceeding. He didn't even wink, unless he did it when his back was turned. It was a grand piece of self-control. Ten dollars a day he got for doing nothing before a crowd. If you think it is easy try it for five minutes.

In 300 German towns, with an aggregate population of 15,000,000 inhabitants, medical statistics are now regularly received and compiled.

GOLD FROM THE MOTHER EARTH TO THE GOLD COIN.

BY OCIA C. LANHAM.

In 1848 Mr. James Marshall was digging a sawmill race on the bank of the American River in California, when he discovered some yellow metal which proved to be gold. For a long time this precious metal could be washed from the sand and dirt along the river banks and at the foothills, then they went to sinking deep shafts farther up in the mountains.

Gold is usually found among stones of great size and ofttimes the large stones are laden with small particles of gold, all through it. After a vein of gold has been located the miner sinks his shaft just to the edge of it. After putting in the proper machinery, they go down into the shaft and tunnel or drift out to the side and take out the precious ore. Some gold is found, that is pure enough to go directly to the smelter, but much of it must be gotten out of these large rocks. This is done by a lengthy process at the cyanide mill. It is put into a large mill which works very much like a coffee mill, and it is ground or crushed to the size of a walnut, then it passes into another mill which grinds it to about the size of a pea, now it is ready for the drier. It must be perfectly dry and to do this it is passed through large tubes or pipes of steel about as large as a barrel and through which flames of gas are continually blowing; this dries the valuable rock. Now by the use of an elevator much like that of a flour mill it is clevated up and emptied into another mill-like machine which grinds it to flour. Would you not like to have a loaf of bread made of this flour? Why not? It would be worth several coaves made out of wheat flour, although you cannot yet see that there is any gold in it. Now to get the gold out of this dust it is necessary to wash it with a solution called cyanide of potassium and water. This cyanide of potassium when dissolved in water has such an attraction for gold that if there is any gold in anything which it tooches the gold will melt and become a part of the solution.

The dust, with its gold in it, is put into a large circular tank made of steel. Now the solution is turned on. It being very poisonous it must be handled with great care. As the dust becomes moistened by this deadly liquid it is made into mud. Isn't this a curious mixture? So rich! Yet how deadly poison! The gold leaves the mud and goes with the cyanide which is drawn off through the bottom of the tank. Now the gold is gotten from the water or eyanide solution by means of the attraction which gold has for zinc. Gold likes the cyanide but it likes zinc better and as it passes into boxes filled with fine shavings of zinc, it leaves the solution of cyanide and sticks to the zinc. Now to get the gold off of the zinc, it must be washed. Then the zinc and gold is so melted in a furnace that when the door is opened a stream of almost pure gold runs forth. After running into molds and hardening, it becomes a gold brick, too rich to put into the walls of a house.

After gold has been mulded into bricks, it is shipped to the United States mint, of which there are several in the United States, but the oldest mint is in Philadelphia, Pa. It was founded during George-Washington's administration. In these mints there are certain rooms or vaults in which the precious gold bricks are piled up in regular order. These bricks are much smaller than our common brick. They are only about the size of a bar of kitchen soap, but weighing about forty pounds cach. We know that pure gold is so soft that you can mar it with your finger nail, so, in order to make good, lasting money, it is necessary to melt it in large pots and mix in copper and other substance to make it hard. Now the whole mixture is run out into long gold wedges about as wide as a twenty dollar gold piece and about a foot long, and two inches thick. These wedges are called ingots. It is from these ingots that our gold coins are made. They are not melted and run into mold as is done with the iron or many other metals, but are stamped out of cold metals. These ingots pass through between large cylinders of steel so graduated that the ingots get thinner and thinner,

as they are pulled through, until at last they are just about the desired width and thickness, but they are much longer than when they first went through the rollers. Now these long strips of gold are run under a vertical steel punch which has such great pressure that it cuts out round gold pieces just the size of the coin to be made. Why won't this round piece of gold pass between citizens without any more work? Because Uncle Sam has not put his stamp on yet.

It is very important that each coin should have the proper amount of gold in it, so it is weighed, and if it is found to be lacking in weight, they often cut into the side and slip in a small bit of gold, but if it lacks very much it is thrown back to be melted again. If it is too heavy, a little bit is filed off before it is stamped. After this weighing it is taken down into the basement and with thousands of other blanks, it is shoveled into a vat of acid which soon eats all the dirt off of it. It is then dried and taken upstairs to receive the important part.

The coining is done by a coining machine. The gold blanks are fed through a long tube into a machine which drops them between two dies. The upper die bears the picture of the goddess of liberty, and the lower one bears the American eagle and the lettering which you find on a gold dollar. As the coin lies there perfectly speechless, these two dies come together with such great pressure that they leave the beautiful impression which we find on the gold coin. All money is carefully counted and at certain times a certain amount of it is put into the treasury and thence into the different banks and by various transactions it goes from the banks to the citizens.

Bowbells, North Dakota.

THE JAPAN PERSIMMON.

BY N. R. BAKER.

"Green persimmon" is a synonym for bitterness

Stories of how certain uninitiated have been deceived into tasting green persimmons are as numerous, and perhaps not half so fabulous, as the old joke of "holding the sack for snipe." But the thoroughly ripe fruit, even of the wild tree, is quite edible. And yet the difference between the common wild fruit and the cultivated and improved Japan persimmon is almost as great as between the wild crab apple and the best highly-developed Baldwin.

Within the memory of men now living bananas were not seen upon fruit stands. We predict that young people of to-day will live to see the persimmon almost as numerous and popular.

The Japan persimmon commonly weighs nearly a half pound—hence will average fully as large as the larger varieties of apple. It is practically seedless. There is a story told here of a man earnestly seeking for some seed of this new seedless variety of persimmon, as he remarked that the fact of its having no seeds would be a very remarkable feature. Whether true or not we do not really know, as like a great many occurrences it always happens just over in another neighborhood, and when followed there, like the "milk sickness," it is a little further on, or else we have passed it.

The Japan tree is not so hardy as the common tree of our native forests, and even that does not mature fruit north of the isthmas—or average temperature—of Columbus, Ohio,

The fruit is generally of a deep yellow color, when ripe, and is shaped not unlike the leaden ball of a common cartridge.

Its taste is similar to that of another persimmon on the same tree or those on another tree of exactly the same kind. In other words it is so unlike other fruit in taste that I can think of none with which to make a suitable comparison,—not even other persimmons. It is simply luscious. That is the general verdict after a few trials. Some do not like it at first—possibly because its taste is peculiar to itself and hence unexpected. People who had to "learn to cat" bananas, and celery, etc., may have to cultivate to some extent a taste for the Japanese persimmon.

The book name for persimmon is date plum. Like nearly all fine Japan fruit the tree is a dwarf, though it is thought it may reach several inches in diameter. There is no way of knowing, I believe, as there are no large or old trees yet on account of their recent introduction.

The "puckering" propensity is almost entirely wanting. "When frost falls," as we say in the South, then is the time for persimmons and opossoms. The acme of good things to many a South ern appetite, especially to those of the colored race, is an opossum, fattened on persimmons, baked in a pan lined with yellow yams. If that has been the case in the past what must the future have in store when the new kind of persimmons shall be raised ten times as large and ten times as luscious? What 'possums there will be then! Surely "there is a good time coming."

Whistler, Ala.

GIRLS OF THE WILD WEST.

BY LOIS G. NEEDLES.

Are any of the Inglenookers wild west girls? If they are, they are girls to be envied. The writer happens to be one, so of course she knows. pony and gun, the best that can he had, are all Western girl needs to make her happy. She must have a good saddle, and plenty of ammunition, and a half day off to give her pony and gun exercise, On a cold day when her pony feels good, no one need think of passing her, for she would be unlady like enough to run him a race of half a mile and i sure to come out ahead. If a rabbit or bird crosses her path it is liable to get a bullet in its neck. The Eastern lady would be shocked at such actions, Nevertheless a Western girl can sit in the parlor and converse with the preacher as well as the Eastern girl.

When she attends college, she may forget sometimes and act as she would at home, and then she is shunned by the Eastern girls, and called "horribly unwomanly" by the professors, and frequently is told to "Please step in the professor's study." While there she gets her orders, and if she doesn't follow them just right she gets another raking, and that is the way it goes the rest of the time. But one good thing, the professors, nor anyone else, can keep her from thinking of the jolly times she will have when she returns home.

You must not get the idea that the Western girl does nothing but hont rabbits and quails, and run races, for she can bake bread, cakes and pies, wash dishes, and scrub as well, and osually better, than her sisters in the East. And on Sundays she doesn't go to church just to show her fine clothes, but to worship, as all good people do. In the week time when she gets her work done she brings in the horses and hitches them to the buggy without help, and she and her mother spend the rest of the day in riding around. If she wants chicken for dinner she takes her rifle or revolver and shoots one, and then chops the wood to cook it with. I have described the country girl, but I think I can truthfully say for the town girl that the West sends out the finest stenographers in the country. If this doesn't appear in the Inglenook, I will try again, for I am only sixteen and have time to learn,

Wayside, Kans.

An enterprising Australian millionaire named Leonard took a trip to Peru recently. He sa great flocks of the alpaca wandering on the Andes. Being a woolgrower himself, he was struck wi their splendid fleece. He resolved to buy some 3 take them home. He found that the Peruvian gov ernment absolutely prohibited their export. tried, by chartering a special ship, to smuggle some off, but was unsuccessful. Then the idea occurred to him of taking them out of the country eastward. He bought a large flock, engaged trusty men at had the creatures driven over the passes, 18,000 led above sea level, and then clean across the continent to Buenos Ayres. This little expedition cost him \$13,500. But the long march had so weakened the alpacas that they all died on the voyage.

The sensation which you experience from a release blow on the head resembles very much the sight of stars. The fact is, there is a phosphore cent power in the eye, which shows itself when it the head is strock violently, and is often perceived the head is strock violently, and is often perceived even in the act of sneezing. The jar to the system even in the act of sneezing. The jar to the system even in the act of sneezing. The jar to the system even in the act of sneezing. The jar to the system even in the act of sneezing. The jar to the system even in the act of sneezing. The jar to the system even in the act of sneezing. The jar to the system even in the act of sneezing. The jar to the system even in the act of sneezing. The jar to the system the even in the act of sneezing. The jar to the system the start of the start of the start of the sneezing either the darkness or a faint blue light which floats before the eye and in which the imagination discovers the system of the sneezing either the start of the system is a specific to the system of the system of the start of the start of the start of the specific the start of the specific the start of the start

Nature & Study

THE biggest animal on earth afraid of the small-

Is an elephant afraid of a mouse?

Get an elephant and a mouse together, climb a mee and watch for yourself.

An artist and a writer athirst for scientific truth. metried the experiment. There need no longer ic any doubt that a mouse can scare an elephant alo fits in about three seconds. It was thoroughly demonstrated to the satisfaction of two embryo natgralists and any number of curious onlookers at the orcus grounds on Folsom street last Wednesday

Armed with a box of mice and a camera, this expedition in search of zoological information proreeded to the tented arena and inquired for the head keeper of the elephants. A gentleman named Souder-Mr. Pearl Souder, altogether-answered

We have come to discover if it is really true that abig thing like an elephant can be frightened by a file thing like a mouse," said one of the visitors. We have brought a few of the latter variety along sith us to spring on your elephants for the purpose of seeing what there is in the theory we hear menhoned now and then about these African monsters maning away from our American pantry cheese ollerers. We thought that only women were afraid of mice, and we want to see if elephants are as timid a women in this particular."

"So you want to try them on my elephants?" said he head keeper, glancing apprehensively around teplace. "Are your lives insured? Perhaps you don't understand what a stampede one little mouse can cause in a drove of twenty-five elephants. Do you want the beasts to pull this lot up by the roots and run away with it?"

"Is it as had as that?"

"It might be a good deal worse. If there is one thing in the world that an elephant is mortally alraid of, that one thing is a mouse. When we are n our winter quarters in Wisconsin, our greatest are in connection with the elephants is to keep nice out of their stables. One mouse has been known to create an elephant panic and cause more min in ten seconds than a tiger could cause in ten bours. I don't know how it comes that a beast who lears no animal anywhere near his size can be brown into a chill of terror and be made to plunge about like mad, tearing to pieces everything he buches, simply by the sight of a mouse creeping buildy into his stall. But if you are looking for oformation I suppose I can risk a trial with the nice if you can. Bring on the mice."

The mice were brought on.

The artist got his camera ready and fixed the soulter to catch movement in the thousandth part of a second. Anybody who knows much about elephants doesn't allow himself to be misled by the notion of slowness which their unwieldy appearance would naturally suggest—he knows that an elephant he he move in real earnest is not the slowest action a creation by several long lengths. The artist's smera had quick work ahead of it to keep track of hings after those innocent little mice should be liberated.

Two of the most courageous elephants in the unch, Prince and Duke, were led out first. If bese royal martyrs should stand their ground when be mice ran at them, their less intrepid brothers ad sisters would be given a turn.

The camera illustrates better than any words could describe what Prince and Duke did the moand Duke die ... Only they caught sight of the tiny intruders. be sternest commands of the keeper and his assistthis prevented the huge beasts from taking to the Arcets. They swung along at a ground-rocking Ace for a mad moment, then were called to a halt Revenue by the sound of their masters' voices. hey stood looking anxiously about them to see if the mice had followed. Not a mouse was in The fright of the bigger animals had not a circumstance to the terror of the smaller the they felt the jar of the earth which the leton mountains of life had caused by their tramp-A mouse ordinarily will shy at nothing but a A mouse ordinarily will shy at nothing being or a cat, but the thunder raised by the

elephant stampede was too much even for their nerves.

Prince and Duke were led back to the pit and were re-enforced by three more of the elephant band. Then a second relay of mice was let loose and more trouble began. One of the new victims stood on his hind legs and pawed the air, another turned and broke for the tents in the opposite direction to that taken by the main bunch. But all were equally afraid and in a hurry to get out of the way.

Again the keepers succeeded in calling them back, after the beasts were satisfied that their tiny enemies had disappeared. They still had uneasy expressions in their cyes and they walked with caution, peering carefully at the ground. One might imagine that an elephant would need opera glasses to see a mouse, but it seems that the little eyes of the monsters are keen enough even to spot as small a danger as that when the danger happens along.

"They haven't seen any mice for some months," said Mr. Souder, after the elephants had been quieted for the second time—"not since we left our quarters in Wisconsin last spring. They had grown somewhat used to the little rodents by that time, and while they remained cowardly in the face of them they had got enough confidence in the generosity of the mice not to hurt them to bear the little visitors' intrusion without serious agitation. But their long vacation on the road has caused the old fear to creep back in them, and, as you have just seen, they cannot witness the return of their old enemies into their lives without having their nerves going to pieces."

WORTH A DOLLAR A SMELL.

THE costliest of all flowers produced of late years is the Rothesay rose, a strange-looking, fleshcolored bloom. It is of an extraordinary colorvelvety, and just like the cheek of a healthy baby in tint. Every petal is wrinkled like the "goffering" of a girl's dress, and the entire bloom is very closely set, and weighs as much as six ordinary roses of the same kind. A single flower is worth

The prize of \$1,000 offered in Holland for a black tulip has never been claimed, but five jet black hyacinths have been known to grow in the last twenty years. The cheapest fetched \$100 and the dearest \$450-almost a record price for a bulb. Only one of the five reached a second generation, and now there has not been a black hyacinth for three years.

Orchids fetch the highest of all prices among flowers, though one may buy a tolerable orchid buttonhole for a quarter.

The sunset orchid, a lovely flower of deep yellow and carmine and flaming crimson, which cost many a life before it was first brought home from the virgin forests of the Amazon, could not be bought for less than \$1,500 a plant when it arrived in England. Only three out of forty-five sunsets were alive on arrival.

The record price paid for an orchid lately is \$2,100 for a plant of a new species called the canopus, from the interior of Brazil. It has a most lovely bloom, each flower eight inches across, streaked white and purple.

A blue peony seems to be as likely a thing to encounter as a blue horse. However, a light and washed-out-looking but distinctly blue specimen grew in the hothouse of a Manchester flower culturer. It was bought by a very wealthy amateur for \$1,000.

You can pay as much as \$40 a blossom for some varieties of the chrysanthemum, and a peagreen flower of this species, which is occasionally to be had, will fetch double that amount.

WHERE GRAPES ARE PLENTY.

"CONTRARY to the belief of many people, the largest grape-growing region in the world is not the champagne districts of France, nor in the sunny valley of southern California, for western New York owns the title by virtue of 50,000 acres now given over to grape culture," observed one of the largest fruit merchants in New York to the writer the other day. "In the Keuka lake region of western central New York there are 30,000 acres in vineyards, and the other 20,000 acres are in the Chautauqua belt. The two districts are made one by a sort of grape

corner of the state. The harvest in these great vineyards will amount to nearly 7,500 car loads this year. That means more than 22,500,000 ninepound baskets of grapes, or nearly three pounds of the fruit for every man, woman and child in the country.

"To harvest this gigantic fruit product will require the services of between 6,000 and 6,500 pickers, most of whom are women. The women are preferred, because they pick the fruit more rapidly and pack it more neatly than the men, who are only employed to do the heavier work of hanling, lifting and driving. Many of the girls come from the inland districts of Pennsylvania, northern Ohio, southern New York and even farther away. A good picker usually gets from eighty to ninety cents a day when she boards herself, or \$3 a week and board for working ten hours a day."

LAST OF THE SEA ELEPHANTS.

FIFTY years ago the fine natural harbor on the southwest coast of the island of Santa Catalina, gave shelter to what was perhaps one of the largest herds of the California sea elephant-macrorhinus angus tirostris-then known, the largest of its tribe, many attaining a length of twenty-two feet.

It was a striking and conspicuous object, and naturally attracted the attention of the whites, who immediately began a war of extermination, the animal being very valuable for its oil, the large bulls affording 200 or more gallons.

The animals were very plentiful at this time from latitude twenty-five degrees to thirty-five degrees; but the war of extermination began about 1852, and the present decade has, in all probability, seen the last of the animals.

The government, recognizing the inevitable, sent an expedition to Lower California a few years ago, and secured all the sea elephants they could find; and the oil hunters have since then completed the work, and it is believed that this fine animal is extinct.

In 1884 the crew of the sloop Liberty killed ninety-three. These men had sentiment enough to leave a few females and young; but it was a mistake, as some weeks later another boatload of exterminators came along and slaughtered what was left of the herd.

The government then sent Charles H. Townsend to secure what animals might have remained. He visited all the localities in Lower California, which had formerly given shelter to these animals, but found none until he came to San Cristobel Bay, where there was a herd of fifteen, these being killed in the interest of science. These were probably the last of the race.

CARPETED RIVERS IN THE SOUDAN.

THE search for convenient ways of transportation by which the products of the Soudan may reach the outer world has called attention to a remarkable phenomenon of vegetable life on some of the headwaters and tributaries of the Nile. This consists of enormous growths of papyrus and other plants, completely covering the streams and forming carpets of vegetation two or three feet thick, beneath which flows the water. Navigation by small boats is, of course, entirely interrupted by this obstruction, which is in places supplemented by vines and clinging plants which arch the streams from bank to bank. Heavy floods occasionally sweep away the accumulations of plants, but they are quickly reformed.

FISHES SLEEP WHILE IN MOTION.

THE sleeping of fishes, if they may properly be said to have such a habit, is as yet a puzzle. It is altogether probable that they do sleep, though they never close their eyes, simply for the reason that they have no eyelids. Probably many fishes slumber while swimming in the water, reducing the exercise of their fins to an automatic minimum. But it would be a mistake to suppose that a fish does its sleeping at night necessarily. On the contrary, many species are nocturnal in habit, feeding in the night time.

In Turkey the disappearance of the sun at night is accounted for by the periodical retirement of that isthmus, which runs down toward the southwest pious luminary for prayers and religious reflection.

THE INGLENOOK.

PUBLISHED WEEKLY

At 22 and 24 South State Street, Elgin, Illinois. Price, \$1.00 a year. It is a high grade paper for high grade boys and girls who love good reading. INGLENOOK wants contributions, bright, well written and of general interest. No love stories or any with killing or cruelty in them will be considered. If you want your articles returned, if not available, send stamped and addressed envelope. Send subscriptions, articles and everything intended for THE INGLENOOK, to the following address.

BRETHREN PUBLISHING HOUSE, Elgin, Illinols.

Entered at the Post Office at Elgin, III., as Second-class Matter.

HAVEN'T GOT TIME.

THERE are some people who seem to be always busy, and never have time to do things they should do. They rattle around in the world, on the jump half the time, and they are always so busy that they haven't time to attend to their business. They are usually people of abounding vitality coupled with deficient mentality. They undertake more than they are capable of, and divide themselves up in a way that leaves them but little more than a rickety rattle of humanity out of which nobody can get any clear-cut, concise statement or definite action in anything. They are like peas on a griddle, nobody knowing where they will be next.

Another man, of a different turn, would manage a railroad employing fifty thousand men with less noise and confusion than the "Haven't time" could drive a one-horse wagon to town and back. Now there's a reason for this and it is not hard to find. Of course there is a deep down difference making one man a quiet manager of men, and the other a rattle-trap, but the unspoiled reader may help himself wonderfully if he will remember that the difference is one that admits of a clear explanation. The born leader and manager is always a quiet man, one who does one thing at a time, and allows nothing to break in on him. He always has time for anything and everything pertaining to the business between matters. The man with the rickets tries to do half a dozen things at once, and when in the middle of one he allows somebody to thrust a paper in his face or to ask a question foreign to the matter of the first part. Of course he never has time, more than that his time is usually of not much account to anybody. He tries to be in town, across the hill and up the creek at the same time. Of course he is

One thing at a time, that done well, then when finished the next, and never any interruptions allowed, and the amount of work accurately done will astonish you.

YOUR RENEWAL.

FEW of our subscribers will allow their subscriptions to lapse. The 'Nook, with its weekly visits, has won for itself a hold on the minds and hearts of its readers. They look for it eagerly, scan it carefully, and wait for the next issue with interest, But here and there are those who will put off their renewal till they begin to miss the 'Nook's coming when they will ask for back numbers. They can not be had. The papers are all disposed of as we go along. Take time by the forelock and renew today. Save delay and disappointment.

If, however, you are now a subscriber and intend continuing as such, but do not find it immediately convenient to send on your dollar, then postal eard us that you wish to be continued and we will not take you out of the mailing list and you can remit later. But the better plan is to subscribe at once, one way or the other.

A BOY RELIGION.

THE late Henry Drummond said to a company of boys: "Boys, if you are going to be Christians, be Christians as boys, and not as your grandmothers. A grandmother has to be a Christian as a grandmother, and that is the right and beautiful thing for her; but if you cannot read your Bible by the hour as your grandmother ean, or delight in meetings as she can, don't think that you are necessarily a bad boy. When you are your grandmother's age you will have your grandmother's religion."

Now, there is a great deal in the above for a boy to take to heart, for some boys have the idea that they will be expected to put aside most of their propensities if they take upon themselves the duties

pects, no one wants them to give up the natural rights and feelings of boyhood. They are not to be in the least grandmotherly or grandfatherly, but they are to be happy in the way that God intended all youth should be happy.

One of the truest-hearted Christian boys I know is also the merriest. No one would think of calling him "grandmotherly." He reads his Bible, too, and goes regularly to church, to Sunday school and to prayer meeting.

LONG PRAYERS.

No one likes to hear a long prayer, and when a man is making one, very likely the people are praying that he will stop. Long prayers may have been all right in other times, but they are not now. Men think quicker than they used to and act quicker. A man used to take ten foolscap pages to send an order for goods to New York; to-day he sends it by telegraph and puts it into ten words. See how short are the prayers recorded in the Bible. "Lord, help me!" is one "Lord, save, or I perish!" is another. Why, a man said that if Peter had had as long a preamble as men put into prayers nowadays, he would have been forty feet under water before he would have got as far as the petition for rescue. Prayer isn't praise; it is asking God for something. You can ask God for something in a few words. If a man will pray fifteen minutes in a prayer meeting, he will pray all the spirituality out of it. I'd rather have a man pray three times and only five minutes at a time, than to have him take fifteen minutes at once.—Moody.

YOU SHOULD NOT FORGET THAT-

To judge by personal appearance alone is an evidence of ignorance and stupidity.

Kindly deeds show kindly thoughts and prove the sincerity of kindly words.

Kind words are never lost; love and appreciation are the coinage in which they are paid back.

Daily politeness at home shows more true refinement than any amount of company manners.

Kindly thoughts ennoble the thinker, though others may know naught of them.

Little acts of kindness performed daily are greater and grander than one immense act of goodness done now and again.

ONE OF THE IRONIES OF WAR.

CAPTAIN LANS of the Germany navy, who took such a prominent part in the capture of the Taku forts, writes home that the Germans captured at that place seventeen guns of various caliber and much ammunition. "These," declares Captain Lans, "are the guns which have killed and wounded so many of my brave fellows, and which, alas! like almost all the enemy's guns and ammunition, come from our native country. The guns are all modern quickfirers from Krupp's."

STAY ON THE FARM.

A RECENT writer urges boys to go on the farm. He prophesies that the farm will soon return to favor as it will to greater profit. He suggests that the life of the farmer is far more peaceful and independent than the lot of the average city man. Conditions are annually growing more uncertain and difficult in the cities. Then, too, a dollar earned at home is worth two earned abroad. The writer refers to Lancaster County, Pa., showing the money made and saved by the farming community. There are in that county seven thousand men, and there are twenty-two million dollars out at interest in the county, hundreds of millions in homes, beside nearly one horse to every adult male, and household comforts galore.

A FLUENT speaker utters between 7,000 and 7,500 words in the course of an hour's uninterrupted speaking. Many orators of more than usual rapid utterance will reach 8,000 and even 9,000, but 125 words a minute, or 7,500 an hour, is a fair average.

D. L. Mohler, one of Missouri's brightest ministers, writing to a friend, who showed us the passage about the 'Nook, says, "Undoubtedly the In-GLENOOK is one of the spiciest, newsiest, neatest, of Christian boys. This is a mistake. No one ex- cleanest, and most readable papers I ever saw."

OUR QUERY COLUMN.

Do you club with other papers?

No.

Could I sell wild birds to dealers in Chicago? Yes, but better let the birds go free.

Who wrote the poetry about the INGLENOOK COVER! It was written in India.

Was a Bible year shorter than our year?

No, not appreciably so, that we know of.

How was the war with China settled?

It is not settled. The powers are haggling about the terms now.

Why will some European nations not show marked honor to Paul Kruger?

Because they don't want to get mixed up in any fuss with England.

Is there much difference between colleges, or is one like an-

There is a world of difference. All are good but some infinitely better than others.

What is a mugwump?

One who leaves his political party for its opposite. It is an Indian word, applied to one who married out of the tribe.

Is Sunday visiting right?

After service we know no better thing to do than to visit friends. A Sabbath afternoon, with brethren and sisters for company, is well spent.

How is cornstarch, the kind used for food, made?

It is simply a finer grade of the starch used to other purposes. We have a good description of the interesting process in the pickling vat. Wait.

Is there any given length for a sermon? That is, what is the time that should be occupied?

Here in Elgin an hour is used up from first to last, that is, beginning at 11 o'clock, all is over by 12, and that is long enough to say a great deal.

Is Elgin a large city?

It has about 23,000 population, but being only an hour from great Babylon by the lake it is dwarfed in the shadow. It is more like a large country town. But it is a good place all right enough.

Is there any preservative used to keep milk in the Elgin dairy country, and what is it?

None that we know of. It is a crime to adulter ate food, and there is no chemical that can be use for the purpose without injury to the health of the consumer.

Are angels male or female?

There is no mention of female angels in the Bible They are usually represented as winged women, b that is an idea of the artist, not sanctioned in l The word means "messenger."

What is the derivation of the words "Chicago "and "Elgen?

Chicago is an Indian word, the meaning of which is disputed. Elgin is the name of a place in Sco land, the name of a Scotch family, and also t name of a tune. One of the oldest settlers here says that it was named after the tune.

When you receive an article for publication do you return with a letter it with a letter pointing out defects, or do you throw it not waste baske1?

We do not regard ourselves under obligations to criticise contributions, though if the article has med it, yet falls short, we sometimes do it in the case of a friend. Mostly it is love's labor lost. crow thinks her own children white, and no are ment will change the opinion. As to the waste be ket, articles are never thrown in it, at least not he Whoever goes to the trouble to prepare an article that is unsuited for our uses has his copy either turned on all turned or filed away carefully. The INGLES, I waste basket is for scraps of paper, apple cores. If the like.

MAKING MINCE MEAT.

MINCE PIE is Uncle Sam's national dessert. A elebrated Englishman who once visited this coun-With as "the incarnation and quintand quintcoence of American independence." The British are their tart and the French their paté—both by the both works of genius in their way but it remained for the Yankee to rise above the tradigos of the past and conceive the idea of rolling the favorite desserts of both nations into one, addog a sprinkling of spice and a dash of cider and inthe expressive name "mince pie" for his treation. Unfortunately history does not record the name of the grandmother who first mixed mincemeat-she is one of the unlaureled and unsung benefactors of the human race. Yet, as she sneezed over the nutmegs for the first pie, she may have seen, dimly, through the long vista of the future the scrambling crowds of men and women around the "hot-mince" table at the "help yourself" restauant. If she did, she had her reward.

But mince-meat making, for a long time the segret craft of the grandmother, has been reduced to 3 science, and mince-meat is now being made throughout the country in quantities to supply every man, woman and child in the United States with a pie a week all the year round. Besides, a considerable number of pies are being shipped over to England and France, where the former devotees of those inferior creations, the tart and the paté, are wondering vainly and enviously how the pies were made. When first exported a French chef who has since become famous invented a new kind of fruit cake or plum pudding, which was the delight of every epicurean palate and the despair and torment of all the rival cooks of Paris, who could not imitate the marvelous creation. But it was only mince-meat, just like mother used to make.

In the early stages of its evolution mince-meat was no higher in the scale of culinary progress than ordinary hash. It was doubtless the outgrowth of the Yankee housewife's "nearness." She had some straps of meat left and some extra apples, and so she chopped them up together and made them into apie. Out of such humble beginnings mince-meat lorced itself upward by sheer merit, until it stands shoulder to shoulder with apple pie.

At first mince-meat was made soft and juicy and it had to be kept in a cool place in the cellar where it would not spoil. But there was a far-sighted man named Allen who saw that it had a glorious future, and so he went to work studying its characteristics. After awhile he found that it could be condensed in dry form so that it would outlast a piece of wedding cake. With the invention as a lass a number of large manufacturing concerns have sprung up, several of which are located in Chicago.

The beef used in making mince-meat comes from the shoulder of the animal and is cut in lean strips. It is taken at once in big trucks to the mince-meat lattory, where it is thrown into a vat, in the bottom of which there is a coil of steam pipes covered with Natur. Here it boils away, stirred from time to ime by a brawny workman, until the blood is all tooked out of the fibers. The room in which the work is done always has a rich, almost-dinner-time When the master workman thinks the cookhas gone far enough the meat is forked out taken to the chopping machine. This has a g basin which can be made to revolve slowly. At center of it a shaft, to which is attached a numof knives, jumps up and down and cuts the eat very much as a woman would cut it with a opping-knife. When it is fine enough the atch" of 500 pounds, or about one-fourth of a no pound "batch" of mince-meat, is laid aside.

bried apples are used, the finest grade that can contained in Michigan or New York. About 500 mince-meat, are chopped in a machine similar to be workmen trundle them off to the mixing-room. A small apartment, opening off from the chopped of bags and barrels are standing at one side of the room and on the other side two machines, when the spices mills, are droning pleasible. When the spices come in they are first when the mills to a fine powder and then chedsed separately in the barrels. There is allspice,

cinnamon, mace, citron, nutmeg, cloves, ginger and a very little pepper. The workman mixes them in just the right proportions, about fifty pounds of them being necessary to properly season a 2,000-pound "batch" of mince-meat.

The currants and raisins come in boxes and before they can be used they have to be thoroughly picked over and cleaned. This is accomplished by pouring them on a fine meshed sieve through which all the particles of dust and the little pieces of stem will sift.

Now the ingredients are ready for mixing. The meat is poured into the bottom of a long, narrow trough standing on the floor, the apples go in on top of it, then the raisins and currants and the spices and the sugar. A few gallons of New York state cider is poured over the mass and then half a dozen big, bare-armed men with shovels begin to turn over and mix the fragrant mass. It is work which almost any small boy would do without any compensation whatever, but the men have grown so accustomed to it that it has lost all its poetry.

When the mixing is complete the mince-meat is shoveled out into a truck, where it is allowed to stand several hours. It is almost dry and is rich and tempting.

The packing-room is full of animation. Around a long table stand a score or more of girls in natty white caps and aprons. Before each of them there is a pair of iron rods, crooked at the end and standing upright in the table: By a motion of the foot the girl can force the rods down until the crooked ends slide into two little boxes, just as a pump dasher slides down into a pump. The mince-meat is placed on a traveling belt which runs along the table and the girls take it in handfuls and pack it into the little boxes before them. Then the rods come whirring down and compress it into a solid block hardly larger than a cake of stove blacking. This block weighs twelve ounces and will make three pies. It is passed along to a girl who wraps it up in oiled paper and slides it into a little pasteboard box, after which it is ready for shipment.

About 15,000,000 pounds of mince-meat are made annually in the United States and it is consumed largely in the big cities, the country housewife still preferring to follow in the footsteps of her grand-mother and make her own mince-meat.

CUTLERY MANUFACTURE.

SELECTED BY D. Z. ANGLE.

THERE are three kinds of steel employed in the manufacture of different articles of cutlery, common steel, shear steal, and cast steel. All edge tools, which require to be tenacious without being very hard, are made of shear steel. The best scissors, razors, penknives, etc., are made from cast steel, which is able to take a very fine polish; common steel is only used in making cheap articles of cutlery.

In making good table knives, shear steel and cast are generally preferred. In the ordinary method of making knives, the blades are cut out of a sheet of steel, and the backs, shoulders and tangs of wrought iron are attached to the steel blades by welding at the forge. The knife is then ground to the proper shape, and the blade polished and hardened.

The fork manufacture is a distinct branch of industry, and the manufacturers of table knives generally buy their forks from the fork makers ready to be put into their handles.

In making table knives, two men are generally employed; one is called the foreman, or maker, and the other the striker. Pen knives are usually forged by a single hand, with hammer and anvil simply; they are hardened by heating the blades red hot, and dipping them into water up to the shoulder. Razors are also hardened in the same manner. The grinding and polishing of cutlery are generally performed by machinery. The business of the grinders is divided into grinding, glazing, and polishing.

Grinding is performed upon stones of various dimensions, those articles which require temper being ground on wet stones.

Glazing is a process by which lustre is given to cutlery; it is performed with a glazier, consisting of a circular piece of wood, sometimes covered with leather, or an alloy of lead and tin; it is fixed on an axis like a grindstone.

The polishing process is the last, and is performed on a similar piece of wood covered with buff leather. Only articles of cast steel which have been hardened and tempered, are subjected to this operation.

Mt. Vernon, Ill.

REALISTIC SONGS.

Henry Russell, the well-known English vocalist, relates in his autobiography that on one occasion he gave, at Hanley, England, an entertainment for the benefit of the Staffordshire potters, who were in great distress After he had sung his song, "There's a good time coming, boys; wait a little longer," a man in the crowd arose, greatly excited, and shouted: "Muster Russell, can ye fix the toime?" Another artisan in the reserved seats stood up and said: "Shut oop, man; Muster Russell'll write to ye!"

At Newcastle-upon-Tyne Mr. Russell sang "The Gambler's Wife," in which the wife is represented as awaiting the gambler's return to his home. The clock strikes one—it strikes two—it strikes three. As it strikes four the young wife, clasping her child to her bosom, dies in hopeless despair. At this point a woman stood up and shrieked in shrill tones: "Oh, Mr. Russell, if it had been me, wouldn't I have fetched him home!"

In earlier days, as the same vocalist was singing, "Woodman, Spare That Tree!" an old gentleman cried: "Mr. Russell, was the tree spared?"

" It was, sir."

"Thank God for that!" exclaimed the old gentleman with a sigh of relief.

When "The Newfoundland Dog" had been sung — a piece which describes the dog saving a child's life—a North countryman exclaimed: "Was the child saved, mon?"

"It was, sir."

Then, with the anxious look of one asking a great favor, the man pleaded: "Could ye tell me where to get a dog like that?"

OVERPOWERING ODORS.

"You don't know how much you can detest the smell of coffee until you have been on board a cargo steamer laden with the green berry," said an old sea captain the other day.

"For a week or ten days it isn't bad—in fact, it is rather a pleasant smell that of the green berry; but after that it begins to worry you. In damp weather, if it's a long voyage, it's something terrible. I've seen a whole ship's crew nearly crazy and unable to touch any food, simply because of the coffee, which seems to impregnate everything on board.

"Some other cargoes are just as bad. Sugar, for instance. Didn't suppose there was any smell in sugar, eh? Well, you take it in a bowl and there isn't. But take a cargo of it, and let it steam in a temperature of from ninety to one hundred ten, and it's worse than coffee. I've felt sometimes as if I could drink a gallon of vinegar flavored with lemon juice, just to take the sweet taste out of my mouth.

"But pine lumber is the worst. I remember one voyage when we had a cargo of pine, and before we had been out of port many days the resin from the wood seemed to have got into everything. We could taste it in the water, and it was almost impossible to drink it at all, and we were all parched with thirst. Three of the men died of fever, and when we got into port again we were the worst looking set of men you ever set eyes upon. It was months before I could get rid of the effects myself."

CHILDREN BURIED UNDER BRIDGES.

Indian Engineering, published in Calcutta, says that the kidnaping of children to bury under the foundations of railway bridges, which has often caused trouble in India, has spread to China, and a bridge is now rarely built in that country without the disappearance of several children from the neighborhood.

PEOPLE frequently write us signing only with initials unknown to us. All such communications are laid aside, not to be acted on. Give your correct name and address each time you write us. We may want to write you. We must know who is doing the talking.

Good Reading

HOW THE INGLENOOK IS MADE.

THERE is always more or less interest attaching to newspaper work, how the paper is made, and what course it goes through before it gets to the reader in its present form. So let us talk a little about how your paper is made. It is a little out of the ordinary, and may interest you. In the first place there are two great features that are always uppermost in the mind of the Editor. One is that all that is printed in the 'Nook must be clean, morally, and the other is that it must be new, entertaining and instructive. As easy as these two seem they are a source of continual watchfulness. A very good article, a selection or a clipping, may seem all right, and then when it comes out in plain type there is something that might be misconstrued by folks who seem to be so constituted that they are on the watch for such things. At least six people read every line in the 'Nook before it goes out, and yet now and then something will escape the whole lot of us. There is nothing to do but to let

Then the novel and unusual industries that form such a readable part of the 'Nook are not always easy to get. If we see something in a paper, a magazine, or a book, that we think will interest our people, it is promptly laid hold of, worked over, or fixed up to suit us. Then we may think of something that will make a good column of what is technically called "stuff," and the only place to get it, that is, the nearest place, is in Chicago. Enough said. We swing into our overcoat, put on our hat, and without a word take the first train to the city. Just in proportion to the intelligence of the proprictor, in that relation it is easy sailing. We show him a copy of the 'Nook, tell him what we want, and he details a man, or goes himself, and in a very brief time we have the whole business jotted on the back of an envelope. Then we return, hammer out the article on the typewriter, and it goes into the printer's hands. That's the last we see or hear of that story, till Olaf, the office "devil," begging your pardon, lays a proof of it on the table, and silently marches out. But some of the most interesting stories are hard to get. We go down into a cellar where they are making plaster images, and some of them are really artistic. The dusty, blackhaired Italian, working on a diving girl, is suspicious and tells us to "see Garry," Garibaldi is called in from the back room and he develops a most surprising lack of English. He doesn't understand what is wanted and is not taking any chances. This requires that we go to the corner grocery, explain to the Italian keeping it, and he goes along back to the cellar, and in a minute the whole family are telling all they know at once. In some places where there is a trade secret, or a number of them, it is sometimes difficult to get the facts. But we get them. Nothing is too good for an Inglenooker to have, and we get them, sure.

Then there's our correspondents. At first we had a great deal of trouble with them. They would write essays and such nice and good pieces. Now we have them on another tack, and they are lining up with the interesting and instructive. We have some as good regular writers as there may be found anywhere. We always try to get on to the personality of a writer for the 'Nook. We want to know who's doing the talking. It helps us in the letters we write them. Naturally it makes some difference whether a new writer is sixteen or sixty.

When all the printed material that will make the next issue of the paper is before the Editor he scissors it out in column widths and, taking an old copy of the paper, cuts the material in proper lengths, and pastes it roughly in place, till the paper is full, and this is called a "dummy." It is a guide to the one who makes up the paper for the press, and is useful in telling where the Editor wants certain articles to appear. Meantime the proof readers, two of them, are at work on the printed slips reading for errors. One of them, pencil in hand, is droning out the words while the other, with the original copy in hand, is watching whether it is in print as written. Then, when the made-up paper is ready, there is a final revision, and the foreman takes a line by line look over it, and if he sees anything wrong it is immediately corrected. Then the Editor marks his O. K. on the final revision, ling gum.

and the heavy forms go down the elevator, and it goes on the press, where, clumpety-thump, it is run off. They bring up a printed copy of the first impression, and a final look is taken. Sometimes a serious error, with its dirty smudged face, stares insolently from the printed page, and this corrected, clumpety-thump goes the press again. When printed it goes, with the covers, to the second floor, where it is stapled and trimmed, and then it is ready for the mailing clerks. The paper was begun on a Monday, and by Saturday it should be in the mailing room. On the next Monday the wrapping and sacking begins, and on a Wednesday it is rolled out of the back door, and off it goes, over hill and plain, under mountains, and over rivers, till you get it on a Saturday. It is easy, smooth reading, but if you think it is all easy making come on and get out a copy that is up to the standard, and you may have a new impression before you are through. Our reward consists largely in the fact that we know that between 15,000 and 20,000 people are delighted weekly, and that's glory enough, though the satisfaction would be greater if more people knew about it.

CHEWING OUT FACTS.

Is it made of objectionable material?

Are the methods employed in its manufacture unclean?

O, no; on the contrary, the gum, when it leaves the manufacturer for the retailer, is as sweet and wholesome and clean as one might wish it to be.

The original product comes from a South American tree, exuding as does our dear, old-fashioned spruce gum, and it is hastened in its exit and increased in quantity by incisions made with a short, sharp knife by the natives, who are employed by the exporters to gather it in the dense tropical forests.

In this state, as a sap which has run out over the trunk of the tree, and formed in huge lumps, it is known by a number of names, among which the most familiar are "oxcaca," "pacata sap," or "gum chiele".

In its crude state, as it arrives in boxes or bags at the factories in this country, it is irregularly globular in form or broken in small fragments. It is hard and brittle and of a dull grayish color with a wild fragrantly aromatic odor.

It is broken up and placed in a steam-jacketed kettle to melt and boil.

During the boiling process it forms in a clear coffee-colored liquid and is carefully skimmed, strained and refined of all foreign particles.

When it has undergone hours of boiling the required flavors are added and it is run out on huge marble or steel tables to cool and form what is known as the "dough."

In this state, when it is almost cooled, the mass is broken up by the operator's hands and thrown between powerful rollers, which flatten it out to about a quarter of an inch in thickness.

As it is pushed along the table by the rollers a number of young women keep it straight and flat and free from "bucklings" until it reaches a set of intensely keen steel knives, where it is first cut in strips and then in finger lengths.

During this process it is constantly dusted with finely-powdered sugar to keep it from sticking to the tables or the cutting machines.

As the short lengths drop into the boxes set to catch them they are removed to the cooling department, where they are afterward wrapped in waxed papers and afterward in labeled covers and boxes.

The product is now ready for the retailer, and the pretty pink mouth of the "miss who chews gum."

Throughout every department, and in every process very great care is exercised to keep all the materials and the machinery as clean and bright as a new pin, and the factory rooms are models of cleanliness.

In connection with this story on making chewing gum it might be mentioned that a young woman of Brookline, who was recently married to a wellknown Boston business man, has a splendid annual income from a process which she discovered some years ago for manufacturing a certain class of chewing gum.

ODD USE FOR CANNON BALLS.

"CANNON balls for blasting!"

This sign, hung in a conspicuous place before the door of a store on Atlantic avenue, led a reporter inside and started a bit of questioning upon the subject of "cannon balls for blasting."

The proprietor of the shop said: "Last fall when the United States government sold all of the old cannon balls and solid shot which for many years were piled in pyramids along the main street of the navy yard at Charlestown, we purchased a lot of them, with little thought of converting them into anything beside 'pig iron.'

"But a few weeks after we had stored them here I overheard a quarry owner complaining of the slowness and uncertainty of the old system of steel wedging used in getting out huge blocks of grante, and after a bit of thought I suggested the use of cannon balls in the place of the steel wedges,

"We sent about twenty of various sizes and weights out to his quarry, and after the first trial he hurried a team in here with a note that read:

"'Tried the cannon balls; they are it. Send fifty more; have thrown the steel wedges away,'

"The experience of this man led us to send the cannon balls and solid shot to other quarry operators, and within the past month the orders have been coming in so thickly we can scarcely fill them from the stock on hand.

"The method used in getting out great cubes or monoliths from the granite and marble quarries has been to drive steel wedges along the line of the lower portion of the split made by a blast until the great chunk of stone topples over on its face.

"It required a deal of time and a number of men with big iron sledges and steel wedges to separate these cubes from the quarry wall from which they had been started by the blast.

"The method now pursued with the cannon balls is to start the block of stone away by a light blast, and then between the quarry face and the block several of the smaller solid shot, usually the four-inch sort, are dropped down into the aperture,

"Two men with crowbars give the block a little shake, and the instant the block moves in the slightest manner forward, the shot take up their 'purchase' on the space made. Then the large cannon balls, some measuring fourteen or fifteen inches and weighing 200 or 300 pounds, are dropped into the top of the gap.

"Now, the slightest outward jar by levers on the big stone sends these heavy cannon balls dropping downward of their own weight, until, with an easy forward motion, the cube goes over on its face.

"These shot do away with any driving; of necessity their great weight in proportion to their size forces them downward, and their form prevents any chance of backward setting of the block.

"These cannon balls are also used as rollers, as they take up and go over the inequalities of the quarry surface, and can be rolled in any direction without resetting, thus doing away with the old style wooden rollers.

"They are also used to smother heavy clearing out blasts. Heavy rope mats are thrown over the surface where the blast has been set, and these can non balls are thrown around over the mats."

GOLD MINE ON A ROOF.

Down in the heart of Wall Street is a placer mine Uncle Sam has worked with profit for many years. It is on the roof of the government assay office. During the refining process much gold is carried out through the chimneys with the smoke through the chimneys with the smoke arrived out through the chimneys with the smoke through the roof air, however, it is a large to the roof in yellow powder. Being so heavy rain cannot wash it away, and at stated intervals men sweep the roof carefully, returning the sweep ings to the assay office. Federal watchmen jealous ly guard the roof against overcurious visitors.

EQGS AND FRUIT IN STORAGE.

Is eggs kept in cold storage are in the vicinity of spoiled fruit they will taste of spoiled fruit because the shell of the egg, being porous, absorbs odors rapidly.

In a hurricane blowing at eighty miles an best the pressure on each square foot of surface is thing one and one-half pounds.

THE WORK OF THE LEADER.

BY J. R. SNYDER.

THE duties of the leader of a Circle meeting are onerous, yet there is necessary some natural glent, a good understanding of human nature and secutive ability. It is all the better if he has had water previous knowledge of the work. He should open the meeting, or see that it is done, and conduct the sessions in a proper manner.

The lessons or chapters of the book under study bould be allotted to each reader according to his Thity and opportunities for research. If the leadg is in a position where he can procure supplementary reading treating on the subject, or line of study, he should do so, and place it before the members of the Circle.

Another thought. A leader is not a ruler. Whenever he begins to show such a disposition he atterly disqualifies himself for the work. He should, in all things, and above everything else. have the good of the Circle in view. We like the plan of assigning to each one a definite work, and nete is a good opportunity for calling out the latent talent of the more backward members. Do not give the most important work always to those who are more free of speech but divide the work

If your Circle meetings are held in connection with a "Young People's Meeting " of some sort, the above will bear modification somewhat so as to meet the rules of the powers in charge of such meeting, and the planning and arranging of the meetings will devolve upon that Committee or whatever body has the oversight of the organization. Right here we will say that it is best to thange the leader occasionally, say once each month, or two, at farthest. This develops workers and overcomes jealousies that might arise in cases where human nature is prevalent.

For an example we append a program where the Circle is just beginning the study of " New Acts of the Apostles." This program presupposes that they have had a preliminary meeting and have organized and begun work in earnest. If the lesson outlined has not been read by all the Circle, this should be done the first thing by some good read-

THE RECLUSE.

REFLECTING glories of the golden day In faces sunned by cloudless human love, Two passed a "Sister" on her sacred way, Her eyes cast down, to keep her soul above. Life on that morning had been gall to her. While brimmed with honey for the passing twain: One tender word she hears; it sets astir The human current in each cloistered vein.

HOW TO MAKE RELIGION WINSOME.

In the first place, by realizing the need and propriety of making it winsome. Some people seem to think there is no occasion for any effort in this direction, that religion is sufficiently winsome in itself or, if not, that there is something out of taste, if not morally culpable, in trying to make it seem so. But certainly it is our privilege to do what we can to lead others to realize that the religious life is a happy life, a life of gladness and reward. So long as we do not misrepresent the truth and do not put before anyone the rewards of the Gospel as the chief incentive to be Christians, we shall do no

How, then, can religion be made winsome? Chiefly in this life by revealing it as a means of doing good. It is in accord with the profoundest philosophy, as well as with the widest experience, that there is no such happiness as that which springs from the effort to benefit others in some practical manner. It is quite true that many people who are laboring to do good do not seem, and perhaps are not, specially happy. That does not alter the fact. He who sees in his neighbor a brother in Christ, and who, for the love which he bears to Christ, puts himself out in order to be helpful to that brother, always finds a spring of gladness bursting out in his heart as out of the rock which Moses smote.

The spirit which imparts self-sacrifice, fellowfeeling, sympathy and outreaching toward others in hearty looking for their best welfare, makes religion seem winsome. It is something which he who lacks it wants to possess. It satisfies his sense of the fitness of things. It is a kind of religion which he believes to be genuine and inviting. To make religion attractive, therefore, cultivate and illustrate all the sweet, gentle, uplifting qualities which Christianity suggests. Let it be seen that Christ is an attractive Master to you, that his service is perfeet delight as well as perfect freedom. That will aid you to win others to join you in serving him.

THANK God, we have got all eternity to rest in. This is the place to work. I pity any child of God that wants to sleep all the time down here. Brothers, sisters, wake up! We have got plenty of time to rest hereafter. The question is not what Gabriel can do, or what we will do when we get to heaven; the question is, What can you and I do before we get there?

ONE of the tasks of Chinese children beginning their education is that of learning the A B C at

ODD CALLINGS FOR WOMEN.

GENTEEL poverty is one of the tragedies of modern society. Yet out of the evil comes good, and from absolute necessity clever women devise new modes of earning a livelihood. Most of those who find themselves in reduced circumstances take up ordinary callings, but a few plunge out of the beaten path and make some idle accomplishment the basis of a paying vocation. One young woman up town, who in the past learned to make lace as a fad, now puts it to practical use by repairing old and priceless laces. She carries what may be called a kit of tools, including a lacemaker's pillow, a full set of threads, and various kinds of needles, and restores an injured collar or an ancient fichu in the presence of the owner. The work is exceedingly difficult, and the reward correspondingly high.

Several women have taken up indexing. Their patrons are people who keep scrapbooks, and who are too busy, or, as is more often the case, too negligent to index for themselves. The work is slow and laborious. It demands a wide literary knowledge and often a knowledge of French and German. The pay is moderate, being usually \$3 a day.

Artistic and fancy bookbinding is practiced by eight or ten women in New York City. This is a skilled trade, of the highest class, demanding both technical skill and artistic ability. Two of the binders have done such good work as to make them moderately famous.

A Vassar girl with a penchant for chemistry found herself thrown upon her own resources three years ago, and adopted for her daily work the giving of instruction to members of her sex upon the subject of cold cream. To the uninitiated this seems a very simple matter, but in truth it is very complex. It involves a knowledge of the various fats and oils, including spermaceti, cocoa butter, wax, Japan wax, almond cream, lanoline and such medical ingredients as benzoin, camphor, myrrh. carbolic acid, sulphur, arsenic, zine and white lead.

Women who contemplate a foreign tour, or who are to receive distinguished foreigners, are often at a loss respecting the etiquette of European countries. They can get out of their trouble by taking a course of lessons from teachers who have lived abroad in days of wealth. At least ten bright young women have taken up dermatology with special reference to the hair and scalp. They visit their patrons the same as physicians, and earn a handsome living. At least two in this city clear more than \$5,000 a year.

Restoring old photographs gives profitable employment to a number of women who have become experts in the use of the camera. It does not pay very well in general, but now and then when there is strong family love involved it gives very handsome returns. One successful woman inlays books. The work is exceedingly hard and consists in scraping away a film from the surface of a blank sheet of paper so as to fit a printed piece which is to be set into it, and also removing a corresponding film from the back of the latter. The two pieces are glued and subjected to great pressure. The result is a page which looks exactly as if it had been printed as an entirety.

Entertaining children is another new occupation. It demands much tact and infinite patience. Writing sentiments, letters and club addresses for indolent women of leisure is followed by many exschool teachers and college alumnie.

THE LIMIT OF COLD.

Is there a lower limit of cold -an absolute zero beyond which the temperature cannot be lowered? Scientific research has shown that there is this lower limit, and from numerous calculations, based upon different properties, such as the amount of contraction produced by cold, it has been assigned at about 461 degrees below zero Fahrenheit. The search for this absolute zero and the endeavor to reach it has been for scientific men just such an undertaking as the geographer's quest of the north pole of the earth. It has been approached within forty degrees Fahrenheit, and it is extremely probable that by means of solid and liquid hydrogen the cold will be still further lowered. Professor Dewar of England is at present working upon this specific prob-

HALF CENTS ARE WANTED.

THE coinage of the half cent is being demanded from numerous quarters. In the early history of the country this coin did not seem to be needed. Business had not reached the degree of division and specialization that rendered it useful. In all new countries, where resources have to be developed, there is a disregard for detail and of small things. As civilization progresses and population increases the trading and everyday business is done on finer

Convenient small coins for use in small transactions conduce to economy and saving. In California in the pioneer days there were no coins less than a dime. All transactions in which change could not be exactly made, less than a dime caused a loss to one side and a gain to the other. For a long time California affected to despise nickels, but the advantage of making closer and juster change gradually recommended itself, and now even the copper cent is gaining ground in that state of great resources and large ideas.

The demand for the half cent comes from those sections of the country where the struggle for existence is becoming more difficult and where the subdivisions of business and competition in prices causes the loss of even a half cent in making change to be a serious matter. There are many things sold for a cent which would be sold for a half cent if such a coin existed. The dollars would probably take care of themselves better if the half cent were in existence, to be taken care of than they are now, when the cent is the least coin that can be looked after. To add the half cent to our coins would increase the profits of small dealers and the possible economies to that class of people who are obliged to make small purchases. As it is now, either the seller or purchaser in these small dealings, which by their number are of great importance, loses or gains.

To save a cent each day amounts to \$3.65 a year and to save a half cent each day effects a saving of one-half of the same. The country should have the half cent.

RUN RISKS WITH ANMALS.

A FRW days ago a Parisian butcher, for a wager, entered a cage in which three large lions were inclosed, drank a bottle of wine and played a game of cards with the beasts' trainer. When he was about to leave be thrust a wineglass under the nose of one of the animals and as a result the lion leaped upon the man and mangled him fearfully before the tamer could interfere. The terrible scene was witnessed by a huge audience in a menagerie at a village near Paris.

A pretty Irish girl had a queer whim of this nature during the past summer. She had been asked to become the wife of a young solicitor and she promised to give him an answer the next evening in the tent of a traveling menageric at the conclusion of the performance. When the would-be benedict arrived on the scene he was thunderstruck to see the young lady smiling sweetly at him behind the bars of a cage in which were two full-grown lions. Although she promised to marry him if he entered the cage he swung round on his heels and disappeared without a word.

Herr Becker, of Vienna, an eccentric man of considerable means, took it into his head to spend the last few days of his life in a cage of lions. When he knew his end to be near he had his bed removed into the cage and in this queer bedroom he lay for one week, when he died.

During the visit of a menagerie to Salem, Mass, last spring a young lady of twenty-four made up her mind to enter a tigers' den and in the presence of the savage beasts knit a scarf for their master The tigers endeavored to spring upon her when she entered the cage, but the tamer beat them back. Presently they began to toy with the ball of wool that was used in the making of the scarf. The plucky young woman remained in the cage for two hours, and before she left it she placed the scarf she had knitted with her own hands round the tamer's neck.

THERE are a million health hints, but if you keep the head cool and the feet warm you will not need many of the other 999,998.

THE WORLD'S MOST FAMOUS MEN.

HARVEY: Born in England 1578, died 1657. He was a physician, and an investigator of natural science. He was voluminous as an author, but his fame rests on the fact of his discovery of the circulation of the blood. Before Harvey's time there were several absurd theories about the circulatory system, and between the Christian era and the sixteenth century only two theories were held, and both were wrong. Harvey discovered the correct facts, at least approximately correct, by close observation of animals and other living objects. It was a long time before the simple fact was accepted, and what any schoolboy now knows was disputed and denied by the then educated people. His discovery led to important changes in the views of life and disease, too extensive to deal with here, but the general fact remains that he was one of the men who influenced human thought and practice by his great discovery of the circulation of the

GROTIUS: Born at Delft 1583, died 1645. He was a man of the most varied and comprehensive attainments. He excelled as a political, a religious and a legal writer. It is his great literary merit that gives him prominence, and out of his works the possibly greatest is his De jure belli et pacis, a work that goes fundamentally into the law of war and peace. He was a great jurist, and what he wrote on the subject was the first complete formulation of the principles of law that govern men in their amicable and their bellicose relations. There had been prior discussion of these questions, but none so comprehensive and far reaching as that of Grotius. At the time of his writing the Thirty Years' War was in progress, and his pious efforts to mitigate its horrors led to the work in question, and it was the forerunner of a similar series of productions of later and more available value that have been of inestimable value to the world in softening the horrors of war and its consequent misery.

RICHELIEU: Born 1585, died 1642. The greatest French statesman of the seventeenth century. His fame rests on his impress on the politics of France, of which country he became master in a statecraft way. He aspired to literary honors without great success.

DESCARTES: Born 1596, died 1650. He was a great philosopher, dealing not only with the physical world, but also with the metaphysical and unseen, in which latter field he has come to us famous. He was a man of tremendous mental reach, and the reader may remember him best as one of the group of world philosophers.

Cromwell: Born in England in 1599, died 1658. He was a farm boy in his early youth, and took an interest in the politics of his day. He was elected to Parliament where he was a staunch supporter of what is known as Puritanism. The King and Parliament falling out a resort was had to arms, and Cromwell took the field against the king. He won finally, and endeavored to introduce Christianity into the practical things of government, and he took the side of the Protestants against the Catholic church, and thus came to be known as the Protector of the Faith. He was a politician of the Christian type, austere and sometimes not over scrupulous, but in the main distinguished by his opposition to papal interference in government matters. He was also bitter against the monasteries, and did much to abolish them. His fame rests on the fact that he was instrumental in breaking the power of Rome in England, but his enemies combined against him and he was finally beheaded. He led the life of a religious ascetic and fanatic, and bitterly opposed the Catholic church in politics.

MILTON: Born 1608, died 1674. One of the greatest of the English poets, studied and quoted to-day among scholars. He wrote much, but Paradise Lost is his greatest poem. He was Cromwell's Latin secretary, and his English has a Latin turn. Milton is responsible for a good many radical ideas about evil spirits, still existent in the minds of people.

Don't imagine that you can win the regard of your neighbors by saying just what you think.

TAKING THE TIME AT NOON,

Just before noon each day all business must be taken off the wires controlled by the Western Union Company, and that means the absolute cessation of business along the main lines of electric communication in the principal cities of America. Three minutes before noon wire chiefs in each of the principal cities and the towns and cities lead. ing to and from their large sisters cease sending or receiving messages, no matter how important they may be, and devote themselves to switching on wires in such a way as to make an unbroken circuit of communication from Washington around the uttermost boundaries of the United States. This is called an "unbroken national circuit." Thus a smooth track is made along which the electric message may flash encompassing the union and announcing the time of day. Ten seconds before the time bell strikes comes another silence, and then a mighty throb, a titanic heartbeat from the foremost factor in modern commerce, and an electric current pulsates from the Atlantic to the Pacific, from Gotham to the golden gate, announcing the fact that the sun has passed over the seventy-fifth meridian and it is noon at Washington.

SOMETHING GOOD TO EAT.

IF you can't get something good to eat, something palatable which will "stay by you," in the Brethren church, in its favored localities, you are fastidious indeed, and might as well seek no farther. But there is no one man who knows it all, nor any one woman either. A hundred people putting their best productions on the table will, in all probability, teach each other a great deal. So, as an additional attraction to the 'Nook, we have decided to print one recipe a week from some sister, giving the details of a dish within reach of the average reader, and which she knows to be all right by trial,

Over a hundred women have been asked to contribute one of the best recipes they know and it will be printed in the 'Nook, credited to ber. If any other good cook has a recipe, send it on, remembering the following: It must be by a sister, within reach of the average household, not copied out of a book, proportioned for six guests, and accurately told. The Elgin sisters will make the start. Watch the Inglenook. The paper has been good for the head and the heart, and now it proposes to set forth things fit for a king. Don't cut these recipes out and paste them in a book. Copy them if you wish, but don't mutilate the paper. Watch the 'Nook, we say.

THE WINTER PUDDING.

BY ADA L. EARLY.

An excellent winter pudding may be made as follows: A cupful of finely picked or chopped such kept cool, or it will not work right, one cup of any kind of sugar, three eggs well beaten, one-fourth cup of sweet milk, a teaspoon each of ground cinnamon and cloves, two and a half teacups of flour, a teacup of raisins and one cupful of currants, two full tea spoons of baking powder, and a teacupful of brea

Put in a pan the suet, the sugar and the bread crumbs, pour the milk over this and mix thorough ly. Then stir in the eggs and the fruit and all the other ingredients. Lastly stir in the baking powder with a half teacup of flour. Mix thoroughly, in a well-greased pan, set in a steamer, over boiling water, cover tightly, and steam for two hours and a half, or till a broom splint will come out clean when the pudding is tested.

For the sauce melt together in a pan a cupful of sugar, three or four tablespoonfuls of butter, the tablespoonfuls of flour; when these are not only melted but hot, pour over all a quart of boiling was ter, and flavor with lemon or vanilla. The pudding left over can be resteamed as long as it lasts. has been thoroughly tried and is excellent as a col weather dish.

Elgin, Ill.

THERE are some men who cannot tell the truth and there are some women who declare that the never want to be married.

What They Say!

Chicago Says:

D: INGLENOOR is par excellence. It has Problement in our in our church publications.—John E. Mohler. Each number seems better than the ending one. I have a Sunday-school class responses and girls, from thirteen to eighteen ren, and all get the Inglenook as a Sundayand paper, and they are delighted with it.— F. R. Miller.

Clarence, Iowa, Speaks Out.

Itis with much satisfaction that I express of approval of the INGLENOOK. Its appearmake up are such that it at ger commends it to the reader. It has found ssay into many of our homes, and the peopage truly glad for its continued success. El John Zuck.

Mt. Morris Says:

The INGLENDOK easily takes rank among bebest young people's papers in the country. his better than most of them because of the alsence of the silly love stories and light readz. It is a most valuable addition to the Enthren's publications. No family should be whout II.-Eld. D. L. Miller.

Lanark, III., Has An Opinion.

We have been receiving the INGLENOOK greit started. We like it very well. I would He to see it go to all the homes of the land. Deshort sermons are good for both old and roung.-Eld. I. B. Timut.

Mrs. G. A. Thurber, Rallston, Va., says: For years I have suffered with headache, neuralgia and nervousness. Almost from childhood my nervous system has been such that the least exertion would throw me into a spell of headache and extreme fatigue, so that life seemed almost a borden. I have tried the best doctors and many kinds of medicine. I began using German-American Hert Compound some four months ago and almost from the first I felt huproved, and now I seldom ever have any headache at all. I cannot express the benefit derived from its use, and trust the may be the means of many other sufferers to use the Compound. It also did wonders for my husband whose complaint was stomach trouble.

Abram Studebaker, Shideler, Ind., says: Your med-leline has done myself and wife a great deal of good and we recommend it very highly. Please send me two more boxes for friends.

THE INGLENOOK.

"The Inglenook" will be Sent to any Address the Rest of this Year for Twenty-five Cents, or it will be Sent the Rest of this Year and all of next Year for One Dollar.

The Best Way is to send the Dollar and be Done with it. After You Have Read it for a Week or two, You'll be Sorry that You Didn't Save Money by Subscribing for the Whole Year at Once. It's a Paper that Grows on One. Once Read, Always Read!

We Want Agents, == Real Live Agents

In Every Part of the Country. Anybody can solicit Subscribers at the Twenty-five Cent Rate, and Whoever Sends in a Club of Ten of These, Can have his Choice of ONE of the following books:

Beside the Bonnie Brier Bush, Dictionary of the Bible,
Natural History of Birds and Quadrupeds,
Black Beauty, Dream Life,

Drummond's Addresses,

Ten Nights in a Bar-Room,
Intellectual Lifé,
Imitation of Christ, Etc.

If he gets twenty subscribers he can have two books; for thirty subscribers three books, and so on. And they could be had in an hour's work in many a place. Whoever shows himself an efficient agent will be put in line for the Fall work connected with the INGLENOOK. There is a library of Fifty bound books waiting for somebody.

The Agent who sends in the largest list of dollar subscribers between this and the first week in January, 1901, will have sent him a Library of FIFTY BOOKS. Here is the list:

Adventures of a Brownie, Æsop's Fables, Auld Licht Idylls, Autobiography of Franklin, Autocrat of the Breakfast Table, Bacon's Essays, Beside the Bonnie Brier Bush, Black Beauty, Burns' Poems, Child's History of England, Confessions of an Opium Eater, Dictionary of the Bible, Dream Life, Drummond's Addresses, Emerson's Essays, Ethics of the Dust, Fairy Land of Science, Fifteen Decisive Battles, House of Seven Gables, Imitation of Christ,

Intellectual Life,
Lays of Ancient Rome,
Longfellow's Poems,
Lorna Doone,
Mosses from an Old Manse,
Nat. History Birds and Quadrupeds,
Poe's Poetical Works,
Prue and I,
Rah and His Friends,
Reveries of a Bachelor,

Samantha at Saratoga,
Sesame and Lilies,
Sketch Book,
Sticket Minister,
Stories from the History of Greece,
Stories from the History of Rome,
Story of an African Farm,
Ten Nights in a Bar-Room.
Thirty Years' War,
Twice-Told Tales,

Window in Thrums,
Education,
In His Steps,
Minister's Wooing,
Professor at Breakfast Table,
Lamb's Tales from Shakespeare,
Lallah Rookh,
On Liberty,
Tanglewood Tales,
Sign of the Four.

The Agent sending in the next largest list will have the choice of TWENTY-FIVE books out of the above list. The third largest list will entitle the Agent to FIFTEEN of the books, his choice; and the fourth largest list will win TEN of these cloth bound books. There is also a cash commission going to the Agent. We prefer the services of the Messenger Agent if he will write at once for the place, but we will put the first live applicant into line, as the INGLENOOK is not going to be the last in anything. If agents desire to enter for the Library they should say so in order that we may keep tab on subscriptions received at the office. Elgin city is barred in the competition for prizes.

The announcement of the successful Agent will be made in January, 1901.

A Live Paper for Live People.

The INGLENOOK is no longer an experiment. It is regarded as phenomenally successful by experienced newspaper men who know what they are talking about. The reason is not hard to find. It is a FIRST-CLASS PAPER, with nothing old and commonplace about it. It is up to date, and always will be. It will have something new in each issue, it always has and it never will fall below its self-set standard,—being the best paper of its kind in the world. You can't read it without being interested and instructed. The whole wide-spread world is ransacked in the interest of its readers. The INGLENOON isn't made with a dull pen and a pair of shears. It is a live paper for live people.

Some of the best known men and women in the church will write for the Inglenook next year. The like of it was never undertaken in the church before. Look at the names, note the subjects! Every man and woman in the list know what they are talking about.

LIFE'S MIRROR.

THERE are loyal hearts, there are spirits brave,
There are souls that are pure and true;
Then give to the world the best you have,
And the best will come back to you.

Give love, and love to your life will flow, And strength in your utmost needs; Have faith, and a score of hearts will show Their faith in your work and deeds.

Give truth, and your gifts will be paid in kind, And song, a song will meet; And the smile which is sweet will surely find A smile that is just as sweet.

Give pity and sorrow to those who mourn, You will gather in flowers again The scattered seeds from your thought outborne, Though the sowing seemed in vain.

For life is the mirror of king and slave,
"Its just what we are, and do;
Then give to the world the best you have,
And the best will come back to you.

—Madeline S. Brigham.

THE BANNING OF ELLEN WOODS.

In Three Chapters .- Chapter Three.

When the community heard that the baby had died there was consternation all around. The friends talked in an undertone of the happening, and wondered what she would do now. Would Ellengo home, or would she go away? At her home there was a thorough feeling of uneasiness. They could not ask her to return, and if she came they tould not give her the help they knew was her due. And the funeral was the next day. This would take place in the Dunker cemetery back of the church, and there would be a bigger crowd than attended Henry's interment. All the members would be present, and there was a very decided interest as to what she would do now that she was thrown entirely on her own resources.

The day of the funeral was late in the Fall. The baze of Indian summer spread over hills and valleys. The naked trees waved their arms in the quiet breeze, and the river stole silently around the bend as it had done for ages agone. The crowd that met in the graveyard was something unequaled for numbers. They were all there. The ban held, though lifted for the time

The sermon had been preached in the house. On the front seat sat Ellen, alone, through all of the dreary platitude by the Elder, and now that she stood by the side of the open grave of her child a food of thought came over her. It found no wording but it was as a revelation from the great un-Inown. Then up came Uncle Isaac Price and whispared something in her ear. It was an open violation of the ban, and it was noticed by all. She and he went around to where the Elder stood, and said something to him. He assented, and as he rose on the mound of clay beside the litthe grave the first shovel of earth paused in mid-air thile he made this announcement in a loud voice: "All the brethren and sisters present will come the house at once. There's going to be a members' meeting."

He took Ellen by the hand, and, as a father, led it to the front seat, facing the table. When all led in and seated the air of expectancy was paintle the extreme. What was coming? Nobody lood right. Then Uncle Isaac arose from be-

Brethren and Sisters, you all know how this hing is, and Ellen, she is sorry, and wants to be resorted. Ain't that so, Ellen, and she says yes, and you know what we will have to do. What do have the usual vote, and I move it be a rising vote the has made her acknowledgment. Now, El-

tad met death and had not been scared and now before the living there was a calmadout her that surprised her. She looked all

over the congregation, now as still as death. She said:

"Friends, you all know the situation. I am not sorry that I married Henry Zook. I am not sorry that I did as I have done. I would do it all over again just the same way. I am going out in the world to earn my own living and so I will not be a burden to you or to anybody as long as I can work. But I feel that I would like to be in the church, and it is not that I care for what you may say or do, but I want to be with Christ in the church." Then she sat down. Uncle Isaac Price tried to wipe his face with a hymn book, and threw his head back and began singing, "There is a happy land," when he was interrupted by the Elder who remarked that the vote had not been taken. He said if there were no objection to the restoration of Sister Ellen all who were of that mind would stand up. As one person the congregation rose up. Ellen could not see, but she heard, and rejoiced in her heart. There was not an opposing vote, and all that remained was being received. Ordered to stand up in front of the congregation she did so, knowing the routine, and first came Uncle Isaac, who, seizing her left hand, shook it vigorously, shouting out, "God bless you, Ellen, it's all right now."

When it came her mother's turn she whispered to her, "Ellie, you'll come right straight home with us and stay there all your life. Pop, he says." Her father said, "You'll go home along." And so it went till the last one had given hand and salutation, and the ban was lifted.

Ellen was put in a carriage with a neighbor who would pass the old home, with strict instructions to leave her there. The parents followed in their carriage. There was a time of silence, and then Jonathan, Ellen's father, spoke up.

"Mom! Ellen's going to stay at home now?"

"Yes, Pop, she's going to stay there as long as I live. Pop, did you see the baby?"

"No, I didn't. I couldn't trust myself to look. You seen her. What did she look like?"

"Why, Pop, it wasn't a girl. It was a boy, and he looked like you. His name was Henry Jonathan, after his father and after you."

Jonathan was dumbfounded. He never fully realized the situation. For an infraction of church discipline his daughter had practically been driven from home, her husband dying without sympathy, his own grandchild, bearing his own name, dying without his having looked on the child's face. Now it was too late. He would never again have a grandchild. It came on him with a force that he had never recognized. At home, where he would be in half an hour, he would meet his only child, widowed and childless herself, and all because of the action of those he called his brethren, and who professed to have his highest interests at heart. He was sore at heart, for it has ever been that the errors and mistakes of others react hardest on the innocent. On the way home the parents settled it that in consideration of the past no reference to the matter would ever be made, but that they would treat Ellen with a consideration never before shown her, and so it happened throughout the years. The ban was lifted, and it has never again fallen on any one in the Brethren church, nor will it. At the love feast that followed the fairest face under the cap and bonnet was that of Ellen Zook, and she was quiet in the extreme. She treated her brethren and sisters with courtesy unknown to them before, but there was always a gulf between them, for while they were bound to each other with earthly ties, she had become the bride of the Master through human suffering. The grass grows green on the graves of all the actors and the ban is a forgotten nightmare.

(The End.)

MERCHANTS in London are still selling Boer relics and, however little their intrinsic value may be, they bring high prices.

SOLID BRICKS OF VELLOW.

A PARAGRAPH in the New York letter of the Ledger stated that there had been received at one of the banks a lump of gold from British Columbia weighing 7,897 ounces, in shape of a cone, thirteen inches high and thirty-four inches in circumference at the base, and valued at \$135,275. At the United States mint in this city it was stated yesterday to a Ledger reporter that it was unusual to ship gold in such large masses. It must have been cooled in a crucible, which was broken from it, judging from its shape. No such masses had ever been received at the mint.

The usual form of gold bricks is that of an ordinary brick, the very largest being valued at about \$30,000 and weighing about 1,500 ounces. That such bricks are not easily handled was easily demonstrated by the reporter, who was allowed to lift from a truck a brick from the Denver assay office, 8x4x334 inches in size. It was just the size of a building brick, only three-quarters of an inch thicker, but it weighed ninety pounds and was valued at \$21,080. Though small, it could not easily have been gotten away with.

Very little gold as it comes from the mines is received at the mint. A few small lots brought by the early Klondike miners is all that has been seen from Alaska. The dust, or flakes, is taken to the nearest assay office, probably at Seattle, and there sold to the government, which purchases all that is offered. It usually contains more or less silver or copper or both metals. It may be refined at the assay office, but is usually refined at the mint. Many bricks shown to the reporter looked like silver, the proportion of one-third of that metal giving them that appearance. Some small bricks, worth about \$5,000 apiece, were shown which had been refined to 998 parts in 1,000, practically pure gold. These were for a prominent watch case factory for use in its business. Chemically pure gold is made only for testing purposes.

A OIRL OF EXPEDIENTS.

A great many good stories are told of the bishop of Norwich, England, a genial soul, who appreciated a joke as well as anyone on earth. He was once asked if he was really the hero who performed upon the out-of-reach knocker for a small girl and was then told to follow her example and run away. The bishop said he could not lay claim to that experience. But en revanche, he told the following which once occurred to him. He was to hold a confirmation at a small town, and, arriving some time before the hour for service, took a stroll. His steps led him to the outskirts of the town, and, passing a picturesque little cottage, he stopped to admire it. A pretty little garden separated the cottage from the road, finished off with a neat hedge and green gate. "Oh, please, sir," said a voice from the other side of the hedge, "would you open the gate for me?" This the bishop at once did. Then, to his surprise, instead of the tiny child he had expected. there stepped forth a girl quite big enough to have opened the gate for herself. "And why, my dear, said Dr. Sheepshanks, "could you not open the gate for yourself?" "Please, sir, because the paint's wet," said the child. A glance at his hand testified to the bishop but too plainly the truth of her state-

A small boy was ready to start on a long-promised week's visit to his grandfather's in the country. There was an exasperating delay in the appearance of the carriage to take him to the station. The young man worked off his impatience in various annoying ways for half an hour, then suddenly he was seen to kneel beside a-chair in the corner and bury his face in his hands. After a few minutes his mother said: "Well, Kenneth, what are you doing?" "Just getting my prayers said up for while I'm going to be out at grandpa's. There's nothing to do here and I 'spect to be pretty busy while I'm there."

🛎 Correspondence 🛎

DLD MAIDS CLASSIFIED.

BY ANNA M. MITCHEL.

THE popular idea of an old maid generally represents her as a tall, angular being of uncertain age, ranging anywhere from twenty-five to eighty, one who has grown vinegar visaged and sharp of tongue after years spent in a fruitless search for a husband. For of course an orthodox old maid is not supposed to have any other purpose or diversion in life but that of securing a husband. This view of the old maid, however, is quite erroneous. Look over your list of old maid acquaintances and you will find that this description will apply to very few among them.

Instead of hustling around for a possible husband, it is ten to one that the old maid is quietly minding her own business. Very likely too she is assisting and comforting some unfortunate woman who has secured a drunken or grumbling specimen of mankind. There is a great difference in the dispositions of old maids, and to judge the whole class by one specimen is quite a mistake. But there is one subject about which they all seem to be of one mind. That subject is their age. I profess that I don't in the least understand why maiden ladies should be so averse about enlightening the public in regard to this matter.

It is a well-known fact, however, that after reaching a certain birthday, they refuse to give much satisfaction along this line, and cheerfully endeavor to put impertinent questioners on the wrong track, One very grave fault a great many old maids have is their inconsistency. After solemnly avowing their firm determination to live a single life, and having a fair start therein, how often it is that some fascinating old bachelor or widower induces them to change both their mind and their name.

But there are many reasons for the whys and wherefores of spinsterhood. While there may be some who would get married but can't there are equally as many who could get married but don't. Undoubtedly our friend Miss Jerusha, belongs to that class of maidens who would be willing to exchange single blessedness for married bliss, if it were not for the perversity and thickheadedness of the opposite sex. To have your best years spent on the warpath-metaphorically speaking-and not bring in one prisoner is, to say the least, rather discourag-

But Jerusha is not easily daunted by such trifles, and no doubt reflects that, "while there's life there's hope."

In her zealous search for a husband she leaves no stone unturned and no nook unexplored. Her maternal progenitor has also been known to assist in this worthy cause, by eloquently discoursing on the extraordinary housekeeping capabilities possessed and practiced by Jerushy. This oration to be delivered, of course, while the prospective son-in-law is within carshot.

But for all that Jerusha still wends the pathway of life alone, with one eye fixed on the departing, and the other watching for the coming man.

Miss Margaret now is just the opposite of Miss Jerusha. No one can blame her for trying to attract attention from the opposite sex. In her youthful days she too had bright and glowing hopes of a happy life with the one dearest in all the world to her. But Death's cold hand was laid upon the loved one, and he was called to his long home. And with a place in her heart that can never be filled by another, she lives faithful to the memory of her betrothed.

Then there is Miss Polly, the bright and energetic old maid, who stays at home and cares for her parents. In order to do this she sacrifices not only her chances of matrimony but other ambitious plans as well. Does she whine and go about sniffling over her trials and tribulation? No indeed! She is probably the best loved and most useful woman in the neighborhood. She is the one who is called upon for help and sympathy when death or sickness enters the neighbor's home.

It can't be denied, however, but what there are a few of the sour and angular class of old maids, Miss Priscilla is one of this kind, and does not take kindly to the masculine element. This antipathy appears to be mutual. She is a walking encyclo-

pedia of morals and good advice, delivered gratuitously wherever she perceives the need of them. A single glance from her cold gray eye will make the small boy tremble and its effect upon the strongest man can be imagined.

So stately and erect is her appearance while walking to church with her hymn book in hand, that one admiring critic alluded to her as being "over plumb." Then there are some old maids that nobody knows the reason for their being such. The old maid can keep other secrets from the world as well as her age.

But if the average old maid looks over the specimens of either sex, who have obtained partners, no doubt but that she will consider her own case not altogether hopeless.

Newburg, Pa.

THE FOREST FIRE.

BY MINNIE UPTON.

A forest fire is worse than the prairie fire by far, as it lasts longer, and unlike the prairie fire, which, when it has burned and passed, all danger is over, the forest fire, though it appears to be out, is quietly smoldering away in some old hollow tree or log, waiting for the wind to give it a start, when it will break out worse than ever. It takes a hard, drenching rain to put it out, or hard fighting it.

It is started in a great many ways. The one which I will tell you about was started by two or three boys, who, while out hunting, treed a possum, and smoked it out, neglecting, when they left, to put out the fire.

Fire as a usual thing makes wind, and fanned by the breeze it soon spreads. The fire was started about midnight, about one and a half miles from our house, and in the morning was in our second field, which was about a quarter of a mile away from the house. The country being mountainous, you could see a fire away from home a great deal quicker than when one was right on you.

In the morning when I got up, upon going out I saw a great deal of smoke, but thinking the fire was twenty or twenty-five miles off, remarked as I went in, that someone was having some fun fighting fire. By noon I was having plenty myself.

The fire was out of our control so all we could do was to keep it from reaching the house and outbuildings. The fences were made of rails, and as we hadn't any rain for a couple of months, were dry as gunpowder. The fields were simply clearings, or rather, trees with a circle chopped around their butts to kill them. They were as dry as the

At first the fire only hurned the underbrush, but soon the rails and dead trees caught and you could hear them burn for a mile away, they making a popping, blowing and hissing noise. In about an hour the trees commenced to fall. Some struck against other trees, starting them to burning, others falling to the ground starting fire wherever they fell. In this way fire is spread across creeks. The tree falls across the water and starts the dead

We quickly turn out to help fight the fire, there being about twenty or thirty of us, neighbors, all armed with huge gunny sacks and pails of water; that is, the women folks are so equipped, while the men are armed with axes and crosscut saws. The women wet their sacks and commence to whip the fire. 'They commence out as far as the fire has run. If they see a tree that has fallen they backfire, that is start a fire, let it burn a space around the tree, and then put it out. While they are doing this the men cut the trees down that are on fire and backfire around them. In this way the fire's mad career was closed.

No matter how fierce a fire burns in the day, it dies down at night, the heavy dews causing this.

Just imagine a cloudy night, and you could step out and look across the fields and adjoining country and see hundreds of trees ablaze from bottom to top. It is a glorious sight, when it isn't too

Anyone fearing for her complexion should never help fight fire, for when you have finished you are a sight to behold, your clothing burned, your face and arms blistered and blacked by the fire and smoke, the latter which very nearly strangles you as it blows in your face.

The very walls of the house will blister. A great

deal of damage is done by these forest fires, not only to the timber, but houses are often burned, and people's lives are lost and great destruction follows

The neighborhood where one of these forest fires has been is always healthier for them because it burns away the decaying wood and dead animals. Elgin, Ill.

WILD GIRLS OF THE WEST.

BY M. U.

In the last 'Nook is a very interesting and breezy article from the pen of Lois Needles, of Wayside, Kansas, and for western boasting nothing has been printed to equal it. I am a Southern girl, and while I do not ride a pony and shoot qual "through the neck" with a rifle, there are some things in which I can give Sister Needles a good start and still leave her behind. Lois is only six. teen, but why didn't she think of saying sweet six. teen, and there is much that she has ahead of her to learn yet. Not long ago on a train bound overland the passengers saw a tremendous dust raised as though three or four thousand cattle were stampeding. All thought that it was a big cattle runaway. We now imagine that it was the wild wes. tern cyclone girl out on her pony for a spin, shoot. ing right and left at the innocent, long-eared bunnies, taking them through the neck, every time. My, but we are a smart lot in Kansas and now everybody knows it, for has not Lois, herself, said it? Arkansas.

THE WILD WEST GIRLS.

BY P. C.

In the last issue of the Inglenook there is a very interesting article by Miss Lois Needles, one of the kind that I hope she will repeat in the near future, but there is also something about it that seems to call for comment. Is it quite true that only people in the West can ride and shoot? Here in Virginia we think that Miss Needles could learn a little were she not so wedded to her wild West as to be incapable of learning.

We think we know something of riding and shooting, but we freely admit that none of us can ride a pony and shoot partridges through the neck with a rifle. It is a trifle beyond our skill. Will Miss Lois please tell us how it is done? I suppose that the chickens take it as useless to run or fly when she appears in the door with a revolver in her hand and determination in her eye. They simply wonder which one is going to get it in the neck. The West is a great country, and I suppose that we are behind the times here in the Valley. Nevertheless the article shows Miss Needles to be as sharp as a whole paper of the needles themselves.

THE EASTERN OIRL HEARD FROM.

BY A. MITCHEL.

THE breezy and realistic picture of the Western girl in last week's issue was much appreciated by the readers of the Inglenook.

While we admire her brisk style of writing, no fear that our Western contributor is laboring under a wrong impression in regard to the Eastern girl. The writer happens to be one, so of course she

The Eastern girl differs in some respects from the Western girl, but she is by no means a wishy-washy

The Eastern girls are wondering what becomes of sort of person. all that game "shot in the neck" from horseback Does it go to the Denver or the Kansas City mate kets? At least we presume the supply would too great for home consumption in addition to the chicken that probably gets it "in the neck" als We—that is the Eastern girls—are wondering if the Western girls can kill a chicken with a revolver well at night as in daylight. The Eastern girl als has some slight knowledge in the art of hitching the horses. To drive on a mountain road requires con siderable more dexterity than to drive on the open prairie as any one with experience knows.

We are pleased to note that our Western friend takes for granted the ability of the Eastern girl sit in the parlor and converse with the preacher.

Pennsylvania.

Nature & Study

CHRYSANTHEMUMS,

BY MRS. DECIMA G. WAREHAM.

THE glory-day of the jaunty chrysanthemum is yearing its close. Yet how few of its admirers, who irequent the chrysanthemum shows, or wear the soucy flower on coat lapel or seal wrap, know the soucy flower of the flower or the name of its varieties.

The chrysanthemum is a native of Japan, and long before Columbus landed at San Salvador, they were thriving on those far-away islands. Though a fivorite flower of the Japanese, they, in time, became the sacred flower of the Chinese, and continued so, until the Tartars invaded China and overthrew the old dynasty. On tablets of stone these blossoms have been found crudely portrayed. On one tablet it is stated that when a boy babe is born a chrysanthemum plant is named for him, and the number of its blossoms, their size and beauty indicate the fortune of the boy. Woe to the child whose flowers are stunted, for the sacred flower has withheld him her favor.

Our present chrysanthemum would scarcely recognize its ancestry, any more than modern English would its mother tongue. When the enterprising Americans brought these foreign plants to our land, they immediately set about improving them. Grafting and transmitting pollen were some methods employed. Where formerly the chrysanthemum was a bushy plant, covered with small, disy-like flowers, now it is a slender stalk, with one great blossom to crown its summit. This result is obtained by plucking all save one bud, so that it alone may consume the entire sap of the plant.

There are some two hundred varieties, with lesser and greater degrees.

"Louis Bonheur" is the darkest lavender, while "Charles Davis" is a variegated yellow. But the lion of the season is "John Lewis Childs," the pride of the propagator and the admiration of the Borists. This chrysanthemum is such a dark red, that it proudly bears the name at the shows as the mahogany chrysanthemum.

A BLUSHING TREE.

"Among the many wonders of those strange swamps there is nothing more surprising than the blushing tree," said Albert F. Dewey of Punta Gorda, Fla., who has recently passed a month in the Everglades of Florida.

"The blushing tree," continued Mr. Dewey, " is by no means common. It is found only in the densest thickets of those interminable marshes, those luxuriant vegetation is a revelation to explorers. It is called the blushing tree by those who hoow it because it actually blushes when the rain Ells upon it. This phenomenon is apparently incomprehensible. It never fails to astound those who see it for the first time. The mysterious and teautiful glow of color which it assumes in a raindorm baffles description. The Seminole Indians, ho once ruled Florida, have always known of the tree, and in their musical language, now fast disap-Paring, have words which mean 'the maiden tree which reddens at the coming of her lover, the rain." "In company with a taciturn Indian guide I joureyed forty miles to see this marvelous bit of vegtable life. I could scarcely believe the story he fold me, yet curiosity at length overcame increduw, and we set forth one morning in a small canoe. We spent nearly three days paddling and poling way over the winding waters. In the afternoon the third day I began to wonder if he had only ken deceiving me for the sake of the boat hire and pay as guide, when he gave a grunt of satisfacbon and pointed to the right.

Distrustfully, I followed him ashore and though the underbrush. Beneath great cypress the underbrush. Beneath great cypress the underbrush and past the underbrush are the underbrush and past the underbrush are the underbrush. Beneath great cypress the underbrush and past the underbrush the gray hanging moss, and past the open share we wended our way inland. The open space he stopped and with silent pride toward toward the center. Gracefully a tree, while spreading branches hung down, slightly waying the warm breeze. Its emerald-hued foliage.

was the most beautiful I had ever beheld. It rose to a height of twenty feet and its thick, substantial trunk indicated many years of existence. This the old Seminole informed me, was 'the blushing tree,'

"I told him to prepare to camp here until it rained, regardless of time. We unrolled our blan kets, stretched our mosquito bars, without which one cannot sleep in the glades, cooked supper and rolled up in our blankets for the night. That night, the day following and the next night passed without rain.

"I began to think it would never rain, when about noon a cloud darkened the sky overhead. I put a rubber poncho over my shoulders and fixed my eyes on the green and pretty tree a dozen yards away. It was covered with a greenish insect, the size of a large wood tick, which intensified its color. The rain began to fall in torrents, after its custom in that region. Beside me, grinning confidently with his pipe in his mouth, stood the Seminole.

"As the cool water drenched the tree, I was amazed to note a changing of color. Gradually, yet unmistakably, the green hue was giving away to pink. The Indian had told the truth. The tree was blushing at the rain.

"In a few minutes the green had faded from sight. On only a few, half-hidden spots beneath broad branches and on its trunk was there a tinge of green to be seen. The tree was as pink as the cheek of a healthy girl.

"After an hour or more the shower passed over and I watched with no less interest the wonderful tree assume its familiar green once more. As it was changing back to emerald I suddenly realized the secret of the phenomenon. The tiny insects and not the tree itself changed color. These peculiar parasites are possessed of the power of chameleons. In the bright warm sunshine they are greener than the tree on which they live, but when the chilly rain falls upon them they contract their little backs and become a pretty pink in color. Millions of them thus change the tint of the tree. They are found only upon one species of trees, which grow in certain parts of the Everglades."

HOW ANIMALS FIGHT.

Supposing all the animals in the zoo at Regent's park were to begin to fight to the death, who would be the ultimate victor?

A well-known animal dealer votes for the elephant, which he calls the J. L. Sullivan of beasts. His trunk is his weapon and he is the hardest hitter with it of all the animals. Furthermore, he gores with his mighty tusks and tramples beneath his huge feet his daring adversary.

A sporting writer would call the tiger a whirl-wind fighter. He is very light on his feet and his impetuous rush needs clever withstanding. With his heavy paw his favorite stroke is a lightning downward punch. With all his cleverness he soon tires if he meets a tough adversary.

The same remarks apply to the lion's style of fighting, though Leo has generally more grit than Friend Stripes and will last longer in a conflict, Still, in a lion and tiger fight one would hardly back Leo, for he is several stones lighter than the gentleman from Bengal, says the London Express. And it is generally admitted among students of the fistic art that "a good big one is better than a good little one." What Mr. Gilbert calls "an interesting eastern potentate" often has lion pitted against tiger in the wild-beast fights with which he beguiles his leisure, and almost invariably is the king of beasts subjected to an ignominious knockout.

The specialty of the giraffe is his enormous reach. He can deliver a nasty punch with his forelegs and is not above biting his opponent when opportunity offers. Another long-range fighter is the deer, who is also very swift in his movements. Besides the quick punch with the forefeet, beware the sharp horns when you take on Br'er Deer. The buffalo, though his pet weapon is his great ironclad head, is also good at a long, swinging blow with the forefoot.

The grizzly bear is a formidable foe. He can punch like no other animal save the elephant—one blow of his stupendous paw will break a horse's back—and when he clinches to avoid punishment his hug will crush anything living. Besides this, nothing can break his pluck. He will fight as long as he can see or stand and he is a glutton for pun-

ishment. None of the cat tribe could stand a tenth of the pounding which the grizzly takes without turning a hair. As an offset to the useful qualities I have enumerated the bear is slow on his feet and his eye is not good.

The snake is about the cruelest of fighters. He has not the advantage of legs, but he is armed with the deadliest poison, and once he has wound himself around his adversary's body one swift movement of the head enables him to bite his victim.

The trickiest fighter is our colonial friend, Uncle Kangaroo. He bites when he can and his powerful hind legs and tail are useful for dodging. The opponent who gets one of his forefoot blows seldom requires another and a straight kick from him will rip a horse or another large animal wide open. He is also fond of hugging and when pursued by dogs will take the faithful friend of man to his bosom in a fervent embrace that is generally fatal.

Thus, though each of the beasts has his own specialties in the way of fighting, we have come to the conclusion that either the elephant or the bear would wear the belt in a general fight among the happy family of Regent's park.

* BUILD THEIR OWN HOUSES.

The oyster at the commencement of its career is so small that 2,000,000 would only occupy a square inch. In six months each individual oyster is large enough to cover a quarter and in twelve months a half-dollar. The oyster is its own architect and the shell grows as the fish inside grows, being never too small. It also bears its age upon its back and it is easy to tell the age of an oyster by looking at its shell, as that of horses by looking at their teeth.

Everyone who has handled an oyster shell must have noticed the successive layers overlapping each other. These are technically termed "shots" and each one marks a year's growth, so that by counting them the age of the oyster can be determined.

Up to the time of its maturity—that is, when four years of age—the shots are regular and successive, but after that time they become irregular and are piled one upon another, so that the shell grows bulky and thickened.

Fossil oysters have been seen of which each shell was nine inches thick, whence they may be guessed to be more than 900 years old. One million to 2,000,000 oysters are produced by a single parent, and their scarcity may be accounted for by the fact that man is not the only oyster-eating animal. The starfish loves the oyster and preys upon it unceasingly. A variety of whelk is also very fond of young oysters, to get at which it bores right through the shell and sucks the fish up through the hole thus made.

FRUIT GROWN IN ROYAL GARDENS.

Most of the fruit consumed in the Queen's household is grown in the royal gardens at Windsor. Some statistics published show that the Queen's gardens supply in one year no fewer than 20,000 desert apples, besides 400 bushels of eating apples of a commoner kind. The grapes produced in one season weigh two and a half tons, the strawberries one and a quarter tons, the red and white currants a ton and the cherries half a ton. Of the rarer fruits about fifty pineapples, 400 melons and between 6,000 and 7,000 peaches are gathered each year.

LEOPARD MUST CHANGE HIS SPOTS.

According to a Vienna correspondent the Hungarian government is about to take steps to effectually put an end to the wanderings of gypsies, who are so frequently to be met in that country. The stalwart Hungarian gypsy, with his multicolored cloak, his dark-eyed, fortune-telling wife and his crowd of half-naked children, is certainly one of the most picturesque figures in this part of Europe, and difficulties are sure to attend all attempts to compel him to become a respectable, steady-going peasant. It is, however, asserted that of late years the Hungarian, gypsies have degenerated, disease having wrought havoe in their ranks.

AN AQUATIC HEDGEHOG.

THE sea hedgehog, or globe fish, can inflate his body with air. In this state it looks like a balloon covered with spikes, and is safe from any enemy.

THE INGLENOOK.

ривызнер жевких

At 22 and 24 South State Street, Elgin, Illinois. Price, \$1,00 a year. It is a high grade paper for high grade boys and girls who love good reading. INGLENOOK wants contributions, bright, well written and of general interest. No love stories or any with killing or cruelty in them will be considered. If you want your articles returned, if not available, send stamped and addressed envelope. Send subscriptions, articles and everything intended for The INGLENOOK, to the following address.

BRETHREN PUBLISHING HOUSE, Elgin, Illinois.

Entered at the Post Office at Elgin, Ill., as Second-class Matter.

TO OUR READERS.

MERRY Christmas and a happy new year to you, dear reader. We wish you well. If we had our way of it we would abolish poverty and make health contagious. We would like to have every reader enjoy a pleasant and a merry Christmas. There's trouble enough in this big, round world of ours for the rest of the year, and every reader of the 'Nook is entitled to one day off the wheel, and there is no better day than Christmas. You have heard it said that it comes but once a year, and that once must be taken merrily to do us the needed good. No person need feel that he is desecrating a holy day by turning it into a holiday. Nobody knows when Christ was born. The time has been observed differently in different parts of the world in times past. It is all the sheerest guess work to say that the Master came on December 25. Nobody knows anything at all about the day or the month. It is a day for feasting and rejoicing. Take out of it all you can get. There's trouble enough ahead and behind. Forget it all. Have a good time, innocently, of course, but a good time all the same.

There is something about the sentiment back of the Christmas idea that appeals to all of us. We love to think of the childhood of Jesus. Art and her started comrade, Song, have combined in all past ages to make the day and the occasion for it glorious. The world at that time was in the early twilight of civilization. The Holy Land was full of troubles. The Roman soldier marched up and down the streets of the Holy City to the brazen blare of his trumpets. The Jew was a dog to him. The soldier was a hated person to the Jew. The land was full of robbers, and the world was an unknown quantity to the best informed. It was take who could, keep who can, and the wildest rumors were abroad in the land.

The Jew had expected that a Redeemer would come, but he looked for a warrior king that would drive the Roman back, free the land and reinstate its lost and faded glories. And then when Christ the Redeemer did come—born in a stable with the meek-eyed animals about him, with only a mother's love over him, the world laughed. The stars sang together, and the wise men followed the beacon light of one that shone brightest of all. There was the adoration of the Magi, the unheard songs of the unseen angels, and the Hope of the world lay sleeping on the mother's breast as she crooned a child song in her native tongue.

Then came the strenuous life of the day and age, the three short years of a troubled ministry, and the cruel crucifixion, and the glorious resurrection. But when Christ hung dead on the Cross how hopeless was the outlook. The slumbering torch had been thrust beneath the waters of oblivion and the world was in darkness. Look at the same world today, not far from two thousand years as men count time. In every village is the house dedicated to the worship of the living God, in every land is His name spoken, in every tongue is He called on to help in direst need. Where He was rejected among the dullest of intellect in the infancy of the world he is now accepted among the learned and those of most exalted station. And the growth is a continuous one. The time will come when the whole world will remember what Christmas means.

And so, while we enjoy ourselves, and are merry on the holiday, let us remember that it is only in His name that we have a hope beyond the present life, and that hope is realized only by a life of love and obedience while we are in the present life.

YES, my little boy and girl, you can have all you can eat Christmas, but remember that there is a limit to even your capacity, and don't you overdo it and have us getting up in the night to hear a tale of woe about a great big pain in your midst. Stop short of the bursting point.

YOUR SUBSCRIPTION.

In the matter of your renewal the following should be remembered: Your name is set up in type, and goes into the mailing list. If you allow your subscription to lapse your name will be taken out, and if you then renew it will take some little time to get you in line again, and you may miss an interesting number or two. It would be better to advise us by postal card that you intend taking the paper, if through any contingency you cannot at once send on the dollar. Then the paper will come straight through to you.

THE MISTAKE OF THEIR LIVES.

In the next issue of the 'Nook a story will be begun running through several issues of the paper. Its title is the caption of this article. It tells the story of the clandestine marriage of a young brother and sister, and the trouble that followed. When it was imperative that the marriage be proven there was – but let us not get "ahead of our story." There will be a valuable lesson in it for all readers.

ROCK ISLAND ROAD AGAINST THE CIGARETTE.

Westward, like the star of empire, the anti-cigarette crusade takes its way. The Union Pacific railroad has placed a ban on the noxious little rolls, and now a report comes from Armourdale, Kansas, that the employes of the Rock Island road at that place have been notified that those who smoke cigarettes must give them up or lose their positions. It is only reasonable to expect that all the great corporations will sooner or later follow the excellent example which is being set them.

According to a German physician of high repute the Chinese may ultimately triumph over the powers of civilization because of their nervelessness. The Chinaman, he says, can write all day, stand in one position all day, weave, beat gold, carve ivory, do infinitely tedious jobs for ever and ever and discover no more weariness or irritation than if he were a machine. This quality appears in early life. There are no restless, naughty boys in China. They are all appallingly good, and will plod at school without holidays or recreation of any kind. Sport or play-if we except cards and kiteflyingseems to John Chinaman waste labor. He can sleep anywhere, amid rattling machinery, deafening uproar, squalling children or quarreling adults, on the floor, on a bed, on a chair, and in any position. And in the increasing complexity of civilized life, when half the population may be expected to be "all nerves," this quality of "nervelessness," the professor thinks, will be of incalculable value.

Por, hast du für den 'Nook geschriebe, so wir es en anners Johr griege? Was, du hast nit? Well, denn must du's aber schnell dun. Wir wäre ja gans verlore ohne die Zeitung. Ich will wisse wie die Elgin Schwestere koche könne, un ich will a ganse lot Sache aus dem 'Nook griege, von den gute Dinge zu koche. Un du weest nix davon? Die beste Köch in der Gemeinschaft gebe uns jede een Recept, un sie werre alle im 'Nook gedruckt. Pop, ich muss die Zeitung habe shur, un dass is gewiss so. And he just handed over the dollar.

Our cooking school is prospering mightily. The recipes, or receipts, if you prefer it, are coming in in a way to make one's mouth water. The 'Nook readers will have a whole lot of first-class recipes that have several distinct merits. They are all practical, they are by Sisters, signed, so that we know who is doing it, and they are good things for good people. We have been asked by outsiders to print some recipes for them, and we respectfully decline the honor. None but Sisters are allowed in the kitchen this feast.

As you enter upon life choose your friends as you would choose guides on the borders of a wilderness. Friends more than anything else determine the paths which most of us follow.

Too often often when Cupid registers marriage vows he falls into the modern habit and uses the cash register.

OUR QUERY COLUMN.

Will the Japanese persimmon, described in the 'NOOK, grow here in Illinois?

No.

Will we be allowed to ask questions in the Cooking School class?

Certainly. Send them on. Somebody will know.

In what part of the United States is the hedgehog tound?

Will some of our readers answer this—is it found in your locality?

Can astronomy be learned from a book?

You can get a very good idea of the science from a book, if it is a good one, well studied.

Whereabouts in the Bible is the phrase, "God tempers the wind to the shorn lamb?"

It isn't in the Bible at all. It was said first by Laurence Sterne, an English writer.

In this day of machine-made manufactures would it pay a boy to learn the trade of a machinist?

Yes. Somebody must make the machines, and hand work will always be in request.

Can you tell me some business in which I can make a latte money without too great expense. I am a crappled girl,

Try Belgian hares or Angora cats. There is money in each if intelligently bred.

What is the meaning and the use of the word "menu?"

It means nothing more or less than a bill of fare.

It is French and is pronounced "mean-you."

What is condensed milk, made at Elgin?

Nothing but milk with the water evaporated from it, and sugar added. You could not well do it at home.

Are cheap weather indicators any good?

They usually get around to the facts the next day. Rain will be indicated on a Tuesday when it rained Monday.

Is alcohol a "food?"

Some affirm and some deny. It is a fact that it does infinitely more harm than good. It has done more harm than war or pestilence,

Will the cooking recipes be continued?

Yes, and each one of them will be tested by its contributor or originator. This feature of the 'Nook will be a very valuable one to the people who cook.

Are others besides Sisters allowed to contribute recipes to the INGLENDOK Cooking School?

You will have to get some Sister to mother it for you. It is exclusively Dunker cooking we are after. Every Sister is invited to send in her best

* * *

What is meant by exchanges in a newspaper office?

You send your newspaper free to another paper which comes to you free in return. It is a matter of agreement and does not universally apply. Some papers have hundreds of exchanges, others very few. The 'Nook does not have half a dozen because most papers do not contain what we want.

THE INGLENOOK.

BY M. P. E.

IT matters not which way we look, We're sure to spy the INGLENGIOK. It has fluttered here, and fluttered there, It finds a glad welcome everywhere.

Is there anything you want to know? Just give our Editor half a show; He'll tumble his silvery locks of hair And hum a tune with thoughtful air.

And soon from a pig on hole he'll take Something that makes his broad sides shake? The information, if you'll only look. You soon will find in the INGLENOUS.

What's the difference to us if he won't tell his name?

What's the difference to us if he won't tell his name?

Perhaps we, in his place, would feel just the same.

And when asked, "Why so modest?" he murmurs.

Cause: "

So we'll have to nickname him Our Santa Claus.

UNCLE SAM'S MONEY BOX.

They are not all up to date portant alterations. They are not all up to date portant alterations. They are not all up to date portant alterations. Seventy-five thousand dollars has any means. Seventy-five thousand dollars has red appropriated for the alterations, which consist red and extends under the terrace at the reginally box of steel lattice work, eighty-nine feet reginally box of steel lattice work, eighty-nine feet reginally fifty one feet wide and twelve feet high, filled to walk around the mass of treasure, following a region passage which runs between the side of the box and the steel walls of the vault.

This lattice work receptacle holds \$101,000,000 in alver, which is packed in wooden boxes, two bags of standard dollars to a box and each box weighing ropounds. Formerly the coin was simply stacked up in bags, but notwithstanding the walls of steel dampness rotted the bags and the money ran out of them. This made extra trouble, requiring fresh counts and it is no small job to reckon over such a grantic sum in metal. Hence it was decided to pack the stuff in boxes. Each sack contains \$1,000, and so long as the treasurer's seal on it is intact its contents do not have to be verified on occasions when recounts are made.

The bond vault is to be enlarged greatly, doubling its capacity—a change made necessary by the increasing number of national banks which deposit bonds in the treasury. Many private and State banks, taking advantage of the recent act of congress, are coming in as national banks.

Anew and thoroughly modern strong room is to built for the register's office to hold canceled paprimoney that is awaiting destruction in the macmator. Meanwhile the subtreasury in New York is putting in two additional vaults, one for gold and the other for silver, the latter measuring forty-seven teet in length by twenty-eight feet in width and thelve feet in height. Gold and silver are pouring inthere by tons daily and there is no place to put all of it. At the present time that subtreasury has on hand \$170,000,000 in gold coin and \$58,000,000 in silver. There are now 152,000,000 silver dollars in the treasury at Washington, but only \$6,080,000 in gold coin. The treasury never keeps much gold on hand here, the great stock of the yellow metal being held in New York and at the mint in Philadel-

If one wants to see crude gold in masses he should visit the mint in the Quaker City, where he find it stacked up in heaps of bricks-tons on tons of it-all ready for conversion into coin. At the present moment there is \$53,000,000 worth of sold bullion at this mint, with \$53,000,000 in gold bin, not to mention \$150,000,000 in silver bullion and coin. Notwithstanding the fact that the treas-We steel-clad structures now used by great private oncerns that have valuables to protect, the government leels fairly secure as to the safety of its stored talth. The best safeguard for coin is its weight.

Just to illustrate this point, it may be mentioned that the \$152,000,000 in silver now held in the stong rooms of the treasury weighs nearly 5,000 1003. A million dollars in gold coin weighs about holons and it would take a very strong man to any off \$50,000 worth of the yellow stuff. Though gold brick the shape and size of an ordinary bilding brick represents \$8,000 its "heft" is something astonishing.

There was quite a scare a few years ago when similar was quite a scare a few years ago when

defer was quite a scare a few years ago when filling was treasurer, because the vault in the shoom where the ready money is kept refused to open. It is always set for 8:30 A. M., with a to be wrong with the mechanism, and the steel wind and still the money was locked up. For anyments. Experts were sent for and came with the time lock had been to day accident for 9:30. In this vault not only we kept, Each parcel holds 4,000 notes, and is in known as single such package represents \$2,000,000

Burglars may be practically excluded, but the treasury does not claim to be theft proof. On an unlucky day in 1870 a visitor came into the treasurer's room with a large Panama hat in his hand. The treasurer's attention was distracted by some other people who were trying to talk to him and the man dropped his hat carelessly over a package which contained 2,000 \$10 notes lying on the desk. It was one of several such packages and the loss of it was not noticed until some hours later. Of course, the notes were advertised and sometime afterward a part of them were deposited in a New York bank. The depositor was arrested, but no-body was punished for the crime.

A singular immunity from punishment seems to have attended thieves who have robbed the treasury in such ways. In 1875 a clerk named Benjamin Hallock passed a package of \$500 notes representing \$47,000 out of a window in the cashroom to a saloonkeeper named Ottman. For some time the robbery remained a mystery, but later on Theodore Brown was caught betting on the races at Saratoga with some of the missing \$500 notes. He was arrested and implicated Ottman and Hallock, but Brown was never tried and the other two were not finally convicted. Of the stolen money \$20,000 was recovered.

It has been said that no trust company would accept the responsibility of the treasurer of the United States for the \$6,000 a year salary which he gets. He is responsible for all moneys that may be stolen and on more than one occasion Congress has been obliged to relieve by formal act an official in the position who would have otherwise been liable for the repayment of large losses. On one occasion two men named Marden and Johnson, the latter an assistant paying teller, took \$62,000 by collusion. The government got back \$12,700 of this money and the offenders escaped with a year in prison for each. There have been a good many thefts in the redemption division, where the temptations are exceedingly great, the most famous of them being that perpetrated by a woman who invented a method of making nine notes out of eight, incidentally to the process of putting together scraps of torn bills sent in to be redeemed. Nobody ever knew how much she stole, but she gave up a portion of her ill-gotten gains and was not prosecuted.

In 1865 there was much excitement over the loss of \$1,000,000 in paper money, which had been shipped from Washington to the assistant treasurer in San Francisco. The shipment was made in a sailing vessel called the "Golden Rule," and consisted of 1,000 \$1,000 notes. The ship was wrecked on Rocador reef and the safe containing the cash was lost with it. Nevertheless a conspiracy was suggested and a theory was formed to the effect that the vessel was deliberately cast away for the sake of stealing money. If this had been true some of the notes would certainly have turned up later, but as a matter of fact none of them has ever been seen since. Of course, being paper money, it was no loss to Uncle Sam.

Immense quantities of gold are shipped nowadays across the ocean, and the danger of loss is so small that the precious stuff may be insured at so low a rate as one-tenth of one per cent. It is insured just like so much grain and the documents, written in old-style legal phrases, guarantee its safety against all perils of the seas, including "men of war, fires, enemies, pirates, rovers, thieves, jettisons, letters of marque, reprisals, takings at sea, arrests and detainments of all kinds, princes," etc. Every large trans-Atlantic steamship has a treasure-room, which is a great steel box, built more like a vault on land.

Shipments of gold coin from this country to Europe have been extraordinarily large recently. The banker in New York buys it from the subtreasury there, receiving it in sacks of \$10,000 each. It is carefully weighed, because Europe will accept our gold only by weight, though the quality of the coin—its purity and degree of fineness—is guaranteed by Uncle Sam's stamp. Usually it is packed in casks that are much like herring casks, ten sacks to each cask, which weighs 180 pounds when thus filled. Thefts on the voyage are practically unknown, but in 1894 a cask of gold coin was lost on its way to Paris, being finally located on the platform of a railroad station between Havre and Paris. The station agent thought it contained white lead.

HE HAS MANY PRIVILEGES.

A curious privilege of an ambassador is that he, and he alone, when dismissed, may turn his back to the sovereign to whose court he is accredited. The mode of procedure is as follows: When the ambassador's audience is over he waits to be dismissed by the sovereign. When dismissed the ambassador bows, retires three paces, bows again, retires another three paces, bows a third time, turns on his heels and walks to the folding doors. But it is felt that more polite methods should obtain when the reigning sovereign is a woman. To turn his back is to be discourteous, to walk backward is to resign a privilege; the ambassador retires sideways, like a crab; he keeps one eye on the sovereign and with the other tries to see the door. He thus shows politeness to the sovereign and at the same time retains one of his privileges.

As the ambassador is usually an aged gentleman, often shortsighted, he sometimes fails to reach the door and comes into collision with the wall. Another privilege of ambassadors is the right of being ushered into the royal presence through folding doors, both of which must be flung wide open. No one except an ambassador can claim this privilege; the most any nonambassadorial person can expect is that one of the leaves shall be opened to him. The reason for this privilege is not known. There are certain irreverent suggestions that have been made, but we prefer to be silent with regard to them. Another privilege, capable of causing great inconvenience, is the ambassador's right of admission to the sovereign at any hour of day or night. Thus the minister representing some little bankrupt state could go down to Windsor and demand an audience at four o'clock in the morning. The audience would have to be granted, though it could be delayed by the exercise of ingenuity.

A HINT FROM HENRY CLAY.

A WELL-KNOWN Southern politician, who died just before the Civil War, not infrequently spoke of an incident that took place in his first term in Congress, in which he received a lesson in statecraft from the great Whig leader, Henry Clay.

"I was a young man and an enthusiastic Whig," he said, "and I entered Congress, quivering with eagerness to serve my party and to distinguish myself. I was on my feet shouting 'Mr. Speaker!' a dozen times a day. I opposed even petty motions made by the opposite party, and bitterly denounced every bill, however trivial, for which they voted. Before the session was half over, I had contrived to make myself personally obnoxious to every Democrat that I met.

"One day, after an ill-tempered outbreak on a question of no moment, I turned and saw Mr. Clay watching me with a twinkle in his eye.

"'C--,' he said, 'you go fishing sometimes?'
"'Yes.'

"'Don't you find that the best rod is the one that gives a little at each joint? It does not snap and break at each touch, but bends, and shows its strength only when weight is put on it.'

"I caught his meaning. I had seen him chatting familiarly with the very men whom I was berating. Yet I knew when the great interests of parties clashed he was the one man whom they feared,

"I set myself then to learn patience and coolness. It is the strong, flexible rod which does not break under the big fish."

To come down from national to domestic life, it will always be found that the fretful, quarrelsome member of the family is of little use in a crisis. It is the men and women of coolness, reserve and good humor who control the emergencies in the household, as men and women of this type have always done in all human history.

The Chinese have a curiously cheerful way of disposing of their lepers. The relatives of the afflicted person propose to him that they bury him alive, and such is the fatalism of the Chinese that the victim readily consents. An elaborate meal is served to him, in the way of a farewell banquet, and then the funeral procession forms. The man who is about to be immured under the sod follows his own coffin, and when he reaches the grave he takes a dose of laudanum, hops into the box and settles down for eternity.

Good Reading

A CHRIST/IAS DINNER AND HOW TO OET IT UP.

BY MRS. M. EARLY.

Considering woman's relation to the home and family, the art of good housekeeping is an accomplishment, to which all others are trivial. I mean by good housekeeping, cooking and everything that goes to make up a well-ordered home. But ask the young and inexperienced housewife to tell you some of her trials with sour bread, muddy coffee, half-cooked vegetables, meats so tough that the cat and dog turn away in disgust, pastry which makes the husband long for his mother! To these might be added a whole fist of horrors resulting from improper training or none at all,

Some are pleased to call housekeeping drudgery. But remember the girl or woman who is satisfied with only the highest perfection in her housekeeping becomes the artist, not the slave. Now for the benefit of the ever busy housewife and the young daughter, into whose homes the 'Nook comes once a week as an extra bit of sunshine, we have a new feature, a Surprise Christmas dinner for six, giving instructions how to prepare and serve an inexpensive, up-to-date dinner:

•			
	MENU,		
21	Soup.	Oyster.	
Tomato,	Celery.	viyact.	
Baked Fish,	Fish	Creamed Salmon.	
Turkey,	Roast.	Cranberry Sauce.	
	Vegetables.		
Mashed Potatoes, Cold Slaw,	Creamed Lima Beans, Baked Apples,		
l'otat	oes with Ch	cese,	
	Dessert.		
Chocolate pie, Cheese,		Mince pie, Cranberry Farts,	
	Spice Cake,		
Café au lait,	C	hocolate au café,	

One of the best recipes for the preparation of each of the above dishes is here given in detail, and if directions are closely followed, with the liberal use of good judgment, the dinner will do for any one.

Tomato Sour .- Strain one quart of canned tomatoes, same as for catsup. Place in granite pan over slow fire. Add one-fourth teaspoon soda to sweeten (or else the milk will curdle). When hot stir in one tablespoon butter, salt and pepper to taste. Add one quart rich milk and one pint of water. Allow to come just to the boiling point. Keep hot and serve with crackers.

OYSTER Sour.—One quart of fresh oysters. Pour liquor in soup pan, boil and skim. Then replace the oysters. Add tablespoon butter, salt and pepper to taste. When just to boiling point add one quart of milk. Let come to boil and serve imme-

BAKED FISH.-Clean, rinse and wipe dry a whitefish, or any fish weighing three or four pounds. Do not leave stand in water as they lose much of the best flavor. Rub the fish well inside and out with salt and pepper. Fill with a dressing made like that for poultry, only drier. Sew it up. Lay in hot pan with something under the fish to prevent baking too hard or burning. Add a little water with drippings or lumps of butter. Dredge with flour, Lay over fish a few thin slices of bacon. Bake in moderate oven till fins can be easily taken out with fingers. Baste while baking. When done lay on platter, and in the pan pour one pint rich milk. When hot thicken with one tablespoon of flour previously stirred smooth in one-fourth of a cup of milk. Cook well and pour around fish on platter. Keep hot and serve in side dishes with the soup

CREAMED SALMON. - Heat one tablespoon butter in frying pan. Add one tablespoon flour. Stir over fire till smooth. Take back and slowly stir in two cups cold milk, eook well and salt lightly. One ean of red salmon, picked fine, removing pieces of bone and skin. Prepare one quart of fine bread erumbs. Grease well a round granite pan. In the bottom place layer bread crumbs, cover well with

ly over dressing and crumbs; again place layer of crumbs, dressing and salmon. Continue till all is in pan. Bake twenty minutes in moderate oven. Serve from pan, as this dish is made unattractive by turning out,

ROAST.-After fowl has been picked, carefully singe and draw, being sure that nothing unsuitable remains. Break the legs a little below the knee, pull down skin and tie to prevent the muscles from shrinking away from joint, throw liver, heart and gizzard into cold water, wash well and put on to cook in three pints of water. Boil two hours. Use as little water as possible in washing fowl, but wipe thoroughly inside and out with damp cloths, then use a dry one, rubbing well. Rub inside and out with salt and pepper. Prepare the stuffing from pieces of dry bread with other bread several days old, till you have a gallon. Over this pour a little boiling water. Cover tightly and let steam. When soft, add three tablespoons butter, salt and pepper, and any other seasoning desired, to taste. Three fresh eggs well beaten, mix thoroughly, but be careful and do not have it too moist. Stuff breast first, but not too full, or it will burst in cooking. Stuff body. Sew up openings, sewing the skin of neck to back or breast. Fasten wings and legs in proper position with skewers, if skewers not used tie well in place with twine. The best way is to steam the turkey before roasting, and a steamer can easily be improvised by placing two or three sticks of hard wood in the bottom of the wash boiler, with just enough water to cover them. On these place the drippingpan with the turkey. The boiler lid should fit tightly, and as the water boils away add more. Steam till easily pierced with a fork. When tender place turkey in dripping pan with the water in which the turkey was steamed. On the breast place lumps of butter. Sprinkle with pepper and salt. Dredge with flour. Baste well and often from the water in the pan. Add boiling water as needed. Bake until a golden brown and perfectly tender, remembering that the excellence of the turkey depends much on the careful basting. Remove to a hot platter and serve with crauberry sauce. To make the gravy, place pan on fire after turkey has been dished, skim off most of the grease or fat. Add more water if needed. Add the heart, liver and gizzard which have been chopped previously. Add to the pan the water in which they were cooked. Slowly add a smooth thickening of flour and water. Boil till flour is thoroughly cooked. Season with salt and pepper to taste.

CRANBERRY SAUCE.—Pick over carefully and wash one quart of cranberries (the pink are preferable). When washed put granulated sugar over them, stirring, put on sugar till each berry is coated. Set on the back part of a moderately hot stove. Cover tightly and leave till all have popped. Remove immediately to dish, from which they are to be served.

MASHED POTATOES.-Pare and put on to cook in boiling water. Keep boiling till done. Drain quickly. Mash in kettle till smooth. Add cream or rich milk, liberal amount of butter. Salt to taste. Beat one way with a large spoon, the more the better, put in dish. Smooth the top, in center place lump of butter. Serve hot.

Baked Beans .- Soak one quart of limas twentyfour hours. Put in fresh water. Cook slowly for one-half hour. Then change to fresh water again. Cook one hour and give fresh water. Cook slowly till tender, then remove from fire. Take out one teacupful of the beans. Mash fine and add two tablespoons of butter, pepper and salt to taste. Then add one pint of milk. Mix thoroughly. Place the remaining whole beans in bake pan, salt and pepper. Pour the mashed beans and milk into pan, Lay a few thin slices of pork on the top and bake slowly till browned.

COLD SLAW .- Cut very fine one-half medium sized cabbage (keep cold). Whip one-half teacup of cream and slowly add sugar and vinegar to suit taste. Then pour whipped cream over the just salted cabbage and beat well.

POTATOES WITH CHEESE, - Wash six medium-sized potatoes. Boil till tender in salt water. Remove from fire and drain. When cool enough to handle, pare and dice (cut in small squares. Save the parts which can not be diced to fry). Measure and lay on large paper. Take the same amount of grated or shaved cheese (which can be prepared while the potatoes are cooking). Sprinkle over pocream dressing, add one-fourth of the salmon even- tatoes. Then take up paper and hold so as to allow

the cheese and potatoes to slide from end to en when well mixed, place in round granite pan, it little salt, but pepper well. Pour milk into pantil it can just be seen. Bake in moderate oven till ton is covered with a golden crust. Serve from pan,

BAKED Apples.—Pare and core one dozen tant apples. Keep apples whole, removing core with a narrow sharp knife. Place in baking pan with little water. Fill cavity of apples with sugar and on each place a lump of butter. Sprinkle cinnamon over them and bake slowly. Serve with cream.

CHOCOLATE PIE.—Heat two cups of milk with two cups of sugar and two tablespoonfuls of grated chocolate. When hot stir in briskly two tablespoons of cornstarch, mixed with a little milk. Add the beat. en yolks of two eggs. Cook well. Remove from the fire and stir in a small piece of butter. This will fill two crusts which have been previously baked. Fill crusts with the cream. On the tops place the two whites of eggs beaten with two table spoons sugar. Place in oven to brown.

CRANBERRY TARTS.—Make crust in the usual way. For filling cook one pint of berries. Strain and add same amount of sugar. Boil till ready to jelly, Cool and fill the crusts.

SPICE CAKE.—Cream two cups dark brown sugar and one-half cup butter. Add three well-beaten eggs. Use the white of one for frosting. One cup of sour milk and one teaspoon each of cinnamon, cloves and nutmeg. One teaspoon soda, three cups flour, added slowly. Bake in long pan. Frosting,-Chop fine one cup of raisins, seedless. Boil one cup of granulated sugar and four tablespoons water till it strings. Pour hot syrup over beaten white of the egg. Add raisins, stir all together till nearly cold, then spread on top of the cake.

MINCE PIE. - Use any of the old-time recipes. CAFE AU LAIT.—Thoroughly clean the coffee pot. Put into it one teacupful of ground Mocha and lava. Stir an egg, put in coffee pot. Over it pour three cups of boiling water. Set where it will keep at the boiling point for twenty minutes. Take out and

cups of good rich milk. Heat again and serve. CHOCOLATE AU CAFE. - This is simply half good, well-made coffee and half well-boiled chocolate mixed.

strain out all grounds. Pour back and put in three

ONE OF THE NEW TOYS.

This, says a London paper, is a clever, ingenious and most amusing mechanical tin toy. At each corner is a Chinaman with pigtail and Chinese hat, but it would seem as if four nationalities were intended, for on the crown of the hats are the colors of the several European allies now in the celestial empire. Each holds one corner of a yellow sheet and by an ingenious device the figure of a Chinaman placed in the center is thrown in the air as soon as a side spring is touched. By means of a regulator near at hand the throw can be either high or low and the attitude of the victim is most natural. He can, however, be replaced either with dice or balls.

COULD NOT PAY FOR TWO.

At one of the railway construction works in the vicinity of Glasgow a Roman Catholic clergyman takes a great interest in the members of his flock who are engaged at the cutting. One Saturday saw one of them entering a "pub" and hailed him. but Pat simply looked and walked in. Waiting till he came out, the reverend gentleman accosted him thus: "Pat, didn't you hear me calling?" "You your ravrince, I did, but but I had only the price of one."

AT Emporia, Kans., a prize contest had been waged between the Degree of Honor and the East ern Star for a fine piano. The Eastern Star won but the Degree of Honor thought there had been some underhand work in the drawing. So an attorney was consulted in regard to bringing suit here against the successful society. But there will be no suit. The attorney informed the ladies that all of them on both sides had been guilty of a breach of the Kansas law against lotteries and that they might be sent to the penitentiary for a year each.

THERE is a distinct difference—all the difference in fact, between sense and nonsense—between abi ity to converse well and ability to chatter inco-

HOW TO BEGIN AND CONDUCT A CIRCLE.

BY JOHN R. SNYDER.

oflow shall we begin a Reading Circle in our This question is often asked, and let us arnght here that there is no ironclad rule in this arrigin. In most cases, organization and the plans gerelor, must be left to the circumstances suranding each local community. But a few hints long general lines are in place and may be of use nthose contemplating this work.

First, there must be a leader, or some one to "go bead," but not in an arbitrary manner. It is as necessary to have a leader in this work as in any wher. A good leader, coupled with a half-dozen or sate active workers, have surmounted the greatest obstacle to a successful Reading Circle. Anyone becomes a member by filling out the Promise Card and paying the entrance fee (twenty cents). This offiles the signer to all the privileges of memberhip. The cost of membership is more than refunded by the saving on cost of first book of the ourse by the special price to members.

Local Secretaries have been appointed at most places where an interest has been made manifest ward the Circle. Should there not be one inform he General Secretary, recommending some competent person for the place and the appointment be made. The Local Secretaries become a part of the general organization.

Now with a leader, a local Secretary, and a band of members, you are ready to go to work. Select some convenient place of meeting. Let it be at the durch if possible and not too inconvenient. Take up the work in a systematic way. Each member should have a copy of the cheaper books at least and of the more expensive ones if possible. If not, then there should be one or more of the larger books, to be used as a sort of circulating library. Much depends upon the care given the study of a book. Do not read in a desultory, careless manner, bat read in such a way that you digest it thorough-. Have frequent essays, critiques, and readings based upon certain phases of the life of some person or field. Collect all the incidents of interest oncerning the subject and store it away for future 48e. Widen your work as much as possible but sondense your thoughts, keeping only the best. Have your meetings at regular intervals and do not ectinto a "rut," but vary the program. Continue blabor for an increase of membership and extend beinfluence of your work until it will be felt by he renewed life of the church in which you live. Unless it does this your work has not been what it hould be, or you are selfish and are keeping the 100d things to yourself. Have an occasional "spe-^[64] program," or missionary meeting, taking some tennite subject, such as "India, its People and Cusoms," "China's Call to Christian America," "City Work, its Needs and Drawbacks," etc. Do not reglect the devotional part of the meeting. Keep touch with God through his Holy Spirit. not stop outside church rules and propriety. b future papers we will write upon, "The Work of te Leader" and "The Work of the Local Secre-Bellefontaine, Ohio.

SISTER MIRIAM K. FASTNACHT, of Quarryville, Pa., Rods us her own name and twelve others. We ish that many others could do as well.

biother Virgil C. Finmell, of Morgantown, W. hath one of our local secretaries, and we are glad hat he is one of those who continues steadily in the He says, "Once more I have the pleasure sending the Circle two names, and my best wisha for its ultimate success."

Brother E. J. Egan, of Tub, Pa., joined our Cirthis summer. We appointed him local secretary ed he has now responded with seven new names

Dr. Geiser, our Secretary in Baltimore, has recent-Furchased the twenty-six books which comprise three courses laid down by our Circle. He hats to fead them all himself and lend them to others. His zeal for the cause, and enthusiastic interest in our Circle are very encouraging. He sends one new name.

Sister Esther B. Kulp, of Pottstown, Pa., who is our secretary there, has been much encouraged by a visit from Brother Emmert. They have recently purchased a number of new books, and she also sends eight new names for the Circle.

We do feel that everywhere our members should be hard at work, that this winter we may organize many new Circles, and encourage the readers to finish the course, hold Circle meetings and do much good in Jesus name.

We are very glad to welcome the following new members this week:

HINTS ABOUT CONVERSATION.

ONE has said, "Of ten things which I know, I have learned six from conversation."

- 1. Avoid satire and sarcasm.
- 2 Never repeat a word that was not intended for
 - 3. Often cultivate "flashes of silence."
- 4. It is the longer half of the conversation to listen well.
 - 5. Sharp sayings are an evidence of low-breeding.
 - 6. Shun fault-finding and fault-finders.

A WELL-KEPT LIFE.

Ir requires a well-kept life to do the will of God, and even a better-kept life to will to do his will. To be willing is a rarer grace than to be doing the will of God. For he who is willing may sometimes have nothing to do and must only be willing to wait; and it is easier far to be doing God's will than to be willing to have nothing to do-it is easier far to be working for Christ than it is to be willing to cease. No, there is nothing rarer in the world today than the truly willing soul, and there is nothing more worth coveting than the will to will God's will. There is no grander possession for any Christian life than the transparently simple mechanism of a sincerely obeying heart.—Professor Drummond.

A SAVING FAITH.

FAITH is not called into exercise where we can walk by sight. It is in darkness, in affliction; in bereavement, in suffering, that faith is called into exercise. Another says: "The eye of true faith is so quick-sighted that it can see through all the mists and fogs of difficulties. The faith of man that is grounded on the promises of God must believe that in prison there is liberty; in trouble, peace; in affliction, comfort; in death, life; in the cross, a crown; and in the manger, the Lord Jesus."

THE WORLD'S MOST FAMOUS MEN.

JOHN BUNYAN: Born in England, 1628, died 1688. A religious writer, perhaps the most popular in the English language. He was a tinker, a roving tinsmith, and is claimed by the gypsies as being one of them. He was at one time a soldier and his works abound in military allusions. He wrote quite a number of books and pamphlets, but the Pilgrim's Progress is the best known. Not a single copy of the first issue is known to exist. It has, however, been more reprinted, and sold more copies than any other work extant besides the Bible. He is great because he has influenced, through his religious romance, more people than any other secular writer. He was a very good man, morally, given to argument and verbal contention, a street preacher, put in jail by the authorities, but never deserting his original methods nor abandoning his position. His fields of labor were among the poor, and for a long time educated people did not allow his literary merit, but he is at present regarded, and justly so, as one of the great because he influenced and directed the minds of millions of English speaking people, and also other nationalities, to the higher

Louis XIV: Born 1638, died 1715. A king of France whose impress on the politics of his country renders him prominent among others who served in the same capacity. He was surnamed Le Grand.

WILLIAM OF ORANGE: Born 1533, died 1584. He was a born statesman, chiefly honored by having permanently crippled the power of Spain and having founded the independence and greatness of the United Provinces.

NEWTON: Born 1642, died 1727. One of the greatest natural philosophers, eminent in every department of physical science.

MARLBOROUGH: Born 1650, died 1722. An Englishman who played an important part in the politics of his country, both as a soldier and a statesman.

PETER THE GREAT: Born in Moscow, 1672, died 1725. In 1696, by the death of his brother, he became the sole Czar of Russia. He was a man with many faults of character, but combined with these were all the elements of true greatness as far as the work he did for the advancement of Russia, both as a nation and for her people is concerned. He added to her dominions, gave her an outlet on two seas, established a powerful fleet, founded a naval academy, and originated galleries of painting and sculpture, and endowed libraries. That a man, in a country like Russia, with a people such as composed her population at his time, should do these things. entitle him, really and truly, to be called "Great." In fact all Russia, even at the present day, is a monument to his energy and his wisdom. Not only what he did, but the conditions that surrounded him at the time, all, or mostly all of which were adverse, compel our respect and admiration.

POPE: Born 1688, died 1744. A famous English poet who wrote much and who is still studied by the scholarly.

Swedenborg: Born in Sweden in 1688, died 1772. He was eminent as a scholar and writer on theological subjects. He was the founder of the religious system known as Swedenborgianism. He claimed that heaven was opened to him and that he conversed with angels. The substance of his faith is that he claimed to have witnessed the last judgment. or the second advent of the Lord, and that he received authority to establish the new church, which has many followers. His writings are mystical, often narrow and incredible, and then again manifest a high appreciation and fine perception of the relations between God and man. His teaching is mystical and confusing, but of just the character to attract many minds to his standpoint, and some of them are of unquestioned standing in the world of thought and letters.

IF you light your lamp by another's torch do not forget that the light you borrowed is the light you

HOW THEY MAKE MIRRORS.

In the first place a mirror requires the finest of glass, without spot or speck or "blow-holes." The best work is done with the plate glass manufactured in St. Gobain, France, and in numerous cities of Belgium. All the largest manufacturers of mirrors use the foreign varieties in preference to those of American manufacture. The glass comes in huge plates, a quarter of an inch thick, ten or fifteen feet long and half as broad. As many as a dozen plates are packed in a single box, displaying numerous warnings to "handle with care." When the glass is taken out it is covered with dust and bits of excelsior, and the first thing that is done is to wash it clean with water. Then a dozen men who know just how to handle a great piece of glass without subjecting any portion of it to a breaking strain carry it into the cutting-room. Here a workman in a long leather apron-usually a Frenchman who has had great experience in foreign mirror manufactories-blocks out an order on the plate, say two or three beveled mirrors, for some lady's boudoir. A diamond-pointed instrument, with a strong and steady hand behind it, traces the lines of the drawings on the glass and cuts a groove so deep that the pieces easily crack out.

Each of these oval pieces is then borne into another room filled with the humming noises of rapidly-moving machinery. A thin-faced foreign workman, with his sleeves rolled to the elbows and a ragged apron draping him from chin to toes, picks it up and places its edges upon the side of a swiftly-revolving iron wheel. From a large wooden tank, which strongly resembles a New England ashleach, a steady stream of sand and water flows upon the iron wheel, and in passing between it and the edge of the glass wears the bevel. The muddy water from the wheel is frequently thrown off in the swift revolutions and works polka dot designs all over the operator. But he is a skilled workman and in his pride in getting the bevel on the glass exactly even-and he must depend wholly upon his eve-he doesn't pay any attention to the flying mud.

When the bevel is complete it resembles "mist" or ground glass and is full of scratches and rough places. The next workman in order smoothes the bevel on a rapidly-revolving emery wheel, which casts off a perfect shower of sparks. When it is as smooth as it can be made by this process it is passed to a third workman, who applies it to a fine grindstone from Newcastle, and in two minutes almost all traces of roughness have been removed. A small boy sits above the next wheel, which is made of wood, and daubs it with a wisp broom which he dips continually into a tub of water standing near at hand. He and the operator are both covered with the thin gray fluid which the wheel throws off.

By the time the wooden wheel has been used the bevel to the ordinary eye looks as smooth as the other parts of the glass. But to the trained eye of the master workman, who has watched for flaws in glass since he was a child, it is far from perfect and he takes it in hand and passes the bevel swiftly over a wheel, which is smeared with ordinary rouge, such as the actress uses to make blushes on her cheeks. It may be imagined that this part of the shop has been well treated with red—the men are all red, the floor is red, the tools are red and in passing through the department the visitor frequently acquires involuntary blushes. When the embryo mirror has passed the rouge wheel its bevel is perfect and it is sent on to an expert for inspection. If there are any remaining scratches on the glass they are marked with chalk and a workman with an old rag smeared with rouge rubs away until it is smooth and fine.

The glass is now ready for the silvering room—a tight, hot, well-lighted apartment in which the workmen wear as little clothing as possible. An inclined plane of boards, which resembles a huge washboard turned on its side, fills one corner of the room, and on this the plates of glass are laid face downward. Over them the workman spouts a stream of water, which cleans off the dirt. Then with another hose he plays on the glass with a sensitizing solution of tin, the exact composition of which is a trade secret. The pieces of glass are next gathered up by a workman and are borne to the "bed."

While it is not provided with pillows the "bed" is complete in almost every other particular. It has a blanket which is strong across a frame about the size of an ordinary bed and over this a cotton sheet is stretched. Underneath, so that its surface just touches the blanket, there is a large vat of water kept hot by steampipes. The embryo mirrors are laid on the bed face down, and while they are yet wet with the sensitizing solution a workman pours a diluted compound of nitrate of silver, ammonia and tartaric acid over each glass. The exact composition of this solution is also a trade secret, each firm having its own methods for mixing and each is certain that it cannot be beaten in results.

Assisted by the heat from below and by the tin solution the silver is quickly precipitated on the glass. When the workman in charge thinks the coating is thick enough he pours off the surplus of the silver solution, and the mirror—for it is no longer in an embryo state—is put into a warm "bed" to dry off. Here another workman takes the mirror and paints the back of it with a protective solution. Each firm has a different color of paint and each paint is usually of a composition differing from all the others, so that when a mirror is received for resilvering the manufacturer can usually tell just what firm originally sent it out. Frequently, in special orders, the backs of mirrors are covered with felt.

The whole process in the silvering-room is wasteful of silver and many devices have been used to preserve all the metal possible. The blankets of the beds and the coverings of the tables where the nitrate of silver crystals are ground up all go to the refineries for burning and about twenty per cent of the silver is recovered.

The whole process of making a beveled mirror does not take to exceed an hour by the present methods and no stage is dangerous to the workmen. When mercury and tin-foil were used a number of years ago the fumes killed many of the operatives and a mirror could not be completed under ten days.

A large mirror is much more difficult to make than a small one, owing to the difficulty of handling the somewhat fragile glass. The largest mirror ever made in Chicago—so say the manufacturers—was eighteen and one-half feet long by eight feet broad and it was used in a liquor saloon. Two or three of the five large manufacturers of mirrors in Chicago use French glass almost entirely, for the reason, they say, that it is much finer in quality and lacks the greenish tint which spoils American glass for the best trade. Chicago not only supplies the home market with mirrors but ships them all over the west and to Mexico, Canada and South America.

Making plain mirrors adds about twenty per cent to the value of the plate glass, or in beveled work thirty per cent. For instance, a piece of plain French plate glass, five feet by ten feet, would cost about \$75. A plain mirror of the same size would sell for \$90.

ABOUT SHETLAND PONIES.

THE Shetland pony, the smallest of his race and family, the greatest prize and possession of our childhood, says the Spectator, is now becoming quite a personage on his own account. His birthplace and bringing up, his career and obsequies, are unique in the history of the world's domestic animals. Born in hyperborean islands of a diminutive father and still more diminutive mother, he passes from pasture to pasture in boats, till he goes to the south in a ship with hundreds of his companions. Then he descends thousands of feet into the earth, where he works by artificial light all his life, and at his death is brought above the ground to be buried. To work in the mines is the destiny of the majority of Shetland ponies. Lord Londonderry kept a famous stud of them, presumably for use in his collieries. This stud has been dispersed, but there are several in the south of England in which, by careful breeding, the ponies are kept small. These are mostly bred for home use and for ladies' and children's pets.

But in the pits the Shetland pony is still indispensable. If it were not for him coal would be even dearer than it is. He never goes on strike, his temper is admirable, he never grows restive,

even if he bumps his head, which is the only acci dent which commonly afflicts him, and to guard against which the more thoughtful coal owners provide him with a leather helmet. Now that the pite are lighted with electric light the ponies' sight does not suffer. They have fine stables, with movable boarded floors, so that they never suffer from thrush or cracked heels, and as the temperature is uniform they do not catch cold. Pure Shetlands are the only breed which keeps small enough to work in the seams, even Iceland ponies proving too big and excitable. There is no room to jump about in a coal gallery and the conversion of the diminutive "Shel tie" into an equine mole is one of the greatest trib utes to its placid disposition and to the determin nation of its race never to be anything but ponies In the quaint phrase of one of their admirers. "there are no ponies small enough to push the Shetlands out of their deserved position."

WHEN DEATH COMES TO MAN.

THE instant of death is a vague and indefinite expression when viewed from the point of physiology. An animal or plant cannot be considered dead until it has reached that period in disintegration where it is impossible to revive life. Some physiologists still further restrict the definition to that point in decay where every cell in the body of an animal or plant has ceased to contain or consist of living protoplasm-in other words, each cell must have lost beyond recall its life powers. Probably one of the most striking examples of instantaneous death was that of the person who accidentally fell into a large vat of boiling caustic potash, which at once consumed the entire body, leaving only the metallic plates from the heels of his shoes and a few buttons from the clothing as remains. Deaths from electric shocks also border on the instantaneous process. It has been found that living cells taken from the body can be preserved in a normal, state for a long time and then have life processes revived if they are properly treated.

Our Cooking School.

Below we offer our weekly recipe. These recipes will be repeated, and they will be of inestimable value. We will not, knowingly, print a copied recipe, and what will be given is the result of experience and skill. They will be something more than that, for they will all be by Sisters. They will be signed, and the complete collection will be of the greatest value. Any number of people will want the beginning of these recipes when they cannot get them. It is possible that the Cooking School will soon be expanded into a column, but the idea of keeping closed doors to all save Sisters will not be changed. It is a Dunker method that will be presented, and the Editor who has been going up and down the earth for, lo, these many years, seeking something to eat daily, gives it as his opinion that these recipes will make a collection that cannot be equalled for excellence and practical results in any cook book to be bought anywhere. Every woman in the church ought to know the best ways of the best people, and here it is in cookery.

FRUIT CRACKERS.

BY MRS. J. H. MOORE.

REQUIRED, one pound of dates, one pint of rich cream, graham flour. Seed the dates. Cut them in small pieces. Take first-class graham flour, sift into the cream till it forms a paste thick enough to roll out. Roll out two layers, one-fourth of an inch thick. Sprinkle the cut dates over one of these pieces, lay the other thereon, and then foll these pieces, lay the other thereon, and then foll these pieces, lay the other thereon, and then foll these pieces, lay the other thereon, and then foll these pieces, lay the other thereon, and bake ill each way, prick deeply with a fork, and bake till each way, prick deeply with a fork, and bake till not too crisp.

The 'Nook calls attention to the fact that there is no lard in this cracker. It further ventures the is sertion that nut meats might be employed, and that if black walnut meats were used the result would be a particularly hunger-staying food. The cracker, as presented above, is reported to be an excellent accompaniment for a journey, remaining good is some weeks.

Elgin, Ill.

What They Say!

Chicago Says:

the INGLENOOK is par excellence. It has Re Isolenook supplies the "missing link" in our church publications.—John E. Mohler. Each number seems hetter than the treding one. I have a Sunday-school class tes boys and girls, from thirteen to eighteen ers, and all get the INGLENOOK as a Sundayand they are delighted with it.

Clarence, Iowa, Speaks Out.

itis with much satisfaction that I express prapproval of the Inglenook. Its appearacte and general make-up are such that it at ese commends it to the reader. It has found Basy into many of our homes, and the peoare truly glad for its continued success. Eld. John Zuck.

Mt. Morris Says:

The INGLENOOK easily takes rank among tebest young people's papers in the country. his better than most of them because of the before of the stilly love stories and light read-It is a most valuable addition to the brethren's publications. No family should be vibout it.-Eld. D. L. Miller.

Lanark, III., Has An Opinion.

We have been receiving the INGLENOOK petil started. We like it very well. I would le 10 see it go to all the homes of the land. Beshort sermons are good for both old and pag.-Eld. I. B. Trout.

From the College.

ltake the INGLENOOK. I am much pleased ribits steady and almost marvelous growth. The fact that it is sought after by our people, bihold and young, is evidence that it proves iself to be in fact what it purports to be .- J. G.

GIRDLING THE GLOBE

By ELDER D. L. MILLER,

Author of "Europe and Bible Lands," "Seven Churches of Asia," and "Wanderings in Bible Lands."

The author tells of things seen in his travels around the world; and writes in such an interesting and impressive manner that the reading of the book will give one a better idea of things than would be received by many hundreds who would make the trip themselves. Note what one writer says:

I have examined and read Bro. D. L. Miller's last book, "Girdling the Globe," and find it an excellent work. While all of his books are good and instructive, I put this as THE BEST, in fact the most interesting book I ever read outside of the Bible. Everything is made so clear and plain by the author. I would recommend all to secure it if in their power to do se. Surely a cheap trip around the world! Who would not take in such a trip and at the same time enjoy the comforts of home?

The Red Morocco binding, with gilt edge, gold back and side title, and handsomely finished in every way, makes a magnificent Christmas present to your near relative or dearest friend. Price, \$3.00, prepaid. What better do

Have you a copy of this excellent book? Has the territory around you been canvassed? If not, write us at once. We have liberal terms to offer you.

INGLENOOK

"The Inglenook" will be Sent to any Address the Rest of this Year for Twenty=five Cents, or it will be Sent the Rest of this Year and all of next Year for One Dollar.

The Best Way is to send the Dollar and be Done with it. After You Have Read it for a Week or two, You'll be Sorry that You Didn't Save Money by Subscribing for the Whole Year at Once. It's a Paper that Grows on One. Once Read, Always Read!

We Want Agents, == Real Live Agents

In Every Part of the Country. Anybody can solicit Subscribers at the Twenty-five Cent Rate, and Whoever Sends in a Club of Ten of These, Can have his Choice of ONE of the following books:

Dictionary of the Bible, Beside the Bonnie Brier Bush, Natural History of Birds and Quadrupeds, Dream Life,

Drummond's Addresses, A Ten Nights in a Bar-Room, Intellectual Life,

Adventures of a Brownie, Imitation of Christ, Etc.

If he gets twenty subscribers he can have two books; for thirty subscribers three books, and so on. And they could be had in an hour's work in many a place. Whoever shows himself an efficient agent will be put in line for the Fall work connected with the Inglenook. There is a library of Fifty bound books waiting for somebody.

The Agent who sends in the largest list of dollar subscribers between this and the first week in January, 1901, will have sent him a Library of FIFTY BOOKS. Here is the list:

Adventures of a Brownie, Æsop's Fahles, Auld Licht Idylls, Autobiography of Franklin, Autocrat of the Breakfast Table, Bacon's Essays, Beside the Bonnie Brier Bush, Black Beauty, Burns' Poems, Child's History of England,

Confessions of an Opium Eater, Dictionary of the Bible, Dream Life, Drummond's Addresses, Emerson's Essays, Ethics of the Dust, Fairy Land of Science, Fifteen Decisive Battles, House of Seven Gables, Imitation of Christ,

Intellectual Life, Lays of Ancient Rome, Longfellow's Poems, Lorna Doone, Mosses from an Old Manse, Nat. History Birds and Quadrupeds, Poe's Poetical Works, Prue and I, Rab and His Friends, Reveries of a Bachelor,

Samantha at Saratoga, Sesame and Lilies, Sketch Book. Sticket Minister. Stories from the History of Greece, Stories from the History of Rome, Story of an African Farm, Ten Nights in a Bar-Room. Thirty Years' War, Twice-Told Tales,

Window in Thrums, Education, In His Steps, Minister's Wooing, Professor at Breakfast Table, Lamb's Tales from Shakespeare, Lallah Rookh, On Liberty, Tanglewood Tales, Sign of the Four.

The Agent sending in the next largest list will have the choice of TWENTY-FIVE books out of the above list. The third largest list will entitle the Agent to FIFTEEN of the books, his choice; and the fourth largest list will win TEN of these There is also a cash commission going to the Agent. We prefer the services of the Messenger Agent if he will write at once for the place, but we will put the first live applicant into line, as the INGLENOOK is not going to be the last If agents desire to enter for the Library they should say so in order that we may keep tab on subscriptions re-Elgin city is barred in the competition for prizes.

The announcement of the successful Agent will be made in January, 1901.

A Live Paper for Live People.

The Inglenook is no longer an experiment. It is regarded as phenomenally successful by experienced newspaper men who know what they are talking about. The reason is not hard to find. It is a FIRST-CLASS PAPER, with nothing old It is up to date, and always will be. It will have something new in each issue, it always has, and commonplace about it. and it never will fall below its self-set standard,—being the best paper of its kind in the world. You can't read it without The INGLENOOK being interested and instructed. The whole wide-spread world is ransacked in the interest of its readers. isn't made with a dull pen and a pair of shears. It is a live paper for live people.

The like of it was Some of the best known men and women in the church will write for the INGLENOOK next year. Look at the names, note the subjects! Every man and woman in the list knows never undertaken in the church before. what they are talking about.

LIFE, FRIENDS, HOME.

BY A BROTHER.

I THANK Thee, Lord, for all of Life, A period Thou dost make so rife With blessings manifold. So often wrong-help me amend; Inspire, that yet ere Life must end I may do good untold.

My Friends, O Lord, I'd not forget; Without them I could go-but yet, l should not go alone; For thoughts of them are e'er a guide That pilots me through storm and tide-I thank Thee for this boon.

Most grateful, too, am I for Home, Blest spot of all the world I roam-That nook of rest for me. For these, which my whole soul enthrall, Rich Life, dear Friends, sweet Home-for all. Most bounteous thanks to Thee.

HUMOR OF LUNATICS.

"I NEVER knew until I went out to California this time that insane people have a powerful sense of humor," said a Washingtonian who recently rebroned from a trip to the coast. "I confess that I've always found a morbid sort of interest in going brough noted insane asylums, and so I armed myelf with the proper credentials in San Francisco and went up to Napa county to have a look over the splendid asylum for the insane there. Inasmuch as I wanted to see a few things without the attention of a guide, I didn't present my letters, but just rambled around the spacious grounds for ashile. I hadn't spent three minutes examining the extraordinary rose gardens in front of the main asylum building before a tall, slender young man, well dressed and exceedingly well groomed, emerged hom aclump of oleander trees and approached me. "'Taking a look around, eh?' said he to me.

"'Yes,' I said. 'I only arrived here a few minwes ago and am taking the liberty of nosing about

tithout any official guidance.'

"'Well,' the tall young man said, pleasantly, 'I on't suppose I fall out of the classification "offial guidance," seeing that I am the assistant superintendent here, yet I should be pleased to show you about and at the same time try not to place my restraint upon you by my awe-inspiring pres-

"Well, the young chap's manner was so pleasant and winning that I could only thank him whis kindness, and we started over the grounds. We hadn't gone far hefore a middle-aged man, also tell dressed and well groomed, appeared some disance in front of us down the gravel walk, and he eckoned to my companion. The young man extused himself courteously and went up to the middeaged man. The two conversed very carnestly together for a few minutes, and then, linking arms, that did they do but coolly walk off, leaving me standing there in the middle of the gravel path a food deal nonplussed.

"Surprised over the way they deserted you?" hid a voice right back of me. 'You mustn't mind little thing like that though. Both of those men ue as crazy as loons.'

"I turned around, and there, standing behind a edge about ten feet to my rear, was a little old Rotleman, neatly dressed in black, and with a luizzical smile on his features.

"Surely,' I said, 'you cannot mean that that Stional-speaking, pleasant-mannered young man tio was conducting me about the grounds is bereft

Mad as a March hare,' repeated the old gentlefally. 'Incurable case. Harmless, but incur-The man that he went off with is also a very case very. Thinks he is the Maharajah of biddlud, or something like that. But you musn't em. Lots of visitors are taken in the same If you care to, I'll just show you around. I one of the board of visitors of this institution

and just happen to be here in my unofficial capacity to-day.'

"Much marveling over what the old gentleman told me, I fell in with him, and we rambled around the huge geranium arbors, and finally entered the enormous glass building where the cultivation of violets is carried on.

"'Nice array of flowers, isn't it?' the old gentleman inquired of me, waving his hand at the beautiful beds of violets in bloom. 'I am not inordinately vain, my friend, I hope you will understand, and yet I cannot but congratulate myself upon the introduction of this violet-raising feature here, for I myself was responsible for it, and only succeeded in having this hothouse constructed after enormous exertions with the authorities of the institution.'

"I congratulated the old gentleman upon the result of his labors and was just about to ask him to take me into the main building and introduce me to the superintendent when he suddenly excused himself, saying that he had left his spectacles on a bench in the gardens and would be back directly. I waited for him fully ten minutes, but as he did not return I started on out of the glass building.

"'You didn't really expect him back?' I heard a voice say, and then a pleasant-faced man, dressed as a laborer and carrying a watering pot, came from behind a group of palms. He spoke with a Scotch brogue.

"'The old gentleman you were with is very bad up here, 'said the man with the watering pot, touching his forehead. 'He's been here for twenty years, and he fancies he owns the place. I am the head gardener here, and he tries his best to run me. But he don't-no, sir, he don't. He can't. No crazy man can run me.' And the Scotchman went down the length of the raised violet beds, watering the plants.

"I passed out of the glass building and started for the entrance to the main building, there to present my letters. As I was about to walk up the steps to the entrance a man with side whiskers and rather a sharp, piercing eye walked up to me.

"'You have business here?' he inquired of me in a rather sharp tone. Well I thought he might be another of 'em, and so I kept right on. He followed me up the stairs and into the office, and I had to hand my letters to him. He was the superintendent. He smiled when I told him of my experience in the grounds.

"Which of them was really insanc?' I asked him. "'All of them,' he replied."

MILLIONS IN GOLD MISSING.

THE world is full of millions and millions of long lost sovereigns. A competent authority has just completed some investigations, which, he declares, show that in three years the Bank of England has lost trace of no fewer than 20,000,000 golden coins of the realm. This wholesale disappearance of the elusive sovereign has been going on for years, according to the London Daily Mail. A river of gold has flowed unceasingly from Threadneedle street to all parts of the world, but it has come back only as a tiny yellow streamlet. What has become of the surplus in its wanderings? "Misers" is the unpoetical explanation for the great part of this disappearance. There still exist in this and other countries people who are unbusiness-like enough to hoard up gold and keep it lying idle by them for the sole pleasure of knowing it is there and occasionally counting it.

The people of India appear to be particularly addicted to a habit that is more reminiscent of medieval times than of an age when money is generally saved so that more can be made with it. In the regency of Bombay it is estimated that 12,000,000 golden sovereigns are hoarded. If that is the record of Bombay alone what is the full tale for the whole country? China, too, absorbs a vast amount of gold that never sees the light again. As a mat-

ter of fact, while the whole world is searching for and trying to acquire gold, a goodly part of it appears to be engaged in the less thrilling pastime of hiding it away.

Great Britain is not guiltless of this commercial sin. Dotted all over the kingdom are graveyards of gold which if discovered and opened might restore to circulation a vast amount of wealth at present absolutely useless. At a spot about two miles from Herefordshire Beacon a treasure chest is recorded in the local history as having been buried by a great family once resident in the district. But the money cannot be found. There is a similar record in connection with Hulme Castle, formerly a scat of a branch of the Prestwich family. Somewhere near Stokesey Castle, Shropshire, there is believed to be hidden a great oaken chest filled with gold coins, but up to the present all efforts to find it have ended in failure.

NOT FOOLED BY SALTING.

THE scientific prospector of to-day goes armed with accurate knowledge which enables him to ascertain the relative value of mines. To him the oldfashioned deception of "salting mines" has no terrors. It is impossible for a person to salt a mine to-day so that the expert mining engineer, who is a chemist and an assayer as well, is deceived into reporting the mine to be worth more than its actual value. The early trick of the mine salters was simply to mix a little gold dust and small pieces of unrefined gold in the dirt, so that upon a superficial examination it would seem as if a rich vein had been struck. A few swindling cases like this served to put the prospectors on their guard and they demanded to see and test more of the dirt than that found on the surface. Then followed the more exact method of salting the mine by loading a shotgun with flakes and small pieces of gold and shooting them into the vein of ore. For a while this succeeded very well with the placer miners, who would very often purchase a salted mine for a large sum and discover the swindle a few days after the men who had perpetrated the fraud had escaped.

The modern mining expert would smile at such a simple salting method to-day and the fraud would be detected in a short time. But mine-salting methods have improved with the skill of the experts and the engineer sent out to examine a mine in the interests of capitalists must be on the lookout for fraud. There are men who can salt mines with remarkable skill and accuracy and deceive any but the most careful. The expert salt miners have two good tricks which they sometimes work off on the unwary. One is to whitewash the sides and faces of the rock with a solution of auric chloride, which, when the chloride of gold is dry, is hard to detect from the genuine deposits of the precious metal. The expert engineer to-day usually takes samples of the rock or dirt from various parts of the mines, seals them in small bags and personally ships them off to some trusted assayer. With a hypodermic syringe loaded with a solution of chloride of gold enough of the precious metal can be injected into the bags when the expert's back is turned for a few moments to raise the sample dirt to an apparently enormous value.

WE see it stated in an exchange that there is enough grain in India to feed all the famine-stricken people as well as the animals, but the starving population has not the money to buy, and so, starves to death. This indicates the difference between the Indian and the Saxon. Imagine a village full of people starving to death, their children wasting to skin and bone before their eyes, and right across the street a man with a barn full of grain, enough to feed all of them. It is not necessary to say what would happen, money or no money. But then the man with the white face and blue eyes has a taking way of his own that never occurs to the brown man,

Correspondence

NEW YEAR'S DAY IN NEW YORK.

BY MRS. O. B. WELD.

THERE was much more made of New Year's Day in New York three-quarters of a century ago than characterized the observance of Christmas. It is hard to account for the fact, but it was perhaps due to the fact that the Holland element of the population were simply carrying out the customs of the land they left behind them.

For a week before the day the household were busy making the cakes that would be used on the occasion. These cakes were made in moulds of wood or marble, and represented birds, animals, and fishes. Their edges were notched with a small implement called the jiggering iron. When these cakes were all ready they were placed in layers, in baskets, with tissue paper between, and then the baskets were placed in the hall, behind the door. When poor children called to wish the household a happy new year, they were presented with one of these cakes. Some of the children were too short to reach the great brass knocker with which most of the front doors were ornamented at that time, and aid from passers-by was invoked to help them

At the time of which I write the mistress of the house received alone, and the callers were, of course, the classes associated socially. As my father was one of the charter members of the Washingtonian Society, a temperance organization, no strong drink was served at our house. Tea and coffee, and cake were served our callers, who were Dr. Knott, president of Union college, the faculty, and that class of people. Those who made it an occasion for imbibing strong waters remained away from our house, and all similar places. It was especially a ladies' day, there being much calling to atone for neglected duties in the past,

Take it all in all it seems to me at this remote period that the observance of the day at the time of which I write was accompanied with more genuine kindliness of feeling than characterizes the present time. This may be the result of the glamour of age thrown over the past, or it may be actually true. At all events so it seems to me.

Elgin, Ill.

HUNTING THE WILD TURKEY.

BY W. K. CONNER.

WHEN I was about fourteen my father bought a tract of land almost entirely overgrown, in Prince William County, Va. This tract was known as good "turkey land," and hunters of the turkey during the hunting season, and even a few days before, had an exciting time trailing, "flushing," driving them from the roost in the evening or night, calling, shooting, or eating them.

It was not long until I began to imbibe the hunter's spirit and to take some interest in the fascinating sport. After some time a very proud boy walked home one day with a turkey on his back. Each season thereafter I killed from one to four turkeys, until I quit the sport. The largest that I killed, a young gobbler, weighed sixteen pounds.

I was told for truth that one hunter had killed eleven at one shot. Such occurrences are rare and are possible only by baiting. This is done as follows: Corn is placed in the woods day after day at a certain place. A flock finding it will come almost daily, unless frightened away. At first the corn is scattered among the leaves. Later on it is placed in heaps or rows preparatory to the final event, which generally occurs Oct. 15, the day the hunting season opens. On the fourteenth the hunter puts his corn in a heap or row just as he thinks best to cause the turkeys to arrange themselves so as to give him the most advantageous shot. He shoots from a "blin'," an enclosure about six feet square, made of cedar or pine brush and so tight as to completely hide the one within. The first brush is placed a month or more before the "blin" is finished, the second a day or so later, and so on. To make it all at once would cause them to stop com-

Now imagine it is Oct. 15 and you are sitting in

glossy turkeys come and surround your corn, almost before you are aware of it. You are all excitement, you can scarcely hold your gun. But you level it and discharge both barrels in quick succession. Then there is such a fluttering and scattering of turkeys as you seldom see. You may now go and pick up any number from one to elev-

One accustomed to seeing the wild turkey can easily distinguish it from the tame one, as it has a smaller head, a glossier coat, longer legs, and a slimmer body.

As you pass through the woods you notice some places where the trees are taller than in others and from their tops afford a good view of the immediate surroundings. In a place like this the turkey prefers to roost. It takes very skillful moving to get within gunshot while they are on the roost unless the turkeys are wet. One rainy morning I went to the woods and had not gone more than a hundred yards from the edge, when suddenly 1 saw on a limb not more than thirty yards away a young gobbler, without a brush or limb between us. Instantly my gun leaped to my shoulder and I pulled but it hung fire; I pulled again-bang! and down came the turkey.

Sometimes they become confused by being chased about. Coming home to dinner one day, with gun containing a rabbit load, in hand, when not far from the house I saw a turkey. It made no effort to get away. I looked a moment until convinced that it was a wild one, then shot at it. The load was too light or else, as my brother, who was standing by, claimed I was too much excited to aim and simply shot in the direction of the bird. However it was the turkey was not affected. But the still more striking part of the story is that the hunter dropped his gun, grabbed up a stick, and dashed through brush and briers after the confused turkey, which remained until he was about fifteen fect away, when it calmly spread its wings and soared away. Then the hunter stopped, stared, retraced his steps, picked up his gun and continued on his way home while the woods rang with his brother's sidesplitting ha! ha's!

Bridgewater, Va.

A BUSINESS TRANSACTION.

BY J. H. MILLER.

In Niles, Michigan, there lives a man who had twenty acres of land in the Upper Peninsula. He tried to sell this small, worthless piece of land as he supposed, but no one wished to buy. One day a stranger came to him and asked if he owned a tract of land up there, to which the man replied, "Yes, sir, I do, and I want to sell it." To which the man replied, "I came on purpose to buy it, and I am here to offer you \$10,000 for it," to which the man said: "What do you mean?" The owner then said he was not ready to sell. Then he was offered \$20,-000. The owner became excited and could not tell what this meant. He told the man he was not ready to sell now, but would see further. So he went up to see his small tract of land. To his surprise his neighbor, Jaingghin, had opened up a nice vein of silver and iron ore, running across his twenty-acre lot. He began to search for the hidden treasure, and soon found that the most of his twenty acres had iron ore eight feet deep, with silver veins running through. He now is operating the mines, and is worth over six millions. He was a poor man, but a fortune has made him a millionaire.

A man may become over anxious for wealth, and by his avaricious spirit lose a good bargain. Had he offered the owner \$200 for that land, without a doubt he could have bought it. The gentleman was anxious to sell, and a small sum would have bought it, but \$10,000 and \$20,000 bids spoiled the whole

A CITY OF "INNOCENTS."

THE town of Gheel, in Belgium, is not often heard of outside the borders of that country, writes an Antwerp correspondent for the Chicago News. Even if the name is known, the nature of the municipality is seldom mentioned. Gheel is a town of fools, a town where simple-minded folks dwell in peace with each other and the world at large; stroll the blind, and a flock of fifteen or more of fine about the streets; patronize the local taverns and

go about their daily routine with perhaps niore common sense than a great many worthy citizens who have the reputation of being healthy in mind

Gheel is twenty-seven miles from Antwerp and is the home of about 1,500 lunatics, who are taken as lodgers by the townsfolk, though all dangerous cases are passed on to the outlying villages, Gheel harboring only the harmless. The treatment of the patients is novel, cure being due to the kindness and tact of the townsfolk.

The fees for taking in the "innocents," as the patients are called, vary from \$80 to \$600 a year, ac. cording to the manner in which the patient wishes to be kept. No matter how much he pays, how. ever, he is always the spoiled member of the family. The people of this curious village understand the management of the insane better than any other community. The patient is always given the arm chair, the best seat at the table and enjoys the most attention, so that he grows to value the esteem in which he is held to such an extent that he will make the greatest efforts to master his disease lest he should forfeit his privileges.

The children of Gheel seem wiser than other children, from their contact with their elders in years, though only their equals in brains. Children may be seen walking about hand in hand with great, robust men, to whom they chatter in the most familiar manner. Often the boarder patient is told off to take care of the baby of the household and in most cases he makes an excellent nurse. Of course, Gheel surpasses London, Paris or Berlin as a rendezvous for emperors, kings, queens, popes, archbishops, pashas, millionaires and such characters, all of whom are humored in their strange and weird fancies. One king informs newcomers that he has two left legs and is obliged to have his boots and trousers made accordingly. Another old gentleman, who thinks himself the Pope of Rome. says he is perfectly able to fly to heaven, but that for the moment he is too fat. His landlord humers him to the extent of offering to assist him to make a start for the window sill of the first story, but warns him that he may fall and break his neck, whereupon the "pope" thinks better of it and prefers to wait "until after tea."

One inhabitant of Gheel is always on the lookout to borrow a hatchet, because he says he has grown so stout all of a sudden that he must chop away the doorway in order to get into the house.

Visitors to Gheel need not be surprised if they are accosted by an "innocent" in the street, with tears in his eyes, asking for protection against some butterfly or bird that was about to attack him and eat out his brains. 'Another fancies himself a seed and begs the first comer to put him in his pocket that the wind may not blow him away. Only the other day he was in a terrible way because he fancied himself a mustard seed and that the birds were sure to swallow him. His landlord took lift to task, though humoring him at the same time "Have I not told you," he said, 'a dozen times that you are perfectly safe? Birds do not eat mi tard seed. They only eat hemp seed." After th the unfortunate man became quite calm and con tented. Of course there is a "Dreyfus" at Ghed, who enjoys the sympathy of a host of fellow p tients, but in addition to the belief that he is I fus, he considers himself made of glass and so billtle that he avoids coming in contact with any one or any object.

At the Gheel hotels the landlords show the greatest politeness and consideration toward the "innocents," humoring all their fancies and often pretending to carry out their wild ideas. The spot tacle is curious and a visit to Gheel is almost strange as Alice's visit to Wonderland. It has very comical side and its pitiful side as well, the tenderness and good will that are shown to simple-minded folk and the entire absence of restraint would astonish our latest and most opdate asylum managements.

It seems a little tough to rear and educate and girl and when she looks her sweetest and is a da comfort to her parents have some fellow co along who has not got a cent invested in her carry her off 300 or 400 miles to keep house him. While this seems tough, we are informed would be tougher yet if the fellow failed to com Perhaps that's so.

Nature & Study

A FISH STORY.

BY MRS. W. H. VON PLEES.

TOWNY was a catfish, but he had been endowed with more than ordinary brains, which to tell the both did not develop early in life else this story would never have been told.

This is his life from the time we knew him. One dark rainy night in April two students of Bucknell University decided to go fishing in the Susquehanna mer. They baited their hooks with fat worms, and the water being so muddy kept Tommy from seeing the line and hook attached to that delicious tid-bit. Then too he had been buried in the mud all the minter, and he was very hungry, so he made a dash athe worm and secured it and the hook. Try as he would he could not get away, and finally the boys hauled him out and threw him on the raft of lumber they were on. The heavy rain made it almost seem as if he were back in his native element gain. Finally the boys were ready to go home but before starting they made a "stringer" from a forked twig and strung him along with some smaller fish on it through the gills.

He lay on the kitchen table all night in this woeful plight and one by one he saw his companions die. The mistress coming down next morning turning over the fish said, "Why, this catfish is alive yet, if he lives he'll make an excellent seavenger in our cistern." She carefully removed the twig while Tominy tried to look grateful with the little remaining life he had in him.

The cistern was a great wooden barrel made to hold the rain water from the house roof.

How delicious the water felt to his fast stiffening body. He lay perfectly still a few seconds, then swam painfully away and hid himself among the leaves that covered the bottom.

You know that fish cannot hear, but when his mistress would whistle in the open mouth of the eistern Tommy could feel the vibrations of the water. At first he was shy, but he soon learned that a whistle meant food, so being something of a gourmand he learned to come at once. Just after a rain many angle worms would work their way into the cistern and at such times Tommy was slow to respond. When he did come and found only bread awaited him he would flounce his tail disgustedly and go off to one side and sulk, but on the other hand in a long dry spell he would come to the top with a dash and learned to jump for a tidbit.

The mistress or any of the family could pick him up and play with him, he laying perfectly still, but it a stranger attempted any liberties he would resent it at once, the result being a badly pricked hand

In the summer he would play around a hand in the water, nipping a finger here, pinching a thumb there, sometimes turning completely over on his back to be tickled.

We had him ten years and finally his voracious appetite caused his death. We mourned him sincerely, for he not only kept the water pure but was a curiosity as well.

EXCITING ADVENTURES IN CATCHING WILD ANIMALS ALIVE.

CATCHING wild animals for public zoos and private parks is the interesting and adventurous occupation of William Root, of Laramie, Wy. During the past thirty years he has caught thousands of wild animals.

"Catching wild animals alive for the market," says Mr. Root, "is just like every other vocation; it's easy when you know how.

Take the elk for instance. The elk is a big, strong animal, very fleet of foot, and ordinarily the capture of one alive would be a good deal like roptured as you might go out and lasso a steer.

The capture of elk is usually made along in the carly spring. At this season, by reason of the scarthy of food, the animals are not nearly so strong as teason, too, heavy wet snowfalls are frequent, and then one of sufficient depth comes the mountain-out on snowshoes.

"Being well acquainted with the habits of the elk, it is comparatively easy for the hunters to locate a herd, and then the chase begins. The snow being deep and wet, the elk find great difficulty in floundering through it, while the men on snowshoes can travel comparatively fast. The result is that the younger members of the herd soon become exhausted and fall an easy prey to their pursuers.

"As soon as an elk falls from exhaustion or is overtaken and roped, it is hog-tied, and the hunters leave it and continue the chase after the main herd. One by one the young elk are captured, and from five to ten are frequently taken on a hunt. The captured elk are thrown on sleds and taken to a strong corral, where they are liberated. In a few days they are almost as gentle as cows, and take to hay as readily as a range steer might.

"The demand for wolves is by no means heavy, but when they are wanted it is the young ones that we go after. They usually have to be dug out of holes, and the task is a laborious one. Young wolves occasionally are also caught in traps. If caught while young they can be tamed with comparative ease, although they are not the kind of animal to tie to.

"Hunting bears in the West is not what it used to be. The bear is a wise old guy, who looks like a farmer, but isn't. The bears that you see in zoos and circuses are usually caught when quite young and brought up in the way they should go. Nobody wants to waste his time in training an old bear. You hear many funny stories concerning experiences with bears.

"The funniest thing of the kind that I ever witnessed was just over the Wyoming-Colorado line back in '76. A number of prospectors had pitched camp in the foothills, and one of the party, Jim Henley, started out one morning with a double-barrelled shotgun to kill some sage hens. He had gone up along a ridge above camp and was feeling along through the sage brush when he ran onto a bear digging yampa root.

"The bear didn't know that anybody was near, and probably never would have been any wiser if Henley hadn't pumped two loads of birdshot into him. The only effect was to make the bear angry, and he promptly started for Henley, who headed for camp on a dead run. We heard him yelling as he touched the high places, with the bear in hot pursuit, and as he came into camp he cried:

"'Here we come, boys; secure your meat."

A WONDERFUL FREAK OF NATURE.

ву јемима совв.

PERHAPS it would be interesting to the readers of the 'Nook to learn of a wonderful freak of nature, located in a forest in Decatur County, Iowa. It is an elm tree, or rather two entirely distinct and separate trees united into one. There is about a foot of space between the two at the ground, where the base of each trunk measures three feet and two inches in circumference. At the height of about six feet the two unite and form one solid trunk, measuring at this point three feet and nine inches in circumference, and from there to the topmost branch, some fifty feet, is as one tree, with limbs and branches.

The wonder is, how did it come about that the two united and grew together so perfectly in that way. The old adage, "As the twig is bent, the tree is inclined," might possibly be applied in this ease. Might it not be that in an "early day" some woodchopper or maybe nut gatherer, or, possibly the Red Man of the forest, so bent the twigs that they were caused to grow as the tree is now found?

Who can tell! Garden Grove, Iowa.

INSECTS DREAD THE X-RAYS.

Some interesting experiments on the effect of the Roentgen rays on the lower animals have recently been made. A box was made half of wood and half of sheet lead. In the wooden half a number of larvie of flies, bees, beetles and other insects was placed and the box was then put into the field of the X-rays.

The insect colony at once became greatly excited, and after crawling to and fro, finally emigrated to a worm, to the leaden half of the box, where the rays could not penetrate.

The experiment was repeated many times and always with the same result,

A similar experiment was tried with the blind larvæ of a certain species of beetle. A number of them was placed in an open cigar box, which also contained a metal box with an opening. No sooner were the rays turned on than the insects showed signs of distress. Their uneasiness increased, and in a little while they all sought refuge in the metal box. The X-rays, it should be remembered, easily penetrate wood and most other substances, but cannot pass through metal unless it is in very thin plate.

As the larvæ, in the second experiment, were entirely sightless, their perception of the rays must take place through the nerves of the skin.

This assumption is in accordance with the frequently observed fact that prolonged exposure to the X-rays give rise, even in human beings, to inflammation of the skin and causes the hair to fall off.

ODD USES OF INDIAN CORN.

At the Paris exposition there was a little showcase wherein were displayed the more important Indian corn products of this country. They made an amazing display, including the following articles:

Cornmeal, hominy, hulled corn, cream of maize, granulated cornmeal, canned green corn, canned hulled corn, maizena, samp, degerminated samp, cream meal, self-rising pancake flour, quick malt, brewers' grits, husks for mattresses, cellulose for packing the coffer dams of battleships, paper stock prepared from cornstalk, degerminated brewers' meal, Bourbon whiskey, alcohol, bolted cornmeal, hulled cornmeal, feed of ground blades, stalks and cobs, varnish, cob pipes, corn lager beer, table syrup, popcorn, table grits, British gum, salves, laundry starch, table starch, frumentum, flaked hominy, gum paste, corn oil, vulcanized corn oil, oil cake, grape sugar, gluten feed, glucose, confectioners' crystal, glucose and confectioners' paste. Corn oil vulcanized forms the basis of a substitute for rub-

This substitute, compounded with sixty per cent commercial rubber, is used in rubber boots, linoleum, wheel tires, blankets and other articles. Crude corn oil has been used in the manufacture of toilet soap. Rectified it is as clear as alcohol and is the base of a substitute for olive oil. Cornstalk pit is of value in making paper, varnish, films, imitation silks and guncotton and other explosives.

SUNFLOWER TRADE IN EUROPE.

THE sunflower, once the symbol of the esthetic craze, is now a commercial asset. It is a valuable commodity in Russia, Hungary and Austria, and the fact prompts the question, Is there hope for the distressed British agriculturist in its cultivation? Many tons of the seed are imported here, and attempts have been made to produce the home-grown article. But the climate obstinately refuses to assist in producing a sunflower crop that can be grown and sold at a profit. The flower itself, however, is responsible for part of the failure-it takes too much out of the land. Consequently, only a few acres under sunflower cultivation are to be found in England-acres useless for anything else except thistles or weeds; and the seeds are for the benefit of the owners' pheasants.

Russia sends by far the largest number of tons of sunflower seeds. They are made into food cakes for cattle, and something—very little—is done with the oil extracted from them for medicinal purposes.

A large trade in the seeds is also done with South Africa—from London. No one seems to know what they are wanted for there, but it is suspected that the natives eat them, as the poorer Russians do, and esteem them a luxury.

One of the men employed at the zoological gardens in New York has a black snake that has the run of his house. It has the reputation of being the best rat catcher in the entire borough of the Bronx. It is also a family pet.

A KITTEN has been brought up on an exclusively vegetable diet by a family of vegetarians. The result is that it will not touch animal food and it pays no attention to rats or mice.

THE INGLENOOK.

PUBLISHED WEEKLY

At 22 and 24 South State Street, Elgin, Illinois. Price, \$1,00 a year. It is a high grade paper for high grade boys and girls who love good reading. INGLENOOK wants contributions, bright, well written and of general interest. No love stories or any with killing or cruelty in them will be considered. If you want your articles returned, if not available, send stamped and addressed envelope. Send subscriptions, articles and everything intended for The Inglenook, to the following address.

BRETHREN PUBLISHING HOUSE, Elgin, Illinols.

Entered at the Post Office at Elgin, Ill., as Second-class Matter

YOUR NEW YEAR RESOLUTIONS.

On yes, we know that you have made at least some good resolutions for the coming year, to go into effect on the first day. You are likely having all the good time you can with the old sin or fault that you are going to give up—and lay hold of again, after a time, in all probability. All this is human, and perfectly natural, and as far as the resolutions to do better are concerned entirely justifiable. But there is a better way.

Here is our proposition. Give it up or take it on as it may happen to be a sin of omission or commission, without waiting on the almanac to help you out. The way to quit a thing is to quit, and the time is now. The time to lay hold of a good thing is right now. And let the 'Nook advise you a little further,-don't undertake too much at one time. It is better to cut off one bad habit, and hold on to all the rest, than to drop all and almost immediately take them all to your heart and life again. In other words, though it may not be good theology, don't undertake being perfect all at once. Nobody ever tried it who continuously succeeded. The best make breaks. That is some comfort. The moment you find out the certain fact that of yourself you can do next to nothing you are on the right road to success. Christ is an ever-present help in time of need.

Have you ever heard it set forth that Christ died for failures? When you recognize the fact that by yoursell you are nothing but a failure, and that you are in despair, then you are ready to reach out your hands for help, and, wonder of wonders, not once since the day Christ rose, has this help been refused. It may not come in our asked-for way, that may not be the best way, but it comes in its best form for us in some way often unlooked for.

When we have gasped out our life and passed over, one of the things the 'Nook thinks we will recognize is, that un a review of our lives here in this earth shell, we will see that everything was for the best, and the very things we struggled so ineffectually against were right after all. In other words, the unavoidable is always right, though it may not show clearly as we travel along life's way.

So start the fight as you read this article. Begin with the determination to win, and remember that the sin will not consist so much in falling as in not getting up again. Have a friend with whom you can talk from the heart out. It is a help to discuss these things with a thoughtful person in whom we can confide. But the start must be made by uurselves, and it is a constant matter of care that we do not slip. God gives help. Don't wait for the New Year day. Begin now.

AN EXCHANGE COLUMN.

We expect to add a department to the 'Nook in which people who want work, and others who want workers can be brought into communication: It will be free to all subscribers' families on each side, and to them only. Thus if a young brother in Pennsylvania would like to go west and work on a farm he would write the 'Nook the situation, his age, and what he can do, farming, say. In the next 'Nook would appear something as follows: "A Pennsylvania brother, twenty years of age, a thorough farmer, desires a place as a farm hand with a brother in the West. Address, A. B., INGLENOOK Office, Elgin, Ill."

Then B. C., a farmer in the West, having had poor help and desirous of a good worker, writes the 'Nook saying what he wants, and we send the letter to A. B. and let them go into correspondence themselves.

Or some good sister would like to go into some family as a worker, and she writes us the particulars. In the next 'Nook this appears: "A sister in Ohio would like a place in the family of some of fidence.

the Brethren in the East. A good cook and likes children. No objection to the country, but town preferred. Address, D. E., Inglenook Office, Elgin, Ill."

Now some sister, tired out with bad help, sees this, writes us, and we forward the letter to the proper party.

Every class of workers may send in their calls for either work or workers, and it will be handled free of cost, but both the one wanting work, and the one wanting workers MUST be regular recipients of the 'Nook in their families or no attention will be paid to their calls. We cannot undertake an intelligence office for the whole country. It is for 'Nookers, and 'Nookers only. It may prove of inestimable help to many people. No questions need be asked us. We will tell nothing whatever to anybody. Send in your wants now if you have any. They will appear as received.

IN JUNE.

BY M. M. SHERRICK.

THERE must have been three little birds all new,
Or four, now who can say?
In the cozy nest on the poplar tree
When the robin sang all day

There must have been love in the poptar tree, Where Mrs. Bird dreamed alway, But with eyes awake, and wings outspread, When robin sang all day.

I know that the sunshine was bright and fair,
And found in one heart its way,
And the tune in the heart was the robin's time,
And the robin sang all day.

VIGOROUS MEASURES.

For a long time the favorite form of "make believe" of little Faith was that of "getting married." For weeks she was a bride, marching down an imaginary aisle, to the strains of an imaginary wedding march, to meet an imaginary bridegroom. At last her mother, becoming tired of it, said:

"Faith, don't you know that when you get married you will have to leave me?"

This was a rude awakening, and the game stopped. Not long afterward she came to ask the difference between "Miss" and "Mrs." To make herself clear her mother said:

"Well, when you grow up and become a young lady you will be Miss Butler; but if some man should ask you to marry him——"

"I'd call a policeman!" exclaimed Faith, and her interest was at an end.

SEE the cooking school column. Sisters on all sides, send in your best. A professional nurse is going to give us some sick peoples' dishes Who can give us a good "snitz and nep" recipe?

Owing to a misunderstanding between the Editor and the author of the story, "The Mistake of their Lives," the serial will not appear in the present issue as promised last week.

THERE is many a Christian who asks the Lord to lead him in all his business and spiritual affairs, but when he goes to the polls thinks it safer to follow his own judgment.

WHEN a man is no longer afraid, but is prepared tu welcome whatever comes, because he sees in it the appointment of a loving Father, why then he is in a happy state.

Good by, old year. You were all right in the main. Adios! Welcome, new year! Bring us peace, and if we never see another, then may it be well with us.

Have you sent on your subscription for the next year or postalcarded us that you wish us to continue your name?

The more we help one another the more we want to. The more brotherly we act the more brotherly we feel.

That Exchange column will do you a great deal of good in all probability. You can write in confidence.

QUESTIONS.

Ever since we started our Query Column the 'Nooker has been sending us questions. In this last issue of the year we propose getting back at our questioners. We ask you a few questions. Next week we will go back to the old way. See how many of these you can answer.

What is a palimpsest?

What causes a dimple?

What is a Pinto Indian?

Where was Tenochtitlan?

How did calico get its name?

* * *
What is the shape of the night?

Are heat and light the same thing?

What is the scientific cause of gray hair?

In making soap at home why is it boiled?

How do animals see in absolute darkness?

What is a semaphore? All have seen them.

What animal's legs first grow after it is born?

* * *

Have you forgotten to renew your subscription?

What is it that makes the leaves in Spring green?

Putty is made of oil and whiting. What is whit-

What, in fact, are the "currants" you buy in the store?

What liquid will float a huge cannon ball on its surface?

Why are certain sea fish only found at certain levels in the water?

What weekly publication never gets into a rut but is alive all over?

What disease is it that often manifests itself with a wild, unearthly cry?

Why will a baby go to sleep quicker if you allow it to hold on to your finger?

What is the Circle of Willis and the Island of Reil? Every reader has them.

When you shine your shoes what is the scientific reason why the polish comes?

What is the scientific reason why a match ignites when you scratch it on something?

Why does electricity make the filament in an electricit light bulb give out light and heat?

In what city of over 100,000 population did Bryan not get a single vote for the Presidency?

How could you stop a barrel of cider from fermenting without the use of chemicals? No boiling allowed.

A horse and a cow, lying down side by side, get up each in a different way. They are types of animals, those that get up this way. How would you determine the movement of an animal you saw a good picture of? It is well marked.

Every neighborhood has its smart man who knows it all. Read these questions to him and notice how readily and plainly he answers. Why—ah, yes, it is, ah because it is yes, anybody knows that,—it is its nature to be that a way."

BUTTERINE BY MACHINERY.

THE MARINGACTURE of butterine merely uses a new of producing a well-known food product. He by machinery what the cow does by the laws By analysis certain ingredients are found hulter and oleomargarine is made by obtaining from some other source and combining them the correct proportions. One of the principal of bide is olein, an exceedingly rich oil secreted by The discoverer of the new precess argued that if olein was found in the milk would probably occur elsewhere in the animal, and by analysis he learned that the caul-fat, which horis a cushion and blanket for the intestines, was nch in the substance. It was a comparatively simple process to extract the olein and make it the basis of butterine.

In one of the great Chicago factories a whole billding is devoted to expressing olein or oleomargrine oil, as it is more familiarly called, from the aul-fat. As soon as the fat comes into the manufactory from the slaughter house it is dumped into avit of water, where all the blood and dirt is thoroghly washed away from it. It is then carried to 10 upper floor, where it is poured into a row of iron lettles provided with steam jackets for heating purposes. Here the temperature is carefully raised wiss degrees-at a higher temperature than that he lat will burn-and the oil slowly tries out, asssled by revolving toothed shafts not unlike the gitators of an ice-cream freezer.

When the skilled eye of the workman sees that the fat has been sufficiently heated it is drained to the next floor into large, cool kettles or clarifiers, shere all the dirt and refuse, if there is any, settles to the bottom. The clear oil is then drawn out into in-lined trucks by means of a siphon and trundled away to a big room, where it is allowed to cool and granulate for three days at a temperature of 85 de-

At the end of that time it is sent down stairs to the press-room. This is a busy place. All the men are clad in neat white jackets and their sleeves are rolled to their shoulders. The truck, with its yellowish-white contents, is wheeled to a little table, around which four men are standing. In front of each there is a small rectangular box open at the top and fastened to the table. Over this the workman spreads a piece of stout white duck. Enough of the tallow oil is dipped up to fill the box and then the next workman takes it in hand, folds the top of the duck over the soft mass and passes the cake up to the man on the presser. This machine consists d sixty pieces of sheet iron loosely fastened at the ands to shafts. Between each pair of these plates tight of the little duck packages of tallow are placed, and when the whole machine is full pressure Is given by means of a screw at the top. As it infleases gradually the oil is squeezed out through the duck and drips downward into a trough. Of the fifty pounds of fat to an animal twenty-nine pounds is oleomargarine oil. When the pressure is Removed the flattened duck packages come out filled with a pure white cake, an almost tasteless substance known as stearine, which is used as an ingredient in making certain brands of lard.

The oil as it runs from the press is ready for use in the making of butterine. Part of it goes directly to the factory near at hand and part is barreled for thipment to Holland. The amount exported in 1892 from this country was 91,581,703 pounds, 'alued at \$9,011,889.

The oleomargarine factory is a most interesting place. On entering the building a visitor is struck almost at once by the scrupulous cleanness of the 300rs and tables. They are polished and repolished Front they are almost as white as the proverbial New England kitchen floor. All the employes throughout the building are clad in white jackets and aprons, the girls in the packing-rooms wear dainty

The process of making the oleomargarine begins the third floor of the building. Here in one corher of the room a stream of oleomargarine oil of a Ream: the room a stream of oleoniargan... heam-jacketed kettles, where it is kept stirred by beans of dashers similar to those in the trying-The temperature is carefully raised to 185 the temperature is carefully failed then it is to melt the oil thoroughly, and then it is on thoroughly, and is stored chill the large tin-lined vats where it is stored chilled. It is then passed through a bath of trine, where it is washed and deodorized, and when

sugar, and has a distinctly buttery taste. It is packed in tin-lined trays about six feet long by three wide, and placed in a cool storeroom until it is needed for use. Everything about this storeroom must be kept free from dirt, for the reason that the oil, like butter, is so sensitive that it readily takes up foul odors. A single drop of kerosene in the room might taint and ruin a whole supply of oil.

Into the storeroom "neutral," as it is called, or the purest leaf lard, which has gone through the process of deodorizing in brine, is brought and stored. As these two parts of the oleomargarine, both of which are practically without taste, are needed they are trundled out on trucks, and two workmen with their sleeves rolled up shovel them in equal parts into the flaring tin funnel of a chute which leads to the creamery below.

On reaching the next floor the mass falls into a big vat or churn heated to 180 degrees and is rapidly stirred by two men with wooden paddles until the lumps all disappear. To assist in this operation small sieves are also used. When the mass has been rendered homogeneous a certain quantity of genuine butter and buttermilk, sometimes to the amount of twenty per cent of the whole, is put in, together with a little butter-color of the same kind that is used in ordinary creameries, and the stirring goes forward again. The genuine butter used is churned in a revolving churn near at hand, the milk being purchased and collected in exactly the same way as in a creamery. In fact, one end of the oleomargarine churn-room is nothing but a small creamery. The cheaper grades of butterine do not contain quite as much butter, and they are usually churned by machinery instead of by hand.

When the oleomargarine comes from the churn it has very much the appearance of butter. It is dumped on a circular table and a long conical butterworker operated by machinery squeezes out the buttermilk and works in the necessary amount of salt. A man in a clean white jacket helps along the process with a wooden paddle. When the butterine has been sufficiently worked and loaded into one of the tin-lined trucks it looks like real butter, tastes like real butter, and no one but an expert can tell it from real butter. The creamery has a capacity of 20,000 pounds in twenty-four hours, and 100 men and ten women are required to do the work.

After standing one day in a clean, cool storage room and then being reworked, the oleomargarine is taken downstairs to the packing rooms. Here white-jacketed men and girls stand at tables with mountainous heaps of the moist yellow butterine in front of them. With a deft movement a man scoops up a handful and plasters it into a mold holding one pound. Then he drops it out before a girl, who wraps it up in a piece of parchment paper, and it is then packed away in boxes. In this department the greatest care is taken to have everything sweet and clean. The floor and all the tables are scrubbed at least once a day.

ABOUT INDIANS.

A BRIGHT youth asked us to say something in the 'Nook about Indians, and while the subject is a very interesting one, it is very hard to get hold of. Everybody has heard of Indians, read of them, and a good many have seen them. The writer lived among them for a time, and learned a good deal about them. So a little Indian talk in the INGLE-NOOK may not be amiss.

When the first white men came to this country the Indians were in possession, and they were friendly. They were divided into tribes, and there was a good deal of internecine warfare, tribe against tribe, and all of them, with some exceptions, noted later, were nomadic, or wandering in their habits. They remained in one place as long as the game held out, and then they pulled up stakes, literally so, and moved on to a place where there were more deer or buffalo. It should be remembered that the buffalo was found all over the country, from the far east to the far west. The Indian, with his bow and arrow, could get beside a buffalo, either by stratagem or superior running, and drive an arrow clear through the animal, so that it came out on the far side and stuck in the ground. Outside of wild game they had a few vegetables, notably corn and beans, and something like a sweet potato in the far south. They kept their corn by burying it, and what we I wuzn't."

it comes back it looks a good deal like light brown have found is very much on the nubbin order. They were great people for fish and oysters, and the piles of shells in places along the coast are marvelous in extent. It is likely they got along pretty well in summer, and in winter had a pretty hard time of it.

> They had a religion, the Great Father, and a sort of picture writing, and a sign language that enabled them to communicate one tribe with another having a different spoken language. Now these Indians were to be found all over the United States, till we come to the Pacific coast, where we find another and a different lot. The Coast Indians differed in color and habits from the interior Indians. The Coast man, that is, the Pacific coast man, was darker in color, and he was more or less of a town dweller. He was a different sort of man in his mental and moral make-up. He was an indifferent fighter, and doubtless the Red Man and the Black Indian had many a fight, and it seems from what is left of the record that the Red Man got the better of the darker brother. At all events the blacker Indian moved, or was driven southward, and dug out homes for his people in the sides of the cliffs where the warlike Red Man could not well get at

Now these red and black wild people were of two different stocks, and while nobody knows clearly where the red specimen came from originally, it is pretty well agreed that the blacker one came from Asia, probably, as Humboldt says, from the migratory, warrior shepherd kings of the north of Asia. At all events the two did not get on well together, and the black wild man moved south, and scattered over the upper part of Mexico. He arrived one day, about a thousand years ago, on the site of what is now Mexico City, and here he built himself a town. When Cortez, the splendid freebooter and grand rascal, came on the scene about 1620, he found a country peopled by natives that had got along pretty well toward a rude civilization. Cortez proceeded to destroy their capital, and the Catholic church, through one of its earlier bishops, gathered up all the Aztec books, picture writing it was, and burned the whole pile in the market place. If these manuscripts had been spared we would have learned a great deal.

The oncoming flood of Spanish in Mexico married into and corrupted the native, and the cross is the Mexican proper of to-day. But more than half of the population of Mexico to this day is the Indian, living in the same towns, doing the same things, and generally is the same thing as his fathers of a thousand years ago.

But when the black Indian, or the Aztec, came on the scene in Mexico he found a town and city-dwelling people there before him, which he called the Toltecs, that being only a word in Aztec for architect or builder. And what is stranger yet, before the Toltees were a people that nobody knows anything about, and this people was away ahead of the Red, the Black and the Aztec Indians. These built cities, had a written language, and were possessed of temples, great cities, waterworks, paved streets and the like. The writer spent some time in the ruins of these cities. Would you like to hear of them? Watch the 'Nook.

AN INGENIOUS TIME SYSTEM.

Among the Montagnais Indians a crude form of sun dial is used in hunting to let the squaws, who follow their lords and masters, know whether they may "take it easy" or "hurry up," for they might fare badly if they lagged behind when their husbands were ready for supper. And so the men when hunting erect in the snow a stick at some well-known place and draw the exact line of the stick's shadow in the snow before going on. When the women arrive there with their pots and other cooking utensils they note the new line of the shadow, and by observing the angle which it forms, with the line already drawn in the snow they can tell how far ahead their husbands are.

"You have been in another fight, Tommy," said the mother to her seven-year-old boy.

"No; I wuzn't," was the dogged reply.

"Why, Tommy, I can tell by your appearance that you have been fighting. Your face is all scratched up. You musn't tell a story about it."

"I ain't telling no story. I said I wuzn't in it, an'

Good Reading

SOMETHING ABOUT YOUR HOLIDAY CANDY.

According to the estimate of a prominent confectioner Chicago consumes about 15,000,000 pounds of candy annually. On a basis of 1,500,000 inhabitants this would represent a candy capacity of ten pounds for every man, woman and child in the city. Of this amount a surprisingly large proportion is made up of the better grades of candy, the chocolates, caramels and various kinds of sugared nuts. By all odds cholocate candy is the most popular, and the demand for it is growing daily larger. Sales of the old simple varieties of stick candy and lozenges are declining, the palate of the modern child requiring something that is richer and sweeter. Of recent years grown people have learned to eat candy; there are a great many homes where it is always kept on the dining-table. In the consumption of sugar and sweetmeats the Americans exceed almost every other civilized country, and their machinery and conveniences for making candy are much more elaborate than those of any other country. In Great Britain the amounts manufactured and used are much smaller, and the varieties are comparatively few and rather poor in

The largest ingredient of candy is sugar. This may seem a superfluous assertion, but it means a good deal. A few years ago when sugar was scarce and high in price it was really one of the lesser ingredients, at least in the poorer qualities of eandy, glucose and other things being largely used as substitutes. But the price of sugar went down and it is now cheaper than anything else, and the result is that the candy of to-day is probably purer and better than it ever was before in this country. Some glucose is now used in the cheaper grades of goods even by the best manufacturers. It is in no way an injurious substance, but it is practically tasteless and candy in which it is used is far from being as sweet as that made from pure sugar.

One of the largest manufactories in Chicago uses fifty barrels of sugar every day. It is of three kinds—confectioners', which is almost as fine and soft as flour, and mold A and crystal A, both of which are coarse and crystalline. Some of the other raw materials used are glucose, cocoa beans, coeoanuts, almonds and other varieties of nuts, French apricots and other kinds of fruit, and pure cream for use in caramel-making. When the sugar comes in at the receiving door it goes at once to the top of the building. As the elevator ascends the atmosphere grows richer every moment with the palate-tickling odors of cooking caudy.

The superintendent first leads the way into the cream-candy department. Here the sugar with a small proportion of glucose to make the consistency of the candy thicker, is boiled in water until the sirup is thick and almost clear. Great care is necessary not to burn the sugar in boiling. When the candy is sufficiently cooked it is poured out upon huge marble slabs, where it is allowed to cool for a time. Then bare-armed workmen, aproned from head to foot, begin to stir up the sticky mass with long iron instruments which are known to the candymaker as "spaddles." The caudy is worked up very much as a plasterer would stir mortar, until it is hard and white and almost crystalline. This makes cream candy. The same object is accomplished on a larger scale in big copper kettles or "beaters," which not only cook the ingredients but beat them white and hard by means of a rotating dasher.

The candy is now ready to be cast into a hundred different sizes and shapes. Instead of using iron or wooden molds, as one would suppose, candy is cast in cornstarch molds, which are prepared with great care. The starch is placed in narrow, shallow boxes and smoothed off at the top. Then they are run, one after another, under a press, the lower part of which is covered with projections of just the size required. When the press goes down a little hammer taps the top of it automatically, and the cornstarch is punctured with rows of smooth, clear-cut holes. More than 25,000 such boxes are used in the factory. When the molds are complete they are filled from a tank with the cream candy. Marshmallows, which are made of the white of egg, sugar and gum arabic, are east in the same way.

When the candy in the molds is dry and hard the boxes are taken to an interesting machine called a "starch-buck." Here the starch and the candies are dumped into a hopper under which are a series of sieves. The starch readily falls through the meshes and the candy hops along on top and is finally tailed off at the farther end, after which it is put through a series of brushes to take off the last vestige of starch.

The cheaper kinds of gumdrops such as those sold on the street corners at five cents a pound are made mostly of glucose with some sugar and starch. They are cast like the creams and then rolled in granulated sugar. The genuine gumdrops, which are much more expensive, are made of pure sugar and gum arabic.

One of the most interesting processes in candymaking is the dipping of creams. A row of girls sit around a narrow table, in the center of which a number of tilted kettles rest over a coil of steam-pipes. From a tray at one side of them the girls take the creams, one by one, on a little wire spoon and dip them into the thick sirup in the kettles. Then the drops, as they are now called, are placed on a piece of oilcloth and set in a frame to dry. This is the way the thin chocolate coatings are placed on chocolate drops. The girls who do this work become very expert, some of them being able to dip as many as 1,000 pounds of candy a day, or more than 30,000 pieces.

Another room is devoted wholly to the manufacture of lozenges and candy hearts. For this purpose the sugar is mixed cold in big tubs and the lozenges are pressed out in molds. Mottoes are printed on the hearts with a rubber stamp. Here are some of them:

I LOVE YOU.

MEET ME BY MOONLIGHT.

IF PAPA DOESN'T OBJECT.

Although this style of confectionery has gone somewhat out of fashion in the city, it is still popular in many small towns.

The cocoanut department occupies the whole end of one story. The nuts are bought whole, and the hard white meat is taken out and placed in a kettle, where it is boiled and violently agitated at the same time by means of rotating dashers. Sugar in certain proportions is added, and when the mass is sufficiently cooked it is placed on a marble slab, where it is rolled down fine with a long piece of gas pipe. One of the most popular forms of cocoanut candy is the "tea-biscuit," which is an oval piece of pressed cocoanut baked brown on both sides. Cocoanut is also colored and molded into various forms, one of them representing the American flag, and then sliced up into strips with a patent cutting machine.

Caramel-making is one of the greatest arts in the whole business. Caramels are made of sugar and pure cream carefully boiled together until they are of the proper consistency and then poured on a marble slab to cool. After they are cut into small squares girls are employed to wrap them. One of the best of the wrappers can finish 800 pounds in a single day.

The factory has a capacity of about 4,000,000 pounds of candy a year, about one-fourth of which is used in this city. The rest is distributed from Maine to California. The average price of candy at the factory is about eight cents a pound, the lowest being about three and one-half cents for cheap gumdrops, and the highest about forty cents for chocolates of the best grade. Most of the candy in Chicago is sold to retailers by candy peddlers, who travel about in wagons. The two greatest dealers in candy are two of the big downtown department stores.

GREAT FEATS OF FASTING.

How long can a person fast? During a prolonged fast the loss of weight is usually rapid at first and decreases as the time goes on, death ensuing when a certain percentage of loss has been reached, and this percentage varies according to the original weight. Fat animals may lose half their weight, thinner ones perhaps two-fifths; a man or woman of rather spare habits, weighing 143 pounds, might, therefore, lose about fifty-five pounds before succumbing.

Children die after a fast of from three to five would meet it anywhere.

days, during which they lose a quarter of their weight. Healthy adults, however, have fasted fifty days when water has been taken. From 1880 to 1891 there was an epidemic of fasting exhibitions in London and New York, the periods varying from thirty to fifty-two days. Dr. Tanner, who fasted forty days, weighed 143 pounds at the heginning of his experience and lost thirty-six pounds by the time he had concluded. This was a quarter, or twenty-five per cent of the original weight, and consequently less than the figure given above, but this was one of the instances of water having been taken. Succi is said to have fasted fifty-two days, taking only water, but at a test exhibition in London he gave it up after forty-four days.

A German physician reports the case of a woman, aged forty-seven years, who fasted for forty-three days, taking water freely. She lost forty-four pounds out of 143, and died of exhaustion. In all these cases it must be noted that water was consumed, a most important fact when we remember the part played by it in the constitution of food and of our bodies.

The length of time during which a person can fast without water is difficult to determine, but in cases where pretended fasters have been tested it has proved of short duration. Sarah Jacobs, who was supposed to have lived for a year without food or drink, was closely watched for a week in order to test the truth of the assertion. She died on the seventh day. This was in 1869.

MASCULINE DRESSMAKERS.

The rivalry of men in the business of dressmaking, until recently regarded as the exclusive province of the fair sex, is beginning to be seriously felt by the modistes. It is a recognized fact that when men evince any talent in this line they generally excel and display more originality and more perfect taste than the majority of women. Many women, it is known, realizing that their taste is not above reproach, place themselves entirely in the hands of the artist in clothes, and the result is nearly always entirely satisfactory. It stands to reason that a man whose life is spent in the devising of gowns and the blending of colors must know far more about effects than many of his customers.

The first step toward, the employment of men in dressmaking was taken with the advent of tailor made costumes and in this particular branch no woman can touch them. Although women are employed in most tailors' shops as machinists, still the actual cutting, which is, after all, the crucial stage, and the pressing is done by men, and here, of course, physical strength tells. It seems that wherever a man has taken up woman's work he has, with few exceptions, equaled and often outstripped her. Take dressmaking, cookery, hairdressing or laundry work; men excel in all these different branches, where one would expect women to be their superiors.

The reason of this is, maybe, due in a great measure to the different youthful training of the sexes, more noticeable in the earlier part of the century than at the present date. Boys, from the beginning of their school days, are taught to be more thorough than girls, and in consequence they do their own work in after years more efficiently as a rule and attend to details that the average woman is apt to neglect. As things are at present, the line between the employments open respectively to men and women is rapidly vanishing. Men are doing women's work, while the women are striving their utmost to compete with men, and in many in stances ousting them from their own particular grooves. To the casual observer it would seem that they are really changing places.

Most bald people are found to lead indoor lives and almost all of them belong to the intellectual class. Usually the loss of hair begins before the thirtieth year. In woman it usually constitutes a general thinning; in man it affects the top of the head. Diseases that affect the general nutrition of the body are likely to thin the hair.

From one end of Japan to the other a child is treated as a sacred thing, be it one's own or a stranger's. Each one carries its name and address on a ticket round its neck, but should it indeed stray from home food and shelter and kindness would meet it anywhere.

ooo The o Circle ooo

THE WORK OF THE LOCAL SECRETARY.

BY JOHN R. SNYDER.

In many respects the work of the local secretary the most important in the local organization, the most important in the local organization. It is a large measure, to their exertions is the extending of the work of the Circle in their respective localities. While respect is given in all asses to the wishes of the local Circle, the local section is appointed by the General Committee, or abject to their sanction, and thus becomes a part of the general organization.

As stated above, much depends upon the efforts put forth by the local secretary for the growth of the Circle. And we want to impress them here that they have a very important part of the work of the church. The Circle is not a mere organization to occupy one's spare time, or for social intertourse, but it has for its prime purpose the extension of the Messiah's kingdom here below and the depening of the Christ-life in the church. And in belying to extend the usefulness of the Circle they are an instrument to further a greater and nobler cause. Any effort they may spend for its extension will find its repayment manifold in the intreased activity of the church at large.

It is the duty of the local secretary to order all books needed for use in the study of the Courses. Books can be bought at the most convenient place, but Circles will find it to their advantage and convenience to order all supplies from The Brethren's Publishing House, Elgin, Ill., which have kindly agreed to supply all the books at but a small advance above cost, to members only. There is the double advantage also of securing all the books at one place and in one order, which might not be possible if they were purchased elsewhere. The Circle has no books for sale, but any orders sent them will be sent to the House for filling.

It is also the duty of the local secretary to keep arecord of the books read by the local Circle and report to the general secretary; being sure to give the name and number of each member with amount of reading done by each. This should be done during the month of March of each year. This is important and we urge the local secretaries to be more prompt in regard to this work. A certificate is due each member when he has completed the two years' work or its equivalent.

Finally, work hard to get as many members as possible to join the Circle. Send their names to general secretary. Thoroughly canvass your vicinity so that all may have the opportunity to take up the work. Seek in every way to organize a large local Circle and advance the work in every possible way and we know you will be amply repaid in the increased activities of your church. Get the ministers, elders, and other officials interested in the work and ask their assistance, keeping ever in mind the motto: "For Christ and the Church."

Bellefoutaine, Ohio.

500B00.

We have recently read about a high-caste Brahmin girl, who was petted and praised in her heathen home, surrounded with every Oriental luxury. She was so devoted to the service of the gods, that her mother called her "Million Lights," but her heart was heavy, no happiness or brightness there. In order that she might perform successfully some new ite to the gods, she had to learn Tamil. The only teacher she could find was a despised Bible woman. The reading of the Gospel with God's spirit did the lest. One day she was urged to take part in a great festival of the god. She was weary of it all, and anxious to know more about Jesus, so she prayed heaven to set her free in some way. The piest bid her cross the threshold, to worship, when some away before she had time to pray to the

Then she decided to leave all and follow him; and so one night she left her jewels and her fine clothes in her elegant home, and clad in the humblest garments went out alone in the night to the dission school of Madras. She had gone there the truth, now she threw down the metal box that held am come, I am come; I am God's Christmas gift to you!" Just now she is coming to America, to learn more about Jesus.

THE PROBLEM OF LIFE.

How to lead the life divine surrounded by temptations from within and from without; how to breathe freely the atmosphere of heaven while the feet yet touch earth; how to lead the life of Christ, who shrank from no scene of trying duty and took the temptations of man's life as they came; or how even to lead the ordinary saintly life, winning experience from fall and permanent strength out of momentary weakness, and victory out of defeat—this is the problem.

Our Savior, foreseeing the inevitable tendency of litigation, said in his Sermon on the Mount: "If any man will sue thee at the law and take away thy coat, let him have thy cloak also." (Matt. 5:40.) The wisdom of the Savior's words, hard as it may be to give the "cloak also," had its illustration, in a man who got angry with a neighbor some months ago, and sued him on a promissory note for \$10. The party who was sued claimed that the note was a forgery, and tried to get the holder of it indicted. He failed in this; but his abortive effort resulted in a suit against himself for slander. He did not succeed, however, and one result of the protracted litigation is the presentation against him of a bill for \$1,600 for attorney fees. This bill the court has decided that he must pay, and the decision has driven him into bankruptcy. Truly, litigation is a costly luxury, and well does the wise man say: "The beginning of strife is as when one letteth out water.'

REV. ERNEST GEBHARDT, a Methodist missionary in Germany, translated the hymn, "I'm the Child of a King" into the German, and it became very popular. One Sunday, as the children had been singing it with great delight, the teacher suddenly asked: "How many of you feel that you are 'Children of the King?'" A few hands went up. Then she inquired: "How many of you want to be 'Children of the King?" Among the large number of hands that now went up, was that of a bright little girl who attracted notice by her intense earnestness. A few weeks later she was attacked by diphtheria and was soon unable to speak. Making signs for her slate, it was brought to her, and with her weak, trembling fingers she slowly and painfully wrote: "I'm the child of a King, I'm the child of a King; with Jesus my Savior-" She could write no more, and in a few moments expired, to don her royal robes and sit upon her throne.

"No man hath a velvet cross," was Flavel's assertion, years ago, and it is just as true now as then, Only he who giveth it to us, and he who knows the strength needful for every burden. When we have felt that we were sinking, under the weight of great sorrows, his hand has been placed beneath us to lift us. Sickness, pecuniary losses, the loss of our loved ones, weigh heavily upon us. Separation in this world from those that are dear to us, saddens our hearts beyond endurance, had we no strength but our own. To be misrepresented by the many, and to be maligned, if only by a few, are all crosses which we are loath to hear; but, when we remember that each cross borne adds luster to the crown, we should welcome them, or at least be able to say, "Thy will be done."

THERE should be a regular course of reading in the Bible, especially in the New Testament, so that the entire work should be gone through in a year. The plan of selecting portions of Scripture to illustrate topics or enforce duties is not the best for general use. It does not aid the memory so well as consecutive reading of the whole Bible. If we would retain much of its contents in our minds, we must read from Genesis to Revelation repeatedly.

BOTH David and Solomon caution us not to fret because of evil doers nor to be envious on account of their prosperity. With many people transient success is often the beginning of lasting and irretrievable ruin. As long as we are in the world we must expect sin and sorrow, disease and death, and their appearance around us should render us the more anxious and laborious to make our calling and election sure that at last we may enter into rest.

PLEASURES OF FALLING.

Would you hear beautiful music? Then throw yourself from the roof of a skyscraper. A cliff will do, or a church steeple, or the basket of a balloon; the point is that if you fall from a great height you will experience very agreeable sensations. The only drawback is that you probably won't live to remember them.

Several persons who have miraculously lived to remember how they felt under such circumstances have described their sensations to Prof. Heirn, of Zurich, who became interested in the subject after sliding and falling a mile in the Alps and hearing heautiful music all the way until he landed on his head.

All the testimony he has collected goes to show that falling is a real treat, about a million times nicer than tobogganing, and that, if it were not for the painful and often fatal consequences, it eclipses golf and automobiling as a diversion,

Although unable to collect evidence from persons who have been killed outright by falling, Prof. Heirn is satisfied that they felt no more and no less than his witnesses, most of whom were dashed into unconsciousness at the end of their trip.

His conclusion is that the act of falling brings no pain, no paralyzing terror, no anxiety, no despair. In a word, it is far less disagreeable than almost any other mode of death.

Ligrist the Alpine climber, fell backward from a cliff and was nearly killed in the valley below. He told Prof. Heirn afterward that he was conscious from beginning to end of his fall and enjoyed the sensation of being wafted like thistledown through the air.

He reviewed the causes leading up to the accident, saw himself a dead man and traced in imagination the fortunes of his fatherless family. There was no breathlessness, no suffering from shock, no pain even when Ligrist struck the snow-covered ground and lost consciousness. Not until he was brought to his senses did his sufferings begin.

Prof. Heirn slipped from a snow-covered crag and fell feet first. The wind dashed him against an inclined cliff, and he slid down this on his back, head first for nearly a mile. Leaving the inclined cliff, he shot 60 feet through the air and landed on his head.

Throughout all this sliding and falling his thoughts were clear, his mind calm and his ears delighted with celestial harmonies.

MARIMOTH WATCH FOR ST. LOUIS.

ALREVOV novel features and schemes for attractions at the St. Louis fair of 1903 are being planned. One of these already announced will be a mammoth watch. It will lie on its back, having a polished metal case just like the ordinary watch and will be so large and roomy inside that people will be able to walk around in it among the moving wheels.

It will be nearly 75 feet in diameter and more than 40 feet high, with neat little stairways running all about it, and all the wheels properly protected, so that no one can be hurt. The balance wheel will weigh a ton and the "hair spring" will be as thick as a man's wrist. It will take about two minutes for the balance wheel to swing around and back again. It will be pivoted on two enormous agate blocks, substitutes for diamonds, and will be made of brass.

One of the greatest difficulties will be in getting the balance spring of the size and strength that can stand the strain and keep its elasticity. The main spring, of course, will be an enormous affair, something over 300 feet in length and made of 10 spring steel bands two inches thick, bound together, as it would be impossible to roll so large a piece, either in thickness or length. The projector of the enterprise claims, of course, that the scheme has an educational side.

Those who visit the watch will be given instructions, with practical illustrations on the care of a watch. Guides will point out and name every part with its uses and its proportionate movement. The watch will be wound by steam regularly at a certain hour during the day, to impress upon watch carriers the necessity of a watch having regular hours, whether its owner has or not.

THE tyrant, it has been said, is but a slave turned inside out.—Samuel Smiles.

INSECTS MADE OF METAL.

Did you ever see a copper caterpillar, a silver centipede or a nickel gnat? Yet these and many similar objects can be had, if not for the asking at least for a reasonable amount of money, at several places in New York. Who discovered the curious art is unknown, but it was introduced into this city by an eccentric Frenchman, who said that he had elaborated the discovery of some chemists in l'aris. Paul Despotte, for such was the man's name, declared his secret to be as follows: He first dampcoed the luckless insect, leaf or flower and then blew on it with a blowpipe. The object thus dusted was placed in an electrolytic bath and upon it the metal was precipitated by the galvanic current. The object was then transferred to a second bath, from which all the organic matter was dissolved by an alkali. The metallic shell which remained was slightly heated, touched with some kind of shellac, and the thing was done. The inventor carried with him quite a collection of these preparations. The most interesting of all were a mosquito in gold and a hairy geranium leaf in copper.

The delicacy of the work was extraordinary. Under a powerful magnifying glass the little organs which are invisible to the human eye were seen perfectly reproduced in metal. The discovery does not seem to have been utilized to any great extent so far as the trade is concerned, but has been taken up by many amateurs. This fall an ingenious girl uptown first covered the back of her hand with black lead and theo plated it with metal. She removed this, which was a perfect cast, and used it as a matrix, in which she deposited a second coat of metal, which she finally mounted on a piece of satin. Her hand, as may be supposed, was pretty, and when reproduced in copper made a work of art as novel as it was attractive.

GIVE YOUR GLASSES A BATH.

"HALF of the people who wear glasses and complain that their sight is gradually diminishing owe the idea to dirty glasses," remarks an optician. "Spectacles and eye glasses are as much benefited by a bath now and then as people are. It is strange how many people there are who think that by wiping their glasses now and then they keep them clean. The fact is they want a bath just as frequently as does a human being. You see, it is in this way: The face, and especially the eyes, all the time give off a fine vapor. This clings to the glasses and the dust collects on them. As soon as they become clean—that is, apparently clean—the wearer is satisfied.

"So the process goes on. But, while wiping the glasses cleanses them and is necessary, a bath is also required. Every time the glasses are wiped a fine film of dirt is left on them and this gradually accumulates, and no wiping will clean it off. In time this coating gets quite thick enough to blur the vision, even though at a glance the glasses may appear clean. When this occurs the sight is diminished and they come to me or some other optician. What they ought to have done was to give the glasses a bath in warm water, well scrubbing them with a small toothbrush and soap and afterward wipe them. This should first be done with chamois leather and then with tissue paper to polish them."

WHERE SLUMBER IS A LUXURY.

"Do they ever sleep?" asked an early morning pedestrian of his companion as they passed an allnight Iruit stand, the owner of which he had seen at his post at eight o'clock the morning before. There are probably a hundred Italians and Greeks in the city who spend from twenty to twenty-four hours at their stands. They have their meals brought to them by their wives or children, and at night doze on a stool, while perhaps a member of the family, usually a young boy or girl, stands by for a few hours of the night to guard against pilferers. The trouble involved in moving the stand or its contents morning and night is said to be responsible for many of the all-night stands.

EVERY Christian is as much a debtor to the barbarians as Paul declared himself to be; and it is a debt he could never pay without the help of a Foreign Missionary Society.

THE WORLD'S MOST FAMOUS MEN.

VOLTAIRE: Born 1694 in Paris, died 1778. Best remembered by his attacks on the Christian religion. A prolific French writer of unsavory memory.

WESLEY: Born 1703, died 1791. An English preacher, famous as the founder of Methodism.

FRANKLIN: Born in Boston 1706, died 1790. A statesman of the colonial period, famous for his services to his country and his hard common sense.

FREDERICK THE GREAT: Born 1712, died 1786. King of Prussia. A soldier and a statesman, great because of his impress on the politics of Europe. Taking him in all, his reign was regarded as a trust which he faithfully carried out.

BLACKSTONE: Born in London 1723, died 1780. A great English jurist, author of Commentaries on the Laws of England. An authority on the principles of common law wherever English is spoken.

ADAM SMITH: Born 1723 in Scotland, died 1790. A political economist, author of the "Wealth of Nations," quoted and studied to this day.

IMMANUEL KANT: Born 1724, died 1804. A very prolific writer, whose fame rests on the fact that he was one of the world's greatest moral and mental philosophers.

ROBERT CLIVE: Born 1725, died 1774. A statesman and general who founded the empire of British India for Eugland before he was forty years of age.

Поward: Born in England, 1726; died 1790. John Howard has come down to us as one of the world's greatest philanthropists, having spent his life in the amelioration of the miseries of humanity. He was not a scholar, in the deep sense of the word; not a man of great wealth; not of high birth, nor was he of strong constitution, bodily. He was a man of high religious character, and his turn of mind and heart were in the direction of the prisoner and the unfortunate. He visited the prison, helped the individual in misery, and directed public sentiment toward the amelioration of the conditions imposed on the unfortunate. He did so much of this work, and did it so well, that he has, by common consent, had the word "Philanthropist" attached to his name, and he is everywhere known as John Howard, the Philanthropist, and this gives him his place as great in goodness.

EDMUND BURKE: Born 1729, died 1797. One of the greatest of English statesmen. A writer, an orator and a politician of the highest type, influencing English history.

ARKWRIGHT, SIR RICHARD: Born in England, 1732, died 1792. His fame is based on his invention relating to cotton spinning. Prior to his discovery of the methods of spinning cotton and wool there had been a machine that gave the means of spinning twenty or thirty threads at the same outlay of labor required to spin one by hand. But these threads lacked the hardness necessary to the warp of the eloth manufactured. Arkwright's invention made it possible to spin any number of threads, of any fineness, available for both warp and wool. In other words, he invented a machine that did the work of many people, better than it could he done by hand. Naturally this earned for him the unthinking hostility of the ignorant of the laboring class, but he and his machine triumphed, and conferred more real and lasting benefit on posterity than the acquisition of a kingdom.

WASHINGTON: Born in Virginia 1732, died 1799. A statesman and general. First President of the United States, and remembered as the Father of his Country. He is known to every schoolboy.

The little girl was inclined to answer the door bell about as soon as it sounded, and sometimes she gave answers to whoever might be there that were curious. One day the man who collects the packages of laundry was at the door and asked if the laundry was ready. "No" she replied; "papa has got it on."

Our Cooking School.

Below we give our readers some excellent reci. pes for the home and the home circle. The undertaking has proved that the idea is an excellent one and that the interest in the work is widespread and growing. Those who save their 'Nooks will have a collection of recipes that are all available and tested. Then the signing is a great feature. Without that they might as well be copied from a book. It need not be that all the recipes must be new, but what we want is the way the reader does it. The whole list of things to be eaten may be selected from by any sister who reads and who is willing to help others as she is being helped. Then if there is any person, sister or otherwise, who wishes to ask a question or a number of them, on culinary matters let us have them. Somebody will be found able to answer. We expect to print timely and up-to-date. comfortable little menus from time to time, and whoever does a little entertaining now and then will be sure that what she does, if she follows the 'Nook, will be correct and in good form.

MAKING COFFEE.

BY SISTER BESSIE ROYER.

No person can make a cup of good coffee out of an inferior grade of the berry. The best is a mixture of one-half Mocha and Java, half and half, ground together. The coffee pot must be rinsed clean, and a cup of ground coffee put in it, then add either six or eight cups of water that has been freshly boiled. Then set where it is as near the boiling point as possible without actually boiling. It should remain on the stove, steeping, for twenty minutes, and an hour will not hurt it. The secret of making good coffee is not allowing it to boil. Use no so-called extract of coffee, which is nothing but burned sugar and does nothing but color the decoction.

To make café au lait, take half as much strong coffee as may be needed and pour in the pot as much more rich, sweet milk. Let this just come to the boil and serve.

Elgin, Ill.

TO MAKE CHOCOLATE.

BY SISTER BESSIE ROYER.

Take the amount of shaved or grated chocolate, an equal amount of sugar, and as much flour as will lie on a nickel for each cup to be made. Mix well. Now take equal amounts of water and rich milk and put the above mentioned ingredients in it and boil, stirring continuously. In the countries where the chocolate comes from they use a pinch of ground cinnamon to the chocolate, and then beil. Enough must be used to give it a cinnamon flavor. It will probably suit the taste of our readers better if, when the drink is made, it is slightly flavored with extract of vanilla, added just after the pot is taken from the fire. It should be stirred in. The trick of putting the flour in should not be forgotten. Its use is in holding the chocolate in suspension. Elgin, Ill.

EQQS ON TOAST.

BY SISTER AGNES McDANNEL.

Toast as many pieces of bread as there are guests. See that the toasting is a light brown, and thoroughly well done. Then butter on one side. Take these pieces of toast and put on a plate with hot milk in it and allow them to absorb what they will without turning, while the eggs are being poached. Salt the toast slightly.

Take twice as many fresh eggs as there are pieces of toast, and poach them in water that is boiling hot, but not boiling when the eggs are dropped in. If the water boils it will break up the eggs, and if the water boils it will break up the eggs, and if only kept near the boiling point will jelly the eggs. When done put on the toast, two to each piece, and serve hot. Garnish if desired. An excellent break fast dich

fast dish, Elgin, Ill.

Some people have an idea that about all religion is for is to help them to have a good time, and be respectable.

What They Say!

Chicago Says:

22 INGLENOUR is par excellence. It has in our church publications.—John E. Mohler. Each number seems better than the and one. I have a Sunday-school class boys and girls, from thirteen to eighteen and all get the INGLENOOK as a Sundaypaper, and they are delighted with it.— F.R. Miller.

Clarence, Iowa, Speaks Out.

his with much satisfaction that I express supproval of the INGLENOOK. Its appearreand general make-up are such that it at re commends it to the reader. It has found eray into many of our homes, and the peoheare truly glad for its continued success. 1. John Zuck.

Mt. Morris Says:

The INGLENOOK easily takes rank among tebest young people's papers in the country. habetter than most of them because of the searce of the silly love stories and light read-It is a most valuable addition to the Bridgen's publications. No family should be rhout I.-Eld. D. L. Miller.

Lanark, III., Has An Opinion.

We have been receiving the Inglenook net it started. We like it very well. I would neto see it go to all the homes of the land. Beshort sermons are good for both old and ring-Eld. I. B. Trout.

Lancaster Heard From.

The INGLENOOR'S weekly visits into our own and a number of other homes in the Lancaster City, Pa., church is much appreciated, and its pages gleaned immediately on its arrival, as it has become generally known that it contains live subjects and short statements which is so much desired because of the great abundance of printed matter now in circulation. It certainly is the paper from which can he had much valuable information at a minimum cost.-T. F. Imler.

GIRDLING THE GLOBE

By ELDER D. L. MILLER,

Author of "Europe and Bible Lands," "Seven Churches of Asia," and "Wanderings in Bible Lands."

The author tells of things seen in his travels around the world; and writes in such an interesting and impressive manner that the reading of the book will give one a better idea of things than would be received by many hundreds who would make the trip themselves. Note what one writer says:

I have examined and read Bro. D. L. Miller's last book, "Girdling the Globe," and find it an excellent work. While all of his books are good and instructive, I put this as THE BEST, in fact the most interesting book I ever read outside of the Bible. Everything is made so clear and plain by the author. I would recommend all to secure it if in their power to do so. Surely a cheap trip around the world! Who would not take in such a trip and at the same time enjoy the comforts of home?

The Red Morocco binding, with gilt edge, gold back and side title, and handsomely finished in every way, makes a magnificent Christmas present to your near relative or dearest friend. Price, \$3.00, prepaid. What better do
